ON THE

Southwest Limited

NEW TRAIN
NEW ROUTE

THE NEW SHORT LINE of the **CHICAGO, MILWAUKEE & ST. PAUL RAILWAY,** between Chicago and Kansas City, has been completed.

The Southwest Limited carries new and complete equipment, including standard and compartment sleepers, dining car, chair car, coach and observation-library car. It is electric lighted throughout.

Leaves Chicago 6.00 p. m., arrives Kansas City 9.00 a. m. Leaves Kansas City 5.55 p. m., arrives Chicago 8.55 a.m. Two daily trains in each direction.

The service is up to the high standard maintained on other famous trains of the **CHICAGO, MILWAUKEE & ST. PAUL RAILWAY** —The Pioneer Limited, between Chicago, St. Paul and Minneapolis, and The Overland Limited, Chicago, Omaha and San Francisco.

The Russian Advance

by

SENATOR ALBERT J. BEVERIDGE

An important book on the situation in the Far East. Senator Beveridge recently spent many months in Russia, Manchuria, and Korea, studying the controversy over Korea, and making an investigation of Russian conditions as compared with those in the United States. This book contains the result of his valuable work, and seems to point to war between Russia and Japan over the situation.

Harper Book Notes

DR. LAVENDAR'S PEOPLE

Old Chester Tales made thousands of friends for Dr. Lavendar, the gentle-hearted old village clergyman. In this new volume he is more seasoned, more broad in his sympathies, and more lovable than before, as he takes his guiding part in the simple romances and tragedies and comedies of old Chester. Mrs. Margaret Deland has no equal in the picturing of these simple American community folk.

Booth Tarkington's CHERRY

A romance of an American Christmas-time a hundred years ago. The author has surpassed his own *Monsieur Beaucaire* in piquancy. Such a dainty bit of colonial femininity as Sylvia Gray has seldom appeared in print, while her two ardent suitors present a contrast that is entertaining and exceedingly funny.

MAIDS OF PARADISE

The best of all Mr. Chambers's work is in this dashing story of the Franco-Prussian War—the best of his love stories, the best of all his thrilling tales of adventure. His hero is an American in the French Secret Service and his heroine is a countess — the most enchanting yet achieved by this creator of charming heroines.

Hamlin Garland's HESPER

Think of a very conventional New York society girl suddenly, by the force of circumstances, thrown into the roughest sort of a mining camp. The situation gives Mr. Garland opportunity for his finest work. The spirit of the West is there, and a romance that tells of love triumphant over matters of social caste, bloody camp feuds, and woman's whims. A rare tale of spirited Western life.

COMMENT

WE discuss elsewhere the speeches made in the Senate by Mr. Hoar, Mr. Morgan, Mr. Daniel, Mr. Gorman, and Mr. Pettus concerning our attitude toward the new isthmian republic. Since these speeches were made, the President has transmitted to the House of Representatives a third instalment of papers relating to the recent revolution on the Isthmus of Panama. The papers comprise upwards of a hundred letters and telegrams interchanged by our State Department and Minister Beaupré at Bogota from March 18 to November 18, 1903. It appears that as early as September 10 apprehension was expressed at Bogota that the rejection of the Hay-Herran canal treaty would lead to the secession of the Department of Panama. The appointment of Señor Obaldia, whose separatist tendencies were well known, to be Governor of Panama was censured in the Colombian Senate by an almost unanimous vote. Señor Obaldia was said to have declared, before leaving the Colombian capital, that, should the canal treaty not be ratified, the Department of Panama would proclaim its independence, and would be right in doing so. On October 31 Mr. Beaupré reported that great anxiety had been caused at Bogota by rumors of secession in the departments of Panama and Cauca. As early as July 9 it became known to our minister at Bogota that the Colombian Senators were resolved to extort more money from the United States, and also to blackmail the French canal company. On the date named he wrote to Secretary Hay that, as he was informed, the treaty could not be ratified without amendments increasing the price to be paid to Colombia by the United States to fifteen million dollars, and requiring also the payment of ten million dollars by the Panama Canal Company.

In reply, Secretary Hay said that neither of the proposed amendments would stand any chance of acceptance by the United States Senate; he added, in a later despatch, that the President would not submit to our Senate any such amendment, but would treat a demand for it as tantamount to a decisive failure to conclude a satisfactory treaty with Colombia. As early as June 9 Mr. Hay had reminded the Colombian government, through our minister at Bogota, that the Hay-Herran treaty had been framed at the earnest and often-repeated request of that government, and that its terms conformed substantially to Colombia's proposals. He went on to warn the Colombian government that if it should reject or unduly delay a treaty concluded under such circumstances, action might be taken by the United States Congress in the winter of 1903-4 which every friend of Colombia would regret. This, evidently, was not a threat that the United States would recognize a republic of Panama, should one be proclaimed, for such recognition is an act that falls exclusively within the functions of our Executive Department. At the date named, June 9, moreover, there was as yet no talk of secession on the isthmus, because the inhabitants could not bring themselves to believe that a treaty which complied with the demands of the Colombian Executive would be definitely rejected. Mr. Hay's warning evidently referred to the possible, if not probable, contingency that in the event of the failure of the Hay-Herran treaty Congress would insist on the adoption of the Nicaraguan route for the canal. There is not a word in the correspondence that indicates an intent to encourage a revolution on the isthmus, the outbreak of which was a foregone conclusion should the Colombian Congress adjourn without taking any steps to negotiate a new canal treaty.

The Senate adjourned on January 4 without taking any action on the resolution advocated by Mr. Gorman that the Postmaster-General should be requested to send to the Senate the reports of Fourth Assistant Postmaster-General Bristow and of Messrs. Holmes Conrad and Charles J. Bonaparte, the special commissioners appointed by the President to investigate the postal scandals. The reports had been already sent to the House of Representatives, and had been printed by the House Post-office Committee, although on December 18 most of the Republican leaders had vehemently opposed a resolution to send for them. On the following day, when it became needful, owing to a miscount of votes, to pass the resolution again, Mr. Payne, the Republican floor leader, withdrew his previous objection, with the result that not a single vote was cast against the resolution. This was a triumph for Mr. Williams, the leader of the Democratic minority, for on the preceding day Mr. Payne had made an earnest speech against the resolution to send for the documents, declaring that to publish any more papers in the postal scandal would be to aid the indicted grafters to learn the government's case against them. Mr. Williams, for his part, pointed out that it had been charged that the investigation had not been carried far enough, and that it had been stopped short at a point where it seemed likely to implicate certain high-placed officials.

It will be remembered that the report of Messrs. Bonaparte and Conrad placed ex-Postmaster-General Smith in anything but an enviable light, but that he has hitherto escaped censure at the hands of the President. It is pretty evident that Mr. Smith is one of the persons against whom Mr. Williams's resolution is aimed. Now that the House of Representatives has undertaken an investigation, we may hope to see the postal frauds thoroughly probed. The Republican leaders, apparently, have made up their minds that the only safe course for them to pursue, in view of the coming Presidential campaign, is to profess a perfect willingness to let in all the illumination desired on the postal scandals, no matter who shall be hurt by the exposure. On the other hand, Mr. Williams, who is rapidly coming to be regarded as the most sagacious leader of the Democracy in Congress, believes that the inquiry now resolved upon will provide his party with a great deal of formidable campaign material. It is satisfactory to know that not only the postal scandals, but the frauds in the Land Office of the Interior Department, are to be made the subjects of merciless inquisition. On December 18, one John A. Benson, of San Francisco, was arrested on the charge of being the organizer of a land-fraud conspiracy extending over several Western States and Territories. He is accused of having bribed systematically United States officials in the West and in the District of Columbia. The information secured by the authorities is said to implicate many persons at present employed in the Department of the Interior at Washington, and numerous arrests are expected to follow that of the chief conspirator. It is alleged that Benson has defrauded the government out of no fewer than 100,000 acres of valuable public lands.

At the first annual banquet of the North Carolina Society of Baltimore, held on December 18, a sensible speech on the negro problem was made by Governor Charles B. Aycock, of the State named. He frankly recognized that in the South, or, at all events, in North Carolina, for which State he was qualified to speak, intelligent and fair-minded white men acknowledged that they were under obligation to "the man in black." They brought him here, and he has served them well. He has been patient, teachable, and faithful. Consequently they owe him gratitude, and, above all, justice. Yet, while his services should not be ignored, his color cannot be changed. An amalgamation of the white and black races will never be tolerated by the white people of North Carolina, and for that reason they

are opposed to a political and social equality that would tend insensibly toward amalgamation. Governor Aycock holds that in his State the negro problem has been solved. The negro has been taken out of politics, and foundations have been laid for the future development of both races side by side. Peace and prosperity have been assured. What is the North Carolina solution for which so much is claimed? It is, first, to disfranchise the negro so far as such disfranchisement is practicable under the Fifteenth Amendment. After that has been accomplished, to let him alone; to stop writing about him; stop talking about him; stop making him "the white man's burden"; stop scolding him. Let him, in Governor Aycock's words, "tote his own skillet"; let him learn that no man, no race, ever got anything worth having that was not self-earned; that character is the outcome of sacrifice, and worth the result of toil; that, whatever may be the negro's future, the present has in it for him nothing that is not the product of industry, thrift, obedience to law, and uprightness. Let the negro learn, finally, that there is to be unending separation of the races; that the two peoples may develop side by side to the utmost of their respective capacities; but that they can never intermingle.

The Republican national convention is to meet in Chicago. Where will the Democratic national convention be held? The question will be answered when the Democratic National Committee convenes in Washington on January 21 for the purpose of designating a place and a date for the convention. A vigorous effort will be made to bring the convention to New York, and there is no doubt that much may be said in behalf of that city. Madison Square Garden would be an admirable hall for the convention, and the hotel accommodations are, of course, unequalled on this side of the Atlantic. It is true that the selection of New York would impose long railway journeys on most of the delegates. Such an objection, however, is scarcely supported by precedent, because the Democratic national convention has been held half a dozen times in Baltimore and twice in Philadelphia. It has not been held in New York since 1868, when, it may be remembered, Western Democrats hoped to secure the nomination of Pendleton. There was, on the other hand, a plan among Eastern Democrats to nominate Chief-Justice Chase, who, it was supposed, would draw so largely from the Republican strength as to assure the defeat of Grant. As a matter of fact, the convention was stampeded for Horatio Seymour, and Western Democrats were convinced that the galleries had been packed in his favor, though he personally would never have countenanced such a proceeding. In view of that experience, however, it is not surprising that Democratic national committees have declined to call conventions in New York. If it should seem by January 21 that the Democrats have a chance of carrying Illinois, it might be expedient to hold the Democratic national convention in Chicago. No American political party, and least of all the Democracy, can, at the present juncture, afford to be suspected of having been influenced in the selection of candidates by organized capital, and such suspicion might attach to nominations made in New York city. The surviving friends of Blaine still believe that he would have been elected in 1884 had he not come to New York city on the eve of the contest at the ballot-box and been present at the dinner given to him by certain financial magnates. Mr. McKinley was too far-sighted to make a blunder of the kind.

What will be the effect upon Cuba of the reciprocity treaty which will become operative ten days after the proclamation of the exchange of ratifications? The question is not so easily answered as at first sight it may seem to be. Undoubtedly the reduction of the duties payable on Cuban sugars entering our market by twenty per cent. of the rates payable by sugars coming from other foreign countries would apply a powerful stimulus to the cane-sugar industry of the island. The Cubans are said to be alarmed, however, by the position taken by the British government that, under the operation of the "most-favored-nation" clause, British sugars will be admissible to our markets upon terms identical with those secured for the product of Cuba. If this were true of Great Britain, it would also be true of such producers of beet-root sugar as Germany, France, and Austria—all of which could avail themselves of the "most-favored-nation" clause, which figures in their treaties with the United States.

There is really no ground for Cuban misgivings on this subject. Our Federal government has held repeatedly that the existence of the "most-favored-nation" clause in our treaties with most, if not all, foreign countries does not prohibit us from granting special concessions to one or more of them in return for equivalent advantages. Mr. Olney, for instance, when Attorney-General in the second Cleveland administration, took the ground which had been previously occupied by Mr. Blaine—the ground, namely, that in international law treaties containing the "most-favored-nation" clause do not bar reciprocity treaties. We shall undoubtedly adhere to the view that reciprocity treaties are as independent of all other treaties as if the latter did not exist. It follows that, under the treaty just ratified with Cuba, the sugars of that island will practically monopolize our market, so far as imports are concerned. No beet-sugar producer can compete with her. Admitting, however, that the Cuban growers of cane sugar will derive all the profit that they expected from the reciprocity treaty, are we sure that, so far as the insular government is concerned, the profit will not be more than offset through the loss of customs revenue caused by the reciprocal reductions of duty on commodities imported from the United States? It is true that eventually, even without a change in the existing tariff, the purchasing power of the island being signally increased by the prosperity of the sugar industry, the revenue accruing from imports will not have been materially diminished. An interval, however, must elapse before this state of things is witnessed, and meanwhile the insular revenue, which is obtained mainly from customs, might undergo so marked a shrinkage as seriously to interfere with Cuba's prospect of securing a loan for the payment of the officers and soldiers engaged in the late revolution. To provide for this temporary deficit the tariff committee of the Cuban Senate is said to have provided an entirely new system of revenue, which, if accepted by the Cuban Congress, is expected to furnish an increase of over $2,000,000 in income above the loss due to the reciprocity treaty with the United States. It is to be hoped that this forecast will be justified by the event.

The commercial treaty between the United States and China having been ratified by the Senate on December 18, the text of the convention has been published. It is perfectly true, as Mr. Nelson of Minnesota and other Senators pointed out, that the treaty fails to give us all the concessions we desired. The only new treaty ports opened are Mukden, the old capital of Manchuria, and Antung, a small town on the northern or Manchurian bank of the Yalu River. Neither of these ports is accessible, except to vessels of light draught. The most valuable feature of the treaty is the fourth article, by which the Peking government agrees to abolish the so-called *likin*, or system of inland transit dues, by which the circulation of imported commodities in the interior has hitherto been obstructed to an intolerable extent. At a date to be agreed upon by the two countries, the *likin* and all other inland transit dues are to be abolished throughout the empire, and all the barriers and tax stations maintained for their collection are to be removed. In consideration of this concession the United States agree, provided all the other treaty powers concur, to pay at the port of entry on all goods imported from this country and intended for the interior of China a surtax of one and a half times the tariff import duties. That is to say, where the tariff duty has been five per cent. *ad valorem*, twelve and a half per cent. will now be paid. We notice also that the present export duty of seven and a half per cent. *ad valorem*, payable on Chinese commodities exported, is to be retained, but the whole of it must be collected at the port of exportation. If these fiscal reforms are carried out, there is no doubt that our traffic with the Middle Kingdom will be signally facilitated and materially increased. It remains to be seen, however, whether Chinese officials in the interior will obey the orders of the central government, and will not, under one disguise or another, perpetuate the inland transit dues. It must be remembered that these officials are inadequately paid, and have been accustomed from time immemorial to eke out their salaries from the proceeds of the *likin*, only a fraction of which found its way into the imperial treasury. Now, on the other hand, the Peking authorities are to get the whole of the surtax, which will be substituted for the inland transit dues. Under the circumstances many thousands of officials are likely to starve, unless they can find

a pretext for imposing duties of some kind on foreign goods transferred from ports of entry to the provinces.

There is no doubt that, in an important field of American manufacture, a serious crisis is threatened by the shortage in this year's cotton crop and the resultant high price of the staple. According to an official estimate, our crop aggregates this year only 9,962,039 bales, which is 634,420 bales below the average yield of the years that have intervened since 1897. To appreciate what the deficiency means, we should bear in mind that last year the cotton manufacturers of the world consumed by upwards of a million bales more than was produced in the same period. It follows that this year's shortage cannot be made good from left-over stock. We should have to go back to the civil war to find counterparts of the prices which raw cotton has lately attained on the cotton exchanges of the United States. The actual price of cotton is about double that attained two or three years ago. At that time the raw product was sold for as little as six cents a pound, whereas on Saturday, December 5, it was quoted at twelve and a half cents. Cotton yarn, which two or three years ago brought ten or eleven cents a pound, was sold on December 5 for twenty and twenty-one cents. Under the circumstances, it is impossible for American manufacturers to produce cotton goods at a profit. There seems to be no prospect of any considerable drop in prices, owing to the fact that European manufacturers are said to have bought nearly the whole of the American crop. The situation is one that cannot be coped with by a reduction of wages. Apparently the only course open to many, if not most, of the American cotton-mills is to shut down. A general closure of the factories would mean dreadful privation and hardship for the operatives, who number many hundreds of thousands. To say nothing of the employees in Philadelphia and the South, there are more than 175,000 operatives in the cotton-mills of New England alone. These men are the less able to endure a prolonged season of idleness during the coming winter because in New England their wages have recently been reduced, and in Philadelphia they earned nothing for a considerable period, having taken part in an ill-timed strike. Speculators on the New York Cotton Exchange are blamed for the inordinate price of the staple, but if it be true that most of our crop has been bought by European manufacturers, economical causes would suffice to account for the phenomenon.

If we may judge by the experience of recent years, there is no reason to expect that the volume of raw cotton produced in the United States can be signally and permanently increased. It follows that European consumers will soon find it indispensable to look elsewhere for supplies of the staple. Only a small fraction of the quantity needed can be secured in Egypt, notwithstanding the fact that the recent damming of the Nile at Assouan has considerably increased the area irrigable by the Lower Nile. It is calculated that the Nile improvements will increase Egypt's crop by about 100,000,000 pounds, but that is all. In the eastern Sudan, now governed from Khartum, there are said to be millions of acres capable of producing a fibre as good as the Egyptian. Many years, however, are likely to elapse before land in that region is turned to much account. In India, on the other hand, it is said to be possible, not only to improve the quality of the staple grown in that peninsula, but to augment the quantity by at least a million bales. In British West Africa, it is said that about 30,000 acres will shortly be planted with cotton. There is no doubt that cotton grows wild in many parts of the West-African coast, and that during our civil war large quantities of the staple were there produced and sold in England. The British West Indies were at one time large producers of the staple. Sea Island cotton is a native of Barbados, and at the close of the eighteenth century 70 per cent. of England's cotton-supply came from the Antilles. French statesmen and economists believe that, within the next quarter of a century, all of the cotton needed by France will be supplied by Tunis, Algeria, and Madagascar. The French colonies on the west coast of Africa are also regarded as promising fields for experiment, and money has been appropriated for cotton-raising in the French Sudan and in that part of the Niger Valley which is controlled by France. The Germans are also trying to grow cotton in their African colonies. For example, in Togoland, in Kamerun, and in the Kilwa district of German East Africa. Some of the staple grown in these colonies and shipped to Bremen is alleged to be equal to the Egyptian product.

The most impressive event of last week, from a non-political point of view, was the formal opening on December 19 of the Williamsburg cantilever bridge that spans the East River some distance to the north of the Brooklyn Bridge. Thus was forged the second link of steel between Manhattan Island and Long Island. The dimensions of the new structure are much more imposing than are those of its predecessor. The length of the entire bridge between terminals is 7200 feet, as against 5989 feet in the case of the Brooklyn Bridge. The central span (1600 feet) exceeds in length that of the Brooklyn Bridge by only five feet; it is the difference in the approaches that accounts for the difference in the respective total lengths of the two structures. The approaches of the new bridge are each 2800 feet long, whereas the approach to the Brooklyn Bridge at the Manhattan end is but 1562 feet, and that at the Brooklyn end only 971 feet. The total width of the new structure is 118 feet, or 33 feet more than that of the Brooklyn Bridge. The space will include two 20-foot roadways, unobstructed by trolley tracks; two compartments for trolleys, each containing double tracks; two promenades for foot-passengers, each $10\frac{1}{2}$ feet wide; two cycle paths, each 7 feet wide, and a central space containing double tracks for the elevated railroads. The transit capacity of the new bridge has been computed by engineers at 150,000,000 a year, which is 50 per cent. more than that of the Brooklyn Bridge. It is well known that two more bridges and a tunnel are to be constructed. When these are finished, there will be, for a time at least, adequate means of communication between the two boroughs, which, between them, will then contribute more than three millions to the aggregate population of New York city.

The German census report just published suggests certain grave problems in foreign politics, which the future will be called on to solve. During the year 1902 there were just over two million births in the Kaiser's realm, with slightly over a million deaths. This leaves an increase of nine hundred thousand for the year, the greatest increase ever recorded for the German Empire during a like period. It is worth calling attention to the fact that there has been no marked increase of births, but that there has been a considerable diminution of the death-rate. This points to better sanitation, more wholesome food, wiser care of children, more general distribution of wealth, and is a far wholesomer symptom than a very high birth-rate accompanied by an abnormally high mortality, such as, for example, exists in the domains of Germany's great eastern neighbor, Russia. It is the survival of children, and not the mere birth of children, most of whom die in infancy, that is really to be desired, as the basis of a sound future population and industrial prosperity. Within ten years Germany has reduced the death-rate from twenty-two and a half per thousand per year to twenty and a half—one of the most noteworthy triumphs of wiser living which the modern world has had to record. Now for the political aspect of the question. An increase of about a million a year, which will be added to cumulatively year by year, means that within a generation Germany will have a population of about a hundred millions, perhaps the most thoughtful and best-instructed nation in the world, and one too which adds vigorous and aggressive practice to sound and penetrating theory. The Germany of Goethe and Kant and Wagner is also the Germany of fleets and armies, of scientific and industrial triumph and skill. Recent developments show that the Social Democrats are a great and growing force, the most consistent and best-organized political party in the empire. At the same time it becomes evident that their success brings moderate counsels, and they are rapidly becoming radicals of the English type rather than revolutionary socialists of the school of Marx, Lasalle, Herzen, and Bakunin. We may look forward to a more limited monarchy in Germany, something after the English model, as wisely exemplified by King Edward VII. But the added forty or fifty million Germans will be hard put to it if they are to stay at home in the fatherland. All signs point to greater extension abroad, and South America seems the one field open for settlement. Here then is the great problem for future statesmen on both sides of the Atlantic.

The great forensic duel being waged between the Duke of Devonshire and Mr. Chamberlain suggests a reflection. The present political situation has again and again been said to demonstrate the political poverty and incapacity of the Liberals; it might, with greater justice, be held to show the weakness and decline of the old-fashioned Conservatives. For who is the champion of Unionist imperialism? A seceding Liberal, a former colleague of Mr. Gladstone's. And who not only among the Unionists, but in the whole political field, is his weightiest and most effective opponent? Again, a seceding Liberal, another former colleague of Mr. Gladstone's. The Duke of Devonshire has taken very strong ground, and made a decisive and irrevocable political move, in advising Unionists not to vote for any candidate who specifically supports Mr. Chamberlain's plans; it is not certain whether his Grace will go so far as to advise the nomination of an anti-Chamberlain Unionist, and thus bring about the probable election of a Liberal. Nor is it certain that the Duke would go so far as to advise Unionists to withhold their support from an open adherent of Mr. Balfour's milk-and-water protection, which is merely a diluted version of the Chamberlain plan. But it is quite certain that these two greatest of Liberal-Unionists will between them rend the Conservative party in twain, as they rent in twain the Liberal following of Mr. Gladstone in years gone by. Speaking at Leeds, Mr. Chamberlain taunted his former friend and ally with the "pontifical" character of his "encyclical letter," in which the Duke advised Conservatives not to vote for Mr. Chamberlain's supporters; and, in a certain sense, this taunt expressed the truth. For, beyond all men now in English politics, the Duke of Devonshire embodies the principle of authority. The proposed non-political committee, promised by Mr. Chamberlain in his Leeds oration, will be awaited with interest; very much will depend on the names of its members and their genuinely representative character. One reflection we may make, drawn from our experience in this country: a committee on tariff should include not only manufacturers and exporters, but members of the great consuming public, whose interests and rights are in such danger of being overlooked.

Mr. J. W. Davidson, of the United States consular service, has recorded his impressions of Manchuria, and of Russia's position there, formed during a recent tour through the less generally known regions of the three Manchurian provinces. He makes quite clear, what has for some time been growing more apparent, that the appointment of Admiral Alexeiff as Viceroy marks a change, amounting practically to a reversal of Russia's previous policy and intentions with regard to annexation or evacuation. It becomes evident that there have been two discordant opinions among the Tsar's chief advisers; and that, while the party of the army and commerce, headed by General Kuropatkin and Minister Witté, favored evacuation of everything but the conceded railroad strip and the leased regions about Port Arthur, the naval party has favored from the outset, and has now to some extent won over the Russian Emperor to, the policy of absorption. The appointment of Admiral Alexeiff marks the victory of the naval party in the Tsar's council; the promotion of Minister Witté, involving his departure from the Finance Ministry and his consequent relinquishment of the concerns of the Siberian and Manchurian railroads, and the reported transfer of General Kuropatkin from the War Ministry to the governorship of the Caucasus, to some extent indicate the supersession of the policy of evacuation. China's refusal to agree to certain conditions regarding the departure of Russian troops from Mukden and the central province of Manchuria offered the pretext needed by Russian policy, and we may expect a more openly avowed and more thorough absorption of Manchuria to follow. The naval party in Russia would like to extend Russian influence over Korea, since the peninsula cuts the Russian fleet in two, but this is obviously incompatible with the interests and policy of Japan.

We often hear it said that "the States" have no western frontier any longer, that our country is all settled now, and that wild life has passed away and existence grown humdrum. There was more talk of this sort before the gospel of the strenuous life had taught us all that adventure is independent of environment, but there is a good deal of it still. There is nothing in it. We don't wear coon-skin caps nowadays, but a tumultuous life was never obtainable in this country at less trouble than now. Any one who finds New York inadequately violent and emotional has only to hie himself to Chicago. Transportation thither is luxurious and the trains are many and swift. To the adventurer, once arrived, anything may happen—or so, at least, we infer from the stories that the newspapers bring us. It seems to be a toss-up whether the traveller will ride to his hotel, or walk and carry his trunk on his back; whether his hotel will be warmed, or denied coal; whether he will get coffee and boiled eggs for breakfast, or go hungry; whether it will be safe, risky, or extra hazardous to walk in the streets. Judging from the newspaper reports, the conditions of human existence in Chicago—and we gladly admit that we have made no recent personal test of them—are as fruitful of adventure as the most unfettered aspirant could desire. Life seems to be lived there in one of three ways: by stealth, by violence, or by permission of organized labor.

The latest Chicago story—latest at this writing—began to come over the wires on December 18. It tells of sixteen hundred livery-drivers being on a strike, and of the interference of the strikers with the burial of the dead. The livery and undertaking industries are closely allied. The strikers took charge of both. For example, the funeral of Elias Watkins, banker, was appointed for December 18. No hearse could come to it: the strikers forbade the use of hearses during the strike. No hired carriages could come out. When friends of the mourning family offered to send their private carriages the strikers' pickets sent word (so the despatches say) that private carriages would be stopped by force. It was proposed to have the funeral heavily guarded by the police, but the mourning relatives declined that attention. The pall-bearers—Marshall Field, Lambert Tree, Cyrus McCormick, and others—being warned not to go to the cemetery, did not go there, but the undertaker and his helpers took the body to the cemetery in a wagon and buried it. In this fashion funerals are being conducted at this writing in Chicago, and have been for four days.

We have serious and very costly labor embarrassments here in New York, but they are not brought home to us in these personal, intimate ways. Work is stopped on buildings here, our subway is delayed, non-union men are clubbed or beaten occasionally, a great many workers who want extremely to earn wages and support their families are constrained at times to stay idle because some strike has been called, but the ordinary course of life runs along without startling hitches. We suffered some distress for want of coal last winter, but that was a matter beyond control or cure by our local authorities. There was a strike against the pie trust the other day, but mastication, deglutition, and digestion went on, and private families were not forbidden to bake private pies in their private kitchens. Our branch of the musicians' union has been making curious demands and issuing edicts that make trouble for the theatre managers, but music in back parlors is still free, and children may practise at the piano without a permit. The majority of us eat, drink, and sleep, and are born and die without knowing positively to which union we are indebted for permission to enjoy each of these privileges. And when we have died our friends are as yet able to bury us without asking leave of any one except the Board of Health. Certainly we are not yet under discipline as strict as binds Chicago.

Relief, however, is promised for Chicago. The geologists say that in old times the Great Lakes used to discharge their surplus waters through the Illinois River into the Gulf of Mexico, but geological changes caused the water to flow eastward and make its way through the St. Lawrence. But now, it seems, the lands in the Northwest are rising, and it is only a question of time (geological time) when the flow of water eastward will stop and the southward flow will begin again. And Chicago stands at the precise point where it will begin, and when it comes everybody in Chicago will be so busy minding his own business, and keeping ducks, that orderly folks will have a chance to do as they please again. This is reassuring, but geological time moves slowly.

The Debate in the Senate on the Panama Affair

THERE seems to be current some confusion of mind regarding the scope and purport of the debate which took place in the United States Senate during the week ending December 19, with reference to the revolution at Panama and the attitude of our government thereto. It will have been noted that no Republican Senators took part in the discussion, with the exception of Senator Hoar and Senator Foraker, and that the latter spoke but briefly. The truth, of course, is that the canal treaty concluded by our State Department with the Republic of Panama was not at the time before the Senate for ratification, and if it had been, that body's duty would have been to discuss it in executive session. Under the circumstances, almost all of the Republican Senators held—and were justified by precedent in holding—that a public discussion of the questions involved in the Panama affair was premature and improper. The pretext for considering those questions in open session before the treaty was reported was a resolution introduced by Mr. Hoar calling upon the President to furnish all additional papers likely to throw light on the relation of our government to the secession of the Department of Panama from Colombia. Was the isthmus revolution a spontaneous movement, or was it instigated by the United States? That is the crux of the whole matter. Mr. Hoar himself intimated that he should lay no stress on the quickness with which the independence of the Republic of Panama was acknowledged, provided our government could not be charged with having fomented the uprising against Colombian authority. He would not pretend to assert, he said, that the gestation period of commonwealths should be of a uniform length. Each case must be judged on its own merits, and with reference to the special circumstances which surround it. Had Mr. Hoar gone on to say that, without doubt, his resolution would be speedily passed by the Senate, and be met with an equally prompt response on the part of the Executive, he would have evinced the discretion that is expected from a veteran Senator. He had no right to assume that the President would not comply with the request for additional documents; as a matter of fact, while the debate on the resolution in the Senate was still pending, a large quantity of papers was sent to the House of Representatives. Strange to say, Mr. Hoar not only declined to wait until his request for supplementary papers had been granted, but he seemed disposed to condemn our Federal Executive in advance, for he insinuated that the facts would not justify President Roosevelt and Secretary Hay in asserting, as they have asserted categorically, that they were entirely blameless as regards the charge of promoting the Panama revolution. A suspension of judgment would have been only decent, one would think, on the part of a political opponent, and Mr. Hoar would resent the imputation of disloyalty to the Republican party. Mr. Hoar having set the example of a demonstration against the administration's canal policy—a demonstration that would be meaningless if it did not imply a suspicion that the President and the Secretary of State had been disingenuous in their previous communications to Congress—it is not surprising that Democratic Senators should have pursued a similar course. Not only did Mr. Gorman, Mr. Pettus, and Mr. Daniel follow in Mr. Hoar's wake, and take for granted that there had been something wrong in the action of our government on the isthmus, but the first-named Senator has undertaken to bind all his party colleagues by a caucus to oppose the ratification of the Panama Canal treaty. There are thirty-three Democratic Senators, and it is obvious that only thirty-one would be needed to defeat the treaty. We do not believe, however, that thirty-one Democratic Senators will permit themselves to be constrained by a caucus to reject the treaty negotiated with the Republic of Panama. Among those who have been counted on to vote for the treaty are Senator Cockrell of Missouri, Senator Newlands of Nevada, both the Senators from Florida, and Senator McEnery of Louisiana. It is hard to see how any Senator from a Gulf State could reconcile any other course with his duty to his constituents.

It will be observed that Mr. Hoar has virtually admitted that he himself would not oppose the treaty should it be made clear to him that our government was not implicated in the furtherance of a rebellion against a friendly state. He does not deny that the Department of Panama had ample cause for secession, nor, indeed, is a denial possible. As we have formerly pointed out, the inhabitants of the isthmus have had, during the last seventy-five years, much better reasons for revolting against the central government of New Granada or Colombia than they had for revolting against Spain: and the wrongs to which they have been subjected are incomparably greater than those which provoked our own forefathers to declare their independence in 1776. Of the large sums of money received by Bogota politicians from the Panama Railroad, and for the canal franchise granted to the Lesseps Company, not a penny has been expended on the isthmus, and the same thing may be said of the harbor dues and other taxes levied at Panama and Colon. During the last seventeen years the treatment of the isthmian population has been particularly galling. Since a pretended constitution was proclaimed by the usurper Nuñez in 1886, the Department of Panama, alone among all the departments that comprise the Republic of Colombia, has been entirely deprived of local autonomy. The officials of the department, instead of being elected by their fellow citizens, have been appointed by the *de facto* government at Bogota. Such an oppressive discrimination afforded of itself sufficient provocation to revolution.

That our State Department had reason to expect a revolution at Panama is unquestionably true. That the inhabitants of the isthmus would for the third time proclaim their independence of Colombia should the Hay-Herran treaty be definitely rejected at Bogota had been matter of common knowledge for several months. Early in the summer delegates from the Department of Panama to the Colombian Congress had announced publicly that it would be impossible to prevent their fellow citizens on the isthmus from establishing a separate republic if their interests should be sacrificed by an indefinite postponement of the canal project. No encouragement on our part was needed, and none was given, if we may credit the explicit statements of President Roosevelt and of Secretary Hay. As Mr. Clark Howell, the Democratic National Committeeman from Georgia, has pointed out in the Atlanta *Constitution*, there is no proof of any connivance on the part of our government with rebellion on the isthmus, and, consequently, it cannot be pretended that our national honor has been impaired by arranging with the new republic for a suitable canal treaty. Southern Senators, as Mr. Howell tells them, cannot escape the conviction, if they reflect upon the situation now presented on the isthmus, that a vote from any one of them adverse to the canal treaty will be a vote against the vital interests and urgent demands of the industrial and commercial sections of the Southern States.

It may and will be contended, on behalf of the President, that, under the peculiar circumstances of the case, it was his duty to recognize the new republic of Panama, and to promise to shield it against aggression. Not only by the fulfilment of such a promise would he discharge the function of maintaining peace and order on the isthmus, which we have performed for nearly sixty years, but he would avert the perpetration of a grievous wrong on those French citizens who owned the franchise and plant of the Lesseps Canal Company. The recently published despatches of Minister Beaupré to Secretary Hay confirm the report which had reached us from other sources, that the Colombian Congress had a sinister motive for adjourning *sine die* at the end of October, without even pretending to indicate the terms of a substitute for the Hay-Herran treaty. The purpose was to defer action of any kind in the premises until 1904, at a certain date in which year the first extension of the canal franchise, whose validity is undisputed, would expire. A second extension of the franchise, however, from 1904 to 1910, was granted by President Marroquin in return for the sum of one million dollars in gold, which was duly paid. On the pretext that the second extension is technically null and void, the leaders of the Bogota Congress planned to declare next year the property of the French company forfeited to Colombia, and to demand for themselves the whole of the forty million dollars, the amount of money which the President was authorized by the Spooner act to pay to the French owners of the canal franchise. Had the iniquitous plot been carried out, it is certain that reprisals would have been attempted by the French government, and that a French expeditionary corps would have been sent to the isthmus. We should then have found ourselves involved in a grave dilemma, between our unwillingness to connive at a flagrant robbery and our wish to uphold the Monroe Doctrine. There was but one way of avoiding such an ominous complication, and that was to pursue the course which our State Department adopted.

The Democratic Senators who seem inclined to oppose the ratification of the new canal treaty omit to explain what they would have us do thereafter. Would they have us carry such a refusal to its logical results? Would they have us recall our recognition of the independence of the Panama republic, after having led many European and many Latin-American states to follow our example? Would they have us retract our promise to shield from invasion the infant commonwealth, and leave the isthmus to be drenched in blood? Would they have us reject the opportunity to cut an interoceanic canal which we have sought in vain for fifty years, and which, at last, is ready to our hand? Would it not be well for Democratic Senators to heed the advice of Mr. John S. Williams, the leader of the minority in the House of Representatives, who deems it to be the duty of his party to recognize accomplished facts?

Even if Democratic Senators could manage to defeat the new canal treaty by a vote or two—which we do not believe—we have no fear that the present administration would hold itself bound to follow such a performance to the logical and deplorable conclusion that we have named. The Republic of Panama will be protected, and a way will be found of completing the canal. The Republicans control both Houses of Congress, and, by a majority of one in each House, they could pass a bill or resolution authorizing the President to buy the canal franchise and proceed to complete the waterway, leaving the question of sovereignty in abeyance. Nor would this be the only practicable mode of solving the problem. Should the inhabitants of the isthmus find that President Roosevelt is unable for the moment to secure a ratification of the treaty,

they may demand admission to our Union, either as a State or as a Territory. It will be remembered that the annexation of Texas was brought about by the Democrats through a joint resolution of Congress, after the treaty negotiated to that end had been defeated by the Whigs in the Senate.

Is Our Good-will Worth Less to England than Canada's?

A LONG letter, originally addressed by Mr. Andrew Carnegie to the editor of the London *Times*, has been reprinted in a pamphlet. The writer of this letter plants himself on the ground taken by this journal some months ago, when Mr. Chamberlain's project of a preferential tariff was first launched. We then pointed out that while, nominally, the proposed tariff would erect a wall against all foreign countries indistinguishably, and, nominally, would give an equal preference to all British colonies, yet, practically, so far as the importation of wheat and flour should be concerned, Canada would be the principal beneficiary, and the United States the principal sufferer, by the suggested change. In other words, the outcome of the proposed preferential tariff, should it answer the purpose of its framer, would be to make the Canadian Dominion a successful rival of the United States, considered as a purveyor of breadstuffs to the United Kingdom. We may be asked on what possible grounds the United States, which long have maintained a protectionist policy, can object to the adoption of a similar programme by a foreign country. We answer that American tariffs have not discriminated against a particular foreign country. All foreign purveyors of a particular product are subjected to the same customs duty. The only preferences that we have given have been accorded under reciprocity treaties in return for equivalent concessions. Germany and France have framed their tariffs on protectionist principles, but they have not discriminated against the United States. Such a discrimination would justly be regarded as a provocation, and would lead to tariff reprisals which almost certainly would culminate in war. Such is the lesson of our experience during the first quarter of the nineteenth century. First came, on the part of England, a practical discrimination against the United States. Reprisals on our part followed in the form of an embargo. There was only one step left to take, namely, war, and we took it in 1812. Nor is there much doubt in the minds of those who contrast the state of American feeling that countenanced the Jay Treaty with the popular sentiment that demanded the war of 1812, that, but for the fiscal legislation levelled by England against this country in the first twelve years of the nineteenth century, the schism in the English-speaking world might have been healed a hundred years ago. It is nearly healed at the present moment; but if Mr. Chamberlain carries out his project the wound will be reopened, and may never again be closed.

At the time when Mr. Carnegie's letter was written he was residing in Scotland. But he was not by any means the only man on that side of the Atlantic to recognize the danger of which he warned the *Times*, when he said that a discrimination in a British tariff between the products of the United States and similar commodities coming from Canada would not tend to the reunion of Britain and America, but, on the contrary, would chill the feelings of affection which have germinated satisfactorily during the last few years. Almost at the outset of the discussion cause' by Mr. Chamberlain's proposal, Lord Rosebery inquired, "Against what country will this tariff be directed primarily?" He answered, "The United States, which sends us by far the largest portion of our foodstuffs." He added that he "would look with the greatest doubt and suspicion on any such proposition as that." To much the same effect spoke the London *Standard*, the organ of the most sober-minded and far-sighted men in the Conservative party, when it said in its editorial columns: "Nor can we see how it [a preferential tariff] can operate without causing friction with foreign countries, and fostering international differences and jealousies. Any preferential tax which protected Canada would be aimed directly at the United States. How mischievous it would be for us to purchase a temporary benefit at the cost of estranging the friendship and the good-will of the great English-speaking republic!" Those who imagine that a substantial preference could be given to Canada as against the United States without provoking resentment and retaliation on our part have forgotten the lessons of history. As Mr. Carnegie reminds us, there is nothing new in the proposal to give Canada a preference as against the United States. Such a preference was given in the first quarter of the nineteenth century. We then showed what we thought of it by imposing in 1825 countervailing taxes upon British ships entering our ports. Britain retaliated, and the result was an industrial war, in which the American republic gained a victory. From that time to this the foodstuffs of the United States and Canada have entered the British market on an absolutely equal footing. Mr. Chamberlain had a prototype in Mr. Huskisson, who at first resisted the claim of the United States to enter the British market on an equal footing with the British colonies, pronouncing it an "unheard-of pretension"; but, within a twelvemonth, he announced in a memorable speech his conversion to the policy which has ever since prevailed. According to a contemporary report of his speech: "Mr. Huskisson contended that the period had now arrived when it would be impossible for Great Britain to continue any longer the system of restrictive duties without inducing retaliation on the part of foreign countries, the effect of which would be most disastrous to our commercial interests." In his pamphlet Mr. Carnegie submits that the United States, having in their hour of weakness demanded and secured equality of treatment with the British colonies in the British market, are extremely unlikely to acquiesce in the withholding of such treatment at the present day.

We have quoted the statement of the London *Standard* that it would be mischievous for England to purchase, by a preference to Canada, a temporary benefit at the cost of estranging the good-will of the colossal American republic. It is doubtful whether the *Standard* itself realized how temporary the benefit would be. Without the good-will of the United States, the grain of Canada would never reach the Atlantic ports for shipment. It is obvious that to interrupt the railway communication between the seaboard and the Northwest provinces which constitute the granary of the Dominion would be child's play for the military power of the United States. It would be superfluous, however, for us to commit an act of war. We need not resort to overt hostility in order to cut off England from connection with her principal grain-growing colony during a large part of every year—that part, moreover, during which the wheat crop is moved. Here, again, Mr. Carnegie shows himself thoroughly alive to all the possibilities of the situation. As he points out in his pamphlet, a word from the President might cancel the privilege now generously granted to Canada, of reaching ice-free American ports through American territory, with all her foreign business, exports and imports, free of duty, for five months in the year, when her own ports are ice-bound. As a matter of fact, the privilege is used all the year round. In 1902 the Canadian Dominion shipped through American ports 28,546,000 bushels of breadstuffs. The number of bushels shipped in the twelvemonth named through Canadian ports we are unable to state, but, as the total value of Canadian foodstuffs exported to Britain in 1902 was only $22,471,000, it is evident that a large portion of her shipments of breadstuffs reached Britain over American territory and through American ports. The simple withdrawal of this bonding privilege, which American public opinion would unquestionably demand, would suffice to convince the British people that in offering a preference to Canadian breadstuffs they had committed an act of folly. Negotiations for a restoration of the bonding privilege would soon begin, and the favor so foolishly forfeited would ultimately be regained. The bitterness, however, engendered between the two countries by discrimination and reprisal might retard for years a revival of the present cordial relations.

Mr. Carnegie is quite right in saying that if Britain is determined to revert to a protectionist policy, the wisest thing that she could do would be, as regards foodstuffs, to offer a preference, not only to her colonies, but also to the United States, as being, although independent, by the tremendous ties of language and institutions, her daughter state. Such a preference, unquestionably, would rivet the two branches of the English-speaking race together in an unbreakable though unwritten alliance. If, under such circumstances, the Continental enemies of England should attempt to declare food contraband of war, they would have not only the British, but the American, navy to reckon with. Never would we suffer interference with our right to discharge the function of food-purveyor to Great Britain.

We can have no doubt about the conclusion to which sensible Englishmen will arrive when they contrast the benefit derivable from the good-will of the United States with any conceivable advantage that might accrue from Canadian loyalty.

A Civil-War Story Upset

AT the stated meeting of the Massachusetts Historical Society last October, Mr. Charles Francis Adams, the president of the society, read a paper of curious interest to persons concerned with historical research. Quoting a remark of the late Edward L. Pierce, upon the unreliable nature of the reminiscences of historical occurrences that get into print, Mr. Adams rehearsed a story told by Mr. Abram S. Hewitt, at the monthly meeting of the Chamber of Commerce of New York, on February 7, 1901. Queen Victoria had just died, and resolutions of eulogy and regret were adopted at the meeting. Mr. Hewitt, observing that he had grown very reluctant to make an address on a public occasion (he was then seventy-eight years old), related that, being sent in 1862 on a confidential mission to England and France, he had intimate relations with Minister C. F. Adams in London, and with Judge Dayton, who was then our minister to France. One afternoon in Paris

Judge Dayton asked him to go to London and carry word to Mr. Adams that information had reached Judge Dayton that Napoleon III. had proposed to the British government to recognize the Confederacy at once. He carried this news to Mr. Adams, who had already some intimation of it. Mr. Adams saw Lord John Russell, and asked him directly if the news was true. Receiving an evasive answer, he asked an audience with the Queen. Lord John Russell said it was not usual for ministers to have an audience with the Queen; that all communications must pass through the Foreign Office. Mr. Adams said he would go to Windsor that day and ask the Queen to see him. He did go, and did see the Queen in the presence of Prince Albert; told her what he had heard, and appealed to her to prevent so great a wrong. "He said," related Mr. Hewitt, "that the Queen, in the most gracious manner, replied, 'Mr. Adams, give yourself no concern. My government will not recognize the Confederacy.'"

When Mr. C. F. Adams, son of the minister, read this story he was much interested and much surprised, for he had never heard it before. He wrote to Mr. Hewitt and asked for the approximate date of the occurrences narrated, in order that the story might be verified by reference to Mr. Adams's diary and papers. Mr. Hewitt replied that the language he had quoted was entirely from memory; that his impression was that the events mentioned took place as early as July—about the time, he thought, when the Confederate cruisers were on the stocks at Birkenhead, since Mr. Adams asked him to examine these vessels, and he did so, and one of them was the *Alabama*, though she may not have had a name at the time. But Mr. Adams's diary ought to fix the date. Mr. Hewitt thought, and he asked to be informed of the results of his correspondent's investigation.

But Mr. C. F. Adams was not able to find in his father's diary or papers any hint of such an interview as Mr. Hewitt described. Prince Albert died in December, 1861, so *he* could not have been present at an interview in 1862. Mr. Hewitt seems not to have been in London in 1861, and besides, the few days in that year when such an interview was possible are fully accounted for in Mr. Adams's diary, and no such incident is mentioned. For a long time after Prince Albert's death the Queen lived in the closest seclusion. Mr. Adams seems never to have been at Windsor during his whole mission, except on the occasion of the marriage of the Prince of Wales, in March, 1863. Mr. C. F. Adams never informed Mr. Hewitt of the result of his researches, because he came to the conclusion that Mr. Hewitt's memory had played him a trick, and because he thought it would be mortifying to Mr. Hewitt to learn that a story which was evidently so real to him could not be substantiated. He cannot find any basis of fact at all for the story of the Windsor interview. He knows that Mr. Hewitt was in England and saw more or less of Minister Adams, and was concerned with efforts to detain the Confederate cruisers, and he does not question that Mr. Hewitt at one time brought news from Mr. Dayton to Mr. Adams; but as for the Windsor incident, he is forced to conclude that Mr. Hewitt imagined it. Moreover, he cannot find any definite historical basis for the accepted tradition that "somehow, and in some way, the cause of the Union was, in its hour of trial, dear to Queen Victoria, and that we of the North were then under deep and peculiar obligation to her."

The case is interesting, and it is to be hoped that further light may be thrown upon it. Confidence in the accuracy of Mr. Hewitt's reminiscence is pretty thoroughly upset by Mr. C. F. Adams's paper. Mr. Hewitt spoke from hearsay. He was not present at the supposed interview. It seems likely that Mr. Adams was not present, either, and that there was no such interview as Mr. Hewitt described. But it is not impossible, however unlikely, that the Queen expressed such sentiments as Mr. Hewitt asserted, and that they were brought to Mr. Adams's knowledge by some third person.

A Flying-Machine that Flies

Stories of flying-machines that fly are to be received with exceeding caution. Stories of flying-machines that don't fly may always be accepted at their face value. That is because flying-machines abound, and experiments with them are constantly going on, and the rule has been that they don't fly unless they have balloon attachments.

What looks like a veritable exception to that rule was reported in the newspapers of December 19. The despatches published on the morning of that day recorded that a flying-machine made by Wilbur and Orville Wright, of Dayton, Ohio, was tried at Kitty Hawk, North Carolina, on December 18, and flew three miles against the wind, descending gracefully on the spot selected by Wilbur Wright, the navigator aboard. This machine had no balloon, but was compounded of a big box-kite and a small gasolene engine. It was started from a platform on a high sand-hill, and ran down an incline, at the bottom of which, instead of butting disastrously into the earth, as usually happens, it gradually rose until it got up sixty feet, and, driven by its engine, maintained an even speed of eight miles an hour in the face of a strong wind.

That is the story as the newspapers tell it, and there is no present ground for distrusting its accuracy. The Wright brothers, sons of an Ohio clergyman, are in business in Dayton, and have been interested in aeronautics since the death of Lilienthal, by a fall from a flying-machine, in 1896. They have followed Lilienthal's method of making practice accompany theory step by step, holding that the navigator, before he applies power, must learn to balance himself in his machine as he would on a bicycle. Their practical experiments began in 1900, and starting with the knowledge gained by Lilienthal, and getting some good ideas from Mr. Octave Chanute, of Chicago, they seem to have worked to excellent purpose. Their machine is described as a framework of light timbers thirty feet long, five broad, and five deep, covered with canvas, equipped with a rudder in the centre, and carrying the navigator's car and a gasolene engine which drives two six-bladed propellers, one of which drives the car upward, the other forward.

One of their reported innovations consists of putting their horizontal rudder in front instead of behind. The facts about their experiment need to be further expounded and confirmed, but, so far as known, they are of lively interest.

The Price of Culture

The venerable maxim that "there is no royal road to learning" urgently needs restatement in a form suited to republican conditions. When the proverb was coined, privileges were for kings; to-day they are for millionaires. It was then necessary to lay stress on the fact that there is no common measure of culture and rank; it must now be emphasized that culture cannot be expressed in terms of dollars.

A hundred years ago Oxford admitted members of the nobility to her degrees without compelling them to undergo the tests imposed on others. That particular relic of aristocratic advantage has long since been swept away; but the spirit of it is revived whenever something that is not the result of intellectual effort is accepted as an equivalent for actual scholarship. "Thy silver perish with thee," said Peter to Simon Magus, "because thou hast thought to obtain the gift of God with money." It is an intellectual simony which thinks it possible to acquire by money or by knowledge of affairs that particular asset which can only be gained by the laborious application of years to a special task. One may not do everything. Each man must make his choice. If he prefers the quiet pursuits of a student, he must not complain if he finds that his very name is unknown on Wall Street. If his chief ambition is for a career of business success, he must not expect to be able to exchange his reputation at will for academic distinction.

No one, then, who has become a millionaire has the right to suppose that his business success will be counted to him, or to his children, for culture. The command of wealth, it is true, gives access to certain helpful opportunities of tuition, books, etc., as well as preventing the strain suffered by those who have to earn their bread while they study. But the alphabet and the multiplication table are the same on Fifth Avenue as on the East Side, and every successive step up the ladder of learning must be taken by an individual struggle against native indolence, irrespective of social position.

That the prices of commercial and intellectual success are not interchangeable must be learned by communities also. Chicago cannot transform herself into Athens at a moment's notice. No city, however strenuous, can hustle herself into the position of an intellectual centre. The very word "culture" suggests a long and gradual process, for plants do not spring up into maturity in a night. It takes time to diffuse throughout a community those aptitudes and acquirements without which it cannot achieve real distinction in things of the mind. For the truly cultivated man is not one who has simply made his memory an encyclopædic storehouse, but one who has formed the intellectual habit. And this is not the result of sudden spurts, but the fruit of discipline and patience.

To Regulate Marriages

Iowa has a Society for the Suppression of Disease and Degeneracy which is about to invite the Legislature to make the State marriage law provide that applicants for a license to marry shall bring with them the certificate of a reputable physician that they have been under instruction regarding the duties pertaining to the marriage relation. A like bill was offered to the same Legislature two years ago, but never came to a vote. Reputable physicians have not existed in numbers worth considering more than a few centuries. It is one of the marvels of nature that creation was able to sustain itself so long without them.

WILLIAM I. BUCHANAN, APPOINTED MINISTER PLENIPOTENTIARY AND ENVOY EXTRAORDINARY TO THE REPUBLIC OF PANAMA

President Roosevelt has appointed Mr. William I. Buchanan, formerly United States Minister to Argentina, to the important post of minister to the new Republic of Panama. Mr. Buchanan is a native of Ohio. He was appointed minister to Argentina by President Cleveland, and was retained in that position by Mr. McKinley. He represented his State as Agricultural Commissioner at the Chicago World's Fair, and was also Director-General of the Pan-American Exposition. In order to insure Mr. Buchanan's presence on the isthmus at the earliest possible moment, the State Department has sent him to Panama on a special commission as envoy extraordinary, pending his final confirmation by the Senate after the holiday recess

An Opportunity for the Stage

THE decay of satire has often been a real or imaginary grief with critics who thought themselves safe from it. They have lamented that it was no longer with us to scourge vice, and mock folly, and correct manners, and in differing terms they have asked it to come back. Whether they would really have liked it if they had got it again is another matter. We ourselves doubt whether they would, though that is a point we do not care to insist upon. Our present business is rather to inquire whether we have not satire still, and whether we have not always had it in one form or other. Any representation of life, one might say, was a satire, man being mostly such an ass that whenever he was truly portrayed he was satirized. By the photographic spirit of the moderner novel he has been caught more exactly than ever before, and therefore every up-to-date fiction has been a satire of much closer and finer texture than the old satires that called themselves so. It is much severer to divine than to burlesque human nature, and man, fainting under the Roentgen rays of the realistic novelist might very well cry out for the lash of the satirist, as a relief from his intolerable anguish. But if all this is paltering with a very simple fact we are quite willing, and even glad, to grant that what we used to know as the satire has gone out. It has been gone so long from our own small American order of things that we made no merit of noting, the other week when we spoke of Mr. Ford's pleasing extravaganza of "The Brazen Calf," that it was almost the only satire, in the technical sense, which had appeared since "The Potiphar Papers."

The satire in verse, which was once so admired a phase of the derisive mask, has quite vanished. It is not entirely because we have no longer any Dryden, any Pope, or any Byron, that we have longer any "MacFlecknoes," or "Dunciads," or "English Bards and Scotch Reviewers," because something of the sort might have been furnished us, if it was wanted, by the Churchills and Giffords whom we have mute and inglorious with us still. It is also because people are too civilized to enjoy nasty and cruel personalities, and hate verse, any way, that we do not have satires in heroic couplets in which the satirist's victim was pierced with poisoned arrows, and tortured with points of burning sticks, and then scalped and crowned with live coals from the stake to which he was tied. We now leave such diversions, the aboriginal Americans having been put out of business, to the leading citizens in those parts of the country where they are eradicating the New Crime. We neither want to take part in such scenes, nor to look on at them. All efforts to revive this sport have failed, and when we have a satire in prose, like "The Brazen Calf," it is so mercifully amusing that it imparts a pleasure which is quite benign. So far from asking us to sympathize in an infliction of pain, it invites us to pity the follies it mocks, and in the end leaves us wishing to bind up their wounds. Even so long ago as when "The Potiphar Papers" were written, the author had no model in mind harsher than Thackeray's satirical sketches and studies and novels, which were supposed to be satirical when, in their faltering and imperfect fashion, they were simply representative. They, perhaps, marked more distinctly than anything else the departure from the old ideal of something punitive; they merely sought to be portraitive; but being so awfully like, they were taken for burlesques, such being the confusion in the mind of the ass who is popularly known as man. Their destination involved their origin, but their destination was the actual novel of manners which holds its hand from labelling any figure, or making a descriptive speech come out of its mouth, in a forbearance which Thackeray scarcely conceived of. They held still to the horny hand of the aboriginal satyr, and were born of him and of Allegory, whom they rather more voluntarily favored.

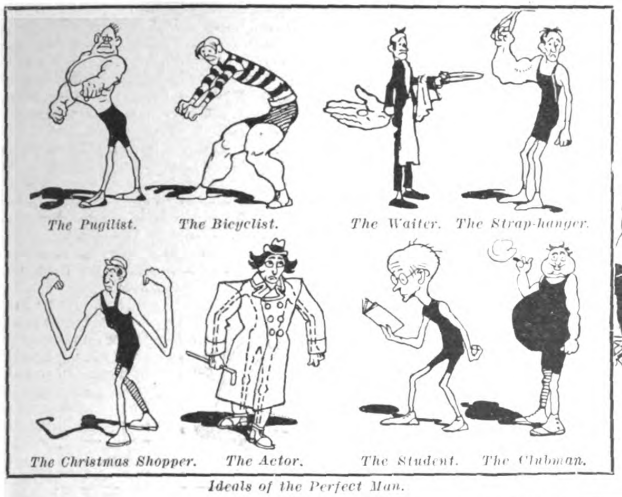
But satires of that sort are quite gone out, now, though not so quite as the satire in verse; and such phases of that antique form as we still have are rather to be met on the boards of the theatre than between the boards of the novel. In fact, the strongly moralized modern comedy is pretty nearly always a satire, if we except such triumphs of a broader and deeper art as "The Second Mrs. Tanqueray," and "The Notorious Mrs. Ebbsmith." Mr. Pinero himself is usually a satirist, as Mr. Henry Arthur Jones is very commonly, as Ibsen always is, as Björnson often is, as Sudermann is apt to be, as Mr. Bernard Shaw invariably is. The very finest comedy on the modern stage is Mr. Shaw's "Arms and the Man," which is never there, and it is the most perfect satire of war and the military profession which ever was written. To such masters of the kind Mr. J. M. Barrie has now added himself in a rank hardly inferior, by virtue of that newest comedy of his, "The Admirable Crichton," which in the best sort, in the sort of "Arms and the Man," is purely a satire. It is a satire of caste, and though an extravagant fantasy in design, it is a study of actual conditions and living character in the effect of its facts which has scarcely been surpassed in the most modern novel of manners.

The tale it tells has now been many times twice-told in all the newspapers, and is simply that of a noble English family whose head indulges a passion for equality once a month by having in the servants to tea, and making the daughters of the house and their friends and lovers wait upon them. The servants all hate it, especially the butler, who deplores it as a wild and corrosive error, subversive of the whole unnatural social order in which England lives. In the next act, the noble family and the butler, with two of the lovers, find themselves on a desolate island after shipwreck in the family yacht; and in the natural order to which they are all remanded, the butler, who is the only one among them capable of imagining or doing anything, comes into control of the group. The head of the house naturally devolves into a silly, old, light-hearted dependent; the lovers become the butler's devoted hegs, and the eldest daughter, the once haughtiest and still fairest, is going to marry him, when they hear a ship's gun, and they know that rescue is at hand. In the last act they are in England again in their old places and relations, and the girl resumes her engagement to the young lord who had remained faithful, or almost faithful, to her through the three years of her exile on the desert island. But there is a last moment, a supreme moment, when she lingers behind the others who are going out to dinner, and fondly reverts to the past in a word with the butler. He owns that he liked it there on the island, where he could be a man, as he cannot be in England. "Then," she boldly suggests, "there must be something wrong with England." "Ah," he returns, "I can't let even you say anything against England!" and she goes out.

This is exquisitely poignant, and it is of a piece with the whole delightful, cheerful, most amusing play, throughout which one laughs with a remote sense of heartache. It *was* right, there on that island, where the best man could and must be the first; and the inferior natures that fall into subjection to him knew it, then, as they know it afterwards when they return to the unnatural order in which they again become the superiors of the best man. This is apparent even to the New York audiences which witness the charming rendition of the author's ideas, and amidst our own anxious and eager beginnings of caste, have some suspicion perhaps that he means what he says. In England, we are told, it is rather hatedly thought that it is "not very nice" to take such a light way with the divinely ordered relations of master and man, which is all the better for not being the natural order. It is said that the cruel irony of the butler's closing words is taken there for a burst of patriotism; but we here need not regard it so. We may take it as the cry of baffled and despairing manhood, that is, if we happen to have little enough money to be men ourselves.

At the New Lyceum Theatre, where we saw this really lovable satire, we could have wished that Mr. Gillette had subdued himself more effectually, in the purely comic moments, to what must have been the author's design. We ourselves do not personally know much about English butlers, but from what we have heard and read of them, we should fear that they did not often sound the note of preaching, or at least so often as Mr. Gillette thinks. We urge this doubtfully, because in the parts which he creates both as an author and an actor, we have pinned our faith absolutely to him, and we do not like to unpin it. In spite of his English butler he will still be for us the finest and truest dry Yankee that ever was imagined, and we must hope that he yet can exteriorate himself to that single characterization. For the other players, perhaps because they were to the manner born, we had not a moment's doubt concerning them, and as they gave it the play was an unalloyed pleasure. We would like everybody to go and see it, for with the clue which we have given, we think some could find their way through it to those heaven-kissing heights where Equality is, and gain from this British playwright some faith in that American ideal.

But we do not wish to get so far away from the lesson which we would fain read our dramatists, actual and intending, from this charming satire. In a time when the other muses have dropped that form of literary expression, it is still the privilege, and so far as privilege implies duty, the duty of the dramatist to hold up that mirror to our national features, and to correct our manners, far as we have any of our own, with a smile. Do not be harsh with us, we would entreat them; be very kind in being true. Our worst phase is not in our treatment of our domestic inferiors yet, though our tendency in copying the English conditions is to brutalize them, but we have some defects, political, social, and religious, which the satirical playwright might make his prey most usefully. This was admirably done in the dramatization of Mr. Robert Grant's novel of "Unleavened Bread," and Mr. Clyde Fitch has done it and half-done it more than once. After all, he is our best yet, and that is saying in the severest way, that he ought to be better. "The Girl with the Green Eyes" was a delightful satire of the jealous temperament, till it lost itself in a morass of sentimentality in the last act; but what we should ask of him, as an example to his weaker brethren, if not as an earnest of what he was going himself to do after this, would be something like the satire of the social situation in the first act of "The Climbers."



The field of satire, closed to the poet and the novelist, is invitingly open to the dramatist, and any American dramatist who ventures into will find himself in the best company, with Mr. Pinero, with Mr. Jones, with Mr. Barrie, with that poor, unhappy, brilliant ghost, Oscar Wilde; with Ibsen, with Sudermann; in a manner with the great Hauptmann, whose "Hännele" is a sort of seraphic satire, so true, so sweet, so sad, so sublime; with the only Tolstoy in his matchless dramas. We would not have our playwrights personal in their satires, as Aristophanes was, so that Doctor Johnson had to threaten him with his cane if he put him on the stage (or was it Socrates who menaced Foote?), but at the same time we would have them absolutely true to conditions. They (unless we are talking in the plural when we are thinking in the singular) have shown us that our society, in the larger and the smaller sense, is advantageously capable of satire, and we invite them to make further proof of it in that kind, at those thousand and one points of its most dramatic structure where our drama has never yet touched it.

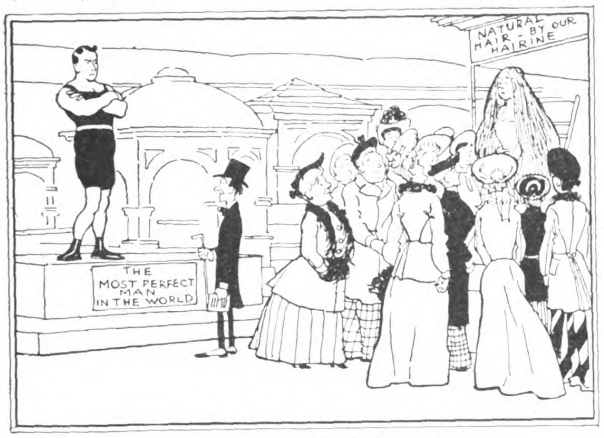
Ideals of the Perfect Man

Sketches from this Week's Physical-Culture Exhibition at Madison Square Garden

By Albert Levering

Ideals of the Perfect Man.



Preference in Angles and Curves

Obsolete and Injurious. (Old Style.)

Dapper, Up-to-date, and Healthy. (Nature.)

The most Perfect Man in the World.

What Correct Living will do for You.

(An Exhibit.)

The most Beautiful Woman in the World.

(Enthusiastic Judges.)

As a Test of Strength a Foot-race was held after the Contestants had Fasted three Days.

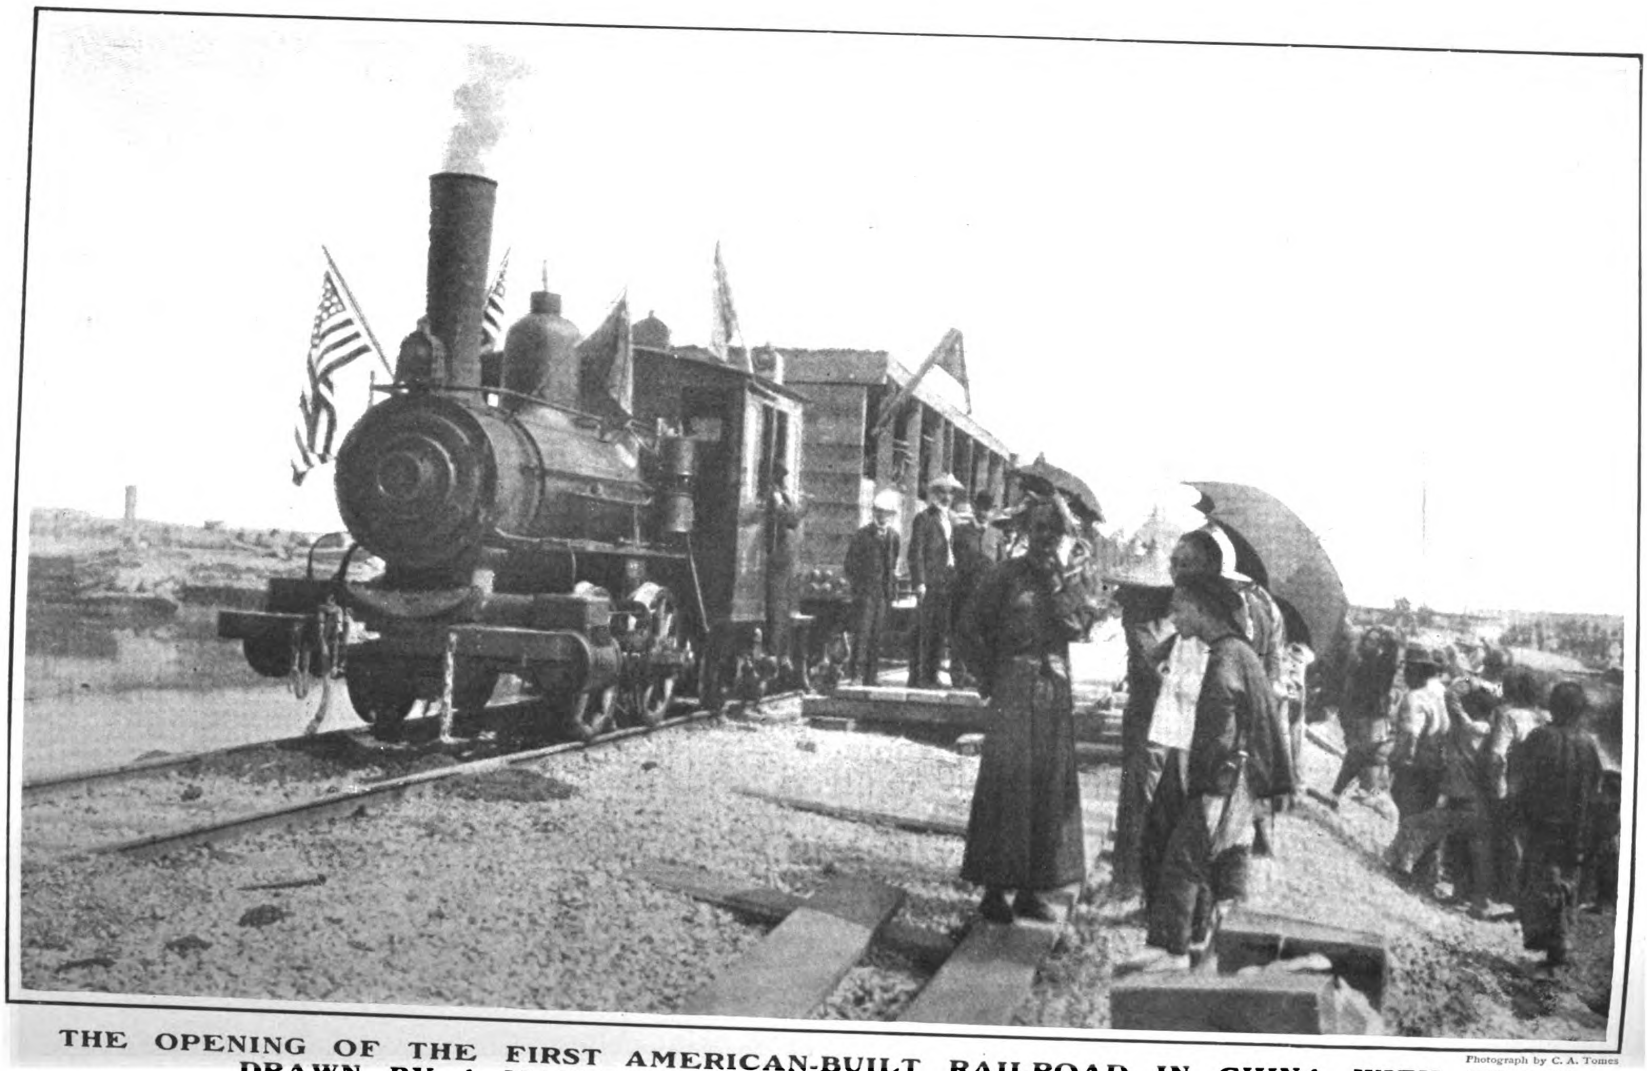
"C.-B."

By Sydney Brooks

LONDON, *December 19, 1903.*

LORD ROSEBERY and "C.-B." are manifestly coming together. (Need I say that "C.-B." is the Right Honorable Sir Henry Campbell-Bannerman, P.C., M.P., LL.D., J.P., etc.? Even leisurely England has no time for such a mouthful, and friend and foe alike have agreed on "C.-B." as an excusable and tractable abbreviation). Lord Rosebery, then, and "C.-B." are within measurable distance of becoming allies once more. Americans may readily conceive what this means if they will imagine Mr. Cleveland and Mr. Bryan standing hand in hand, and swearing allegiance not only to one another, but to a political programme that satisfies them both. The differences between Rosebery and "C.-B." have been no less fundamental than the differences between Cleveland and Bryan. Imperialism and home rule split the Liberal party in Great Britain just as free silver, government by injunction, and imperialism split the Democratic party in the United States. But it is the great good fortune of the English Liberals that they have at length found an issue, or rather an issue has been forced upon them, which is so overwhelming in its importance that it overrides all minor questions, and furnishes a common meeting-ground for each and every section. That issue, of course, is Mr. Chamberlain's new departure. Liberals may differ about South Africa and Ireland, but they are wholehearted free-traders to a man. I shall not be surprised if before many months have gone by Lord Rosebery and "C.-B." are found on the same platform in visible token that English Liberalism is once more a fighting and cohesive creed. Nor is it impossible that with them and supporting them may be seen some at least of the revolting Unionists, men like the Duke of Devonshire, Lord Goschen, Lord Hugh Cecil, and Mr. Winston Churchill, who have proclaimed their adherence to free trade, and must, in the long run, decisively break with their party. At a time like this when parties are in flux, and new combinations, new groupings are forming day by day, there is a good deal of subterranean activity that the public never hears of. So far as the Liberals are concerned, that activity has taken a very definite direction. It is now an open secret that Lord Rosebery and "C.-B." have each renounced his title to the leadership in favor of Earl Spencer, and that the Liberal government of the future will be presided over by that blameless nobleman, with Rosebery serving once more in the Foreign Secretaryship and "C.-B." leading the party in the House of Commons.



The Rt. Hon. Sir Henry Campbell-Bannerman

When England realizes that this arrangement has actually been agreed upon, there will be, I imagine, a well-nigh unanimous admission that "C.-B." has acted very handsomely in consenting to it. For the last four years he has had about as thankless a task as any politician ever tried to grapple with. He was elected in 1899 by the votes of his fellow members to the leadership of the Liberal party. Nominally his leadership embraced the entire party; really it covered no more than a section—a large section, I admit, the larger of the two, but still inferior to the Rosebery following in authority, prestige, and individual capacity. That was the first of his troubles. He was leading a party that was not only in a hopeless minority in Parliament, but was completely divided against itself. The Boer war accentuated and aggravated all its divisions till they approached a cataclysm. The Irish Nationalists formally broke off their alliance with the Liberals, and resumed their old position of an independent faction whose support was to be had by any party that would pay the price for it. It was a situation that would have taxed a Gladstone, a Disraeli, or even that supreme manager of men—Lord Palmerston. The only quality that "C.-B." brought to its solution was a pachydermatous temperament. He is one of those men on whom nothing seems really to make an impression. About nine hundred and ninety-nine men out of every thousand execrated him when he denounced the government, and therefore England and the English army, for waging war in South Africa by "methods of barbarism," "C.-B." did not care. For two years after the war broke out he sat stolidly on the fence. Either he could not or else he would not make up his mind, or perhaps he had no mind to make up. For two years, amid the jeers of his opponents and the desperation of both sections of his party, he wabbled from one side to the other, but never quite fell off his neutral perch. His speeches were studiously framed to suit any and every policy that the future might prove to be expedient—until one day he came definitely over to the pro-Boers, and the country fairly howled with rage.

After all, no man who was not a pachyderm could have stood what "C.-B." had to stand. The hopelessness of it all would have killed a man with any pretensions to sensitiveness. But to "C.-B." it never seemed to matter in the least how often he was defeated or by how large a majority, what was being said of him by the people, the press, and his own party, or whether his nominal followers were really following. Whatever happened, there he was day after day, in his seat in the House of Commons, holding forth by the hour in a level, oily flow of criticism, always cheerful, always ready to remember that as the leader of the opposition it was his business to oppose. There was no fire in his speeches, no real conviction, no trenchancy, no point — just obvious, well-meaning platitudes fluently turned. Neither during the Boer war, nor at the opening of the fiscal question—when a leader of real force might almost have turned the government out — has "C.-B." shown the smallest capacity for Parliamentary generalship. Nevertheless, he filled a gap. It was better for the Liberals that even "C.-B." should be representing them than that they should have gone without any representation at all. True, he missed nearly every chance that come along; true, that he exasperated far more than he stimulated. Still, in politics it is fatal to be doing nothing, and "C.-B." was always doing something. That was an immense point in his favor. He kept up the pretence of fighting, and he never seemed conscious, or at least never betrayed his consciousness, that it was destitute of reality. It meant a good deal that there should be at least one man among the Liberals who was content to "keep plugging away," who never seemed to expect results, and was, consequently, never disappointed when results failed to appear. A sort of pathos began to attach to "C.-B." He was so obviously and patiently doing his best, that the country, which judges a man with very little reference to his ability as a Parliamentary tactician, developed a half-pitying, half-humorous attachment for him. And now that the war is over and the fiscal question engrosses discussion and the Liberals are again a united party, people are beginning almost to admire him. He has done all the work, while Rosebery was looking on and criticising, and he has had all the kicks. Is it fair that Rosebery should now come along and claim the palm when he has carefully avoided the dust?

In himself "C.-B." is a singularly pleasant man. A certain pawky humor runs through his public speeches, but it is not to be compared with the sprightliness, the wit and vivacity of his dinner-table conversation. An American duchess, famous for her political dinners, declared a few weeks ago that if she could not get Joseph Chamberlain to take her in to dinner, she would at once choose "C.-B." The son of a Scotch land-owner, very wealthy, sixty-seven years old, with a sort of ponderous common sense and grotesque immobility, he has in him the gifts that make a man a capital administrator but a poor leader. In all the offices he has held he has done well. Indeed, Lord Rosebery was once heard to exclaim during his Premiership, "I wish I had a dozen 'C.-B.'s' in my cabinet." It is hardly likely he would repeat that exclamation to-day. Nevertheless, "C.-B." holds a position that is in some ways even more assured than Lord Rosebery's.

THE OPENING OF THE FIRST AMERICAN-BUILT RAILROAD IN CHINA, WITH TRAIN DRAWN BY A MANHATTAN ELEVATED RAILWAY LOCOMOTIVE

The first American-built railroad, and the first railway line in the Chinese territory of southern China, was opened on November 15. The line runs from Canton to Fatshan, about ten miles up the West River. It forms part of a line to Samshui, which is being built by the American China Development Company. It is expected that by the middle of January the entire branch line of thirty miles between Canton and Samshui will be opened. Including this and other branches, there are about 1069 miles of railway to build. An interesting feature of the opening celebration was the use of a discarded elevated railroad locomotive from America, which pulled the first train over the line

Books and Bookmen

By James MacArthur

MR. McCARTHY'S latest volume, *Portraits of the Sixties*, needs only a glance to remind the reader that it deals with a decade which had a history entirely its own, and which may claim to be recognized as a distinctive epoch. It is a question whether any equal space of time in the history of England was productive of a larger amount of original matter. Every portrait, therefore, which Mr. McCarthy has drawn to illustrate any phase of that period must have an abiding interest for the readers of this and successive generations. The sixties were memorable years, fittingly enshrined by Macaulay's honorable burial in Westminster Abbey on the 9th of January, 1860, and the declaration of Louis Napoleon on the 1st of January, 1870, at the annual reception of the diplomatic body in the Tuileries, that the year 1870 was destined to consolidate the general agreement between his government and the foreign powers, and thus tend to the increase of concord, peace, and civilization—a year which, as a matter of fact, saw one of the greatest continental wars known to modern European history, the fall of Louis Napoleon's empire and the rise of the third French Republic. Between these events, which serve as historical landmarks for the opening and the closing of the sixties, Mr. McCarthy has drawn from his own recollections and memories of that period the notable figures of the men and women who gave distinction to the sixties, and with whom he was fortunate to come in contact and to know more or less intimately. Two of the greatest English novelists of all time, Dickens and Thackeray, died within that period; Thackeray during its earlier part and Dickens just before its close. The influence of Carlyle, of Tennyson, Ruskin, and of some other writers of the highest order reached its zenith during the sixties. The career of Swinburne, and of Rossetti as a poet, began in the sixties, and will always be associated with that period. Some of the greatest names connected with the dramatic and lyric stage were made known to the world during the same years, and in politics the sixties saw a deep and lasting mark made in the Parliamentary history of England. The work of Darwin and of Huxley took its first recognized form during the earlier part of that era. Outside of England the sixties saw the sudden uprising of Prussia to its position among the greatest European powers; felt the first evidences of the approaching fall of Louis Napoleon's empire in France, and witnessed the settlement of the great controversy which had so long divided the Northern and Southern States of America.

The Hon. Justin McCarthy
Author of "Portraits of the Sixties"

Mr. McCarthy has described these conspicuous figures of English life in the sixties as one would describe a portrait-gallery in which every portrait is characteristic of the time. There is not a single picture in the gallery which does not in itself help to bring back to the public mind a distinct recollection of the men and women who made the sixties an important and peculiar period in modern English history. None of the figures Mr. McCarthy has set forth in these pages is without its appropriateness and importance in the revival of those memories with which he has enriched and revivified our knowledge of those years. By a fortunate coincidence, Mr. McCarthy came to London in the earliest of the sixties, and settled down there to a life of journalism and literature, and subsequently to a career in Parliament. The preliminary chapter in which he gathers up his first early impressions of the London of those days, so far removed in its outward fashion and phases from the London of to-day, are of picturesque interest and value. An amusing peculiarity of the early sixties, which he notes as appalling in its grotesque and oftentimes calamitous effects, was the reign of the crinoline. Mr. McCarthy remarks that it is well for those years that they had so many splendid claims to historical recollection, but it may be said of them that if they had bequeathed no other memory to a curious and contemplative posterity, the reign of the crinoline would still have secured for them an abiding-place in the records of human eccentricities. After reciting a number of personal observations and adventures concerning the crinoline, Mr. McCarthy concludes, "Do what we will, we who lived in those days cannot dissociate our memories of the crinoline from our memories of the woman of the period."

One could wish to linger pleasantly over Mr. McCarthy's agreeable and lively memories of the celebrities of that time, to relate how he was introduced to Dickens through a mutual friend and associate in the reporter's gallery in the House of Commons, his casual meetings thereafter in London with the novelist, and his description of Dickens's original and peculiar style in his readings, and the effect of his impersonations on the audience; of Dickens's superb address as an after-dinner speaker; of the first time he saw Thackeray, and the fascination which his manner had upon the young journalist; the effect wrought upon the public mind, recalled by Mr. McCarthy, when the yellow-covered monthly numbers of *Vanity Fair* first began to make their appearance; of his disconcerting meeting with Carlyle, and his clear recollection of the part which the sage was ever ready to take against the Northern States in our civil war; of Tennyson, a conspicuous figure in public when seen in the House of Commons, and a familiar figure in some of the quieter recesses of the parks, more especially of St. James's Park; of Richard Owen, "one of the most effective public lecturers to whom I have ever listened"; of Cardinal Newman and his brother Francis; of Richard Cobden and John Bright, to whom he was indebted for his first introduction to Browning, between whom and Mr. McCarthy there sprang up a friendship which lasted as long as the poet lived. These are but a few of the names from Mr. McCarthy's portrait-gallery in politics, letters, arts, science, and social life in the sixties, which conjure up a series of historical pictures that make this volume one of the most important and valued adjuncts to the literary history of that period.

The success of Mr. Howells's latest novel, *Letters Home*, very naturally recalls his previous success in New York fiction with *A Hazard of New Fortunes*, and the appearance of this work in a one-volume edition is timely and welcome. It is scarcely credible that in the lapse of fourteen years even so progressive a city as the American metropolis should show, as it does in a comparison of these two novels, the changes that have taken place in locomotion, architecture, and in the general aspects of the city's life. It is curious, for instance, to find the stranger on Broadway only fourteen years ago remarking the passing of the omnibus in favor of the horse-car when now we have the trolley, and are soon to see the underground electric cars and the moving platform in operation.

To his other accomplishments as novelist, poet, and playwright, Mr. Rupert Hughes adds that of a music-lover and authority. Two books of his already attest the fact, namely: *Contemporary American Composers* and *The Musical Guide*. To these he now adds *The Love-Affairs of Great Musicians* in two volumes, fully illustrated with portraits, and attractively bound in red and gold. It is the first work of the kind that has ever been given to the public, and its novelty is further enhanced by the fact that only now could full advantage be taken of much new material published for the first time. As instances, there is the revelation of the exact identity of Beethoven's "Immortal Beloved"; the letters of Liszt to his princess; letters of Chopin long supposed to have been burned, as well as diaries and letters gathered by an intimate friend for a biography whose completion was prevented by death; the appearance of the first volume of a new biography of Clara Schumann, with a detailed account of the whole progress of her beautiful love-story, down to the day of her marriage. It presents a series of chapters in the lives of great musicians, tending largely to elucidate the *motif* of their art, and enriching our knowledge of their isolated existence on the human side—a work that will surely appeal to all lovers and students of music, but which is equally interesting, by reason of its romantic interest, to all readers. By the way, I find that I was in error when I stated a few weeks ago that the musical memoir of *Theodore Leschetizky* appeared originally in French two years ago. The biography is now published for the first time.

ITALIAN WITHOUT A M

IT is almost a fortnight now that I am domiciled in a mediæval villa in the country, a mile or two from Florence. I cannot speak the language; I am too old now to learn how, also too busy when I am busy, and too indolent when I am not; wherefore some will imagine that I am having a dull time of it. But it is not so. The "help" are all natives; they talk Italian to me, I answer in English; I do not understand them, they do not understand me, consequently no harm is done, and everybody is satisfied. In order to be just and fair, I throw in an Italian word when I have one, and this has a good influence. I get the word out of the morning paper. I have to use it while it is fresh, for I find that Italian words do not keep in this climate. They fade toward night, and next morning they are gone. But it is no matter; I get a new one out of the paper before breakfast, and thrill the domestics with it while it lasts. I have no dictionary, and I do not want one; I can select my words by the sound, or by orthographic aspect. Many of them have a French or German or English look, and these are the ones I enslave for the day's service. That is, as a rule. Not always. If I find a learnable phrase that has an imposing look and warbles musically along I do not care to know the meaning of it; I pay it out to the first applicant, knowing that if I pronounce it carefully *he* will understand it, and that's enough.

Yesterday's word was *avanti*. It sounds Shakespearian, and probably means Avaunt and quit my sight. To-day I have a whole phrase: *sono dispiacentissimo*. I do not know what it means, but it seems to fit in everywhere and give satisfaction. Although as a rule my words and phrases are good for one day and train only, I have several that stay by me all the time, for some unknown reason, and these come very handy when I get into a long conversation and need things to fire up with in monotonous stretches. One of the best ones is *Dov' è il gatto*. It nearly always produces a pleasant surprise, therefore I save it up for places where I want to express applause or admiration. The fourth word has a French sound, and I think the phrase means "that takes the cake."

During my first week in the deep and dreamy stillness of this woodsy and flowery place I was without news of the outside world, and was well content without it. It had been four weeks since I had seen a newspaper, and this lack seemed to give life a new charm and grace, and to saturate it with a feeling verging upon actual delight. Then came a change that was to be expected: the appetite for news began to rise again, after this invigorating rest. I had to feed it, but I was not willing to let it make me its helpless slave again; I determined to put it on a diet, and a strict and limited one. So I examined an Italian paper, with the idea of feeding it on that, and on that exclusively. On that exclusively, and without help of a dictionary. In this way I should surely be well protected against overloading and indigestion.

A glance at the telegraphic page filled me with encouragement. There were no scare-heads. That was good—supremely good. But there were headings—one-liners and two-liners—and that was good too; for without these, one must do as one does with a German paper—pay out precious time in finding out what an article is about, only to discover, in many cases, that there is nothing in it of interest to you. The headline is a valuable thing.

Necessarily we are all fond of murders, scandals, swindles, robberies, explosions, collisions, and all such things, when we know the people, and when they are neighbors and friends, but when they are strangers we do not get any great pleasure out of them, as a rule. Now the trouble with an American paper is that it has no discrimination; it rakes the whole earth for blood and garbage, and the result is that you are daily overfed and suffer a surfeit. By habit you stow this muck every day, but you come by and by to take no vital interest in it—indeed, you almost get tired of it. As a rule, forty-nine-fiftieths of it concerns strangers only—people away off yonder a thousand miles, two thousand miles, ten thousand miles from where you are. Why, when you come to think of it who cares what becomes of those people? I would not give the assassination of one personal friend for a whole massacre of those others. And, to my mind, one relative or neighbor mixed up in a scandal is more interesting than a whole Sodom and Gomorrah of outlanders gone rotten. Give me the home product every time.

Very well. I saw at a glance that the Florentine paper would suit me: five out of six of its scandals and tragedies were local; they were adventures of one's very neighbors, one might almost say one's friends. In the matter of world news there was not too much, but just about enough. I subscribed. I have had no occasion to regret it. Every morning I get all the news I need for the day; sometimes from the headlines, sometimes from the text. I have never had to call for a dictionary yet. I read the paper with ease. Often I do not quite understand, often some of the details escape me, but no matter, I get the idea. I will cut out a passage or two, then you will see how limpid the language is:

Il ritorno dei Reali d'Italia
Elargizione del Re all'Ospedale italiano

The first line means that the Italian sovereigns are coming back—they have been to England. The second line seems to mean that they enlarged the King at the Italian hospital. With a banquet, I suppose. An English banquet has that effect. Further:

Il ritorno dei Sovrani a Roma

ROMA, 24, ore 22,50. - I Sovrani e le Principessine Reali si attendono a Roma domani alle ore 15,51.

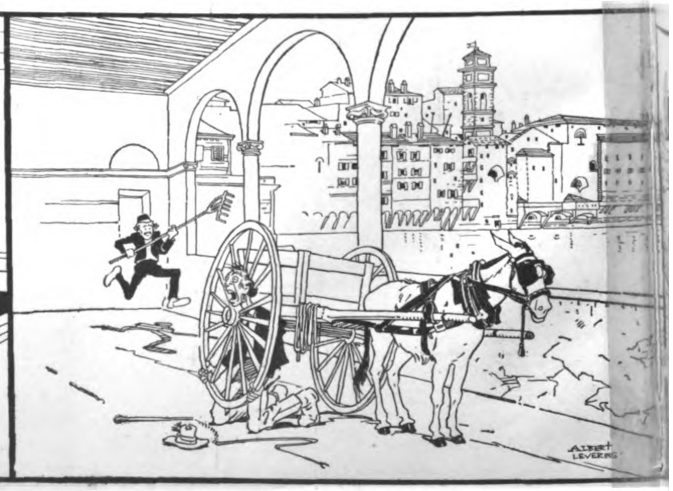
Return of the sovereigns to Rome, you see. Date of the telegram, Rome, November 24, ten minutes before twenty-three o'clock. The telegram seems to say, "The Sovereigns and the Royal Children expect themselves at Rome to-morrow at fifty-one minutes after fifteen o'clock."

I do not know about Italian time, but I judge it begins at midnight and runs through the twenty-four hours without breaking bulk. In the following ad. the theatres open at half past twenty. If these are not matinées, 20.30 must mean 8.30 P.M., by my reckoning.

Spettacoli del dì 25

TEATRO DELLA PERGOLA — (Ore 20,30) — Opera: *Bohème*.

TEATRO ALFIERI. — Compagnia drammatica Drago — (Ore 20,30) — *La Legge*.



ALHAMBRA — (Ore 20,30) — Spettacolo variato.

SALA EDISON — Grandioso spettacolo Cinematografico: *Quo-Vadis?* — Inaugurazione della Chiesa Russa — In coda al Direttissimo — Vedute di Firenze con gran movimento — America: Trasporto tronchi giganteschi — I ladri in casa del Diavolo — Scene comiche.

CINEMATOGRAFO — Via Brunelleschi n. 4. — Programma straordinario, *Don Chisciotte* — Prezzi popolari.

They enlarged the King

Serious Disgrace on the old, old Bridge

MASTER.—BY MARK TWAIN

The whole of that is intelligible to me—and sane and rational, too—except the remark about the Inauguration of a Russian Cheese. That one oversizes my hand. Gimme five cards.

This is a four-page paper; and as it is set in long primer leaded and has a page of advertisements, there is no room for the crimes, disasters, and general sweepings of the outside world—thanks be! To-day I find only a single importation of the off-color sort:

Una principessa
che fugge con un cocchiere

PARIGI, 24. - Il *Matin* ha da Berlino che la principessa Schovenbsre-Waldenbure scomparve il 9 novembre. Sarebbe partita col suo cocchiere.

La Principessa ha 27 anni.

Twenty-seven years old, and scomparve—scampered—on the 9th November. You see by the added detail that she departed with her coachman. I hope Sarebbe has not made a mistake, but I am afraid the chances are that she has. *Sono dispiacentissimo.*

There are several fires: also a couple of accidents. This is one of them:

Grave disgrazia sul Ponte Vecchio

Stamattina, circa le 7,30, mentre Giuseppe Sciatti, di anni 55, di Casellina e Torri, passava dal Ponte Vecchio, stando seduto sopra un barroccio carico di verdura, perse l'equilibrio e cadde al suolo, rimanendo con la gamba destra sotto una ruota del veicolo.

Lo Sciatti fu subito raccolto da alcuni cittadini, che, per mezzo della pubblica vettura n. 365, lo trasportarono a San Giovanni di Dio.

Ivi il medico di guardia gli riscontrò la frattura della gamba destra e alcune lievi escoriazioni giudicandolo guaribile in 50 giorni salvo complicazioni.

What it seems to say is this: "Serious Disgrace on the Old Old Bridge. This morning about 7.30, Mr. Joseph Sciatti, aged 55, of Caselina and Torri, while standing up in a sitting posture on top of a carico barrow of verdure (foliage? hay? vegetables?), lost his equilibrium and fell on himself, arriving with his left leg under one of the wheels of the vehicle.

"Said Sciatti was suddenly harvested (gathered in?) by several citizens, who by means of public cab No. 365 transported him to St. John of God."

Paragraph No. 3 is a little obscure, but I think it says that the medico set the broken left leg—right enough, since there was nothing the matter with the other one—and that several are encouraged to hope that fifty days will fetch him around in quite giudicandolo-guaribile way, if no complications intervene.

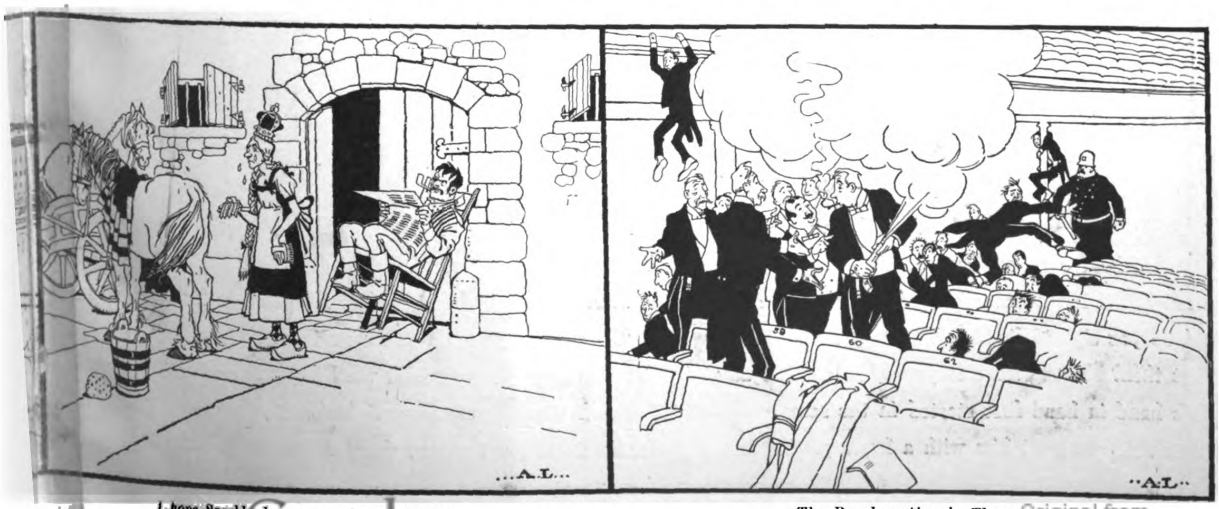
I am sure I hope so myself.

There is a great and peculiar charm about reading news-scraps in a language which you are not acquainted with—the charm that always goes with the mysterious and the uncertain. You can never be absolutely sure of the meaning of anything you read in such circumstances; you are chasing an alert and gamy riddle all the time, and the baffling turns and dodges of the prey make the life of the hunt. A dictionary would spoil it. Sometimes a single word of doubtful purport will cast a veil of dreamy and golden uncertainty over a whole paragraph of cold and practical certainties, and leave steeped in a haunting and adorable mystery an incident which had been vulgar and commonplace but for that benefaction. Would you be wise to draw a dictionary on that gracious word? would you be properly grateful?

After a couple of days' rest I now come back to my subject and seek a case in point. I find it without trouble, in the morning paper; a cablegram from Chicago and Indiana by way of Paris. All the words save one are guessable by a person ignorant of Italian:

Revolverate in teatro

PARIGI, 27. - La *Patrie* ha da Chicago: Il guardiano del teatro dell'opera di Wallace (Indiana), avendo voluto espellere uno spettatore che continuava a fumare malgrado il divieto, questo spalleggiato dai suoi amici tirò diversi colpi di rivoltella. Il guardiano rispose. Nacque una scarica generale. Grande panico fra gli spettatori. Nessun ferito.

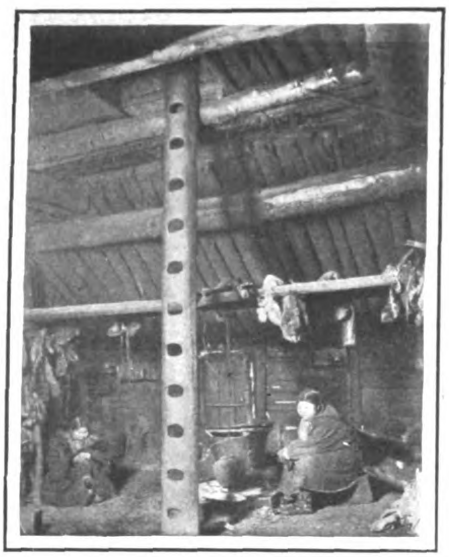


Translation.—"REVOLVERATION IN THEATRE. *Paris, 27th. La Patrie* has from Chicago: The cop of the theatre of the opera of Wallace, Indiana, had willed to expel a spectator which continued to smoke in spite of the prohibition, who, spalleggiato by his friends, tirò (Fr. *tiré*, Anglice *pulled*) manifold revolver-shots. The cop responded. Result, a general scare; great panic among the spectators. Nobody hurt."

It is bettable that that harmless cataclysm in the theatre of the opera of Wallace, Indiana, excited not a person in Europe but me, and so came near to not being worth cabling to Florence by way of France. But it does excite me. It excites me because I cannot make out, for sure, what it was that moved that spectator to resist the officer. I was gliding along smoothly and without obstruction or accident, until I came to that word spalleggiato, then the bottom fell out. You notice what a rich gloom, what a sombre and pervading mystery, that word sheds all over the whole Wallachian tragedy. That is the charm of the thing, that is the delight of it. This is where you begin, this is where you revel. You can guess and guess, and have all the fun you like; you need not be afraid there will be an end to it; none is possible, for no amount of guessing will ever furnish you a meaning for that word that you can be sure is the right one. All the other words give you hints, by their form, their sound, or their spelling—this one doesn't, this one throws out no hints, this one keeps its secret. If there is even the slightest slight shadow of a hint anywhere, it lies in the very meagrely suggestive fact that spalleggiato carries our word "egg" in its stomach. Well, make the most out of it, and then where are you at? You conjecture that the spectator which was smoking in spite of the prohibition and become reprohibited by the guardians, was "egged on" by his friends, and that it was owing to that evil influence that he initiated the revolveration in theatre that has galloped under the sea and come crashing through the European press without exciting anybody but me. But are you sure, are you dead sure, that that was the way of it? No. Then the uncertainty remains, the mystery abides, and with it the charm. Guess again.

Sono Dispiacentissimo

If I had a phrase-book of a really satisfactory sort I would study it, and not give all my free time to undictionarial readings, but there is no such work on the market. The existing phrase-books are inadequate. They are well enough as far as they go, but when you fall down and skin your leg they don't tell you what to say.



I hope Sarebbe has not made a Mistake *The Revolveration in Theatre*

Exploring in Northern Siberia

By Walter L. Beasley

"I HAVE burrowed nights in a wolfskin sleeping-bag deep in the open snows of arctic Siberia, with the temperature at 40° below zero, which was a veritable Waldorf-Astoria compared to the hours of torture I was forced to spend in the underground and insect-infested dwellings of the Maritime Koryaks on the Asiatic coast." So says the Russian explorer Jochelson, who has recently returned to New York from two years of travel and research among the Siberian natives, in the interests of the American Museum of Natural History. The aim of the expedition was to settle the unsolved problem of American anthropology as to the early history of the native races of our continent and their relation to those of Asia. The regions selected for systematic investigation were the North Pacific coast of America and northeastern Siberia. These two points, it was thought, owing to their geographical location, would be likely to yield satisfactory results. The final results of the expedition, though not entirely worked out at present, are enough to show conclusively that the isolated tribes of eastern Asia and those on the northwest coast of our own shores form one race, similar in type and at one time possessing a single culture.

Interior of a Koryak Hut in Arctic Siberia

Reproduced by courtesy of the Director of the American Museum of Natural History

Among the important races visited by Mr. Jochelson were the Maritime Koryaks, living in scattered villages along the shore south of the Bering and Okhotsk seas, and also on the bays of Gishiga and Penshina. They number about ten thousand, and have many peculiar ceremonies and odd modes of life. There are two divisions of the tribe — Maritime and Reindeer people. The former have a harder struggle for existence than do the deer-herders of the interior, as all during the year they are forced to wage a ceaseless warfare upon the walrus and whale for food. In the winter they resort to fishing and seal-hunting through holes in the ice, the animals being compelled to frequent these openings for occasional breathing-spells, when they are killed. Both women and men wear boots and garments made of reindeer-skin, which are obtained in exchange from the inland deer-breeders for oil, blubber, and seal-hides. The most highly prized and indispensable article of a herder's outfit, namely, sledge harness and lariats for catching the deer, are made from the seal thongs. The Maritime Koryaks use dogs exclusively for transportation purposes. Nearly all the travelling is done during the winter months, when the whole tundra and country is covered with a hard crust of snow. A Koryak will then load a half-dozen sledges with objects of barter, and journey from two to three hundred miles in the interior to the reindeer camps and native fairs for trading purposes. One of the most striking and characteristic phases of Koryak life is their peculiar hour-glass-like houses. These are remarkable subterranean habitations, weird and primitive in appearance, and with a squalid atmosphere almost unbearable to the white traveller. From a distance one of these houses has the appearance of some huge inverted funnel rising out of a snow-bank. The craterlike top, besides forming a roof, is used as a general storing-place for food and all sorts of articles. This slopes downward to an aperture in the centre, which serves as a smoke-hole, ventilator, and passageway below. A number of logs arranged in a circle support the rickety framework of the roof, the lower end of which rests on a secondary pile of timbers forming the walls of the living-quarters. For nearly nine months nearly the whole house is banked and covered up within a few feet of the projecting roof with tons of snow, chinked in with frozen earth and débris, the inmates being about twenty feet below the surface. Undoubtedly the most astonishing and spectacular feature of the Koryak house is the means of entrance. This is accomplished by scaling a narrow split log, having holes cut in for the feet and hands, which extends down from the roof. Getting inside is a feat which none but a native can successfully accomplish. The interior is reached by ascending another perpendicular hewn stairway, covered with a slippery coating of grease and soot. A misplaced step of the uninitiated results in the person landing in an immense pot of blubber always kept boiling at its base. The whole enclosure has a ground floor, and is barren of anything in the shape of furniture. A large vessel for cooking seal and blubber and a kettle used for melting snow are the chief household utensils. The diet is limited almost exclusively to raw and half-cooked seal and whale flesh, with Russian brick tea as an occasional luxury. Some thirty to forty of both sexes usually inhabit one of the dwellings. The rancid odor, thick fumes of smoke and soot which fill the room, together with insect pests, is said to be indescribable, and one of the most dreaded of all the privations that fall to the lot of an arctic explorer. Before entering a Koryak household it is customary for the visitor to send word ahead, prior to his arrival. On reaching the house he will usually find assembled on the roof awaiting him the host and all his family, including dogs. These animals play an important part in their religion, which is full of Shamanism and magic. They are offered as sacrifices, and thought to be one of the most potent agencies for keeping away evil spirits and maladies. For this reason the stuffed form of a dog is always kept dangling from a roof top.

Mr. Jochelson, together with his coworker, Mr. Bogoras, brought back nearly ten thousand ethnographical objects illustrating the ceremonial and every-day life of a dozen or more Siberian races, together with several volumes of legendary tales, phonographic records, and thousands of photographs. The Siberian collection, some of which was gathered from the most obscure and isolated dwellers on the earth to-day, is the largest ever brought into civilization. The descriptive memoirs of the whole expedition will add a new chapter to the history of aboriginal man in America.

Another Year

By E. H. Sothern

ALAS! old Tyrant Time will have his way—
Another year, dear love, has flown apace,
And has it left a shadow on your face?
And do you sigh to find my hair is gray?
What then? Young Love is young, as on that day
We hand in hand first started in the race;
And shall we greet him with a lesser grace,
Because our season is no longer May?
Teach him, while youth's bright golden days we spend,
That when our dwelling-place is seamed with age,
When the chill hand of winter turns the page
Where the old story's final word is penn'd,—
Teach him to seek securest harborage,
In hearts whose summer, dear, shall know no end.

Useful Inventions from Coal-Tar

By Sir Hiram Maxim, C.E., M.E.

WHEN coal-gas was first introduced as an illuminant for large towns, the tar which is condensed from the gas was looked upon as a nuisance—a nuisance which gave considerable trouble and was difficult to get rid of. However, chemists discovered that coal-tar was an exceedingly complicated compound, and lent itself admirably to the production of a great number of useful chemicals. So we find to-day that all the various brilliant and beautiful dyes employed for coloring various kinds of fabrics are produced from this substance. Coal-tar also furnishes the basis for several kinds of medicines, such as trional, sulphonal, and so on. Saccharine, which is a substitute for sugar, is also made from coal-tar. Carbolic acid (phenol), the most important and best-known antiseptic and disinfectant, is a product of coal-tar. Benzol, a clear and colorless liquid resembling alcohol to some extent, is another distillate which is employed for removing grease spots from fabrics and also as a solvent of india-rubber. Then we have naphthalene, a substance which to some extent resembles camphor, and is employed, like camphor, to protect woollen fabrics from moths. In addition to this, there are an almost innumerable number of products made from coal-tar which can be nitrated and which form the basis of high explosives, the best known being picric acid, which is nitrated carbolic acid, and is chemically known as trinitrophenol. Trinitrotoluene and trinitrocresol are also well-known high explosives made in exactly the same manner as picric acid, and having practically the same properties as far as explosiveness is concerned.

A curious feature of these high nitro-explosives, which are made from the products of coal-tar, is their great insensitiveness to go off by shock, and the safety with which they may be handled. They have two distinct ways of burning. If lighted in the open they burn like so much pitch-pine; the oxygen which they contain combines with a certain portion of the carbon, forming carbon dioxide, at the same time setting free a large amount of free carbon, which appears as black smoke in the atmosphere. If these explosives are confined in a strong steel shell, and ignited by a very powerful detonating charge, the heat and shock, together with the pressure, produce a different kind of combustion—carbon monoxide instead of carbon dioxide being formed. As the volume of carbon dioxide is very great, and the temperature exceedingly high, and as the whole mass goes off instantaneously, the disruptive effect is very great indeed, nearly as great as with pure nitroglycerine. Dinitrobenzol and dinitronaphthalene are coal-tar explosives which are somewhat less violent than the "trinitros" before mentioned. It will be seen that an almost endless number of compounds can be made by combining these various nitros with each other, and these are the bases of innumerable explosives which have some fancy name generally ending in "ite."

The lyddite of the English is pure picric acid, but the melinite of the French is picric acid modified with about four per cent. of thick viscid petroleum oil. In this condition it may be shot through armor-plates without detonating by shock, a test which the English lyddite, being pure picric acid, will not stand.

A Day at the White House

By A. Maurice Low

THE President of the United States and his wife are always on parade. One of the penalties attached to high station is never to escape the glare of publicity. Anything said by a President is worth quoting; if the wife of the President buys a new hat it is worth describing. The President's walks and rides and drives; the President's guests at breakfast, luncheon, and dinner—everything, in fact, that the President may do, should do, ought to do, or does not do, is so constantly put on exhibition for the delectation of an insatiable public that the public forgets there is a time when a President ceases to be a President and turns his back on affairs of state. Then he is merely a husband and a father.

The family life of the White House is ideal in the affection that exists between Mr. and Mrs. Roosevelt and the *bonne camaraderie* between the President and his children. With them he is one of them—playmate, companion, guide. It is Kipling who says that if a man is very wise and properly humble he may induce a little child to give him his confidence. The President is one of those rare and fortunate men with whom small children act as naturally as they do among themselves. The President's popularity with the "Roosevelt cousins"—and there are many of them, of all sizes and all ages—is so firmly established that nothing can shake it. No man is a hero to his valet, and small children, as a rule, are not impressed by the dignity of office or the importance of power. To the politician who comes with smirking assurance to the White House asking for a minor consulship for a constituent the President excites awe; great Jove himself with his terrible frown could not be more awful. To the "Roosevelt cousins" the President is a sort of fairy uncle, always ready to join in a lark with them, to share their sorrows and their joys, to tell them the most wonderful and entertaining stories. And there are two excellent reasons why the President is the children's hero. He is always buoyant, his spirits are perpetually bubbling over with the imagination of youth, like a child he is full of rare enthusiasms, and the thing of the moment is the thing of all things to be done. And the other reason is that this wonderful father and uncle has a most wonderful memory and the story-teller's gift — not the creative genius of Kipling, though all the Kiplings of past and present are to his command. For the little girls there are the tales of the Erlkönig and the dainty Elfen dancing in the grass in the moonlight and leaving behind them the fairy rings; for the boys there are the Nibelungenlied, the saga of the Volsungs, the epic of Homer—stories of fighting and brave deeds and heroism; or stories of daring of real men when life was more strenuous than it is to-day, when knights fought in armor, or the shock of armies drove kings into exile, or white men battled with savages and created a nation.

The day at the White House begins shortly after seven o'clock. At that hour the President is up, and at eight o'clock he and Mrs. Roosevelt and some of the children—frequently with guests, men whose time is as valuable as his own and who begin their days early—are at breakfast. As with any other man engaged in active affairs, the President goes to his work immediately after breakfast, and spends from nine until half past one in his office, returning to the house to lunch. It is rare that he is without guests, except on Sunday, which he always tries to have a strictly family day.

The demands upon Mrs. Roosevelt are almost as exacting as those upon the President. Mrs. Roosevelt is by nature a woman to whom her husband, her children, and her home are everything. She is, besides, a woman of extraordinary mental attainments and force of character; the President's position has not in any way changed her ideas of life or altered her mode of living. She realizes that when her husband's term as President expires they will have

The President about to Mount his Horse for a Ride in the Country

Miss Alice Roosevelt entering the White House Grounds on her return from a Walk

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA
Generated for Nicole Fry (Washington University in St. Louis) on 2017-08-24 19:26 GMT / http://hdl.handle.net/2027/uc1.31158003386835

to return to the modest style of living which they enjoyed before he became President, because the President is not a rich man, and he will not have added to his wealth by having been President. Mrs. Roosevelt exercises the same supervision over her household as she did when her husband was a Civil Service Commissioner, or as she does in summer when the capital of the United States is transferred to Long Island. She has her husband's fondness for outdoor exercise, especially for walking and riding, but it is difficult for her to find time to walk unless she does it early in the morning. After the President has gone to his office and Mrs. Roosevelt has consulted with the steward and has given the directions that may be necessary in regard to household or other matters, and while her secretary is going through the correspondence Mrs. Roosevelt is able to slip quietly out of the White House for a walk. But at eleven o'clock at the latest she is back at the White House, because usually there are persons to be seen, there are the letters to be signed and disposed of, there are a great many other things which must be done in the morning unless the whole routine of the day is disturbed.

Guests who have lunched with the President have usually left the White House by half past two, when the President returns to office and remains there until about four. Mrs. Roosevelt after luncheon sees a certain number of people by appointment; sometimes she does her shopping immediately after lunch, but at four o'clock, in case she is not the hostess at a tea or other function, or a guest at a concert or other afternoon entertainment, she goes with the President either for a ride or a drive.

The President prefers riding to almost any other form of outdoor exercise, and never lets the weather interfere with him, as Prince Henry discovered to his sorrow, when the President invited him to take a ride, and the Prince returned drenched to the skin.

At six the President is back in the White House, and the next hour is probably the happiest of the whole day, as it is given up to the children, and he either plays with them or reads to them. Then at half past seven there is dinner, and it is seldom the President and Mrs. Roosevelt dine alone. State dinners and other official functions are long, formal, and more or less tedious affairs, but the ordinary dinner, even when there are guests, is generally over in an hour, after which members of the cabinet, Senators, members of Congress, and other persons are received, these conferences often lasting until eleven o'clock. Both the President and Mrs. Roosevelt are fond of the theatre and catholic in their tastes, and are frequently seen at the Washington playhouses during the season, always accompanied by friends. Before retiring, the President makes it an almost invariable rule to read for half an hour or more. By midnight his busy day has come to an end.

Photograph by Clinedinst

Archie Roosevelt

A recent photograph of the President's nine-year-old son

Both the President and Mrs. Roosevelt are people of quiet and simple tastes, and dislike the even modest state which their position make it incumbent upon them to keep up. The President has no expensive or luxurious tastes to gratify. He is fond of walking and riding, and, with a congenial companion—General Leonard Wood when he was in Washington, or Commissioner-of-Corporations Garfield — enjoys nothing better than a long and hard ride or to wander afoot in the wilder parts of Rock Creek Park or along the Virginia shore of the Potomac.

One reason why the President is fond of these excursions is that he can slip away from the secret-service men and detectives who dog his every step. The man who can follow the President when he starts out on a mild constitutional of a dozen miles or so must be an athlete thoroughly "fit," otherwise he will be winded after the first mile.

The President regards a horse as a necessity rather than a luxury. A good horse is essential for his comfort, a horse that can gallop over rough country and take a hurdle or a brook when put to it. When at Oyster Bay he knocks about in a small rowboat, and he has all of Mr. Gladstone's fondness for cutting down trees. He is really passionately devoted to hunting, but to enjoy hunting he must rough it; he has no patience with those effeminate hunters who go out into the woods with a cook and half a dozen servants, who carry with them their wine and their whiskey, which the President never touches, and who bring civilization into the forest. A horse, a companion, an open fire, a rocking-chair, and a book are the modest requirements to satisfy the President's demands.

Strangers of the Atmosphere

By Louis Bell, Ph.D

TEN years ago the scientific world was just settling into the comfortable consciousness that it knew all about the air we breathe—so far, at least, as its composition was concerned. It therefore received something very like an electric shock when Lord Rayleigh announced in 1894 that he had found a totally new gas to exist in the air in considerable amounts. It was discovered not by chance, but in a painstaking and persistent effort to find out why the density of atmospheric nitrogen was not in agreement with that of the same gas chemically prepared. The result was to bring to light the fact that what we had been calling atmospheric nitrogen was a mixture of real nitrogen and a gas somewhat heavier, which Rayleigh christened argon. It is a gas with a strange lack of salient characteristics, but such as it is there is plenty of it. A room eighteen feet square and nine feet high contains almost exactly one cubic yard of this invisible intruder.

Then began a hunt through the mineral kingdom for argon or its compounds, but the first game bagged was another stranger, in a rare mineral from Norway, which seems to have been nature's waste-basket for queer rocks. On examination this gas proved to be one with which astronomers had been on speaking terms for a quarter of a century. They had known it merely as a gas common in the seething surface of the sun's flaming envelope, showing in the spectroscope a gorgeous yellow line, almost as light as hydrogen, whirling in glowing masses far above the solar surface, and had already named it helium. And now they had helium where they wanted it at last, and promptly proceeded to find in it the source of certain mysterious lines in stellar spectra, so that a whole class of stars are now often called "helium stars." Presently it was found, by carefully overhauling considerable amounts of liquid air, to be a regular constituent of the atmosphere, and has turned up in a score of minerals, even including one meteorite. It is far from plentiful, although so widely disseminated, and the room we have been considering would contain only four cubic inches of helium. It is a near relation of argon, like it quite inert, but still plays a stirring part in cosmic affairs.

The same sort of operations with liquid air which brought atmospheric helium to light proved effective in following this by still other discoveries. The process adopted was, in principle, just that employed for obtaining gasoline, kerosene, and so on, from crude petroleum. The heavy oil is distilled at a gradually rising temperature, and its lighter and more volatile constituents, such as gasoline and naphtha, distil off at very moderate heat; then come the heavier oils, like kerosene and lubricating oil, while the very heavy oils are left behind. Just so by letting liquid air boil slowly away its constituents could be partially separated, and patiently carrying out this process, Professor Ramsay unearthed, or rather, let us say, unaired, three totally new gases, closely allied to each other and to those already found. They were named, respectively, neon (the "new 'un"), krypton (the hidden), and xenon (the stranger), and have proved scarcely less remarkable than their predecessors. Neon, the lightest of the three, is fairly plentiful, as rarities go. In our assumed room it would amount to about forty cubic inches, about the size of two-thirds of a brick. Krypton, the next member of the trio, is, if anything, rather rarer than helium—about four cubic inches to the room; while xenon, the heaviest of the three, is also by far the rarest. The whole room would contain only about a fifth of a cubic inch of it—say enough to fill a small pill-box.

The whole quintette, helium, neon, argon, krypton, and xenon, belong to an entirely new chemical family, the chief characteristic of which is a strong disinclination to unite with anything for any purpose. It does not follow, however, that they can never be applied to any useful purpose, and the newcomers have already shown some very interesting properties. To begin with, they display some very curious electrical properties. For instance, an electric spark that will jump through an inch of air will flash across nearly a foot of helium or neon. When air is very greatly rarefied an electrical discharge passes through it only with great difficulty. Oxygen and nitrogen, its principal gases, seem, under these circumstances, to give up the struggle, and when the discharge is viewed with the spectroscope these lines of air fade, while those of argon and its associates, previously drowned out by the glow of the commoner gases, begin to assert themselves.

Now in the far upper air, where the gases are very greatly rarefied, much these conditions exist. Given an electrical discharge in those regions, and the new gases would come to the front. For many years the light of the aurora, which is due to

such electrical actions, has been a standing puzzle. The lines of its spectrum have failed to agree with those of air or anything else. But now the secret is out. Most of the auroral lines are those of the new group of gases, and in particular the wonderful ruddy glow that in mediæval times tinged the aurora with terror of blood proves to be due in all probability to neon, settling down for once to steady work. There is reason to believe, too, that lightning sometimes sets these strange gases aglow. A careful search at the last important solar eclipse eventually made it evident that, beside helium, neon and argon are present in the solar atmosphere; but krypton and xenon were not detected, although doubtless present likewise.

Such finds as these in the air we daily breathe very naturally suggest an inquiry as to what is likely to happen next. New elements have usually been found in queer minerals from out-of-the-way places, but here was a happy family of five literally under our noses. Are there any more in the same convenient place? Well, opinions differ, but there is some reason to believe that we have not made the acquaintance of all our neighbors yet. Spectroscopic evidence points to the probability of finding at least two or three more gases of cosmic distribution, at least one of them a gas hardly heavier than hydrogen. When we can conveniently deal with barrels, instead of pints, of liquid air, or find a better way of separating minute traces of gases from the sea of air in which they are now lost, there is a good chance of finding even stranger things than those here considered.

Do Women Make Good Lawyers?

By Clarence D. Ashley, LL.M., LL.D.

Dean of the New York University Law School

TO-DAY women are admitted to the bar on equal terms with men in thirty-four States of the Union. That woman is intellectually as capable of studying law as man is settled beyond peradventure, and that among the young women now admitted to the bar there are able and well-equipped lawyers is a matter of personal knowledge to the writer. It seems reasonable to suppose that there may be as great need for women lawyers as for women physicians. At any rate, we may rest assured that the ordinary rules of demand will settle the question. If, in the long run, woman is not needed at the bar she will be unable to support herself in practice, and hence will not continue. We may safely leave this for time to determine.

The recognition of woman's right to practice law was the first advance, and although the fight to make this gain was severe, the actual achievement was of less importance than the broader results which necessarily followed. It is not possible to obtain accurate statistics, but it seems certain that less than three hundred and fifty women throughout the entire country have been admitted to the bar during the last twenty-five or thirty years. The profession has done jusice to woman, and she has now the right in most States to practice.

The admission of women to the bar, however, brought about another result of far more importance. If woman was to compete with man in this profession she must have equal chances for legal study, and this necessity ultimately procured the desired privilege. Thus was accomplished a most important advance in woman's education. The opportunity was given to obtain a training which is especially valuable for her general and broad development.

One of the first to perceive this was Dr. Emily Kempin, a remarkable woman. Dr. Kempin was of Swiss birth, and studied Roman law at the University of Zurich, where she was graduated with high rank as doctor juris. Coming to the United States in 1888 she began a battle royal to obtain for women the opportunities for education in law which she herself had enjoyed. At last she organized a private class known as the Woman's Law Class, and by her efforts a corporation was organized known as the Woman's Legal Education Society, which was able, through the generosity of its members, to guarantee the salary of an instructor for the next four years. The objects of this society are stated in its by-laws to be "to facilitate the study of law by women, both as professional students and also as amateurs, interested in law for practical guidance and as a matter of general culture." Thus equipped, application was made to New York University for recognition and aid. This was promptly granted, and a most important work was begun. Dr. Kempin taught the class during the first year, and she is believed to have been the first woman teacher of law in the United States.

This class was begun in 1891, and was based upon the theory that every woman should have some knowledge of law. Recognizing the fact that many women must administer large properties, it was believed that a valuable knowledge of important general principles, together with a correct conception of the rights and liabilities which devolve upon each person in the community, could be imparted in a moderate space of time. In this way busy women could gain great advantages, without devoting the hard labor and length of time necessary for a regular law course. Dr. Kempin returned to her home shortly after the successful founding of this unique class, and has since died. Those thrown in personal contact with her and the students whom she instructed are enthusiastic in her praise. The advantages of legal education for women are nowhere better illustrated than in her life. The class continues as a monument to her memory. After a few years of progress two graduates of this class, Mrs. John P. Munn as president, and Miss Helen M. Gould as vice-president, took the executive lead, and have carried forward the work with ever-increasing success, furthering its aims with untiring interest and whenever needful with a generous purse. Some six hundred women have taken this course and received the chancellor's certificate of graduation. The class now possesses an endowment fund of twenty-five thousand dollars, has invested funds for a number of scholarships, and has become an integral part of New York University.

As a direct result of this class-work New York University opened its regular law course to women, and has graduated some sixty-eight with the degree of Bachelor of Laws. The work of these women in the law-school has generally been excellent and in some cases brilliant. Many of them have taken honors. Three times in classes composed of 150 or more men, many of them college graduates, women have led in scholarship. This exceptional achievement has been accomplished by a graduate of Barnard, of Vassar, and of Bryn Mawr. Of these graduates, some thirty-three have taken their bar examinations, and, as nearly as can be ascertained, fifteen have entered practice. As far as is known, none of these women have failed in practice, and some have made a marked success. In most instances the result of admitting women to the bar has been that the law-schools of the State thus admitting have thrown open their doors freely to women. In NewYork, in addition to New York University, the Cornell and Buffalo law-schools admit women on an equality with men.

In 1899 President Thomas of Bryn Mawr College determined upon a novel experiment. This experienced educator had become convinced that the study of certain legal subjects would furnish a mental training of the utmost value. Miss Thomas had no thought of professional education as such—she did not aim to make lawyers of the Bryn Mawr students—but she was convinced that a sharp course on some such subject as contract would develop the analytical powers of the students, broaden and deepen their reasoning powers, and give a special mental training particularly valuable to women. This plan has been in operation for five years, and its marked success is a tribute to the sagacity of President Thomas. No subject has been selected with a view to the legal knowledge which might be acquired, but simply to its adaptability for mental training. Perhaps the result of this work may best be shown by the following extract from a paper written by a Bryn Mawr graduate, who took this law work in college.

Having referred to mathematics and science for training in accuracy of thought, to English for training in accuracy of expression, she continued:

"Now all these offices that each course fulfils so well and in such detail, law offers too; but, more than that, it shows the relation between all these. In every case there must be, first, a close examination of the facts, then a good, logical thought, followed by clear expression. In other subjects the same training is needed and to some extent given, but nowhere within my experience is the relation so clearly brought out. You may be taught to use your faculties one at a time, but seldom are you shown the order of procedure, you might say—the tremendous importance simply of clear thought before any attempt at expression.

"But with the training that law gave in detailed method (and this was illustrated by cases in contract as it happened), there came to me, not only a general readiness of perception, but also a greater power of thinking quickly, and, above all, clearly; the study was essentially logical. Here there was no chance of a merely cursory glance at the facts sufficing; nor was that hasty judgment that thinks to know the matter intuitively of the least avail. Both the facts and the law had to be gone over with utmost care; then quickly, clearly, and without hesitation, the gist seized and expressed. This was a training that helped me in class-work and in examinations. It helps me now in dealing with every problem that comes up, and the good it has done me in writing and in conversation is more than I can estimate."

As a result of this successful experiment at Bryn Mawr it is understood that Barnard College has in contemplation legal instruction of a similar character. The modern woman is called upon, more and more, to take her part in solving the problems of the world. In the West she has, in some States, the entire franchise, and in many Eastern States she has a vote on some matters. She is called upon to aid reforms. She takes an active and practical part in charitable work and in forwarding the extensive business arrangements of public charitable institutions. Not long since her influence was potently felt by Congress in reference to a question regarding Mormonism. In doing all this she is not neglecting her home, but she is aiding her country. A legal education renders her stronger, more intelligent, and better able to reach wise and conservative opinions. Such an education gives her a training, which she specially needs, and is a benefit to the nation in that it makes her a better citizen.

A realization of all this is leading young women, in increasing numbers, to study law, and the writer sees nothing to deplore in this tendency. They lose thereby neither charm nor any true womanly character. No study or training can change a genuine woman to anything else—she will be after, as she was before, the same genuine woman.

As far as education is concerned, woman is in the law to stay, and the world will be the better for it.

Scenes from "A Japanese Nightingale"

The stage version of Onoto Watanna's novel, recently presented at Daly's Theatre, was described in the "Weekly" of December 5

"The County Chairman"

The new comedy by George Ade, now playing at Wallack's Theatre, New York, is a drama dealing with the life of a town in the Middle West, with the action centering about a local election. The photograph illustrates one of the strongest scenes in the play, occurring in the third act. The episode takes place in the country law office of the "Hon. Jim Hackler," the county chairman of his party. Through treachery, his opponent, the candidate for the opposition, won "Hackler's" sweetheart from him in his youth, and "Hackler" is about to ruin his enemy by publishing a statement implicating him in a felony. "Hackler's" former sweetheart, "Mary"—now the wife of his enemy—intercedes at the crucial moment, and when the editor enters to announce that the accusing story is about to go to press, "Hackler" magnanimously withholds it from publication

MISS GRACE VAN STUDDIFORD IN "RED FEATHER"

Miss Van Studdiford, who was formerly with "The Bostonians," has the principal rôle in "Red Feather," the new comic opera by Messrs. DeKoven, Klein, and Cook. The action of the opera centres about the operations of a band of conspirators who are attempting to overthrow the reigning dynasty in the mythical kingdom of Romancia. "Red Feather," the chief of the band, is known to the world as "Countess von Draga." Her lover, "Captain Travors," of the Romancian army, is ordered by his rival, the Crown Prince, to find and capture the dangerous "Red Feather." He succeeds in reaching the council-chamber of the band, and finds the dreaded chief in the person of his sweetheart. In the end, the Crown Prince is deposed and the captain wins his lady, after the "Order of Red Feathers" has triumphed

Correspondence

THE CASE OF SENATOR SMOOT

WASHINGTON, D. C., *December 5, 1903.*

To the Editor of Harper's Weekly:

SIR,—Referring to your editorial concerning the Smoot case, you say that since it is not charged that he is practising polygamy, "it follows that the demand for his expulsion from the Senate must be based upon the assertion that he is a believer in Mormonism, and that as a matter of theory Mormonism sanctions a plurality of wives." The first ground upon which the opposition to him is based is that as an apostle of the Mormon Church he has taken oaths which forbid his yielding supreme obedience to the United States.

When he does take the oath required by the United States he perjures himself, for, before he could become an Apostle, he had to swear to uphold the Mormon Church as "an order of government established by Divine authority"—"it is the only legal government that can exist in any part of the universe . . . all other governments are unauthorized and illegal." . . . "When God sets up a system of revelation, as he has done by the priesthood in these latter-days, He sets up a system of government that shall rule both temporal and spiritual matters."

Mr. Smoot has less right in the Senate of the United States than a subject of Great Britain or Germany. These governments are not planning for the "day to come when the United States government will be uprooted." That is what the Priesthood of Mormonism has prophesied, and now one of the prophets has taken his place in the seat of power in our government. We are threatened with a far worse curse than slavery, and if we are not wide-awake and ready to smite it down with all the power of this country, we will find ourselves throttled by it. Already the Mormons hold the balance of power in seven States. They declare that if let alone for twenty years more they will control the government, and the amazing spread of their doctrines, and rapid increase in numbers, together with their immense wealth,—the most gigantic trust the world has ever seen—make it seem easy to believe that they will accomplish what they have set out to do. They are never idle, while we sleep in fancied security.

You say, "As regards his private opinions concerning the religious or moral propriety of polygamy, he is as free from restraint as would be a Jew or a Mohammedan, either of whom is at liberty to hold what doctrines on the subject he may choose, so long as he refrains in practice from a violation of State or Federal law," but you fail to take into account that the private opinion of a private gentleman is one thing, and the public promulgation of a doctrine as a direct command of God through his divine apostles is another. A majority of the twelve apostles are to-day living openly with several wives, in direct violation of the laws of their State, and in violation of their sworn promise to abandon polygamy if Statehood might be granted them. Senator Smoot acknowledges that he knows of over seven hundred heads of polygamous families, and had it not suited the hierarchy to have one of their trusted officers in the United States Senate, no doubt he would to-day be obeying the laws of his church by taking unto himself numerous wives, in order to increase his power and elevate his position in this world and the next.

They tried sending an acknowledged polygamist to Congress, and through the efforts of the women he was turned down, so this time they are crafty enough to try another tack. Some of the best lawyers in the country declare that the only way to abolish polygamy is by an amendment to the Constitution, which will give the Federal courts jurisdiction, since the Mormon influence in the State courts is so strong that conviction and punishment is well-nigh impossible. It is only those who are ignorant of the present state of affairs who are indifferent. Those of us who have visited Utah, and who have friends living there, know whereof we speak. Will you not, Mr. Editor, give this matter a more thorough study, and then give us another editorial embodying your best thought after weighing all the evidence? I never miss the editorials in HARPERS, for I think them the wisest and nearest right of any paper in the country. By that same token I want you to stand intelligently right on this question. I am, sir, B.

We discuss this subject elsewhere.—EDITOR.

REPLIES TO PROFESSOR HART ON NEGROES IN THE SOUTH

RALEIGH, N. C., *December 4, 1903.*

To the Editor of Harper's Weekly:

SIR,—Few things are more amusing to a Southerner than the usual impressions of "A Northern student of affairs in the South." There is usually just enough of truth in what is seen to give a shadow to the coloring, but the picture is so unreal, and the lesson drawn from admitted facts is so illogical, that the picture becomes a mere caricature and the lesson a joke.

It is a matter of great surprise, though, that HARPER'S WEEKLY, usually so accurate in all statements of fact, and particularly on the negro question, should publish with apparent editorial approval the statement by "Professor A. B. Hart, of Cambridge, who lately spent a year in the South," that no negro is permitted to enter Mitchell County, North Carolina. If the WEEKLY will turn to the census it will find that for the past three decades more than 500 negroes were permitted to live in that county at the time of each census-taking.

It is not known where Professor Hart obtained his information. But it is well known where he might have gotten it. During the amendment campaigns in North Carolina in 1898 and 1900 the Democrats strained every nerve to induce all the white voters to vote together as a "White man's party." To offset this the Republicans used the argument that their strongholds were in the western part of the State, where there are few negroes, and hence theirs was the real "White man's party."

It was no unusual thing to hear over-zealous campaign orators declare that the Grand Old Party was so white that in Mitchell County, where it had its largest majority, no negro was allowed to even live. Of course, such speakers were careful to make this statement to exclusively white audiences. Every intelligent man knew it was as untrue as was the reply the Democrats made to it, that Mitchell was so lawless no Democrat was permitted to live there.

Is it strange that the North knows so little of true conditions in the South when a professor of Cambridge is carried off his feet by such rot? There may be localities where negroes are not permitted to live, but they do not exist in North Carolina.

That one should think it curious that one community in the South in which there are no negroes should not wish them, while in another, where they constitute the chief labor of the farms, their emigration should be resisted, demonstrates that such person has reached only the shallow waters of the negro problem.

I am, sir, THOMAS B. WOMACK.

RALEIGH, N. C., *December 4, 1903.*

To the Editor of Harper's Weekly:

SIR,—You are right in saying that no negroes are allowed to go into Mitchell County in this State. You ought to add, however, that Mitchell County is solidly Republican in politics, voting the Republican ticket almost to a man without question. In the central and eastern sections of the State, where the Democrats are in the large majority, the negro has every chance to become whatever he is prepared to be. Here in the capital city four-fifths of all our skilled mechanics are negroes. Carpenters, bricklayers, stonemasons, stone-cutters, blacksmiths, and other trades have a large majority of negroes. Negro hackmen own the carriages they drive. Negro physicians have a large practice among their own race, and we have a medical college for negroes, where the leading doctors of the city, the surgeons, and chemists are on the faculty. There are negro lawyers, and they are treated fairly by bench and bar. Let our negro mechanics go North, and they are not allowed to follow their trade. I met a negro at a hotel in Harrisburg, Pennsylvania, last winter, who, finding I was from the South, told me that he went there from the South, and was a skilled plasterer. He got a job on a building at $3 a day, and at once every white man threw down his tools. This darkey told me that he was working as porter at the hotel to get money enough to go back South, where he could work at his trade. The negro has every opportunity here for education, and can work at any trade or profession he fits himself for. Out of her poverty the South has spent millions for the elevation of the negro educationally and morally, but the life of civilization demands that he be kept out of politics, and that the social line shall be strictly drawn.

I am, sir, W. F. MASSEY.

GENERAL WOOD'S PROMOTION

NEW YORK, *December 2, 1903.*

To the Editor of Harper's Weekly:

SIR.—Try to be accurate as well as fair. In your issue of December 5, 1903, under the reproduction of General's Wood's latest photograph, you speak of him as one "whose promotion over the heads of officers ahead of him in *regular line of promotion* is now under consideration, etc." If you will refer to the Army Register, you will find General Wood to-day is the *ranking brigadier-general.* Consequently, being at the head of the list, the statement that he is being advanced over the heads of officers ahead of him in regular line of promotion is not justified by the facts. How he was appointed brigadier-general may be the subject of criticism, but being the senior brigadier, by your own argument he is entitled to be selected to the first vacancy occurring in the grade of major-general. I am, sir, FAIR PLAY.

This simply begs the question. If *merit* was the reason for jumping General Wood over the heads of several hundred officers originally, *seniority* cannot now be pleaded as an excuse for pushing him further up.—EDITOR.

EXPERT APPRECIATION

BALTIMORE, *December 3, 1903.*

To the Editor of Harper's Weekly:

SIR.—It affords me a great deal of pleasure to take a few minutes out of the busy day of a newspaper office, to say how much delight there is in the current number of HARPER'S WEEKLY for the man who appreciates a good thing when he sees it. There is a catholicity and perspectiveness about the number that is unique. It is fine work to bring together in one issue of a periodical a variety of text and illustrations so satisfying to the hungry mind and eyes. I am, sir. F. MCKINSEY,

Managing Editor Baltimore *News.*

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

WHY MODIFY MILK

for infant feeding in the uncertain ways of the novice when you can have always with you a supply of BORDEN'S EAGLE BRAND CONDENSED MILK, a perfect cow's milk from herds of native breeds, the perfection of infant food? Use it for tea and coffee.—[*Adv.*]

TELEPHONE Service lightens the cares of house-keeping, saves time, and prevents worry. Low rates. New York Telephone Company, 15 Dey Street, 111 West 38th Street.—[*Adv.*]

A JUICY, sparkling fluid for all classes of American citizens—COOK'S IMPERIAL EXTRA DRY CHAMPAGNE.—[*Adv.*]

THOUSANDS suffer from a short, hacking cough who might be cured by PISO'S CURE.—[*Adv.*]

DON'T despair. Ill-health flees when ABBOTT'S, the Original Angostura Bitters, are used.—[*Adv.*]

PERMIT me, madam, to volunteer a word of advice! You make use of toilet waters. Well, beware of any such of which benjamin gum forms a constituent part, as this spoils the skin, and procure rather perfumed Eau de Cologne, which constitutes the truly genuine toilet water for ladies. I might point out particularly, amongst Guerlain's exquisite "creations," the "Eau du Coq," a new and faintly delicate perfume, and the "Eau de Fleurs Nouvelles," which is also very much appreciated on account of its remarkable fineness and sweetness.—[*Adv.*]

INTERESTING WINTER CRUISES.

IF proof were needed that Americans are a traveling people, as well as prosperous, it is afforded in the success of the cruises started fifteen years ago by the Hamburg-American Line, and which long since became so popular as not to sail at regular intervals. The shortest of these cruises is a twenty-five days' tour of the West Indies (Cuba, Bermuda, etc.) and the Bahama Islands; the next, in period of time, is a seventy-four days' cruise to the Orient (Gibraltar, Spain, Alexandria, the Nile, Jerusalem, Italy, etc.), the longest being a tour of the world, occupying four and a half months.

Three cruises to the West Indies, this season, will start from New York on January 9, February 6, and March 8 respectively. Among the places to be "touched at" and visited in the first cruise are St. Thomas, San Juan, Martinique (affording a distant view of Mount Pelée in eruption), Jamaica, Havana and Nassau; the second cruise takes passengers to many of these places, and includes Barbadoes, farthest to the windward of all the Caribbee Islands; the third cruise calls first at Nassau, and includes a short stay at Bermuda.

The cruise to the Orient starts from New York on the second of next February by the S.S. *Auguste Victoria*; the other cruises, West Indies and Around the World, will be by the *Prinzessin Victoria Luise*, which was built to the order of the Hamburg-American Line for cruises Around the World exclusively. In her construction she represents an entirely new type of vessel. For instance, she takes only first-class passengers, limited to two hundred; there are no upper berths; she carries neither freight nor mails, but there is a gymnasium aboard, as well as a library and a dark-room for photography.

The *Prinzessin Victoria Luise* has recently been provided with especially large bilge keels, which reduces the motion to a minimum. Each stateroom has an electric fan, and the port-holes are unusually large, to afford ventilation and comfort in the tropical climate which the vessel traverses. Indeed, everything that money can purchase and forethought devise has been provided to make these cruises luxurious—interesting they must be from every point of view. The *Prinzessin Victoria Luise* has twin screws, her length is 450 feet, the breadth 47 feet, and her average speed 15 knots.—[*Adv.*]

ADVERTISEMENTS.

KNOWS NOW

Doctor Was Fooled by His Own Case for a Time.

It's easy to understand how ordinary people get fooled by coffee, when doctors themselves sometimes forget the facts.

A physician speaks of his own experience:

"I had used coffee for years, and really did not exactly believe it was injuring me, although I had palpitation of the heart every day.

"Finally, one day a severe and almost fatal attack of heart trouble frightened me, and I gave up both tea and coffee, using Postum instead, and since that time I have had absolutely no heart palpitation except on one or two occasions when I tried a small quantity of coffee, which caused severe irritation and proved to me I must let it alone.

"When we began using Postum it seemed weak—that was because we did not make it according to directions—but now we put a little bit of butter in the pot when boiling and allow the Postum to boil full 15 minutes, which gives it the proper rich flavor and the deep brown color.

"I have advised a great many of my friends and patients to leave off coffee and drink Postum—in fact, I daily give this advice." Name given by Postum Co., Battle Creek, Mich.

Many thousands of physicians use Postum in place of tea and coffee in their own homes and prescribe it to patients. "There's a reason."

A remarkable little book, "The Road to Wellville," can be found in each package.

Beer Keeps One Well

It is a noticeable fact that those who brew beer, and who drink what they want of it, are usually healthy men.

You find no dyspeptics among them, no nervous wrecks, no wasted, fatless men.

And so in those countries where beer is the national beverage.

The reason is that beer is healthful. The malt and the hops are nerve foods. And the habit of drinking it keeps the body supplied with fluid to flush out the waste.

The weak, the nervous and sleepless must have it. Why isn't it better to drink it now, and keep from becoming so?

But drink pure beer—Schlitz Beer. There isn't enough good in impure beer to balance the harm in it.

Ask for the Brewery Bottling.

THE SPENDTHRIFT

by WALTER JUAN DAVIS

HOW it ever got into Hal Dorn's head was a mystery to the family, but there it was—a novel and apparently original idea which now blossomed into words, as he stood before the fire looking intently into it.

"Colorado is the place for me and I'm going there!"

"My child!" exclaimed his mother.

"Good boy!" said his uncle Reuben.

Hal, without further remark, walked out of the room, and his uncle Reuben turned himself in his chair and watched him stride away. "B'gosh! I b'lieve he means business for once in his life," said he.

"That's what you've driven him to, Reuben, and there will be a day when you will have to answer for it!" moaned out poor, nervous little Mrs. Dorn, who had petted and spoiled Hal until it was a wonder he had any manliness left in him.

"W'y, Sarah, you know I've—" Bang! went the door, and Mrs. Dorn's brother found himself talking to nothing animate except the cat.

Hal's uncle Reuben was a thrifty Missouri farmer whose cardinal virtue was economy. He had no religion other than that of financial prudence, no creed but the salvation of dollars. He was fond of his nephew, but was very hard upon him for his lack of thrift. The lad, twenty years old and just out of college, was bright and entertaining, and his uncle liked "to have him around," as he expressed it, but Hal's mother was poor, and Hal, in his own right, had nothing, and the old man, very naturally, upbraided him for his inability to hold fast what little lucre occasionally accrued to him. That evening he had just been berating Hal in the old way, and the young man had heard it all in silence.

To Mrs. Dorn, who always stood up for her boy, Hal's uncle had often said of him, "He's a good boy, Sarah, but he'll never save a cent." Other frugal souls in this exemplary vicinage had remarked upon Hal's improvidence, and deplored it in chorus with his uncle, so that Hal himself had come to accept it as some constitutional infirmity and calmly lamented it too. But he was tired of hearing about it, and determined to get out of ear-shot of his kindred, and so, though his mother much bewailed his going, he went.

Upon the night of his departure from the village wherein he had been born and reared, the probable length of Hal's stay in the West was variously estimated, by those he left behind, at four, six, and eight weeks. Something of the sort was hinted to him at the depot, just before the train started, while he was being kissed and cried over and shaken by the hand by the good folk who had lived nowhere but in that old, hospitable, family town, and who regarded it as dangerous to attempt to live elsewhere. Hal told them they did not know him, laughed at them, and went his way; but his laugh was a very mechanical one, and there was congestion about his head and heart when, as the train began to get under way, he stood on the back platform of the rear car and saw the lights at the little old depot wink dimly and suffusedly through the trees, as if they were eyes and wept for him.

The monotony of the journey gave Hal plenty of time for thought, and really it behooved him to think. He was rushing on nearer and nearer to Denver, into which bustling corporation he would seek admission on the basis of seventeen or eighteen dollars and a gripsack. He had no idea what he would do, but, somehow, since he had worn off the acute pangs of homesickness, he was rather buoyant. Having no knowledge of business and not having done any sort of hard work in his life, he yet felt confident that he would "get along all right," and any doubts that he had of it merely whetted his anxiety to get where he could forever dispel them. He knew no one in the West, and had no prospects or promises ahead of him. A sort of cheerful apprehension was upon him, and he tingled pleasantly with the risk he took, as does an urchin skating on thin ice.

What he wanted was "a position"; he was not looking for a mere job, that could be had in Missouri, but it would be very gratifying to be able to write back home, "Dear Mother,—I have secured a position with," etc., etc.

It was early in the morning when Hal disappointed the porter with a twenty-five-cent tip for his services *en route*, and stepping from the Pullman car, bade good-by to luxury. Here was Denver. There had been some rain during the night, and Wynkoop Street, which he had to cross, and Seventeenth Street, which he had to traverse, were full of oozy mud. Hackmen swarmed about him and besought him for his baggage, but he pushed them right and left and splashed on sturdily afoot.

Presently somebody ran against him and said: "Hello, Hal! What are you doing out in this God-forsaken country?"

Well, if it wasn't Jack Swinney!—the bright-faced, cherubic dude whom Hal had seen depart for the West three months before, in fine raiment and exuberant spirits, "to accept a position in Denver!" Now his face was thin and serious, and he wore a blue shirt, brown "overalls," and a broad hat, and was in a hurry.

"Why, Jack," Hal exclaimed, "where *did* you get those togs?"

"At my uncle's," he answered, with a queer smile, "and you'll be wearing some like 'em before long, unless you're better fixed than I think you are."

"Oh, I guess not," said Hal; "but what's become of your position?"

"Position? thunderation! One fellow had it, and thirty more were standing around waiting for him to drop dead, when I got on the scene. But I must be moving. I hope you'll do better, but I doubt it."

"But hold on," said Hal, dropping a detaining hand upon his shoulder, "what are you doing now and where are you going?"

"Railroading. My train leaves at eight, and I must hurry. I'm going out to throw gravel for the South Park."

Hal was utterly astounded. "It can't be possible, I—"

"Oh yes, it is, d—d possible," interrupted Jack, as he started off. "So long; good luck, and keep off the gravel-train if you can!" And away he went, shoving through the crowd.

"By George! this is beginning to look serious!" said Hal, so loudly that a large man who was jostling by heard him and laughed.

By this time he had walked well over toward the smaller residences in the eastern portion of the town. He began to inquire the price of subsistence at every house where he saw the sign "Boarding, by the Day or Week." After inquiry at a few of these, he began to think that his "boarding" would, of necessity, be "by the day," for the charge was, invariably, eleven dollars for a week's meals, to say nothing of lodging, and those terms were, to him, in his present condition, quite frightful to contemplate.

At last a friendly-faced woman who leaned over a neat white fence was stricken with pity for the green-looking lad with the Prince Albert coat who asked her if she knew where cheap board and lodging could be had. She said she thought she and her husband, who was a carpenter, might take care of him in some way for the reasonable charge of seven dollars weekly.

Hal was grateful, and immediately planted himself in the bosom of the Biggs family.

Then began days of ceaseless and unavailing search for the "position." All up and down that busy young metropolis Hal went, at first pressing eager suit for the post of assistant in some banking business, or a position upon the editorial staff of a newspaper, and after being laughed at unreservedly and told to "drop in next summer," trying humbly to be somebody's bookkeeper, a lawyer's assistant, a railroad ticket agent, and finally pleading for a clerkship in a dry-goods store; but all to no purpose. The year 1880 was a bad one in Denver. The little city was overrun with apt young men, just like Hal, who panted in vain for honors that had been conferred months before they had been led Westward by their auriferous dreams.

On the third morning after his arrival, as Hal started downtown gloomily to resume his hopeless quest, he suddenly remembered that his mother had given him a letter of introduction to a certain Denver resident, and light rose in his face again as he hurried back to the cottage and got it from among his small belongings.

The person addressed was a kind old man, an ex-Mayor of the city, who had known Hal's family long years before he had moved out from Missouri. But pleasant words of procrastination were all that could be had for Hal.

"Don't give up," said the ex-Mayor, encouragingly, to Hal; "something will materialize within a few weeks, no doubt."

A few weeks! Hal felt in his pockets and let his fingers drift through the dreadfully small change they found there.

What hurt Hal most during the days that followed was to be wandering about where so many desirable things were exposed for sale, unable to make a single purchase. He had to deny himself even his beloved cigars, and he pined for them hourly.

After this sort of thing had gone on for a week Hal got up early one morning and wandered forth as usual.

Early as it was, the streets were as crowded as ever, and Hal encountered hundreds of young men as despondent as he. Without knowing exactly why, the Missourian took his way to the depot. Perhaps it was because he had come to the conclusion that he would never get work in Denver, and vaguely thought that at this his point of entry into the town some plan might suggest itself whereby he could get out of it.

Strolling up and down the platform, Hal saw a tall, square-shouldered man whose brown whiskers nearly surrounded a big "hatchet" face. He was dressed in the durable brown "duck"

clothes that are worn by all men of the West who work out-of-doors or whose business leads them among such laborers. When the man faced about, at the end of his beat, and came toward Hal, there could be seen, upon a piece of cardboard which stuck in his hatband, the words, "Fifty Men Wanted." When he saw this Hal at once went up to the man.

"Will you please tell me what you want with those men?" he asked.

The man-hunter stopped in his walk, and squared around on his questioner with a smile which grew, as his eyes, beginning at the lad's feet, took stock of what he wore, until he finished with a level squint at the round-topped derby.

"Well, whut do y'u wanter know that fur?" he asked, in return.

Hal explained to him the urgency of his reasons for making the inquiry.

"Well," said the man again, "I like yer spunk, but, good Lord, boy, y'u couldn't han'le er scraper er swing er pick on er railroad grade!"

"Try me," said Hal.

For a few seconds the big fellow stood with his head bent down, wrapped in thought.

At last he spoke: "I'm durned ef I don't try yer," said he, "but I'm 'fraid y'u won't last long. Yer better go an' git them store togs offen yer an' git on er blue shirt an' some overalls. Git down here by three o'clock; I'm goin' ter send out er load er fellers then—an' say, y'u wanter have er pa'r er blankits ter sleep on."

"Blankets?"

"Yes, er co'se," answered the recruiter; "y'u ain't goin' ter find no beds down thar; y'u c'n gamble on that."

"All right; I'll fix myself the best I can," Hal said, and started off at once to do it.

It took close figuring to make his money buy the "outfit" and pay the Biggses what was due them, but by patronizing a pawnbroker and contenting himself with raiment that bore marks of servitude, Hal managed it, and appeared at the depot at the appointed time, with his valuables in his valise, his blankets under his arm, and his person encased in the most remarkable costume he had ever possessed. But he felt cheerful: his dread of starvation was over; he had not found a "position," but was immensely pleased to have "struck a job."

A motley crowd it was which he took passage with on the dingy little narrow-gauge train that carried out to the construction camp all candidates for that irksome desideratum work. It was composed, for the most part, of the rough and scruff of humanity—beings who had, all their lives, fought hard for mere bodily sustenance and who bore the scars of the struggle. Across the car from Hal sat a young man of perhaps twenty-five, with keen, restless eyes, a drooping black mustache, and a pale, indoor sort of face. He had on a new suit of working-clothes, and they sat him oddly. Hal noticed his fingers: they were long, soft, and taper; and they were nervous, and those of one hand played constantly with those of the other. He was a gambler, of the "tin-horn" variety, whose luck had been bad luck, and he was going out to "make a stake." A bright youth who had but recently graduated at an Eastern law-school occupied a place farther down toward the other end of the car, and all about him were railroad Irish and ill-smelling Italians.

The big fellow who had gathered up this incongruous mixture of men now walked through the train, and consigned the lot to the conductor as if they had been so many cattle.

It was a short ride out to the station called Acequia, where the shipment of human live stock was awaited by two big blue wagons, to each of which was attached a six-mule team.

It was a drive of nine miles over to Platte Cañon and the construction camp of Wells & Megrew, contractors. The ungainly vehicle in which Hal made the journey was devoid of springs and piled high with merchandise and men. The rough jolting now and then threw him backward into the embrace of a garlicky Venetian or bumped him forward against the broad back of the driver.

The camp at Platte Cañon looked very

HANDSOME FUR SCARF

Can be secured **FREE** by buying our household specialties under the "Salvona System." To introduce our household specialties we are giving away a beautiful **American Prescut Glass Set of 12 pieces.** This is a magnificent set, as the illustrations show, and is the very latest design. To the person who will buy a small quantity of our household supplies we will give free a beautiful **Black Cooney Fur Scarf.** It has two large Marten Tabs, is 58 inches long and is the very latest style; or if you prefer we will give our 50-piece Dinner Set. This set is full size, one of this season's newest designs, handsomely decorated with filled-in flowers and gold-traced and looks exactly like hand-painted ware; or we will give our 10-piece set of granite-ware. This is a complete kitchen outfit, all steel enameled. We also give **Curtains, Couches, Rockers, Parlor Tables, Sewing Machines, Parlor Lamps, Musical Instruments of all kinds** and many other premiums with our household specialties. Every family uses them every day. We allow you 15 days time after receipt of goods to make payment. If you pay in advance we will pay all freight charges. Write today for complete description of the SALVONA SYSTEM—the "Producer to Consumer" way of buying household supplies. It will be to your advantage, as you will find many useful premiums from which to choose and we guarantee satisfaction.

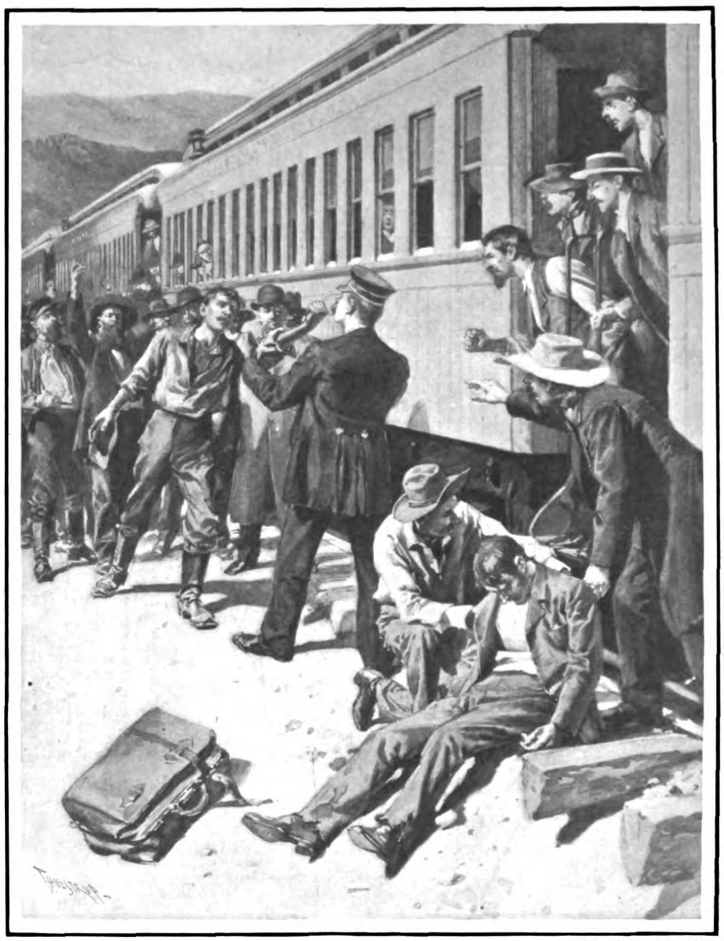
picturesque and pretty, as the wagons, with brakes hard set, slid down to it, along the slope of the rocky "hogback" at whose northern base it lay. It was a village of tents; these temporary structures shone whitely through the leaves of the scattering trees. Smoke rose from the long tent by the river, where the evening meal was a-cooking. In front of the commissary tent and "office" stood Mr. Wells, chief contractor and "head boss" of the grading outfit, who held sway as absolute as that of monarchy. He glanced over the grotesque assortment of human beings with an aggrieved expression. Then he snarled out, with intermittent emphasis, "Now, *can't* you tenderfeet *ever* git off er them wagins and *git* in here an' gimme yer names?"

The "tenderfeet" thought they could, and did so with great despatch.



As soon as Hal's name was down, and it became a fixed fact that he was to be put to work next day, and that he was to get for his labor forty dollars per month and his board, Hal walked over to the storekeeper's counter and began to spend what money he had left. It was a joy he had long denied himself, but now that he was insured against hunger, it seemed to him miserly to keep manipulating the four or five quarters he had left in his pocket. He bought a small pipe, a bag of tobacco, and a can of peaches. He was not hungry, but the painted fruit on the outside of the package looked tempting and made the purchase seem something of a luxury, and that was what the thoughtless lad always yearned for.

Shortly after sundown, a long double column of tired men, riding and leading tired horses, came slowly into camp from down the river. The stiff leather of the horses' harness creaked and the trace-chains rattled, keeping monotonous time to their heavy tramping. The men, weak with weariness and morosely ravenous for supper, drooped round-shouldered on the backs of the beasts and uttered no word, save when a led horse loitered to snap at a green twig, when there was a backward scowl, a sharp oath, and a savage tug at the truant's rein.

Arrived in camp, there was hasty unharnessing. The graders, no less lank and hungry than the animals they had cursed and beaten all day long, were economical with the waters of the Platte, and splashed their faces but sparingly in their haste to obey the call of the tuneless cow-bell which summoned them to supper. After supper the men went to sit on the edge of their bunks and smoke and growl and tell rude yarns and roughly joke each other for a half-hour before they laid their wearied bodies upon the boards and hay.

Hal, "green" and slightly embarrassed, but interested and propitiatory, went with the rest and stood their chaffing and curious questioning with fortitude. He was also told of Curly, the great celebrity, worshipped and feared by all. Curly was the big freighter whose only duty was to make one trip per day to the railroad station and haul out to camp provisions for men and beasts. His privileges were practically unlimited. He had killed a few men, and had thus, by his own exertions, raised himself, in the estimation of the West, to an altitude whereto no jewelled prince might climb. Hal was given knowledge of Curly's exploits as soon as he had seated himself cross-legged upon the floor of the tent among the smokers.

Curly himself favored "Tent B" a little later by putting his head in at the flap and saying, "Hello, fellers!" and much was the deference shown that self-made man, and many were those who rose from the sharp outer rails of the bunks whereon they sat and called out in chorus, "Come in an' set here, Curly!"

Drawn by T. de Thulstrup

"Here, make a ring!" shouted the crowd

Hal observed very closely this arbiter of life and death, and Curly, in his turn, paid smiling attention to the untempered metal that was there to be tried against flinty experience.

"I un'erstan', young un, 'at you're f'm Missouri," said he, tilting his big hat to the back of his head and turning his face toward Hal. A general laugh broke out, but stopped short when Curly frowned.

The point was beginning to be a sore one for Hal. He had been "guyed" a good deal about his native State, so his face reddened as he nodded assent.

"Well, never y'u mind erbout that," continued Curly. "They's plenty er wuss places 'n Missouri ter be fum, 'n these here hobos has got ter let y'u 'lone." With that he scowled about him, while the "hobos" protested that they were "jist er havin' er little fun outen 'im."

"That's all right, but yer've had ernuff uv it now, an' let that settle it!"

And that did settle it. The "young un" enjoyed immunity from badgering from that time forth, and he took very early occasion to thank his big patron for this display of friendliness. Curly acknowledged the thanks, with an admonitory excerpt from his own private code of procedure:

"Don't y'u worry, young un; y'u jes look out fer yerse'f, an' the fust damned feller 'at jumps onter yer, let drive at 'im with anything y'u c'n lay yer han's on!"

Hal laughed, and promised to lay the injunction to heart.

That first night in camp was one of little sleep for Hal. There was not enough hay in his bunk, and in the dark he couldn't find more. At four o'clock in the morning, while it was still dark, he was roused by a husky shout of "Come, come, roll out thar, an' ten' to yer hosses!"

With much yawning and swearing the occupants of "Tent B" obeyed the gruff command. When he had dressed Hal went outside, where he was immediately met by the owner of the voice that had roused him. By the light of the lantern which the man now handed him, he could see before him a bloated, knobby-featured Irishman with a bullying expression on his face.

"Come on an' lemme show y'u yer team!" growled he.

Surmising correctly that this was the generally detested O'Grady, the "boss" of his gang, Hal went with him without a word, and they wound in and out among stalls and troughs. "Them's yourn," said O'Grady at last. "Git up f'm thar!" and he viciously kicked a dirty gray horse which lay nodding beside its dirty gray mate.

"Curry um down, feed um, an' harness um quick," commanded O'Grady, as he walked away.

Hal had many a time seen the harness thrown upon the backs of horses by experienced hands out at his uncle Reuben's farm, but he now found that the making of a horse's toilet and dressing him for business was a thing which required study. Had not Curly happened along at this time and lent his assistance, Hal would have been tardy when the cow-bell rang and the struggle for breakfast began. As it was, he was on time, and managed to bolt down such part of the coarse provender as he thought would sustain him through the morning hours. Shouts at the door of the "hash tent" by the bosses of the several gangs put an end to breakfast.

Mounted on the black-browed gray and leading the spotless one, Hal joined the procession that filed off toward the railroad grade. He belonged to the "scraping" gang, and having arrived at the cut, a heavy scraper was designated and he was curtly commanded to "hitch onter that!" Before he felt the weight of that clumsy

One Hundred Millions in Gold

THIS IS THE PRICE OF GEORGIA'S GOLDEN FLEECE IN THE YEAR OF PROSPERITY 1903

The Entire Gold Product of the United States Will Not Pay for the Cotton Crop of Georgia

GEORGIA'S COTTON CROP

1,300,000 bales at $50	$65,000,000
Seed Products	12,000,000
Sea Island Cotton	4,000,000
Added Value of Cotton Goods Above Raw Material	20,000,000
	$101,000,000
United States Gold Product	80,000,000
Difference in favor of Georgia's Cotton Crop	$21,000,000

These figures are based on the average price paid the farmer this season. Recently the staple has been selling for $60 a bale, at which price the crop would be worth, in seed and lint and fabric, $114,000,000.

Since the days of the forty-niners, when Georgia, as a gold-producing state, yielded the palm to California, the flood of precious metal from the Western mines has dazzled the world. It forced financiers to take new reckonings, and commerce had to adjust itself to changed monetary conditions.

The golden flood from the West now yields the palm to the golden fleece from Georgia, and the rush of the forty-niners gives a suggestion of the tide of humanity that is setting toward the Empire State of the South.

The gold discoveries in California started a grand march of millions, which continued for half a century.

Now there is a counter-march. The great Western hegira is about over, and immigration, which had hardly touched the Southeast in a hundred years, is headed that way. The Panama Canal will probably do more for Georgia than for any other state. Its resources are largely undeveloped. Only one-sixth of the land is under cultivation, and values are absurdly low. A world of mineral wealth remains untouched. Alabama furnaces buy Georgia ore when they wish to make car-wheel iron. There is enough water-power in the state to drive all the spindles in the country.

Georgia is now the Golden State, and the door of opportunity is wide open there. Capital and labor work together, and all hands work for Georgia.

The Greater Georgia Association was organized for the purpose of telling the world about this state. Thirty towns and cities are affiliated in this work, and their leading men compose its governing committee. Its president is an ex-president of the Atlanta Chamber of Commerce, and its treasurer is the cashier of the Atlanta National Bank. The association was not organized for gain and is not selling land, but exists solely for the purpose of building up the state.

W. G. COOPER, *Secretary*,
GREATER GEORGIA ASSOCIATION, ATLANTA.

implement he had expected that he would rather like the work—now he knew that he had entered upon an all but mortal struggle.

The work was cruelly hard. The seventy-five or eighty teams formed an endless chain, going in at one end of the cut, coming out at the other upon the fill or dump, and, after the scraper had been laboriously heaved over, dragging the empty receptacle back, along the other side of the big groove, to recommence a similar round when the starting-point was reached. There was no time to stop. To turn the blade of the scraper to the ground, to hold hard down on the handles while the horses strained forward and the dull edge bit into the earth and gravel took all the strength and weight that was in Hal's frame. That night he could not sleep for weariness and pain. For days and days he suffered thus and thought he would die, and almost sorrowed that he did not.

However, after a while he became calloused to the bitter toil; his muscles grew strong and sinewy, and he began to take some pride in his brawn.

One hot morning, with these mutinous thoughts in his mind, he was mechanically keeping his place in the ever-moving chain. The heat was like that of a kiln. It added to Hal's misery to know that, over there in the shade of the cottonwoods, it was almost cool, and it made him nearly frantic to think what it was that those willows by the river hung over and hid. He was doggedly dreaming and not watching his work, for he had driven too near the edge of the dump, and when he gave his scraper the emptying swing he did it so disgustedly and forcefully that it flung the hinder quarters of the fretful gray a little way down the slant. The animal's right foot, at this supreme moment, caught in the traces and down he floundered, dragging the other horse with him, rolling over and over until they reached the foot of the steep slant, seventy-five feet below.

O'Grady saw it all from the top of the cut, and came down toward the dump swearing his breath away. When he had come within forty feet of Hal, a coarse-grained bowlder the size of his fist zipped by and ticked his ear. He stopped, paralyzed with surprise.

"Go in an' git yer toime!" he bawled.

"Won't I, though!" Hal answered.

And Hal was free once more, with money in his pocket, and all he had to do now was to wait till Curly got ready to start, and then ride with him on the freight wagon to Acequia.

"Whar do yer 'spect ter go, young un?" asked Curley.

"I think I'll go to Santa Fe, New Mexico," Hal answered, giving the first location that occurred to him.

The south-bound train, which he had decided to take, stood still at the little platform. Hal was about to climb aboard when his attention was attracted to a scuffle which was in progress on the front platform of the first passenger coach. Somebody was being bundled off the train. He was evidently an ill man—a consumptive.

When Hal first got a glimpse of him the conductor, a burly ruffian, was pushing him along toward the step of the platform.

"You *will* beat the road, will you, you yeller-faced tramp! I'll show yer!" And the conductor gave him a final shove that sent him to the first step, and then a kick that precipitated him into the ditch beside the track.

"Shame! Brute!" said several onlookers at once.

The big-fisted railroader was not going to be criticised for what he had done. He leaped down from the car, got his fists up, and shouted, "Who don't like it?"

Hal's fresh young blood was rushing through him at mill-race speed. Without a further thought he walked up to the conductor, and saying, "*I* don't like it, you cowardly pup!" dashed a hard, clinched fist into the bully's face.

"Now you're talkin'!" "Here, make a ring!" shouted the crowd, as it backed away and formed a circle.

It was a pretty good fight. The conductor gave out first, and was led gasping to the train, whereon he was helped by the faithful brakeman.

When the train had gone, Hal found that he had forgotten to take passage. The sweat poured down his face, and the flesh about his left eye was beginning to puff up, but he was happy.

The consumptive limped up to him and grasped his hand.

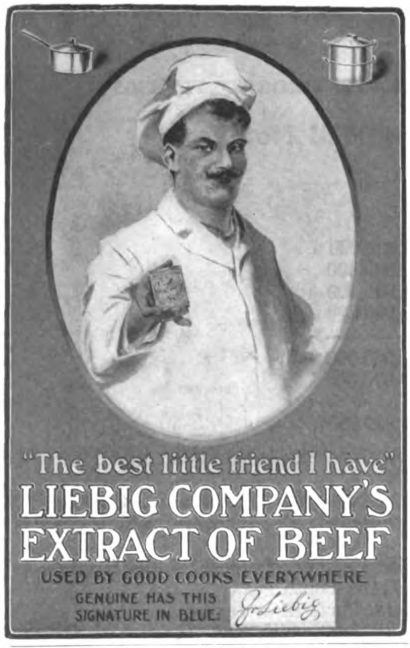
"Thank you," said he; "I could have done that for myself five years ago."

The two went over and seated themselves in the scant shade of the section-house, and the sick man told Hal how he came to be in Colorado.

He had been ill a long time, and was getting worse and worse at his home in Georgia, and his mother, a poor woman, had scraped together enough money to get him to Denver, where he was sent by an employment agent to a dairy farm out near Littleton. He was to help milk the cows and do odd jobs, and for this he was promised twenty dollars per month and his board. Finding that he was becoming still worse, daily, he resolved to go back to his mother. That morning he had asked for his pay, and had been told that he had not earned his board, and that there was nothing due him. Too weak to remonstrate, the unfortunate fellow had, in his desperation, boarded the train, hoping somehow to get a little nearer to Georgia.

"You see how far I got," he concluded, smiling faintly.

"How much will it take you to get back?"



"Well, it cost my mother sixty dollars to get me to Denver," answered the invalid.

The look that came into his eyes as Hal held the money out to him, was one which the young Missourian often called to mind afterward, in the midst of terrific toil, and the thought of it braced him up.

"I thought you wuz a-goin' away," said Curly, when he rode up.

"No, I took another notion, Curly. I think I'll go back with you," said Hal.

The Progress of Science

On the Threshold of New Discoveries

Dr. G. F. Kunz and Professor C. Baskerville have carried out a series of very patient and remarkable experiments, with the object of recording the conduct of gems and gem-material under the influence of Roentgen rays, ultra-violet light, and emanations of radium preparations. The minerals of the handsome Morgan-Tiffany and Morgan-Bement collections were used in the experiments. The fluorescence and phosphorescence resulting from the action of ultra-violet light upon about 13,000 verified minerals were observed. In addition selected stones from 15,000 British Guiana diamonds and some other fine stones (among them a tiffanyite and some carbonadoes) were submitted to special ray and radioactive influences. Many curious phenomena were noted, and the investigators were able to establish a tentative classification of gems and minerals into eight divisions, according to their responsiveness to the different rays experimented with. The data thus procured will furnish new problems for scientific study, and there is every chance that further investigations in this field will lead to important new discoveries in the constitution and properties of gems and minerals and perhaps of matter in general. Through their experiments Messrs. Kunz and Baskerville have come to believe that as the electric furnace has given us carborundum, artificial graphite, and a series of absolutely new carbides, because of the high temperatures obtainable with its aid; and as the production of low temperatures has resulted in the liquefaction of all known gases and assisted in the discovery of new ones; so perhaps the application of the special rays and the radioactive forms of energy may give us the means of identifying substances that have escaped all our earlier methods of observation; it may be even that a new series of elements will be found. We are clearly on the threshold, they affirm, of a new domain of scientific facts, and perhaps generalizations and laws which may yield results in the twentieth century as interesting and remarkable as the electrical discoveries were in the nineteenth.

Mind and Matter

Reference was made in this column last week to the confusion and perplexity wrought in the ranks of science by recent discoveries, and the high hopes that were at the same time engendered. A cablegram from England conveys a good idea of this situation on the other side of the Atlantic. The message states that Sir Oliver Lodge, the well-known scientist, has propounded the following startling theory: "There are those who have surmised that matter is, after all, only the weapon and vehicle of mind. The way it interprets itself to our consciousness through the sense of the organs gives no clue to its nature. A motion and alteration of the configuration of the molecules of our brain are believed to accompany every act of thought. It will be, at any rate, a suggestive analogy if a material process of an essentially similar sort is found to be occurring throughout what we know as the inorganic world—the world of dead matter—and we should begin to ask, Does all this motion correspond to some universal thought or mental activity likewise?" But besides indicating the perplexity of the scientific mind at the present time, this utterance of an eminent scientist is significant of the recent great change in the general attitude of scientific men towards the phenomena of the universe. Only a few years ago what was known as materialism became very prevalent. Every manifestation of life, even the human soul, was held to be referable to "matter in motion," and in this theory matter was supposed to be the prime factor, and motion, spirit, life, the resultant. Now all is reversed; the spirit again becomes the prime agent, and matter is "only the weapon and vehicle of mind." Thus is science beginning to justify the intuitive knowledge of the poets, of such poets as Edmund Spenser, who, back in the sixteenth century, wrote,

> For of the soul the body form doth take,
> For soul is form and doth the body make.

COCKTAIL FACTS

About 90% of the Cocktails now drank are either Manhattans or Martinis; no good bar-keeper uses any bitters but "English Orange" in making them. The "CLUB COCKTAILS," Manhattans and Martinis, are made as they should be with English "Orange Bitters," are properly aged and are better than any fresh made cocktail possibly can be. A fresh made cocktail is like a new blend of any kind, unfit for use. Age is what makes a good Punch, age is what makes a good Cordial, age is what makes a good blended whiskey, age is what makes a palatable sauce, and above all age is what makes a good cocktail. These statements can be verified by any reputable blender.

The Heart of Hyacinth
by
ONOTO WATANNA
Author of "A Japanese Nightingale," etc.

"The Heart of Hyacinth" tells the love story of a daughter of American parents, born and reared in "the land of flowers," and of a half-caste youth whose father was an English nobleman. The fairy-like charm of Japan is felt in every page of the story. It is incomparably dainty, and it is filled with the indefinable spirit of the East.

The book is bound in a delicate lavender cloth, with gold and colored cover decorations. There are full-page illustrations in color and marginal drawings in tint by Japanese artists on every page.

Music

"Parsifal" in New York.—I.

"PARSIFAL," the final and supreme achievement of Richard Wagner's life, was performed on December 24 at the Metropolitan Opera House, New York, for the first time anywhere outside of the Festspielhaus at Bayreuth. The event is sufficiently sensational in itself, aside from any question touching the merits of the production: for "Parsifal" marks a spiritual and artistic eminence to which the master of modern music-drama never elsewhere attained to. Here, essentially, is one of those "dream-colored dramas of the mind, best seen against imagined tapestries . . . against revealing shadows and tragic glooms and radiances" as real, and as near, as the vivid actualities of common life. And of the music—of that marvellously subtle and poignant score which is revealed to us, in its just relationships, for the first time—how shall one adequately summarize it? Nowhere else in his work has this master of illusions wrought such wonderful and moving shapes of beauty and terror, of aspiration and despair and sadness. He is more impassioned, more sustained, in "Tristan," more piercingly tragic in "Götterdämmerung," lovelier in "Siegfried," more immediately human in "Meistersinger"; but in "Parsifal" the intensity, in its sort, is unique; the art is unparalleled in fineness and dexterity.

A youth, pure in heart, uninstructed in life, enters a holy community which is and has long been in distress. One in agony is revealed to him, and high and sacred mysteries are disclosed in his sight. But he is mute, untouched. Years after, he returns: he has come in intimate and searing contact with human passion, he has known life at its vital sources. Again he comes into the presence of that great grief which before left him unmoved, and the ancient and splendid mystery which before was veiled to him. Aroused and enlightened, through a clairvoyant intuition of the community of human emotion, he could cry, with Anna in *La Città Morta*: "Vedo, Vedo!" For now he knows, and is prepared to see the Grail in the blinding hour of its illumination.

Redemption—external redemption—is not the key-note of this searching spiritual fable, as we are so commonly told. *Parsifal* is a subjective hero—it is he, not *Amfortas*, who is redeemed: *he* is the real beneficiary. It is undeniable, of course, that Wagner was obsessed by the motive of redemption—particularly the beneficient and gracious, but spiritually invalid, ideal which conceives of woman's self-sacrificing love as an instrument of salvation—the informing principle of "Die Fliegende Höllander," "Tannhäuser," and—in part—"Der Ring des Nibelungen." Concerning "Parsifal," he himself has written: "In 'Parsifal' the sufferings of the Redeemer himself are the saving power and at the same time the incorporation of that Ideal which the love curse has taken from the saintly ones of the Grail temple. *Parsifal* has attained to the recognition of the sacrificial wounds of Christ, and preserving this recognition in his love of the being of his own purity, rescues the fatal spear that pierced the Saviour's side from the power of heathendom, and in conscious, compassionate sympathy heals with it the ever-bleeding wound caused by the love-guiltiness of the deluded Grail King." But, as was suggested in an article published a year ago in the *North American Review*, Wagner had a singular and most disconcerting habit of transcending his own elaborately formulated theories, both structural and ethical. He imagined himself as, primarily, a dramatic poet, triumphantly realizing his ideal of a lyrical drama in which the music should be merely accessory and contributive; actually, he wrote lyric plays in which the drama serves merely as a framework for music that overshadows it, by its superb and dominant beauty, as the "Erlkönig" of Schubert overshadows the "Erlkönig" of Goethe. So, as an idealist, Wagner builded time and time again far better than he knew. He was a sublimely inspired genius, uttering often, like Plato's poet, "great and wise things which he himself did not understand." But we who see his work in an objective view are permitted to attempt an interpretation.

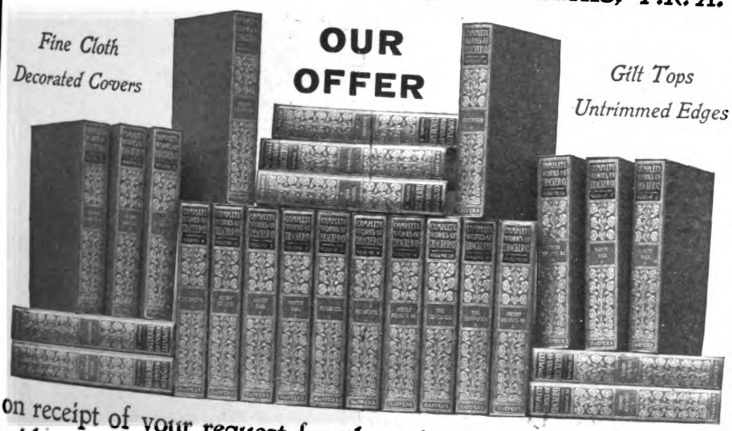
William Makepeace Thackeray
Complete Writings

IN TWENTY-FIVE VOLUMES

A Set of Thackeray is not a Luxury—it is a Necessity



THACKERAY'S creations place him at the head, perhaps, of the English novelists of the nineteenth century. His characters are always human. There are no immaculate heroes, no perfect heroines, no utterly unredeemed persons of either sex to be met with in the pages of his books. He conceived it a duty to describe the world as he saw it, and he drew his characters with admirable realism, and with a marvellous insight into the natures of men and women. We take pleasure in announcing a new edition of Thackeray's complete works, and we feel confident that this edition will meet with the approval of all lovers of good library books.

Many Beautiful Illustrations by Great Artists

Honor, Riches and Long Life!

What Young Man but desires them, and dreams no doubt that great success will attend his efforts and crown his later years with good fortune?

Yet frequently in his haste to become rich the Young Man overlooks entirely the only methods of acquiring a competence which are sure—though to him they may seem slow.

Often he reaches thirty or thirty-five with practically nothing laid by. Then he finds it hard to economize; his expenditures have been gradually increasing and he has not acquired the habit of saving!

The Advantage of Endowment Life Insurance

taken out early in life is that it furnishes a method of saving which is unequalled. In fact, it almost compels you to save money regularly.

You can commence with any amount, from $1,000 up, and increase it as your circumstances permit.

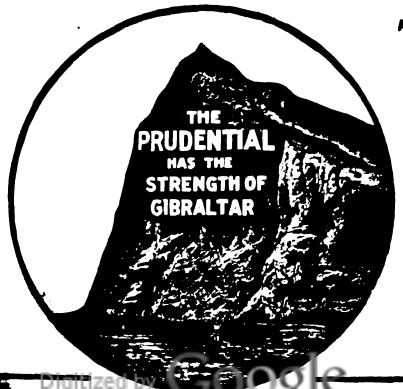
According to statistics, of those who take out Endowment Policies

At Age 30, 80% Survive the Payment Period of 20 Years.

You are, therefore, likely to live to enjoy the results of your own financial foresight, and you can be certain of full returns upon the money invested. There are

Over One Million Endowment Policies in Force in this Country

Representing Ultimate Accumulations of



Over Two Billion Dollars

Wouldn't you like to join this VAST ARMY OF MONEY SAVERS? The most progressive, enterprising, far-sighted and successful young men of America are included in its ranks.

HARPER'S WEEKLY

for 1904

THE fifty-two numbers of Harper's Weekly, at the end of the year, make the most interesting, complete, and informing library possible to place in your home. Every event of importance, every happening of interest in all parts of the world, every phase of home and human interest is chronicled from day to day in the pages of the Weekly by writers and artists who say the last word of authority on each subject. For this reason it is impossible to tell our readers and subscribers exactly what they will find in each of the fifty-two issues of the coming year; every day, every hour brings a new subject—the announcement and description of a new invention, a discovery in science, new phases of education, politics, finance, literature, art, religion, architecture, home-life, music, the theatre—the field is as wide as human interest, and the Weekly tells you of each of these things in each issue in a way to keep you in touch with the best thought of the world. Following are some of the features for 1904:

EDITORIALS OF AUTHORITY

Harper's Weekly has become the foremost political journal of America. In every issue seven pages are given to editorial comment on important topics of the day. This feature of the Weekly has come to be recognized as the most important editorial comment published anywhere. The subjects cover every phase of human activity, from important international affairs to intimate matters of home interest. The comment stands not only for a brief exposition of all questions of personal interest to every intelligent reader, but for an expression of opinion upon these questions by the best authorities. The Presidential election this year will give the editorial pages of the Weekly exceptional value and importance.

THE ILLUSTRATIONS

The illustrated features of the Weekly have long been recognized as the most graphic presentation of current events in all parts of the world published in any journal. At least four full pages will be given in every issue to interesting photographs and drawings of the week's news.

MARK TWAIN AND W. D. HOWELLS

These great authors write exclusively for Harpers. Mark Twain will contribute an occasional article, and every week Mr. Howells will write on interesting topics of the day.

FEATURES IN EVERY NUMBER

Mr. Sydney Brooks, in his weekly letter from London, will tell the intimate story of the men who to-day are making world history.

Mr. James MacArthur, former editor of the Bookman, will write each week of the new books published, stories of authors, and in general will keep before readers the week's literary record.

Two pages of pictures will be given each week to the theatre and to the important plays here and abroad.

In humor, well-known artists like Peter Newell, Albert Levering, Henry Meyer, E. W. Kemble, R. C. Carter will be regular contributors.

In each issue there will be a page of correspondence from readers, in which an opportunity will be given to every one interested to express his ideas upon any subject of moment.

SHORT STORIES BY FAMOUS AUTHORS

In every issue of the Weekly there will be at least one short story by a well-known writer, including authors like Mark Twain, E. S. Martin, Mr. Robert W. Chambers, Mr. G. K. Chesterton, Mr. Hamlin Garland, Mr. Joseph A. Altsheler, Mr. Morgan Robertson, Mr. van Tassel Sutphen, Mrs. Mary E. Wilkins Freeman, etc., etc. Each of these stories will be complete in one issue. In addition, an important serial, which will run through several issues and which will be one of the most interesting contributions of the year to fiction, is now arranged for.

SPECIAL ARTICLES

In addition to these features, every number of the Weekly will contain special articles on all topics of interest—science, invention, art, finance, travel, adventure, discovery, etc.—written by authors who can give the last word of authority upon each subject. Such men as Professor Simon Newcomb, in science; President Charles F. Thwing, President of Western Reserve University, in education; Professor Jacoby, of Columbia, in astronomy; Edwin Lefevre, in finance; Robert W. Chambers and Frank Sherman Peer, in hunting and outdoor sports; Andre Sardou, in personal reminiscences of the theatre and of well-known people abroad; T. C. Martin, editor of the Electrical World and Engineer, and Dr. Louis Bell, on developments in science and electricity; A. Maurice Low and Dr. Henry Loomis Nelson, Professor of Politics at Williams College, on politics and events in Washington, etc., etc.—these will be some of the regular contributors to Harper's Weekly. All branches of human interest will be covered in an authoritative manner.

NEWS FROM ALL PARTS OF THE WORLD

At the present time the Weekly has representatives in all parts of the world, who are reporting at first hand the important happenings of world history. They will contribute articles on travel, adventure, and on the important events in unknown parts of the world. One of the articles arranged for is by a member of the Jessup Expedition—an account of the important discoveries in Northern Asia and Alaska, telling how they relate to American culture; a series of articles by A. H. Savage-Landor, who is now in the Far East for the Weekly; articles on Panama—the development of the situation on the Isthmus, the progress of work there during the year, etc., etc.

THE ST. LOUIS WORLD'S FAIR

Arrangements have already been made to have special representatives of Harper's Weekly at the World's Fair in St. Louis during the entire course of the Fair. A number of special World's Fair numbers are now being arranged for.

THE PRESIDENTIAL YEAR

Harper's Weekly, as the foremost political authority of America, is in a position to offer, from the sources of information at its command, not only the most intelligent expression of editorial opinion, but the most intimate record anywhere of the coming campaign—the conclusive record of authority which comes from personal touch with the Presidential candidates and with the prominent leaders of both National parties. The well-known editorial policy of fairness, sanity, independence, and justice will dominate the discussion and presentation of political subjects during the coming year.

The Subscription Price of Harper's Weekly is $4.00 a Year

HARPER & BROTHERS, PUBLISHERS

NEW YORK CITY: FRANKLIN SQUARE

LONDON: 45 ALBEMARLE STREET, W

COMMENT

IT is a fact portentous with significance of the present position of this section of the United States, that the refusal of a New York financial institution to make a perfectly secured loan to another nation has prevented a declaration of war between Japan and Russia.

At the hour when we write it seems certain that the attempt of Senator Gorman and Senator Blackburn to defeat the ratification of the Panama treaty will fail. The Blackburn resolution, adopted at a caucus of the minority party in the Senate, it will be remembered, was to the effect that should twenty-two Democratic Senators pronounce in favor of a particular course, the remaining eleven should be bound to cooperate with them, unless otherwise instructed by their respective State Legislatures. The Louisiana Legislature has already instructed the two Senators from that State to vote for the Panama treaty, and there is reason to believe that the Legislatures of several other Southern States will assume a similar position. It is now taken for granted that, besides the Senators from Louisiana, the Senators from Florida, the Senators from Georgia, and Senator Cockrell of Missouri will vote for the treaty, and it is deemed probable that the Senators from Mississippi, Tennessee, and Texas will follow their example. Such is the deduction to be drawn from the opinions recently expressed by Mr. Richardson of Tennessee, the former leader of the Democratic minority in the House of Representatives, and by Senator Stone of Missouri.

Mr. Stone says that, so far as he knows, no Senator has declared an intention to oppose the ratification of the treaty. The utmost that any one has striven for, he adds, is to have the facts bearing on the relation of our government to the isthmian revolution and the establishment of the Republic of Panama laid before the Senate. That is a proper request, and there is no doubt that it will be granted. It is announced on good authority that the President is not only willing to furnish all the information at his command, but is determined to make it public, so that if the Senate shall insist upon considering it in executive session, effective measures will be taken to make it generally known. Should the Senate seem disposed to withhold from publication any of the correspondence which passed between the State and Navy Departments and their agents on the isthmus before and since November 3, Mr. Roosevelt's friends in the House of Representatives can ask that all the documents be sent to their Chamber, and the President's reply would, of course, be published. Since we last referred to the state of things on the isthmus, the independence of the Panama Republic has been formally acknowledged by Great Britain and Italy. Like recognition had been previously received from France, Germany, and Russia, as also from some minor European powers, and a number of Latin-American commonwealths. From Spain nothing has as yet been heard, and there is a report that the Madrid government would have liked to cooperate in organizing a joint protest on the part of the Spanish-speaking countries against the secession of Panama. If such a plan was contemplated, it must be held to have miscarried, in view of the promptitude with which the independence of the new republic was acknowledged by Mexico and Venezuela.

An extensive canvass was made the other day in most sections of the country by the Philadelphia *Public Ledger*, with a view of ascertaining the drift of Democratic opinion concerning the choice of a nominee. In Massachusetts, Mr. Olney is at present the favorite, and we are told that his candidacy will be formally proclaimed at the meeting of the Massachusetts State committee to be held in January. The Connecticut Democrats seem convinced that Mr. Cleveland ought to be nominated, but Judge Parker is their second choice. New Jersey will have no candidate of its own, unless Mr. Cleveland shall be persuaded to run. If he persists in refusing to allow his name to be used, the New Jersey delegation will be uninstructed, and will thus be at liberty to try and stampede the convention for the ex-President, should an opportunity for such a move be given. In New York the preference of Tammany Hall has not been divulged in an unequivocal way, and, perhaps, the fact that the friends of ex-Senator Hill are advocating Chief-Judge Parker will not commend the latter to that organization. The selection of Mr. McAdoo, Assistant Secretary of the Navy in the last Democratic administration, for the post of Police Commissioner in New York city is by no means the only indication that Mr. C. F. Murphy, the leader of Tammany Hall, is disposed to look with especial favor upon Cleveland Democrats.

It is surely a reasonable inference that Mr. Cleveland's advice would have much weight in the State convention called to name the delegates of the Empire commonwealth to the nominating convention. The fact that leading Pennsylvania Democrats have decided to put forward ex-Governor Pattison of that State throws no light on their ultimate intention. They know, of course, that the national convention will not select a nominee from a State that there is no hope of carrying. In the Southern States, Mr. Gorman seems for the moment to be regarded with approval, but there is a general disposition to accept any candidate commended by New York. Of thirty-two Democratic Senators interviewed for the *Public Ledger*, twelve were outspoken in their preference for Gorman, and only two declared themselves for Parker, but all agreed that if the latter should be New York's candidate he would be nominated with an approach to unanimity. Of 150 Democratic Representatives, sixty-seven declined to disclose their personal preferences; thirty favored Gorman, and twenty-nine Parker. Senator Money, of Mississippi, said that, with the exception of Mr. Cleveland, any of the men who have been named would prove acceptable in his State. On the other hand, Senator Clay, of Georgia, pointed out that the Democracy must nominate a man who can carry New York, New Jersey, and Connecticut, and have a "fighting chance" in Indiana and Illinois. Nobody knows better than Senator Clay that Mr. Cleveland is the only Democrat who has proved himself capable of fulfilling those conditions. Mr. John Sharp Williams, the leader of the Democratic minority in the House of Representatives declined to reveal his choice so far in advance of the nominating convention. Another fact that should be chronicled is the passage of a resolution by the Jacksonian Club, of Nebraska, reinstating a number of former members who were expelled from the organization during Mr. Bryan's first campaign, because they refused to support the nominee.

That Senator Platt should have sent invitations to the Republican district leaders throughout the State of New York to confer with him at the Fifth Avenue Hotel on December 26 was, of course, interpreted as an intimation that he had made up his mind to contest with Governor Odell the leadership of his party in the Empire commonwealth. To enter upon a controversy certain to be prolonged and bitter cannot have been welcome to Mr. Platt at his time of life, but the Senator has always been loyal to his friends, and there is no doubt that most of these would have been relegated to the background had he retired from the field. It is not true, as it has been asserted, that all the "up-State" Republican leaders failed to respond to his summons, for Mr. George W. Aldridge, of Rochester, appeared at the Fifth Avenue Hotel, and, although Governor Odell explained that

business engagements would keep him in Albany for several days, one of his near friends, Mr. William Barnes, Jr., of Albany, chairman of the Executive Committee of the Republican State Committee, paid his respects to Mr. Platt. Messrs. Timothy L. Woodruff, Michael J. Dady, and Robert A. Sharkey also conferred with the Senator. With the two exceptions noted, not a Republican from the districts outside the city of New York took part in the proposed conference, and it was significant that on the very day named, December 26, Chairman Charles H. Murray, of the New York County Republican Committee, called upon Governor Odell in Albany.

The irretrievable deposition of Senator Platt from the leadership of the Republican party in Manhattan and throughout the larger part of the State could scarcely be more clearly indicated. There is no doubt, however, that in every county the friends of the veteran politician are numerous and devoted, and it would not be surprising if their indignation at the supersession of Mr. Platt by Governor Odell should have consequences no less grave than those which followed the nomination of Judge Folger for the Governorship of New York in 1882. In the opinion of expert observers, the lukewarmness, not to say open disaffection, with which Mr. Platt's adherents will now receive Mr. Roosevel's nomination will render it impracticable for the President to carry his native State. For the New York imbroglio Mr. Roosevelt is to be pitied rather than condemned. He did his best to avert a rupture between the Governor and the Senator. A rupture, however, could not be prevented, and when it came, the President could not be blamed for recognizing as State leader the man who unquestionably has a majority of the New York Republicans behind him. Judge Folger also had a majority of the State Republicans behind him, but the hostile minority was so large that his Democratic opponent, Mr. Cleveland, was elected by a plurality of nearly two hundred thousand. It now looks to us as if, should a conservative candidate for the Presidency be put forward, the Democracy next November will sweep the State of New York with a tidal wave that is likely to engulf both New Jersey and Connecticut, and may exert a decisive influence on Indiana, Wisconsin, and Illinois. It should also be noted that the majority of nearly 40,000 secured by Mr. McKinley in California three years ago was cut down in the last election for the Governorship of that State to less than three thousand. The figures mean, of course, that if the Democrats should make the mistake of defeating the Panama treaty, Mr. Roosevelt would carry California by a large majority; whereas if the Democrats allowed the treaty to be ratified, they would have a fair chance of carrying that State.

The departure of Governor Taft from Manila to assume the functions of Secretary of War, and, practically, also those of Secretary of the Colonies—an office which exists in fact, though not in name—has concentrated attention upon his record in the Philippines. Since the noblest of Roman proconsuls, Flamininus, used the power derived from his victory over Macedonia to declare the Greeks self-governing, no man has used proconsular authority more generously and wisely than has Judge William H. Taft. He has earned the respect and the love of the islanders committed to his charge, and he has been subjected to censure by nobody unprompted by selfish motives. His judicious solution of the serious problem presented by the estates of the friars would of itself entitle him to an honorable place in history. The immense amount of fertile land, held in mortmain, in the Philippines, and especially in Luzon, by certain religious orders, constituted in the eyes of their tenants a grievance which had more than once provoked insurrection under the Spanish régime, and which constituted the chief pretext for Aguinaldo's revolt against our authority, after we were subrogated in the place of the Madrid government by the Treaty of Paris. As we were bound by that treaty not to dispossess the friars by violence, Aguinaldo's friends were able to persuade many Filipinos that unless we were ousted from the islands they would never be delivered from a burden which they had come to think intolerable. Five years have elapsed since the Treaty of Paris was concluded, and only the other day was the assent of the friars secured through the intervention of Pope Pius X. to their expropriation. The terms on which we have acquired their property are by no means exorbitant. We have acquired some four hundred thousand acres of the most fertile soil in the Philippines for about seven and a quarter million dollars—a sum which is to be raised by bonds, and to be made over to the Pope, who will employ it as he chooses for the benefit of the orders concerned, or of the Catholic Church at large.

The plan by which the occupying tenants are to be transformed into peasant proprietors is evidently modelled on the last Land Purchase law for Ireland. That is to say, the insular government will grant to each tenant of the lands acquired a title to his individual holding, and will receive from him for a term of years an annual payment by way of interest and sinking fund, which will be, we are told, considerably less than the rental formerly exacted by the friars. In a word, nobody but the natives of the Philippines will have a penny to gain by the acquisition of the friars' estates. This is only one of the many ways in which Governor Taft has proved his determination to deserve the good will and confidence of the people subjected to his rule. It is only a few American sojourners in the archipelago, who seem to have gone thither in the hope of making fortunes quickly at the expense of the natives, and who complain that Judge Taft has carried too far the programme of the Philippines for the Filipinos. There is no doubt that under the Taft régime every government position that a Filipino could fill, even though he should fill it worse than would an American, has been assigned to a native. Not even former leaders of insurrectionary movements have been debarred from preferment. It might be supposed that this concession of the largest practicable amount of autonomy, which, on moral grounds, is amply justified, would be detrimental to the islands from an economical point of view. This has not proved to be the case. During Governor Taft's term of office the material development of the archipelago has been phenomenal. The balance of trade is now in favor of the islands, and the revenues, which, for the most part, are derived from export and import duties, suffice to meet all expenses of the insular government, except that the subsistence of the soldiers is paid for by our War Department. We observe, finally, that, as regards progress in public education, the number of Filipinos who have been taught to read, write, and speak English is astonishing, when we consider the brevity of the period during which systematic efforts to that end have been made.

It is settled that neither Senator Hanna nor Secretary Root will accept the chairmanship of the next Republican national committee. There has never been the slightest reason to suppose that Senator Penrose, of Pennsylvania, would be requested by Mr. Roosevelt to undertake the duties of the office. The occupant of the important post will probably be ex-Governor Murray Crane, of Massachusetts; that is, of course, in the event, that now seems inevitable, to-wit, the nomination of Mr. Roosevelt for the Presidency. It is the invariable custom of national committees to select for the chairmanship the person indicated by the party's nominee for the Chief Magistracy. If, by any chance, Senator Hanna should be the nominee of the Republican national convention, he would, of course, designate a favorite of his own for the chairmanship of his party's national committee. At the hour when we write, there seems to be no prospect of a concerted and energetic movement in favor of nominating Senator Hanna. It should be borne in mind, however, that no serious opposition to the renomination of President Harrison had been disclosed five months before the meeting of the Republican national convention in 1892. Five or six months before the Republican national convention met in 1884, it looked as if President Arthur had a fair chance of securing a majority of the delegates. In January, 1880, very few observers of events believed that General Grant could be beaten for the nomination in the Republican convention to be held at Chicago some months later in that year. He was beaten, however. We sometimes doubt whether Senator Hanna will allow his name to be presented. He has too many "fool friends." Nothing could be more calculated to blight his candidacy in the bud than its endorsement by Perry S. Heath, the hopelessly discredited secretary of the present Republican national committee.

Some, though not all, of the appointments to important municipal offices in New York city made by Mayor-elect

McClellan justify the belief that he intends to give his fellow citizens an honest, economical, and efficient administration. So far as economy is concerned, it is fortunate that he will have Comptroller Grout as a coadjutor. Mr. Grout applied the brakes more than once to the wheels of the Low administration, and it is already evident that he means to be no less serviceable during the next two years as a restrainer of extravagant expenditure. On December 21 he announced that he had made a careful investigation of the state of New York city's finances, and had arrived at the conviction that Tammany would have to "go slow" in disbursements of the city's cash. After recalling the financial history of the last ten years, which exhibits a steady annual increase in the municipal budget, Mr. Grout made it plain that, in his opinion, the McClellan administration would have to cut down expenses during the next biennium. He did not nor could he deny that the additions made by the Low administration to the city's indebtedness had been justified, and he also admitted that certain projects already authorized must be prosecuted. He thought, however, that the city ought not to contract for any more works of magnitude inside of a twelvemonth. Any definite arrangement as to rapid transit extensions, for instance, would have to be deferred, he said, for about a year. It is manifest that Comptroller Grout does not intend to lose a jot of the reputation for trustworthiness which he has previously acquired.

A heated controversy has been started in English newspapers by the assertion made by Emperor William II., at Hanover, that the deeds of the "German Legion" had saved the English army from destruction at Waterloo. The London journals seem to imagine that the German Emperor meant to say that, unless the Prussians under Blücher had come up in time, Wellington's army would have been annihilated by Napoleon. A moment's reflection should have sufficed to demonstrate that, whatever may be the private opinion of William II. touching the importance of Blücher's arrival, he did not express it at Hanover. He was there to commemorate the deeds of the "German Legion," composed, not of Prussians, but of Hanoverians and Brunswickers, who formed a part, not of Blücher's, but of Wellington's army. In Wellington's force at Waterloo, the Germans outnumbered the English by some 4000, and, unquestionably, but for the aid afforded by the former, the Englishmen and Dutchmen must have succumbed to the overwhelming weight of Napoleon's columns. The German Emperor was, therefore, entirely justified when he said that the Hanoverians and Brunswickers had saved Wellington from destruction. As to the part played by Blücher, about which William II. had nothing at all to say, there seems to be no doubt that, but for the arrival of the Prussians, Napoleon's defeat, even had it been accomplished, which is doubtful, could by no possibility have been transformed into a rout. Wellington's soldiers were utterly exhausted at the close of the action, and the pursuit of Napoleon's broken and despairing forces was prosecuted mainly by the Prussians. It is, moreover, very questionable whether Napoleon would not have crushed Wellington in the afternoon, had not the appearance of the Prussian vanguard compelled him to employ a large number of battalions for the protection of the French flank. This is one of the questions about which students of history are likely always to differ, but we ourselves are disposed to think that, had Grouchy succeeded in foiling Blücher's attempt to join Wellington, the English general must have been worsted by Napoleon, who had a force not only preponderant in quantity but vastly superior in quality to all of its antagonists except the English, who only numbered about twenty-five thousand.

It is amusing to hear anxious holders of securities inquire whether we are likely to escape the financial and industrial crisis which, as history has shown, occurs about once in ten years. The truth, of course, is that the decennial crisis has come, and is now upon us, and that the skies are tending to clear. This will be obvious to any one who compares carefully the recent prices of the stocks and bonds of those dividend-paying railways which are rooted in public confidence with the prices obtainable in 1893, 1883, and 1873. The difference between the present crisis and its predecessors has been that the great banks of New York city and the managers of the colossal corporation that controls most of the iron and steel industry have so managed that the decline in prices has been gradual instead of sudden and catastrophic. The congestion of the money-market has been relieved, or, in other words, investors have been subjected to a bleeding process; but the operation has been performed in a mild and benignant instead of a sudden and calamitous way. We have suffered incomparably less damage than was experienced in Germany two years ago. In this, as in the preceding crisis, the American Republic was the last commercial country of the first magnitude to feel the excess of supply over demand. No doubt the conservative and far-sighted action of our large banks and great railway and industrial corporations has been signally furthered by the output of our industrial staples. Our actual situation is really that of a patient who, under the influence of ether, has had a surgical operation performed. When, cries the patient, awakening from his trance, are you going to take my leg off, doctor? It has been already removed, is the reply. The expected financial crisis due in 1893 arrived on time, and is already passing.

The systematic attempt of the Department of Agriculture to promote, or rather to revive, the culture of raw silk in the United States deserves more attention than it has hitherto received. Not only has the Department been encouraging the industry through the distribution of mulberry cuttings and silkworm eggs, but, during the last summer, two reels imported from Europe have been operated in Washington for the purpose of creating a market for cocoons. Many years ago there was a certain amount of silk culture in Pennsylvania and in some of the Southern States, but the industry languished, partly because the methods of rearing silkworms were imperfectly understood, and partly because the industry lacked the stimulus of a large domestic market. There has never been any doubt that favorable conditions for growing the mulberry-tree and for rearing the best species of silkworms exist in the Middle and Southern States and on the Pacific slope; and the stimulus should be now forthcoming, because the amount of money at present paid by the United States for imported silk exceeds $70,000,000 annually, and is continually increasing. The truth is that we consume about half of the world's silk output, and we might as well keep at home the vast amount of money now expended for the raw material. It is asserted on the part of the Department of Agriculture that an American farmer's family can earn more in eight weeks by silk culture than it could in a year by raising a crop of cotton. The one crop, moreover, does not exclude the other. Mulberry-trees, the leaves of which form the food of silkworms, can be grown along the fences of cotton-fields and in odd corners of the farm. No great outlay is required for stock or plant. In fact, silk-growing can be prosecuted as a by-industry, like poultry-raising, by women and children.

Almost all the newspapers in Havana denounce President Palma — first, for signing the stamp-tax bill, and, secondly, for enforcing it. It is, of course, his duty to enforce a statute, and, had he refused to sign the bill, he would have been accused of betraying the interests of the Cuban army. It is unreasonable to blame the Executive for the vexation caused by the new imposts. The existing revenue of the island is needed for the normal expenditures, and the proposed loan of some thirty millions of dollars for the payment of the officers and soldiers engaged in the revolutionary war had to be provided for in some other way. There were but two ways: a tax on luxuries, and a government lottery. The Cuban Senate rejected a proposal to provide the necessary funds by means of a lottery, and the Congress was, consequently, compelled to accept the alternative. It is not impossible that the Senate can be induced to reconsider its former decision and to accept a lottery bill. Although the sale of lottery tickets is now illegal in Cuba, it is practically impossible to prevent the inhabitants from investing in the Spanish and Mexican lotteries, and the result is that large sums of money are continually flowing out of the island, which would be kept at home were a government lottery authorized. Those who are disposed to look with disdain on the Cuban fondness of gambling of this form may do well to recall the fact that, within the memory of men now living, a lottery was authorized by the Legislature of the State of New York. When we bear in mind the swathling-clothes in which the Cubans were kept

by Spain for nearly four hundred years, we can scarcely blame them for being no further advanced in civilization than we ourselves were sixty years ago.

The trial of the culprits in the Kishinef massacre resulted in the sentence of two men to seven and five years penal servitude respectively, and to the sentence of twenty-two other persons to terms of imprisonment ranging from one to two years. These punishments seem almost scandalously mild for the murder of scores of Jews and the wrecking and looting of hundreds of houses and shops. That they will serve very inadequately to prevent further outrages seems to be pretty clearly indicated by the reports that another Kishinef massacre is threatened. To excuse the course of Russian justice in this case is too large an undertaking. By way of explaining it, however, it may be said that many political considerations complicate such trials. Kishinef is in reality a Rumanian city, the capital of territory annexed from Turkey after the war of 1812, and its inhabitants are almost exclusively Wallachians and Moldavians, full of the instincts and traditions of violence which have ruled in the Balkans for five hundred years. The anti-Semitic movement in Kishinef is due almost wholly to Rumanian influences, crossing the border into Russian territory, and having more affinity with similar movements in Vienna and Berlin than with any genuinely Russian feeling. The genuinely Russian regions of the Tsar's empire have no large Jewish population; the ghettos are almost wholly confined to territory annexed from Sweden along the Baltic, or taken over at the partition of Poland, or conquered from Turkey, as in the case of Bessarabia and Kishinef. Broadly speaking, when Russia inherited these regions containing a Jewish population, the relations already existing in them between Christians and Jews were retained, and many of the restrictive regulations have their origin in this retention. A second political element arises from the undoubted connection of the Jews in Russia with the dissemination of anarchist and nihilist ideas. To this connection, or to a belief in its existence, much of the odium directed against the Jews is to be traced, and to this connection also may probably be attributed the recent mild action of the Russian courts.

The General Conference of the Methodist Church which meets next May at Los Angeles will take up the question of revising the rules of discipline which prohibit dancing, card-playing, and theatre-going to Methodist church-members. Meanwhile there is spirited preliminary discussion of the proposed amendment at the various meetings of Methodist ministers, especially those which take place in the larger cities. Two hundred ministers at the regular Monday meeting in New York on December 28 discussed these rules very earnestly, some arguing that they were practically obsolete as well as inexpedient, others that they were sound, and that when Methodism abandons self-denial her decay will begin. The rules seem out of date, and presumably they will be amended. If so, it may comfort the defeated side to be assured that cards bore many persons so much that they refuse to learn bridge whist for fear of being constrained to play for the entertainment of their fellows. For such persons cards are not a means of indulgence but of self-sacrifice, and therefore, possibly, of grace.

There was a meeting in New York last month to raise money for the George Junior Republic. Most readers of the WEEKLY know that the Republic is an exceedingly interesting school for making good citizens out of boys and girls who have a record for obstreperousness. It was started at Freeville, New York, about ten years ago by a man (Mr. George) with a new idea about the training of waifs and wayward children. His idea was to make them train and govern themselves and one another. He had very much the same ideas about governing boys and girls as Governor Taft has had and used in governing Filipinos. His idea was to give them just as much authority as they could handle and to make them responsible for its use, so that when they finally grew old enough to go out into the world they should be responsible, self-governing creatures, who understood why laws were necessary and what they were for, and saw the point of both obeying and enforcing them. So he established his Junior Republic on American principles, with officers of government elected by the population, and with a police department, and courts, and most of the governmental apparatus of a grown-up American community. It has worked wonderfully well, and is still working, and three other republics of the same sort have been modelled after it. So vigilantly are its laws enforced that Bishop Potter, who was one of the speakers at the meeting of its supporters last month, was able to relate how close he came to being arrested by a boy citizen of the Republic for smoking when lately he visited Freeville to dedicate the Republic's new chapel. The enterprise has never had much money, but it has had good friends, and has struggled on from hand to mouth, as it does still. Three thousand dollars was raised for it the other day, which modest sum was considered "an important lift over present difficulties." This Freeville republic, in which a little money goes so far, is an experiment as interesting and with possibilities almost as important as Booker Washington's Tuskegee Institute. In both cases the effort is to train boys and girls to be law-abiding and useful citizens, and in both cases the proportion of practical achievement to expenditure is very high.

A Massachusetts Democrat who is cheerfully but firmly resigned to the action of the Administration in the Panama case, and thinks there is nothing for Democrats in party opposition to it, begs the WEEKLY to suggest that when the canal company gets to work it shall establish a large electric-light plant and work night and day. Our correspondent wants the work finished while he is still young and ardent enough to go to see it. He holds that it should be possible with three gangs of men working eight hours each, night and day, to finish the canal in three years. "I doubt," he writes, "if it would cost a cent more." We commend this suggestion to the prospective artificers of the canal. If they can finish the work in three years instead of ten, it will be peculiarly gratifying to about fifteen million of our citizens who expect to last three years longer, but have no very confident expectation of being still adventurously observant at the end of a whole decade.

Mayor Engler of Fremont, Ohio, has had the grit to veto an ordinance passed by the common council of that city directing that the union label shall appear on all the city printing. His reasons for doing so, set forth in a message, are that the effect of the requirement would be to limit the competition for public printing to union printers, who alone have the right to use the label. This, he considers, would be to confer a benefit on one small class of citizens, to the possible injury of all the rest, and at the cost of the taxpayers. It has vexed many citizens of many cities to find the union label on their tax bills, and to be compelled to join in advertising and supporting an association which, however useful to its own members, and however worthy in itself, may be at the moment in conflict with the individual taxpayer's personal interests, and may even be boycotting his business. Such a strain on his temper a taxpayer is surely entitled to be spared.

James Smithson, who founded the Smithsonian Institution at Washington, never set foot in this country, but lived and died in Europe, and was buried in the English cemetery at Genoa. It will be recalled that he was the illegitimate son of Hugh Smithson, first Duke of Northumberland of the third creation. He inherited a fortune through his mother, and dying in 1829, left about one hundred thousand pounds to the United States to found "an establishment for the increase and diffusion of knowledge among men." The story of his life and of the development of the disposition which led to this remarkable endowment are of deep and pathetic interest. The cemetery at Genoa falling into disrepair, Professor Alexander Graham Bell proposed some years ago that Smithson's remains should be brought to this country and reinterred in Washington. The proposal was agreed to, the arrangements were gradually perfected, and last month Professor Bell went to Genoa. He expects to return about January 15 with James Smithson's bones, which will be duly committed to a suitable tomb in Washington, probably in the grounds of the Smithsonian Institution. Honor has been late in reaching this remarkable man, but it has come at last in full measure.

The Panama Canal and the Presidency

ASSUMING that the treaty with the republic of Panama will be ratified, and that work on the waterway will be begun immediately, we may find it worth while to consider what part, if any, the acquisition of the canal franchise is likely to play in the Presidential campaign. There is no doubt that the acquisition of Texas and California strengthened the Democratic party, and the Whigs were able to elect a President in 1848 only by abjuring their previous opposition to the war with Mexico, and by putting forward as their candidate Zachary Taylor, who had been one of the heroes of that conflict. It is probable that the fulfilment of our age-long desire to cleave the American isthmus and link the Atlantic and Pacific oceans will augment materially the popularity of the Roosevelt administration on the Pacific coast; and, but for his treatment of the negro question, would have also endeared the President to the people of the Gulf States. Whether it will commend him to the confidence of conservative and thoughtful men at the North is doubtful. Even if the documents to be submitted presently to Congress shall justify, as we expect they will, the attitude taken by our State and Navy departments toward the revolution at Panama, they will scarcely dispel the feeling of uneasiness engendered in prudent and cautious minds by certain aspects of the affair—the apprehension that, should Mr. Roosevelt be re-elected, the country might find itself committed to a policy of adventure. What, therefore, the President may gain in some sections of the Union by the association of his name with the fruition of the national wish for an interoceanic waterway he may lose in the great centres of industry and finance. It will be remembered that the esteem and trust with which the business world regarded Mr. McKinley were intensified by his reluctance to interpose for the deliverance of Cuba, a reluctance which, probably, would never have been overcome but for the destruction of the battle-ship *Maine*. It is no impeachment of the motives that led Mr. Roosevelt to take the vigorous course pursued by him at Panama, to say that, in our opinion, if Mr. McKinley had been President, the revolutionists would have had to wait much longer for a recognition of their independence, and the Colombians would have been permitted to attempt a restoration of their authority. That this would have been the position assumed by Mr. Cleveland is indisputable, in view of his repudiation of the Hawaiian annexationists. We do not deny that, in this instance, conservatism might have cost us the opportunity of constructing a canal at Panama. But the fact remains that very seldom is a lack of conservatism justified by the event. The next exhibition of Presidential strenuousness may be much less defensible.

If Democratic Senators should decline to make the ratification of the Panama treaty a party question, they would minimize the advantage derivable by Mr. Roosevelt from his solution of the canal problem. That is the position which has been taken, from the hour when the treaty was signed, by Mr. John S. Williams, the leader of the Democratic minority in the House of Representatives. Mr. Williams recognizes that Democrats have been pledged for half a century to forego no opportunity of constructing an interoceanic waterway, and, now that an opportunity is presented, they cannot, with any show of consistency, let it slip. This would be true, even if the rank and file of the Democratic party in the Gulf States were not even more deeply interested in the building of a canal than are Northern Republicans. The cleavage of the American isthmus means more to Galveston, New Orleans, and Mobile than it means to Philadelphia and New York. In dealing with this matter, Mr. Williams evinced the same sagacity and foresight which he had shown with reference to the Cuban reciprocity bill. The members of his party in the House of Representatives were originally divided in opinion regarding the expediency of passing that measure. Mr. Williams, for his part, perceived that the Democrats were logically bound to accept any reciprocity bill if they were sincerely determined to make drastic tariff revision a pivotal issue in the approaching campaign. He succeeded in prevailing upon almost all his colleagues to adopt his view of their duty. In the Senate, on the other hand, Mr. Gorman strove to array the Democratic minority against the Cuban reciprocity bill, and, although he failed to secure a caucus resolution to that end, he did manage to split his party, a considerable fraction of his Democratic colleagues voting against a reduction of the Dingley tariff by twenty per cent. in the case of Cuban sugar. This was an extraordinary attitude for revisionists to assume. So far as Cuban reciprocity was concerned, Mr. Gorman's leadership was repudiated, but, when the Panama treaty was sent to the Senate for ratification, he contrived to procure the passage of a caucus resolution, requiring all Democratic Senators to adopt the course recommended by two-thirds of their number. It was evidently Mr. Gorman's intention to use this resolution for the purpose of marshalling thirty-three votes against the treaty, and thus defeating it. It has turned out, however, that the Senator did not represent Southern sentiment with respect to the treaty, and it is by no means impossible, provided a number of Southern legislatures shall give instructions on the subject, that the friends of the treaty may control the Democratic caucus, and compel Mr. Gorman himself to vote for ratification. Thus would the engineer be hoist with his own petard.

It is becoming more and more evident at Washington that the true leader of the Democracy in the Fifty-eighth Congress is not Senator Gorman, but Representative John S. Williams. It is the latter who seems likely to exercise decisive influence in shaping the issues of the coming Presidential campaign, and he has already let it be seen that, in his judgment, the canal treaty should not be one of them. He believes that Democrats should adopt aggressive, not defensive, tactics, and that, if they hope for victory, they must seek it with such war-cries as Down with the Dingley Tariff! and Turn the Rascals Out! He will, therefore, miss no chance of keeping tariff revision in the foreground, and of demanding a more searching investigation of the postal frauds.

Our Relation to the Far Eastern Imbroglio

THE apparent imminence of war between Japan and Russia forces upon us the inquiry to what extent our national interests may be involved in such a conflict or in the resultant complications. Let us first consider the question from the standpoint of the assumption that hostilities will be confined to the two powers that we have named. It is undeniable that our attempts to secure an "open door" in Manchuria, and to obtain from China a desirable commercial treaty have met with sympathy and support on the part of the Japanese. Russia, also, has professed to approve of our Far-Eastern policy, and even went so far as to give our State Department a promise in writing that the evacuation of Manchuria should begin on October 8, and should be completed within a definite time. We need not say that the promise has been broken. There is now no likelihood that the Russians will withdraw voluntarily from any of the three Manchurian provinces which they occupy. Unless they are ejected by force, the whole of the territory north and northeast of the Great Wall must be looked upon as practically severed from the Middle Kingdom. Japan, on the other hand, has concurred with Great Britain and the United States in averring that the independence and territorial integrity of China must be maintained. She has not swerved from that position in the course of her protracted negotiations with the Petersburg government. She has insisted not only that Russia must refrain from interference with Korea, but also that China's sovereignty over Manchuria must not be impugned, either in theory or in practice. That is to say, while Russia's right to occupy the Liau-tung peninsula, which she holds under a lease, or to operate and protect the Manchurian branch of the Siberian Railway, is not disputed, the Japanese contend that she ought to replace Newchwang under Chinese authority, and recall her troops from all points in Manchuria, except those on the line of the railway named. We add that the Mikado's representative at Peking is known to have furthered, so far as his influence would go, the efforts of our minister, Mr. Conger, to negotiate the commercial treaty which our Senate ratified the other day, and which, besides opening two additional treaty ports in Manchuria, substitutes a single surtax, payable at the port of entry, for the vexatious and burdensome *likin*, or inland transit dues, which have virtually shut out American merchandise from the interior of the Celestial Empire. Russia, on the other hand, has striven, through her minister at Peking, to prevent the ratification of this treaty on the part of the Chinese government, and, at the hour when we write, the agreement is still unratified.

It is clear, then, that our national interests in the Far East would be promoted by the triumph of Japan and seriously endangered by the success of Russia. This is true, even if the contest should be limited to a duel between those powers.

There is scarcely any room for hope that the war could be thus limited. It would probably prove impracticable for the Peking government to resist the demand of its subjects for cooperation with Japan. Comparatively valueless as China's aid may be, her appearance in the field would create a situation that would render operative the treaty of alliance between France and Russia, for that treaty binds France to assist her ally whenever the latter is attacked by more than a single power. The interposition of France would, in turn, constrain England to enter the arena, for the Anglo-Japanese treaty binds each of the parties to help the other whenever the latter is assailed by more than one power. Here, manifestly, are all the conditions of a world-wide war, even if Germany should remain neutral, instead of pursuing the course which she took eight years ago, and siding with Russia and France. France and England, once enlisted on opposite sides of the controversy, there are no waters on the globe, from the British Channel to the Caribbean, or from the Mediterranean to the South Pacific, in which their respective war-ships might not meet in battle. How profoundly our interests might be affected by such a state of things will be evident if we keep in mind the fact that England is our best customer. A strenuous effort would be made by French and Russian commerce-destroyers to cut off England's food-supply.

and a proposal would, perhaps, be made to declare grain contraband of war. Against such a declaration we should, of course, protest, and if an attempt were made to enforce it, we should be constrained to resist with all the military and naval resources at our disposal.

These are some of the reasons why we note with anxiety Russia's apparent unwillingness to avert, by timely and adequate concessions to Japan's demands, the outbreak of war in the Far East. There is, as we have seen, no end to the possible developments of such a conflict. Eventually our own country might find itself involved, in spite of our traditional avoidance of foreign entanglements with foreign powers. There is, therefore, nothing academic or perfunctory in the interest with which we watch the unfolding of events in Eastern Asia.

What Russia Thinks of Japan

THE *Novoe Vremya* recently published an editorial which shed a great deal of light, not so much on the Far-Eastern question as on the opinions then held about it in St. Petersburg. This article makes the reflection that, for the moment, the tone of the Russian press, in the Far East as well as at home, is reassuring, and promises peace, at least for the present. While rejoicing in this reassuring symptom, the *Novoe Vremya* finds it worth while to ask the reason for the sudden changes of newspaper opinion, which yesterday declared war inevitable, and to-day preach tranquillity, while to-morrow they may again declare that a conflict is certain. The source of this barometric variation, from foul weather to fair, the Russian writer finds in the fluctuation of the Japanese press, which is now bellicose and now more conciliatory; its changes mirroring themselves with fidelity in the Russian papers, and, in a less degree, in the press of the world.

This change from alarm to reassurance, according as Japan scolds or grows reasonable, would, in the opinion of the Russian writer, be to a large extent justifiable were the Japanese newspapers really the organs of public opinion, supposing such a thing exists in the Flowery Land, or of the Japanese government and ruling class. But, we are told, this is far from being the case, as many of the best-known Japanese papers are subsidized by English or American interests, or are simply owned and edited by these interests, for their own purposes, and to advance their own ends. Therefore, the fluctuations of the Japanese press reflect rather the aims of these interests than any substantive force or tendency in Japan, and must be discounted accordingly.

That a certain strain has existed between Russia and Japan for a comparatively long period, the Russian paper admits; acknowledging further that this strain has grown very much more intense recently, though Russia has done nothing aggressive which might serve as a reason for increased tension. In spite of Russia's pacific and unaggressive policy, Japan has mobilized her fleet, and has held manœuvres in the Korean Strait, extending the line of her cruisers from the island of Korgodo to the islands of Tsushima and Kiushiu. The Japanese even went so far as to embark a considerable body of troops on transports and make "experiments in the transfer of infantry" to Ma-san-pho, where, however, they were not landed, but were carried back by the transports to the Tsushima Islands. And these manœuvres, in connection with other military preparations on Japan's part, were the cause of the general uneasiness concerning the situation in the Far East.

Of course, says the Russian writer, there is a long distance between such manœuvres and the actual outbreak of hostilities. A naval demonstration is no such grave matter, and the powers which possess strong navies often have recourse thereto, to accomplish some desired aim. In the present case, that aim was not achieved: Russia was not induced to yield anything substantial to Japan. Russia's aims in the Far East point to peaceful development and the security of her frontiers, and there is, therefore, nothing which she can yield, without sacrificing her most vital interests. In other words, she cannot yield at all.

The *Novoe Vremya* then makes a sinister reflection, declaring that, though the press of the world, including the Russian papers, has become much more pacific in tone, yet the military preparations of Japan are being carried on with unceasing activity and vigor. The mobilization of Japanese troops continues; many transports have been hired, yet the Japanese government is trying to hire more; all Japanese officers on leave in foreign countries, even for purposes of study, have been recalled by cable, and are now hurrying homewards; the orders for war material sometime ago placed with the Krupp works are being pressed, and telegrams are being sent asking for an immediate delivery of at least a part of the rifles and cartridges ordered; the Japanese arsenals are working day and night, with feverish activity, and Japan is buying up English coal for her fleet, although Japanese coal is usually used for the war-vessels in time of peace and during manœuvres.

All these were ominous symptoms, in the view of the Russian writer; yet he did not wish to go so far as to say that the danger of war was great. What was important was, that the Russian authorities should not be lulled into a fancied security, by the (then) pacific tone of the Japanese press, since this by no means represented the real views of the governing class of Japan, but was the result of interested wire-pulling from Washington and London. This writer found the greatest guarantee of peace in the genuinely pacific intentions and policy of Russia, which he believed strong enough to counteract and neutralize the bellicose attitude of Japan. A further guarantee against hostilities lay in the fact that Japan's danger in case of failure, or anything short of complete success, would be so great as to act as a deterrent on even the most hot-headed of her statesmen.

Mitchell's Doctrine of "Classes"

IN one respect John Mitchell's book, *Organized Labor*, is unique. The first sentence of the first page, the sentence which every reviewer quotes, and which many friendly reviewers deprecate, sums up the book and the philosophy of unionism: "The average wage-earner has made up his mind that he must remain a wage-earner." That sentence is a revelation and a justification. The door of hope once and forever closed on a great part of American citizenship, it only remains for that part to organize war on the rest of that citizenship for such advantage as may be shared pro rata by the individuals composing a class of unalterable status. No one need read a word beyond; for explanation of method or attitude, as toward the non-unionist or the general public, is simply incidental. The ultimate purpose is, and can only be, to create an ochlocracy—government by the crowd, the organized-labor crowd. The conclusion of the whole matter is recorded on the next to the last page in a sentence which few, if any, reviewers quote, either not reading far enough to see it, or missing its significance: "The (organized) working-man who once crawled upon his knees is now upon his feet. . . . It takes generations to implant dignity in the human breast, but once implanted, it is ineradicable." In the ochlocratic view, then, "dignity" consists in the surrender of opportunity and aspiration to become one of countless units in a fixed class, that thus the status of the class may be raised in respect of wages, hours, and conditions of employment.

Realizing how un-American is such a doctrine, one friendly reviewer regrets that Mr. Mitchell did not base a premise so vital to his contention on the dicta of "reputable economists." Mr. Mitchell does, indeed, quote from Hadley a doubt as to whether in the future as many captains of industry as in the past will be drawn from the ranks of labor, Hadley adding, "Certain it is that the prospect of becoming capitalists does not act as so powerful a motive on the laborers of to-day as it did on those of a generation ago," and this though "the opportunities to save are as great or greater." Hadley attributes this in part to the fact that "the amount which has to be saved before a man can hope to become his own employer has enormously increased." But so long as, admittedly, increase of opportunity to save keeps pace with increase in the sum of savings needed for independence, we must look elsewhere for a convincing explanation. And there is one at hand, both simple and reasonable. Every contention, like that of Mr. Mitchell, which insists strenuously for its justification on the existence of certain social conditions, contributes powerfully toward creating the conditions which it predicates. The organized laborer has, through much preaching and appeal, become obsessed with the idea that life is a football-field where only the mass plays count. Thus he contemptuously disregards opportunity, the chance for individual play. For illustration one has to look no further than the recent hearings before the Massachusetts commission to investigate the relations between employers and employees. The labor representatives, so R. L. Bridgman reported in the *Outlook*, were "disposed to flout all offers of help from theories of students of society and economics regarding the best solution of their own problems." They were bent upon working out their own salvation in their own way—the way of war of class upon class.

Such an alignment of the class called "labor" against the class called "capital" can only mean, if successful, the disintegration of society as at present organized, for the very obvious reason that no room is left for non-combatants. Passing over the commonplace example of the outrages and indecencies of the active strike, where the victims are so often "the innocent third party," we have but to instance the attempt to organize "public" servants in the interests of a "class," as policemen, firemen, and school-teachers. In the case of these last, indeed, this attempt has in Chicago proved partially successful, the delegates of the union of public-school teachers being admitted to Chicago's central labor body on an equality with the delegates of the hod-carriers and teamsters. An amalgamation of classes so curiously incongruous and manifestly improper but reflects the avowed attitude of "conservative" labor leaders toward society as embodied in the law and its application. It is a case of being not above the law, but beyond the pale of law. Thus we find Mr. Clark, of the Order of Railway Conductors, objecting to the incorporation of unions on the ground that incorporation laws were enacted for capital; and Mr. Gompers, of

the Federation of Labor, objecting to the enforcement of the interstate commerce law against unions, because that law was enacted for the restraint of capital. Their position is, though Mr. Clark and Mr. Gompers may not appreciate it, that, if responsibility is evaded through failure to incorporate, or if interstate commerce is interfered with through a boycott, a special dispensation should be granted by the law-making power—society, or All-of-Us—because the evasion and the interference are the deliberate act of organized labor. Nothing could more strongly mark the distance we have drifted from the inherited American conception of civil liberty, "that of a status created for the individual by laws and institutions, the effect of which is that each man is guaranteed the use of all his own powers exclusively for his own welfare"—the striking definition of a sound thinker, Professor William G. Sumner.

The phrasing of this definition recalls the ideal of another great labor leader. He is a leader who does not seek the disorganization of society by the organization of his class into a predatory clan. Rather he seeks the organization of society through the development of each individual member, his equipment for the best work that is in him; thus through honest service to secure a dignity of recognition, individually and as a class, that is now denied. Which labor leader stands for the true democratic and American ideal—John Mitchell or Booker Washington?

As to Alleged Moral Indifferentism

Not long ago Rev. N. D. Hillis, of Plymouth Church, Brooklyn, uttered the disquieting opinion that the day of positive convictions and ardent advocacy of the same had passed in this country, and that the present ethical and spiritual lethargy was appalling in its significance. His opinion naturally recurred to one who a month later read Mr. Bliss Perry's article in the *Atlantic*, on the indifferentism of the times. From poet as well as preacher and man of letters there has come the same message:

> The peril of the races grows apace,
> Behold vast flocks amid the flocks of death
> Bite deadly nightshade, while their shepherds sleep.
> What care these for the sheep?

More recently have come startling revelations as to venality in Federal, State, and municipal governments, and the relative apathy of the people respecting the crimes, juries failing to convict unless the evidence is overwhelming, and voters continuing the venal bosses and their hirelings in power.

This state of affairs is not confined to this country. Canon H. Hensley Henson, of Westminster Abbey, has recently said of English society: "For most of us it is not open, palpable vice that is our principal danger, but just the quiet worldliness, the decent habitual self-indulgence, the sustained indifference to the claims of the higher life. . . . We have acquiesced in the notion of an effortless, painless discipleship, and the stern agonistic language of the Master and His Apostles has ceased to disturb us or alarm us. Christianity has come to fit on comfortably to the social conventions which fill our lives; nay, it is but one of those conventions, and wields an authority no less and no more." The Bishop of Durham, preaching just after the postponement of Edward VII.'s coronation when he was *so seriously* ill, welcomed the sudden halt, because it would turn the attention of the British people to serious things, to evils which were clamant, and would prove, he hoped, that "under the blank surface of indifference to religion there still abode the instinct of prayer." Other quotations might be made from the sermons of preachers, the essays of men of letters, and the editorials of journalists, to show that there is a general feeling here and abroad that the present is a time of laxity of belief and conduct, a time of drifting, when old landmarks are fading out of sight, and a time when moral leaders are few and the popular response to those who aspire to lead far from general or encouraging.

The danger is, in an era of disintegration and flux like the present, of confounding indifferentism with incertitude. It so happens that thousands to-day are uncertain as to their duty who are by no means indifferent to it. While it is true that truth, objectively considered, is as unchanging as ever it was, it is none the less true that, subjectively considered, it is a very illusive and individual thing. As the world ages its life does not grow simpler, either in theory or in practice, and those who affect to secure reform from current so-called indifferentism by restoration of primitive man's aboriginal conditions of life are trying to turn back the hands on time's dial or to alter the procession of the seasons. The simplicity of to-day is the luxury of yesterday, and the luxury of to-day will be the simplicity of to-morrow.

No diagnosis of present conditions of life here or in any other civilized land can approach correctness which does not make allowance for the marked increase of strength of individualism as over against institutionalism during the past decade or two. Superficially viewed, there is much which makes against this contention. Economically, industrially, and even politically considered, it may seem that the individual is losing his relative importance, but as a member of the family, as a ward or child of the church, as a citizen of the great world of letters and science—in short, as a moral and intellectual being—never was the average man so free to formulate his own code of conduct, his own belief, his own taste, and his own destiny, and never were the historic institutions of society so uncertain as to the loyalty of those who nominally give adherence. This accentuation of the spirit of individualism makes against leadership of the many by the few. Hence the cry, There are no leaders! There are leaders, but not always of the old sort, and the ties which bind the masses to them are new ties. If in his newly won freedom the man captive hitherto acts for a while as if dazed, and is not sure what he believes or what he will do, it is easy, of course, to write him down as agnostic and degenerate, but it may be far from the truth.

Moreover, it has ever to be borne in mind that with the new age come new manifestations of old passions and adorations; and the great trouble with many who denounce the corruption and decadence of the present and who fail to see any good in the spirit of the age, is that they are looking for idealism, for self-sacrifice, and devotion to a cause to show itself in old ways, whereas it is showing itself in new ways. Instead of giving vast sums to build cathedrals or training-schools for the clergy, as have men of the past, the men of to-day are building universities and training-schools for artisans and engineers. Heroism is shown daily by thousands, not in the old pursuit of arms, but in the careers of policeman, fireman, railroad engineer, electric-car motorman. Youths of fortune and station enlist not to support a dynasty or an aristocracy, but to make for themselves a career of helpful service for their nation or their municipality.

If leaders are not followed so blindly, adoringly, implicitly, as they once were, if authority wanes in literature, in theology, in politics, if dogmatism is out of favor, it does not follow that men are incapable of recognizing worth or ability in captains, or that standards of style, systems of belief, and party principles are obsolete, or that positiveness of belief and devotion to duty have become extinct. It may mean that privates are capable of more initiative, that the progressive quality of all standards of truth is more clearly seen, and that men are willing to concede to those who think and act differently from them the same honesty of purpose and quest of truth which they claim for themselves.

Cleansing Military Records

It takes a good deal of courage to attack a strongly intrenched legislative fiction, especially when implanted by influences potent with the politicians. General F. C. Ainsworth, who used to be an army surgeon, and who is now chief of the record and pension office of the War Department, has called official attention to the illegality and unconstitutionality of the practice of Congress in making legislation which attempts to relieve old soldiers of such infirmities of record as court-martial sentences, dismissals, dishonorable discharge, and desertion. Any one familiar with the mass of pension legislation and the laws which lead up to it, must have been impressed with the bills passed for the purpose of relieving individuals from this or that defect in their records. Sometimes, nearly always, in fact, this is a cleansing preliminary to the introduction of another bill which provides a pension, the beneficiary having attained an artificial eligibility to such reward.

The whole thing is preposterous, having grown up from the old days when the War Department, through the Adjutant-General of the army, used to take such liberties with historical fact. No one objected to the claim which was of so much benefit to individual voters. In the aggregate, these people formed a large class, the good-will of which was of importance. The practice increased until it seemed that any sort of disgrace recorded against an officer or soldier could be legislated off of the government archives. General Ainsworth's point is that these are facts which nothing can remove, and that the deserter of forty years ago cannot get back into honorable status by means of law. Court-martial proceedings, dismissal, and dishonorable discharge are no less real because Congress passes a bill providing solemnly that the court never existed and the dismissal and dishonorable discharge never occurred.

General Ainsworth says, moreover, this is encroaching upon the pardoning power of the President, and that, in the end, it is unjust to the veteran survivor with an unblemished record. He furnishes a remedy, too, but it is such that it is obviously one of convenience and still presumes to do violence to the veracity of physical occurrence. A law might be passed, for instance, providing that a dismissal and a dishonorable discharge and a court-martial trial "shall be considered" as not having occurred. And it remains that the remedy, like the original evil in the case, is harmful besides being ridiculous.

W. H. TAFT, NEXT SECRETARY OF WAR

Governor William H. Taft is expected to arrive in Washington from the Philippines not later than January 29, and will take the oath of office as Secretary of War on February 1, succeeding Elihu Root. He left Manila on December 23, and a special train may be necessary to bring him from San Francisco to Washington in time. The rise of Governor Taft has been rapid, for he is still comparatively a young man. He was born at Cincinnati in 1857, and has been successively a lawyer, a collector of internal revenue, a judge of the Superior Court of Ohio, Solicitor-General of the United States, United States Circuit Judge, President of the Philippine Commission, and Civil Governor of the Philippines

A Painful Subject

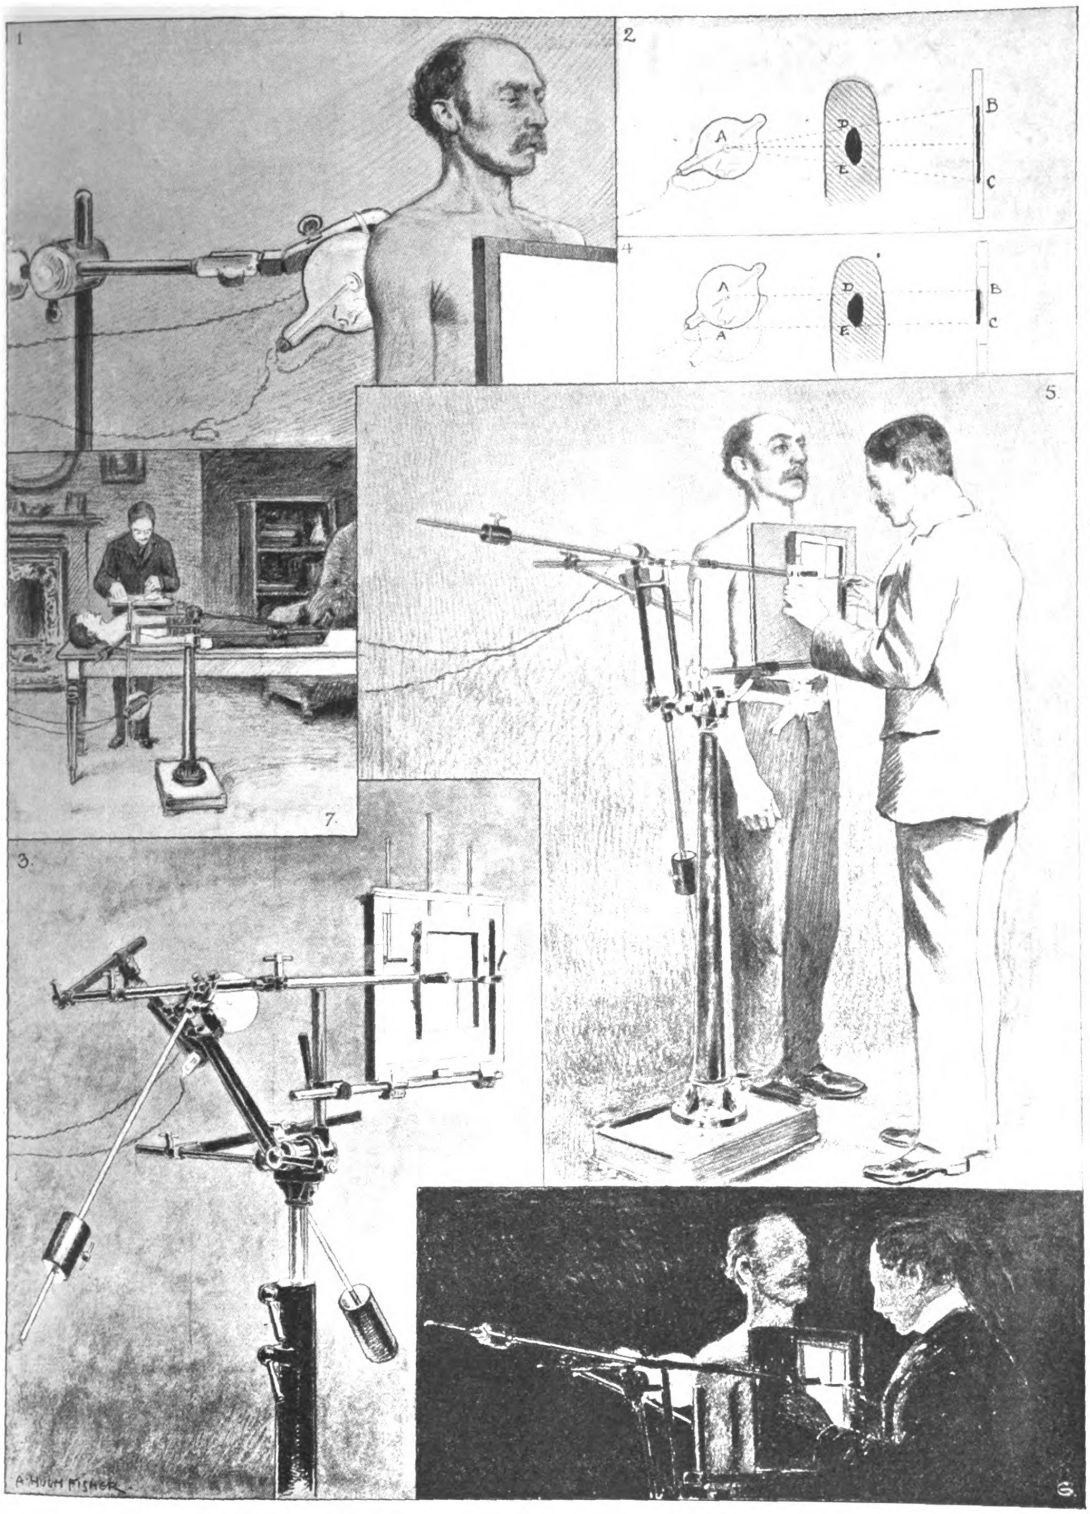
By W. D. Howells

MR. HERBERT G. WELLS, the very well known English author, has lately touched upon a certain regrettable business condition which is, by reason of one of the temperaments concerned, hardly less than an impassioned grief. The condition is the present relation between authors and publishers, and the temperament which lends it an interest beyond and above the interest of other business conditions, is the temperament of the author. This, so essentially feminine, is of an intensely personal quality, and yields itself fondly up to such an imaginative conceit of the relation, that the relation might be more rightfully called, as far as the author is concerned, a love-affair rather than a business-affair. He fondly fancies that in the kindly generalities of the publisher's politeness is latent a peculiar affection for himself, and he is the more jealous and exacting, because he has often been obliged, against the instincts of the feminine nature, to make the advances. At each simple commercial action on the part of the publisher, he imputes to his partner a treacherous intention, and he seizes the first occasion to break their engagement, or, if it has gone farther than that, to seek a divorce of their interests. He believes that an advantage has been taken of his innocence, that his confidence has been abused; and he turns with his wounded affections to another publisher, on whom he as briefly relies in as passionate a devotion.

In terms less poetic than mine, and perhaps more exact, Mr. Wells has lamented that there has to be a fresh bargain made with each new book, and that in this contract the author tries to get as much, and the publisher tries to give as little, as may be. If the author has succeeded, perhaps through the risk and enterprise of the publisher, and perhaps through something charming or rubbishing in his work, he will have the pound of flesh next the publisher's heart, in their next deal, and he will not mind if a few drops of blood come with it; if he has had only a success of esteem, the publisher takes everything from him but his life. It is a fight, to which the unscrupulous greed of the parties hardly imparts the grace of a gamble, and it differs from other commercial transactions in the loss of an ideal to which other commercial transactions make no pretensions. From this bad state of things, which again I have pictured in my own words and not Mr. Wells's, Mr. Wells suggests that there may be found a way to a better state through the publisher's giving a fixed income to an author who has evinced ability or popularity, besides the usual percentage on sales. He tells us that some such arrangement is coming into favor in England, and that he already has it with the publishers of his French and Italian translations.

I myself think some such arrangement would be admirable. The only difficulty lies in getting either authors or publishers to agree to it. If the author is unsuccessful or unhopeful he will eagerly accept the proposed terms, but the publisher will be slower. If he is successful, the author will delay, and the publisher will press the advantages of the system upon him. In this view I am afraid it will come to nothing here, where a big-selling author means automobiles for himself and his publisher, and the most gifted and meritorious writer who does not sell, languishes in obscure immortality. There is another system which I believe is in use in Germany and Scandinavia, if I remember aright what Mr. Björnstjerne Björnson told *me* a good many years ago. By this system the author pays for his electrotype plates, and then sells to a publisher the right to print and market a certain number of copies. When the edition is exhausted, he sells the right to publish another, but does not part with his publishing right, as the American *author* does. He divides the risk with the publisher, and he shares more equally in the profits. But probably this system is no more likely to be introduced here than the arrangement which Mr. Wells says is coming into favor in England.

In the mean time the situation is becoming with us more and more anarchical, or to use a milder analogue, more and more competitive, through the passing of the comity which once ruled somewhat in the affairs of authors and publishers. It grew up during the times *before* international copyright, when one respectable publisher would not reprint an English book announced by another, and would not seek to get his English authors away from him, or even meet them half-way when they wished to leave him. This worked a certain hardship for the authors, but it had a romantic beauty, which survived the passage of the international copyright law in the chivalrous regard for one another's interests which still prevailed among our publishers. Now, however, I am given to understand, at the first sign of discontent in an author of the automobiliary class, a publisher of the first rank will not hesitate to receive him with open arms, and console him for the real or imaginary wrongs he has suffered with subventions in ready money, and with agreements for percentages on sales as far beyond the dreams of avarice as he can measure the author's rapacity. He will get him away from his brother publisher if he can, and if he waits for the author to make the advances, he waits impatiently. All hope of building up an exclusive list of authors is gone, and though some publishers still maintain their lists of copyrights it is no longer with the old security, or without perpetual peril against which no vigilance is a safeguard.



It will be readily conceived how demoralizing this must be for authors, a species of fellow man and fellow woman notoriously weak in their notions of right and wrong where their real or imaginary interests are concerned. In spite of it there are very many affecting instances of loyalty among them. Against experience they cherish the delusion that their publisher has a personal tenderness for them, and that when he has taken every advantage of them in the case of their first books that legal ingenuity could devise, he has published their first books out of love for them. Others in their disillusion revolt against him, and are glad to leave him for another love who has not yet disappointed them. One of our most delightful and ingenious authors, to whom I noted the fact that each of his successive books seemed to be published by a different house, frankly owned that this was done upon a theory of his which he believed founded on an unfailing principle of human nature. He said that if he went with his books successively to the same publisher, they lost the allure of novelty; the publisher took them as a matter of course, and relying upon the moth-eaten idea that one of his books helped the others, let the new book take its chances with the public. But if he carried each fresh book to a fresh publisher, the business imagination was stimulated; the fresh publisher conceived that he had somehow got a good thing, and he pushed it, and praised it, and put all his moral forces into the work of selling it. But this author was very exceptional among authors of the older sort, who almost all cling to their first loves, however little these may have done to justify their faith or requite their affection. Now, however, it is said that the younger authors are disposed to be rather of the exception than of the rule in the matter.

I am not ready to declare whether this is so or not, but if it is so I am not willing to believe that it is altogether the author's fault, though at the same time I should be sorry to take the vulgar view of publishers, which is indeed not the common view among authors. No fair-minded author, who knows them at first or second hand, can fail to have known instances of extraordinary generosity in their dealings with authors. As a rule they stand by their bargains to their own loss, and if they stand by their bargains to their gain, the wiser of them know how and when to default from it in acts of munificence which the author seldom emulates. That is, I have heard of publishers who overpaid authors out of profits unexpectedly great, but I never heard of an author reimbursing a publisher for his losses, except in one shining instance which I prefer to believe unique. Generally, though, the publisher is short-sighted enough to give the new author a grudge at the start, though the author does not then know it, but supposes himself to be the object of a most flattering and magnanimous faith on the part of the publisher who grinds him down to an agreement to expect nothing till a thousand copies of his book are sold, or poorly gives him a ten per cent. which is no just part of the profits after three thousand books are sold. The author, when the glow of his pristine gratitude has died from his cheek, and he has learned how unequal his part of the profits is, begins to feel his grudge, and when the time comes, he goes away to feed it.

The whole thing seems to revolve in a vicious circle. There is nothing the young author indulges so eagerly as the superstition of his own importance, and there is much excuse for him. He must be more than mortal not to believe himself more than mortal when he finds his name in all the reviews and advertisements and paragraphs of literary gossip. The publisher who is pressing the belief upon the public is largely though helplessly to blame for the author's inflated notion of himself; his one purpose is to sell the author's book, but all the time he is fashioning an automatic idol, which constantly falls down in worship of itself. The thing is preposterous, but no one is particularly to blame, least of all the idol, poor thing, which when it gets its first account for copyright is in ninety-nine cases out of a hundred rudely recalled to a realization of its humanity. No wonder that, in the difficulty of accepting the facts, the author goes off with his next book, and his grudge and his shame, to another publisher. In most cases, the first publisher does not grieve for him, except as an erring fellow man, but if he has proved a big seller, the publisher feels hurt by his defection. He thinks unkind things of him, and prophesies evil for him.

Out of the difficulty, it seems to me that there is but one way for the publisher who will not, and who sometimes cannot, trust to the handsomest possible behavior with the author. I myself believe that authors are very amenable to good treatment, but I do not say that all authors are so; though I hope I am not working treason to my own calling in suggesting to publishers the formation of a syndicate pledged among its members to the payment of such and such prices to authors, and vowed to an absolute constancy in one another's behalf, and to an unrelenting warfare upon all publishers outside of the syndicate who offer different terms. It might not work at first, but perhaps it would work at last. Then there would be nothing for the authors but to form a labor-union, with a schedule of prices for fiction, history, poetry, psychology, travel sketches, reviews, and so on, and all sorts of penalties, direct and indirect, for ratting authors. Of course, the same prices must be paid to poor authors as to good ones, when once they are members of the union; but this rule of trade-unionism is, oddly enough, already enforced by the publishers, who now issue all books of a certain size and shape at the same price without regard to their authorship, so that the buyer gets the book of a writer of established fame and unquestionable quality for exactly the same cost that he gets the book of a perfectly unknown and unproved writer. The painter, the sculptor, the actor, even the preacher is paid according to the cumulative value of his work, but in the world of books the prentice-hand is paid as highly as the hand of the master. The times are ripe, therefore, if not for the publishers' syndicate, then at least for the authors' union.

A NEW INVENTION FOR PERFECTING X-RAY PHOTOGRAPHY

The Orthodiagraph is the name of a new invention for reproducing an exact image of the object under observation by X-rays instead of a magnified image as heretofore. Figure (1) in the drawing represents an ordinary Röntgen apparatus by which the shadow of the object to be studied is shown upon the fluorescent screen. In this the illumination is from one point, and the spreading of the rays throws on the screen an image larger than life, as in diagram (2). Figure (3) shows the details of the new instrument, the Orthodiagraph; and in Figure (4) is shown the arrangement of the rays of light by which the operator is enabled to make an unmagnified drawing. The instrument has a system of levers and weights rigidly connected with the Röntgen bulb on one side and with a drawing stylus fixed in the middle of the fluorescent screen on the other. The frame moves in front of a fixed sheet of pasteboard upon which the drawing stylus makes its record. By this arrangement the drawing is of the exact size and shape, instead of being more or less magnified, as in Figure (2). Figures (5) and (6) show the instrument in use, and Figure (7) shows an arrangement by which observations with the Röntgen rays may be made on a subject in a reclining position

Morley's "Gladstone"

By Sydney Brooks

LONDON, *December 26, 1903.*

WHO wants an impartial biography? "That my book," says Mr. Morley, "should be a biography without trace of bias, no reader will expect. There is at least no bias against the truth; but indifferent neutrality in a work produced, as this is, in the spirit of loyal and affectionate remembrance, would be distasteful, discordant, and impossible. I should be heartily sorry if there were no signs of partiality and no evidence of prepossession. On the other hand there is, I trust, no importunate advocacy or tedious assentation." There you have the impregnable common sense of all good biography. An impartial "Life" would be an unreadable "Life," in some ways even a revolting "Life." I doubt whether such a biography has ever been written; if it has, I am sure no one would care to read it twice. The cold-bloodedness of the judicial spirit has no place in this branch of literature. Of all the great biographies in the English language, Boswell's *Johnson*, Moore's *Byron*, Lockhart's *Scott*, Trevelyan's *Macaulay*, Carlyle's *Sterling*, which one is impartial; which is not impregnated with the honest one-sidedness of affection, devotion, sympathy; and which does not make its major appeal precisely because it is so quickened?

I count it, then, one of the first merits of Mr. Morley's *Gladstone* that it should be nobly partial. Partial and in the best sense partisan, yet not an unqualified echo. There are points at which one is tempted to call it a "Life of Gladstone" written by an admiring contrast. Substantial as was the agreement between these two lofty spirits, there were matters of vital import in which the temperament of each prevented an equal communion, matters for the most part of belief and the policy that springs from belief. Yet even here the consciousness of a chasm is soon swallowed in admiration of the large reverence of soul by which it is bridged.

Next to this spirit of balanced partiality I would place Mr. Morley's style and generalship. His book is a masterpiece of proportion, arrangement, literary craftsmanship. Perhaps only a professional writer who has had the ordering of big tasks can quite appreciate the high qualities of mind displayed in the strategy and the tactics of these volumes. It is not, as a rule, an art in which Englishmen excel; Macaulay and Gibbon alone are preeminent in it, Macaulay by virtue of his almost infallible instinct for the disposition of paragraphs and chapters, Gibbon by his consummate power as a surveyor and judge of political topography. Mr. Morley happily unites something of the virtues of both masters. He has a capital "eye for country." The immensity of the material at his disposal, the complexities and diversified activities of his subject, the incessant contact for more than sixty crowded years with the great events not only of England and the empire, but also of Europe and the world, the consequent difficulty of saying where history was to end and biography begin—all this must have tested his sense of relativeness to the uttermost. But he has stood the test perfectly. The reader feels from the moment of embarkation that a sure hand is on the rudder, steering a measured course. The narrative flows with the freedom of a brimming river. Sequences, gradations, those subtle connecting links and transitions that try a writer's economy, are here surmounted with an ease and a precision that half-conceal their difficulties. I know of few books of the kind that have at once such an amplitude and such a finish.

But even greater than the spaciousness of these volumes is their style. Some fifteen of Mr. Morley's books stand on my shelves, but I should be hard put to it to say where he has shown more strength or suppleness or an apter variety than in his *Life of Gladstone*. A winning style, like Newman's or Ruskin's, his is not; but a grave charm, an elasticity of movement, an eloquence born of high thought and deep conviction animate it throughout. The humdrum phrase, the obvious turn, the hackneyed formulæ, are seemingly impossible to him. Yet there is no straining, no preciosity, none of the literary pirouetting which with Stevenson, or at least with his disciples, seems to be the alpha and omega of composition. The distinction of Mr. Morley's style is the distinction that comes from scholarship—the half-nervous, half-impetuous play of a free and full mind, and the ripeness of an ardent yet brooding nature. Now fresh and quick with a colloquial terseness, now heaving and agitated with the contact of a great theme, here rushing down with majestic sweep, there placid, meditative, lingering—it is a style that sways like a poplar, in harmony with the fluctuations of its subject. In narrative, argument, exposition, and reflective comment it answers without losing its high identity to the call and needs of the moment, always sustained, vital, and pitched on a lofty plane, yet bending without an effort to little things.

Was it not Mr. Morley himself who noted in Burke's handling even of the least significant topics that grand faculty for suddenly opening up long vistas of thought and speculation and affecting his readers with a sense of something new and unforeseen? Lord Salisbury with his comprehensive mind often showed this quality in his speeches; Mr. Morley shows it in his writings. He never trifles. Loftiness is the "note" of his *Gladstone*, as it was of Gladstone himself. We move along a splendid elevation of thought, aim, feeling, achievement. No one can read the book without thinking better of politics and politicians, without being wonderfully refreshed and inspired by the proofs that even in such a sphere of contention, pettiness, sordid ambitions, there was at least one man whose every action and every thought was clean and noble. But this is only half its virtue. From a mind that has ripened and mellowed in many fields of learning, from an experience sharpened by contact with the most arduous offices of state, from a nature passionate even in its austerity, humane, broad, and swiftly kindled to pity—Mr. Morley sows his narrative with those deep reflections, those pregnant suggestions of things unseen, that make the most careless reader pause and think, and brace and widen his mind. He has rigidly eschewed the biographic sin of seeming to compete with his subject. Yet, studious as is his self-effacement, entirely as he succeeds in leaving us alone with Gladstone, we are conscious throughout not of the writer's presence, but of his personality and spirit. No great writer can avoid this; and no reader would for one moment wish that, even if it were possible, Mr. Morley had avoided it. It is one of the great charms of these volumes that to read them is to be as much drawn to the man who wrote them as to the man of whom they are written.

And what a feast is here prepared for us! Life and literature, scholarship and theology, history and politics, philosophy and oratory are all gathered within these pages. It was a tremendous epoch through which Mr. Gladstone lived, and he was himself a tremendous actor in it; and whether you take Mr. Morley's book not as a history but as a comprehensive commentary on the essence of the Victorian era, or whether you take it as a study of the mind and character of its greatest, or nearly its greatest, son, it is alike amply satisfying. It is a contribution at once to history and to biography, and not only to the history of the United Kingdom, but of Europe also. I doubt, for instance, whether you will anywhere find an account of the events that led up to Italian unity that will equal in insight, vigor, and compression the few masterly pages that Mr. Morley devotes to it. Here and there in his narrative of English events, an American, or one not already well grounded in the main facts, may feel that a little too much is taken for granted; but, on the whole, Mr. Morley has given us an adequate panorama of Victorian England, and, above all, has enabled us to study it from a new standpoint, and through the eyes of the man who did most towards shaping it.

And Gladstone himself? We see him, it is needless to say, from the first to the last stage of his career and in all its multifarious phases. We know precisely what he accomplished and how, what he stood for and why. But we also know far more than this. Mr. Morley takes us into the arcana. We see the hidden springs that worked that marvellous mechanism—the long and painful development of mind, the character of the man, his scattered and energetic talents, something, too, of his inner spirit—all this explained and translated for us by an intellect of the first rank, a nature touched to the finest issues, and with a consummate gift of literary expression. It is an absorbing, a stirring picture; rarely have artist and subject been so perfectly mated. If it has one fault it is that it is too unrelieved. Of those terse, illuminating touches that make a personality real, of anecdotes, reports of conversations, sketches of habits, manners, and the minutiæ of daily life, Mr. Morley is singularly abstemious. He never Boswellizes. For some reasons the reader wishes he had; for others, and these the weightier, he is glad he did not. Mr. Morley has given us the best and the essential part of the man; others may supply the trivialities.

Wisdom

By Theodosia Garrison

I NEVER knew what sorrow meant
When I had tears to shed,
The tears that washed out bitterness
And left content instead.

I know at last what sorrow is
Who have no tears to fall,
But only for life's tragedies
A laughter cynical.

NEW YEAR RESOLUTIONS

THE WEEK AFTER

BY ALBERT LEVERING

His Excuse. "If the furnace had not smoked, I should never have thought of it."

Her Excuse. "Why do the Sunday papers advertise such wickedly tempting bargains!"

His Excuse. (He doesn't know any.)

Grandpa's Excuse. His temper (and Tommy's wagon) ran away with him.

Their Excuse. "We didn't resolve not to!"

Tommy's Excuse. "I forgot!"

Et tu brute!

Books and Bookmen

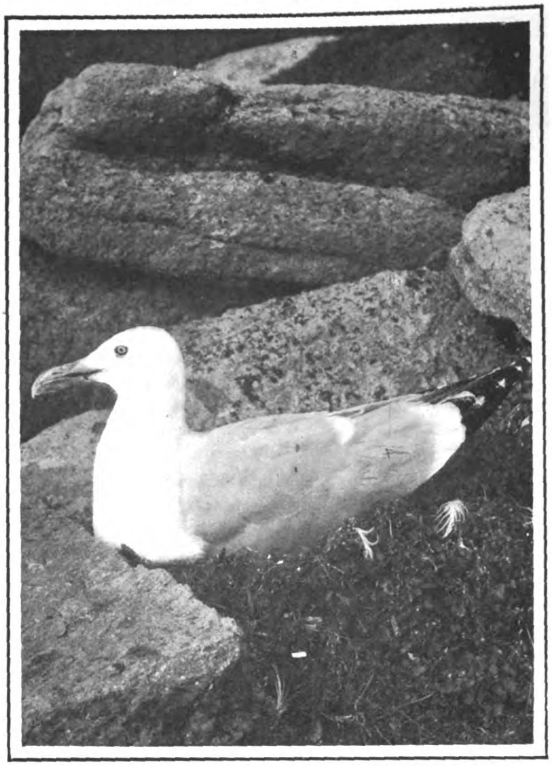
By James MacArthur

IT was Coleridge who said that experience is like the stern-lamp of a ship, it only sheds light on the track left behind. Nevertheless, the only wise and effectual teacher of life is life, and in literature the repository of life's wisdom is to be found in biography and autobiography. *The Making of a Journalist* is not so much a primer for journalists as it is a series of chapters from the author's own experience, and as such it is of the greatest service and stimulus to those who aspire to or have begun to follow the calling of journalism. For the late Mr. Ralph took his profession as seriously as the once-celebrated preacher, Spurgeon, whose advice to young men applying to him to enter the ministry used to be, "Don't—unless you can't help it." At the very outset Julian Ralph maintains that the journalist is born, not made, and his own career would seem to bear out his statement. To him who feels the inborn instinct of the writer impelling him toward the profession of letters, determined to achieve the high aim set before him, despite all obstacles and by dint of arduous labor and patient endeavor, *The Making of a Journalist* will be a source of stimulation and a bulwark of power; but to him who is eager to enter the lists because of the glamour of publicity, the seeming ease and elusive grasp with which its prizes may be obtained, the book will, let us hope, be a salutory check and a daunting of day dreams that have no substance in them. I should like to put a copy of this book into the hands of every young man or young woman who comes to me out of a vague and uncharted vision of things literary, that leads them to believe they have but to appear to be assigned to a position of importance on the MAGAZINE OR WEEKLY without previous knowledge or training. Every editor knows how hopeless it is to give advice to the major portion of such applicants; they blandly believe that a college education has fitted them for positions that, as a matter of fact, are now occupied by men and women who have spent years of steady acquisition and cultivation of their craft to arrive at their goal. It is a pity that there are not more books like *The Making of a Journalist* to correct this popular delusion among would-be literary aspirants. I know of only one other work of its kind which sets forth the rigors, the difficulties, the ardors of the journalist's career—a work that has deserved a wider publicity than has been awarded it. The *Life of James Macdonell*, of the London *Times*, was written some years ago by Dr. W. Robertson Nicoll, and is, I believe, the only life of a journalist, pure and simple, that has ever been written. Dr. Nicoll, by the way, has recently been giving some sensible advice to those who aspire to journalism in "The Correspondence of Claudius Clear," which he contributes to his paper, *The British Weekly*. His counsel is so sane and pertinent to the matter in hand that I cannot do better than quote at length some of the passages which grapple with this important question involving the relations of publishers, editors, and writers.

The late Julian Ralph
Author of "The Making of a Journalist"

First of all, there is the question: Are introductions useful? "In the province of literature and journalism," Dr. Nicoll replies, "I am certain they are not. It is very hard to convince young writers that, in spite of their endless disappointments, editors always give consideration to manuscripts. It is a fact nevertheless. An editor or a publisher gains so much from the annexing of a brilliant young writer that he invariably is on the outlook for him. Years and years of disappointment do not kill out the hope. Authors should remember that trained eyes know by infallible indications what is hopeless, and therefore do not spend much time upon it. But I have yet to discover the editor who does not consider very carefully everything which shows a sign of promise. How many hours one has wasted in turning over page after page of a manuscript, not bad enough to be thrown aside, and yet not good enough to publish! This being so, it is much better to dispense with introductions, and trust the manuscript to speak for itself. Introductions are a confession of weakness. They may induce good-natured people to print once what they would not otherwise have printed, but successes of this sort speedily come to an end. It cannot be said too often that the best introduction of a writer is in his work."

Dr. Nicoll points the young man to his Emerson, and reminds him that a shrewd and practical sage underlies the oracular utterances of the essayist and the poet. In particular he quotes a pregnant sentence from the essay on "Self-Reliance." "Trust thyself; every heart vibrates to that iron string." His advice to the literary beginner is grounded on a long editorial experience. "Do your very best; consider carefully what papers or magazines admit articles of the kind you have written. Choose to begin with the humblest of these periodicals. Then send your manuscript, with a stamped addressed envelope for return. Do not be discouraged by a rejection; go on for six months, and if at the end of six months you find the editors unanimous against you, you may wisely conclude that you have no call to the literary profession. Many failures are due to the extreme carelessness with which young writers choose their periodical. I have no doubt the *Athenæum* gets short stories sent to it. Many failures are also due to a want of modesty. In the provinces a young man with a literary turn had better begin with the local papers and the local life. In any case, he may rest assured that the introductions he wrings out of his influential friends are prejudicial rather than otherwise."



He goes on to ventilate an old grievance. Time was when a man who was a failure in other directions sought a respectable vocation in becoming schoolmaster; now it would seem that under present conditions he takes to journalism. "There is a widespread belief that any young man who has failed in other professions may become without difficulty a journalist or a publisher. If one could make an end of this delusion, he would render a great public service. It is of no use attempting to be a journalist nowadays unless you can bring something to show. You must succeed in getting manuscripts accepted, printed, and paid for. The largest newspaper proprietor of our day never makes an appointment to his staff save from the ranks of his outside contributors. Still, young men come up to London with introductions, and expect harassed editors to train them in journalism! The publishing trade cannot be entered into nowadays without large capital and the experience of many years. I think I should also say emphatically that it is hardly possible for any one engaged in another occupation to supplement his income by contributing to periodicals." What Dr. Nicoll has to say of the conditions and chances of literary success in England are equally true of this country.

Again, there is a great deal of arrant nonsense in the talk about influence and "pull" and "discovering" authors. Harriet Martineau used to say that she had never been able, with all her influence, to bring about the publication of any book for any one but once. Now and again influence may help to introduce a new writer, but for the rest it remains with the merit of the work. The limits of possible help in launching an author are necessarily narrow. On the subject of "discovering" authors, Dr. Nicoll, who has been credited with more than one notable discovery in his day, grows wroth. "I often wonder that authors do not kill their so-called discoverers. The temptation must be very great. The most that any one can do for a man with real stuff in him is to anticipate his triumph for a few months. He pays dearly, it seems to me, for these months in having his name forever after coupled with the man who first printed his work, the man who was amply repaid for doing it. Critics can do something, I admit. There is no doubt that enthusiastic reviews are helpful at the start, and few can afford to despise this aid. But no conspiracy of critics in these days can force upon the public what the public does not appreciate. It may also be said with safety that many critics are always on the outlook for a new writer with the root of the matter in him. It is in this respect at least that the health of the critical world is bettered." Dr. Nicoll's view is the sensible one; the notion that a critic or editor can do much for an author beyond lending him encouragement and speeding his pen is ridiculous. All that can be done is to hasten by a little the day of recognition. Macaulay used to take delight in Bentley's fine apothegm. "No man was ever written down save by himself." Equally true is it that no man was ever written up save by himself.

A Snap-shot at close Range of a Bluebird at the Edge of her Nest

A rare Photograph of a Great Herring Gull

A Female Warbling Vireo about to Inspect new Nest

A Red-breasted Nuthatch bringing Food to the Nest

STUDYING WILD BIRDS AT CLOSE RANGE WITH A CAMERA

The reader is referred to an interesting article on page 57 of this issue of the "Weekly," by Professor Francis H. Herrick, describing modern scientific methods of nature study. The photographs, which were taken by Professor Herrick, show the results of the detailed observation which is made possible by modern methods of study. The difficulty encountered in studying the habits of wild birds not in captivity is overcome in the case of many species by the use of an observation tent erected near the nest of the bird to be studied. By this means the bird whose habits are to be observed can be watched and photographed at close range

The Labor War in Colorado

This is the first of a series of four articles by the special representative of "Harper's Weekly," telling from actual observation the story of the conflict which is now in progress in Colorado between the miners and their associations and the employers. The struggle now going on is one of the most important labor contests ever waged in America, and its outcome will have weight in determining similar questions throughout the country

I. The Present Situation in Pueblo.—By Charlotte Teller

THERE is probably no thinking person in Colorado who has not taken sides in the labor troubles which are now on out here. There are very few persons who are not directly or indirectly affected by the strikes, the lockout, or the military rule in different parts of the State. Except in the instance of the lockout, there is a most frank admission of the issue; there is, however, great uncertainty as to the outcome—and it is that uncertainty which makes the situation of significance, of interest to the rest of the country.

The line of battle is sharply drawn: on the one side there stand the Mine-owners Association, the Citizens' Alliance, the Colorado Fuel and Iron Company, the Victor Fuel Company; on the other side the Western Federation of Miners, the United Mine-workers, and the individuals, here and there, who feel their interests coincident with the interests of the labor organizations.

At the headquarters of the Citizens' Alliance I heard the ultimatum of the one side—"The Western Federation of Miners must be destroyed!"

At the headquarters of the Western Federation I read the proof of an address from the executive board whose closing words were: "We know no surrender, and justice will arise from the staggering blows administered by a soulless Executive, and the future will record the political revenge of an oppressed people."

On the union card of the Western Federation of Miners are the words: "Labor produces all wealth. Wealth belongs to the producer thereof." On the "union" card of the "Citizens' Alliance" are the words: "The man who makes the payroll shall carry the keys. Law and order first; creeds, politics, and unions afterwards." And there you have the slogans of the two parties.

In the mean time the struggle seems to indicate a war of extermination, and the various phases of loyalty to one side or the other when expressed seem to lead to the two conclusions, phrased nearly alike:

American citizens shall have the right to work without coercion.

American citizens shall have the right to organize.

"The open shop!" cries one party.

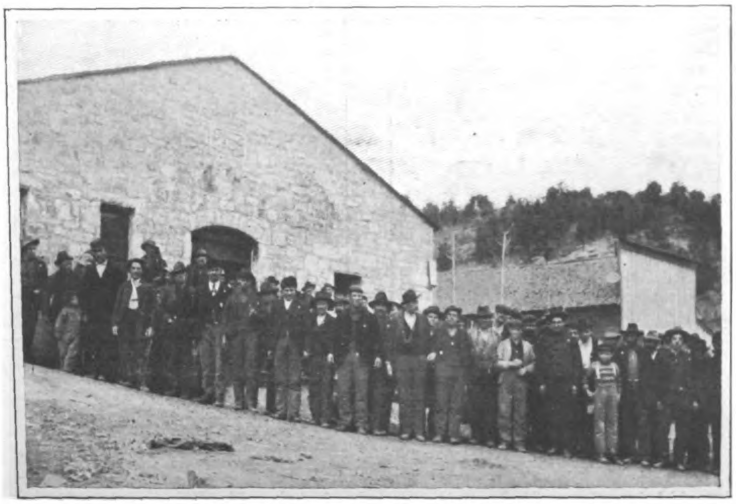
"No discrimination against union men!" says the other.

Men in the street-cars, on the trains, in the office, and the shop—all are arguing, slandering, wondering, and waging wordy battles which come to naught, for, after all, the real conflict is carried on in the three places—in Denver, between officials; in the Cripple Creek region, between the striking metalliferous miners, and the mine operators, protected by the militia; and in the southern coal-fields near Trinidad, between the coal miners and the coal operators, chief among whom are the Colorado Fuel and Iron Company and the Victor Fuel Company. Then, of course, there are the financial interests and the mysterious and uncertain public sentiment which may influence the situation at any time, although apparently of little importance just now.

In a fourth locality—Pueblo, "the Pittsburg of the West"—I found the effects of the war most evident. Here one feels the cost of industrial warfare. Miles off in the mountains there are encounters and the noise of the sheriff's posse hard riding; in Pueblo there is a silence that is more destructive than any number of street-fights between union and non-union men. There are no flames by night, no smoke by day over the six furnaces of the steel plant, which lie on the edge of the town. There are only shadows resting upon a silent field of industry, and sparrows chattering undisturbed on the chimneys and empty cars. And the silence outside in the streets, where grocery wagons come less frequently and children play less merrily—that is even more oppressive than the quiet of the works. Men at work in their own back yards become figures symbolical of despair; men on the streets, talking in idle groups or watching listlessly the few activities of trade, make one feel the reality of the present situation.

Close to the high board fence in the town live the skilled workers—the men who can take the crude ore from the mountains and convert it into rails for the highways of a nation. These men cannot enter in and work. One of them, whom I stopped in the middle of a deserted street, told me that all those who were single had left as soon as they were without work, but that the men who were married, who had bought their homes and had settled down in the security which slips over most lives when wages are good, these had to stay and wait.

"How long will you have to wait?" I asked.



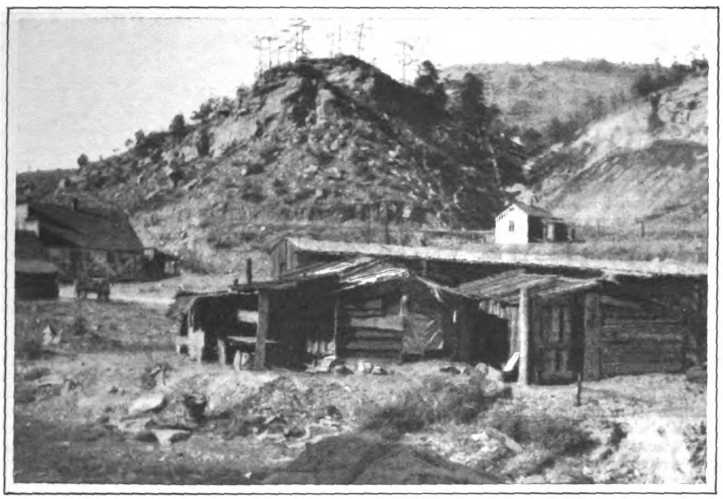
"Nobody can tell," he said, "but it looks like all winter." And he went on down the street with his hands in his pockets and his shoulders bent under the load of uncertainty. He was one of those who could not enter into activity, who could not sell his labor nor use his strength until the company should say, "Let there be light in the furnaces." In fact, the whole community, the whole town with its 60,000 inhabitants, are waiting for those words, and they are powerless to help themselves until the words are spoken.

The steel plant with its allied industries, which are inside the enclosure, is estimated to be worth $20,000,000, but just now it is worthless to the community to whom it formerly gave power, and, to a certain extent, prosperity; it is useless because of the industrial war, "extending," as one of the journals of finance says, "over every section and involving every financial interest." In Colorado the issue is more pointed because of recent financial changes in the most important corporation of the State, and because of the changes in management resulting therefrom.

The men who are out of work in Pueblo are not members of labor-unions to any great extent; unionism has never had a firm hold on the men at the plant. They cannot, therefore, depend upon unions elsewhere for support, and they have no emergency fund. There is not and has never been any great feeling of solidarity among them; yet there have been during the last year a number of strikes and labor difficulties in the plant which have had the approval of unionists who were more strongly organized. Undoubtedly these labor difficulties were a factor in the closing of the plant. It seemed time to settle the whole question of labor organization and its rights, as opposed to the freedom of the management in determining hours and wages.

The closing of the plant has some details of interest. The first dismissals were made about the time that the coal strike began. The "yard gangs" were the first to be let out, then the engineers on the field and in construction work, the draughtsmen and office force (most of them were given a month's notice); then there was an announcement that those who wished to stay at work could do so if they would work full time at half pay. Finally, it was decided to close down entirely, the skilled laborers were laid off, and the division superintendents, some of whom received no warning whatever that they would be out of employment the next day.

The suddenness of the discharges has made more than half of the distress, for many of the minor officials, sure of their service with the big corporation, had invested in homes and made affiliations in Pueblo which had to be given up, for no hope was given them to stay on and wait for the opening of the plant. Engineers of ability, skilled steel-workers, expert bookkeepers, and foremen were all thrust out into the necessity of looking for employment. The unskilled labor, especially the cheap labor, has had the best of it, and has shaken the dust of the country from its feet. The negroes have been transported as strike-breakers to the southern coal-fields of Colorado. It is more than a month since the silence settled down over the Colorado Fuel and Iron Company at Pueblo.



Striking Miners waiting to get Provisions at the Commissary Store, Berwind

Although there are no effective labor organizations at the steel plant, there are various "company" enterprises. The Minnequa Land Company, whose stockholders are stockholders of the Colorado Fuel and Iron Company, have put up from 300 to 500 houses in the vicinity of the plant. These they have for sale on the instalment plan or for rent. One of the men in the office of

the town company told me that the houses were put up at a cost of from $700 to $2500, and rented for from $14 to $40 a month. The cost of the land, which this company bought practically in one tract—in fact, I have heard that part of it was given as a grant by the county—is so small that it is safe to say that the company houses return from twelve to fifteen per cent. interest on the original investment when all expenses of management and repair have been considered. It is in this vicinity, too, that the Colorado Supply Company have their store, and the stockholders in this company are also stockholders in the Colorado Fuel and Iron Company. The solidarity of interest is so great that it is impossible, they say, for a man to rent property anywhere near the company store in order to establish a competing business in groceries, dry-goods, ready-made clothing, shoes, or any of the merchandise sold in the department store. The corporations are technically three; they are practically one.

The wholesale department of the Colorado Supply Company is one of the best organized business enterprises of the West. The goods which they retail to the thirty branch stores are brought in car-loads from all over the country. Its retail department offers goods at about the same prices current in the stores of Pueblo, which are perhaps two miles away from the works. As it seems probable that they have advantages in buying and in transportation not enjoyed by the competing firms, it is probable that the profits are somewhat larger. They have another advantage, too, which is not generally known, and that is access to the pay-roll of the Colorado Fuel and Iron Company. A collector for one of the firms in Pueblo proper told me that very often he was told by the employees that their pay had been stopped by the Colorado Supply Company, because they owed a bill at the store. He said that the company store never lost money through unpaid bills, and that all other merchants had to wait until accounts were settled there before they could hope for money due them. The same thing is true of the company boarding-houses—there have been several in Pueblo—the board money is always forthcoming as long as a man is at work; and, of course, when he leaves work it is known at once by the managers, and he is asked for his room.

Miners' Homes at Greenville, Colorado

There is no technical reason why these enterprises should not have the protection of the big corporation, but there is a feeling that the feudal conditions resulting therefrom take away some of the privileges of the employees which are enjoyed by other citizens of the country—the right of taking advantage of the competition among storekeepers, the right of saying which bills shall be paid and which shall be unpaid.

The monthly assessment for hospital service shows another of the well-organized undertakings of the company. There are 5000 men employed by the Colorado Fuel and Iron Company in its Pueblo plant, and some 17,000 altogether. The assessment of a dollar a month each for "medical service" means an income of more than $200,000 a year at the least. Out of this fund the company doctors are paid, and the expenses of the camp hospitals, wherever they exist, and of the hospital in Pueblo—said by Dr. Lorenz to be unequalled in equipment and service. There are eight resident physicians and twelve nurses. Any employee who is burned or maimed in the pursuit of his livelihood can go to the hospital without further expense than the dues he has already paid. He may have been only ten minutes in the employ of the company, and yet receive the care of its surgeons and nurses; or he may be taken with typhoid or malignant disease, contracted elsewhere, and have the benefits of the hospitals. Again, it is not criticism of the kindliness and high sociological consciousness of the corporation of which the employees are guilty; it is simply that they feel that they are the involuntary supporters of an institution which is necessitated by the business they are in, but whose place in the community is not clearly defined. If the company considers the institution benevolent, they ask why it does not support it out of the profits from the business, rather than out of the producers' wage. On the other hand, if the institution is in any sense a community, a democratic institution, it should be financed by self-assessment of the supporters, voting within some organization.

It would hardly be worth while to have considered these activities of the Colorado Fuel and Iron Company were it not for the influence which they have upon the feelings of the people. Many of the employees feel that they are indebted in a financial way to their employers; whereas the employers, from their point of view increasing the comfort of their employees, have gained recognition outside as a benevolent and progressive corporation which should have the loyal support of all persons who stand for benevolence and progress.

By way of the Pueblo depression and the study of the Colorado Fuel and Iron Company in Pueblo, I came into touch with the Citizens' Alliance of the town. The storekeepers, restaurant-keepers, and lawyers are all feeling the pressure, for which the coal strike and the metalliferous strike are responsible, and they feel that the unions, especially the Western Federation of Miners and the United Mine-workers, have brought matters to a head by taking their present position. The purposes of their organization are merely protective "against the boycott, coercion, persecution of non-union labor, and other usurpations and oppressive acts of labor-unions."

Mr. Arthur Woodruff, who is president of the alliance in Pueblo, prefaced his explanation of the intents and efforts of the organizations by saying that he was not in complete agreement with the methods being pursued elsewhere in the State; but he said that the alliance would not lay down its arms until the Western Federation and United Mine-workers had left the State. Mr. Woodruff himself is a most genial man, and is simply bent upon the destruction of what he says is a dangerous organization to the freedom of the people.

"I talk with the members of the labor-unions here in my office," he said, "and many of them sign our constitution and leave their former union cards with me."

"How do they happen to come to your office?" I asked.

"I am advertising every day for men to go to the coal-fields, or to the metalliferous mines, to break the strikes."

He thought that their need of work proved that their self-interest lay with an organization which would incline towards the employment of its own members if there were choice to be made. He did not wish that inclination to be called discrimination, though. I found that great emphasis was laid by most of the members of the Citizens' Alliance whom I interviewed upon the careful use of words. For instance, the Pueblo president wished that there should be a *white list* of stores to be patronized by the members of the alliance and not a *black list* of those which should not be patronized.

Mr. Woodruff said that twenty-nine murders in twenty-one months could be laid at the door of unionism in Telluride alone—where the metalliferous miners are striking. I learned that the Citizens' Alliance is a secret organization, and that any one who joined had to subscribe to the following:

"I agree to abide by the constitution and by-laws of this or any other Citizens' Alliance with which I may hereafter be connected, *and agree on my honor to keep secret forever all that is said or done by the alliance or any of its members.*"

At first glance such an organization seemed strikingly un-American, but its growing power makes it worthy of careful study. It resembles closely in its formalities and offices the average trade-union. The initiation fee is a dollar, and the yearly dues are a dollar. A blue card like those of the unions is given to each member, and must be presented at each meeting. An employer coming into the alliance may pay five cents per month for each employee he has if he wishes financial backing during a possible strike. No member need to let any one but the officers know that he is a member; and so it is possible for merchants in the same block to be quite in ignorance of one another's position. In case of a strike the alliance intends to use its efforts to fill the vacant positions. And it is this, among other things, that makes it a dangerous antagonist of unionism.

In Denver I talked with the president of the alliance, Mr. J. C. Craig, whose position was practically that of the Pueblo president. He believed that unions should not strike, and that striking unions were not legitimate. He pointed to the good behavior of the typographical union, which had played the part of pacificator in the Denver troubles of last spring. Denver newspapers have not been held up by the "typos," as have the papers of New York and Chicago, and for that reason perhaps they do not realize what a determined and intelligent set of men compose that particular union. At any rate, out here they are constantly held up as the model union.

In Denver I also talked with Herbert George, who is a leader in the alliance movement in Colorado. Mr. George used to be a

Populist, until he entered into business relations with Mr. Guggenheim, the principal owner of the Smelter Trust, which is known as the American Smelting and Refining Company. Since then he has become very much interested in the Citizens' Alliance, and not only gives up much of his time to the founding of "locals" all over the West, but devotes the columns of his paper to the propagation of the principles of the alliance. Mr. George was most decided in his views.

"We are simply a union which includes all persons who are against the other unions. We have come into the field to fight, and we are going to come together like this"—he struck his clenched fists together. "Then it will be time for the neutral good people to step in and separate us!"

"Would you use force if necessary?" I asked.

"Most certainly," he replied. "Was it not the Citizens' Alliance in Telluride that succeeded in getting the military force sent there?"

General Bell of the State militia, whom I saw later at the Capitol, corroborated Mr. George's statement, and said that members of the Mine-owners' Association were among the most earnest workers for the alliance. If that is the case, and facts bear it out, the Citizens' Alliance is an organization which has sufficient strength to affect the whole situation in Colorado in such a way as to make history. The membership in Denver is 14,000, and there are in Colorado alone twenty-three local alliances which are bound together by the same desire, the same interests; they have, besides, sufficient capital to carry out their designs.

As it is evident that the Western Federation of Miners is the "enemy" of this solid wall of "business interests," corporate wealth, and military power, it is worthy of as detailed a study as the alliance which has sprung into action more suddenly than any labor organization could possibly do. There are at least 40,000 members of the Western Federation of Miners, and they are drawn up in line of battle. I went to their headquarters in Denver, and found the executive council in session. The secretary, William D. Haywood, took up the questions which I had heard discussed by the opposition. His story throws a somewhat different light upon some of the recent events. General Bell told me that he expected troops to be sent at a moment's notice to Trinidad; the situation is reaching a crisis. There seems to be a gradual preparation for a long and bloodless fight; the stories of the encounters which get into the daily press are, after all, but tales of the skirmishes.

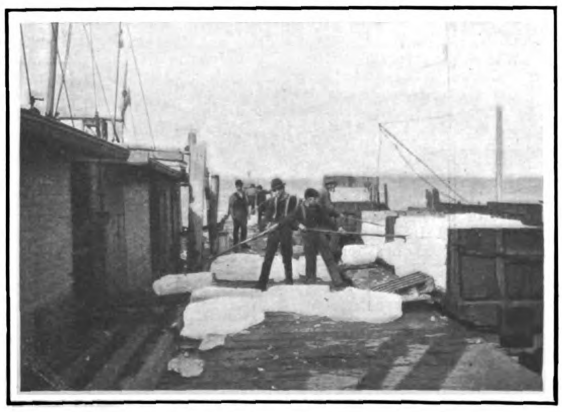
Ice-harvesting for New York City

By W. B. Ashley

WHEN a dozen men harvested 125 tons of ice in a winter, New York was seventy-three years younger, and a farm wagon could carry a barrel of potatoes down to the sloop along with its day's shipment of ice. When 800 men, at Rockland Lake, New York, harvest 150,000 tons as a drop in the five-million-ton bucket of ice that New York city requires to-day, the farmers are needed at home to raise food for them.

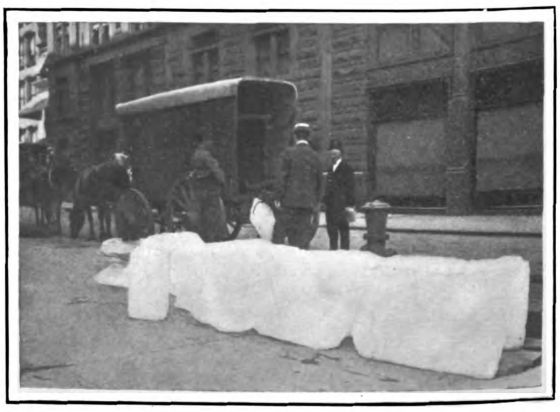
In the ice-house thirty men dig at the frozen mass beneath their wool and rubber booted feet. Drip by drip the tremendous pile has been settling together since the doors were closed last winter, until the thousands of individual cakes seem a solid pile. Expert users of long-handled ice-chisels stab down where division lines should be; big-muscled pliers of ice-hooks secure a hold on the loosened cake; portable ice tracks receive it from sudden jerk and swing; and a man at the narrow opening catches it, steadies it a moment on the edge of the "run," and then lets it slide down to the car platform beneath. Sometimes endless-chain lowering machines carry the cakes down. A partially automatic scraper takes the snow crust from the cake as it nears the foot of the run, when, as it plunges out onto the slippery platform, an ice-hook jabs deep and a pair of muscular arms stop its flight and swing it around into its place in the car standing alongside.

It takes less than six minutes to load the train of two cars. An old engine from the Third Avenue Elevated Road switches the train away to the track on the hillside, to be drawn up at the end of a steel cable that is wound around a drum by a sixty horse-power engine.



Up under the town's main street rumble the ten tons of car and twelve of ice. The heavy cable drops off, the horse chain is hooked on, and the short journey from lake slope to river slope is begun. The train is to go down that incline by force of gravity. No doubt it can do it. But why not utilize the power it will generate? At the foot of the hill stand two empty cars. Why not attach two cables to a fourteen-foot drum at the summit, carry one of them down to the empties, wind the other around the drum, hook the rear of the loaded train, and start it off? In order that the empty train may counterbalance the full one, the drum is controlled by a big beam-lever brake operated by a man in a frame house at the top of the slope. Looking down through the tree branches this man sees a closed target drop open, meaning "all clear." The train starts slowly over the brink, then faster, until it roars down with never a mishap, save once in a long while when men below leap for safety anywhere out of its path, and out of the path of ice and splintered beams and twisted iron that fill the air when it strikes. At other times it strikes only the scale platform at the foot and stops to be weighed, while a powerful horse drags it along the pier to where the barges wait.

At the barge, work is under way. Before the cars stop, their sides are dropped, and hooks are jerking out the cakes to be shoved by other hooks to the short "run" leading from the platform over into the vessel's hold. A derrick-swung tongs clutches a cake and lowers it into the hold, where three men stow the cargo.



Throughout the work there is no confusion, no ordering of men to their work, no sharp censure. It is the performance of a gigantic human machine, watched over by a few expert minds, each living part knowing its allotted task. From the click of the first bar to the crash of the last cake into place, there is one complete, interdependent operation. Not the making of parts by many workmen, to be assembled later, but simply the one act of getting a cake of ice from house to barge, and another and another. Hooks must be ready for the loosened lump on time to slide it to the door at the moment when it can be sent down to the hooks that are clear of the preceding cake, the train must start when loaded and empty cars take its place, while horse and driver stand ready on the hill top to haul the load across to the point where it starts down to the river.

The barges are towed down the river, and in the morning 700 tons of Rockland Lake are flung into lumbering wagons which in turn distribute it to a fraction of New York's population.

The secret of the quietness and accuracy with which this complex work is done is that those who govern it have grown up into their responsible positions. The superintendent worked "on the ice" with his father as a boy, and the foreman's father still tells of the days fifty years back when *his* father was one of the first in the business.

Loading Ice on the Barges for Transportation to the City

Delivering the Ice to a New York Customer

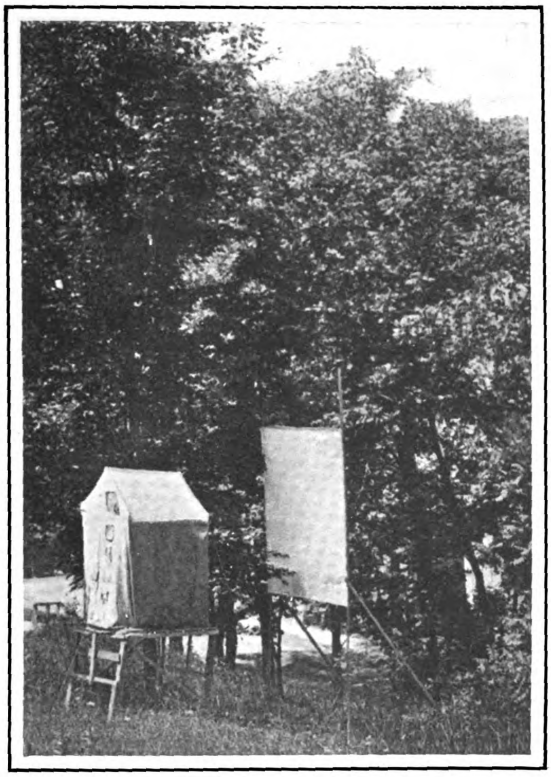
Modern Scientific Methods of Nature Study

By Francis H. Herrick, Ph.D., Sc.D.



Professor of Biology at Western Reserve University

"NATURE study" is a convenient phrase which the American school has tried and in many cases adopted for a special purpose. It needs no explanation, and yet the time is long past when words of universal import can be used without ambiguity. As a discipline of the school it is designed to open the eyes of the young and to awaken their minds to the common, though no less wonderful, processes of nature which take place all about them.

To a still larger public "nature study" suggests a revival of the old and once time-honored "natural history," which for over a thousand years was used in the literal sense of *historia naturæ*, the history of all nature. At a later period a sharp contrast was drawn between "natural history" and "civil" or "human history." Huxley, who has traced the remarkable evolution of this phrase, observes that even in his time a professorship of natural history in certain universities was anything but a sinecure, since the holder was obliged to occupy not a chair, but a "settee of the sciences."

We shall not be misunderstood if we say at once that, for the present, we are concerned with the higher animals alone. Still further must we be limited to their *actions*, as distinguished from their structure or anatomy or from their physiology, in the academic sense. No doubt if we knew enough about the bodies of animals, particularly of the nervous system in its most intricate relations, we should be able to refer the complex act to changes in definite parts, but except in comparatively simple cases this cannot be done. For the present, and certainly for a long time to come, the study of animal behavior will profit far more from exact records of what animals actually do or are capable of doing, than from premature theories and attempts to connect their acts with unknown changes in the microscopical cells.

The field is wide enough to satisfy the most ambitious, and herein lies a difficulty which may at times have brought the study into disrepute. All students, and in particular those who seem to regard nature study as primarily a form of amusement or recreation, should ponder the words of Karl Groos, who maintains in his admirable work on *The Play of Animals*, that the interpreter of the animal mind should unite to a thorough training in physiology, psychology, and biology, the experience of a traveller, of a director of a zoological garden, and the lore of a forester, besides being a student of modern æsthetics. In other words, there is demanded a versatility which is practically unattainable. If this is true, it is not surprising that much has been written to little purpose upon so difficult a subject. In a word, the modern method of studying animals is to go to nature direct, to experiment, and to use every means which promises to yield valuable returns. It is a good rule to discard second-hand information, and to remember that isolated, disconnected, and therefore imperfect, observations are a most fruitful source of false ideas. Let us further guard against the popular tendency of reading into the actions of animals, without sufficient warrant, the whole gamut of human feeling and capacity, a pitfall which claims so many incautious writers.

The Author's Observation tent and Photographic screen for studying a Red-eyed Vireo's Nest in its natural Position

For the present we may distinguish the following: (1) *The Method of Free Observation* of both young and adult animals in their natural state, unhampered by the hand or presence of man. This has been the popular means of approach, and is responsible for a vast and chaotic mass of anecdotal material. It is evident, however, that if this method were carried out with ideal completeness, it would give us a normal picture of the daily life of the animal, and it is capable, as many have abundantly shown, of producing results of the first importance. (2) *The Method of Progressive Changes or Development*, by which the behavior of certain animals can be followed step by step from the initial reactions at birth to the adult state. It has been applied, for the most part, to the smaller domestic animals—the chick, kitten, and puppy—but within certain limits it can be extended to an almost unlimited number of wild birds, in their natural state, by a method to be considered later. It affords the only means of discovering the origin and relation of many instincts and habits, some of the best for studying the whole subjects of food, growth, and general environment, and promises to light up the dark question of animal education. (3) *The Experimental Method* consists in placing the animal under definite conditions and recording its reactions in kind and frequency. Thus, an animal will learn to traverse a maze, or to open a cage of simple construction, to do which requires definite movements, the spur to action being hunger and the sight of food, or some incentive equally strong. As a reward for its performance it is promptly fed. In such ways the right action is learned through association, and the facility displayed in the learning process, as well as the permanency of the acquisition (strength of associative memory), becomes, in some degree, a measure of the animal's intelligence. The extension of such methods to a great variety of reactions would seem to be limited only by the tractability of the animal and the discretion and ingenuity of the operator.

In similar ways Lloyd Morgan, Thorndike, Kinnaman, and others have tested the mental powers of certain fish, birds, the cat, dog, rat, and at least two species of monkeys. I have shown how promptly a free wild bird learns to do certain things or forms new habits, as in adopting a definite course in approaching its nest, or a definite position when sitting on its eggs, to mention the simplest examples, and it has been proved that a domestic chick can learn to find its way out of a maze—easily made of books or wooden blocks—in the brief space of fifteen minutes.

No doubt, as Kinnaman observes, it is often difficult to select such tests and apparatus as are suited to the character and intelligence of the animal studied, for it is sure to be baffled, and, consequently, misjudged if these are too complicated or too far removed from the range of its every-day life and actions. At all events, such experimental methods have the merit of showing, if not the limits of the animal's capacity, at least what it actually does, under definite conditions which can be changed at will. They also afford a means of measuring its associative powers with approximate accuracy.

If we have given prominence to one class or trend of experiments, we should not forget that every method of nature study can be made to yield to experiment in some degree, and that every observation should be tested by experiment so far as possible. Under this head, indeed, are conveyed all the modern methods of the biological sciences. To discuss these would lead us from our present purpose to consider many of the fundamental problems in biology, pertaining to heredity, variation, and development, together with the brilliant experimental work which has been conducted upon both animals and plants by the modern students of physiology, morphology, and evolution.

With regard to (4) *The Study of Animals in Captivity*, there is no doubt, as Kinnaman remarks, that the caged animal often ceases to be himself, and like some of the great carnivora—the lion, tiger, or jaguar—often varies from insipid tameness or moroseness to a state of wild excitement, very different from what he is in the freedom of the forest or jungle. Under such conditions observations are apt to be disappointing, and to show little more than the reaction of the wild animal to its cage. But it is important to discriminate more closely between the individuality of animals of the same species, and between the kinds or species studied, as well as the manner in which each is confined.

Certain individuals submit more readily than others to restraint, while many of the smaller mammals breed freely, and even become semidomesticated, when maintained in quarters of the right sort.

Finally, the proper housing and care of wild animals are often grossly neglected, and until recent times have seldom received the attention they deserve.

To the list of methods already considered some would emphasize the importance of *Training*, which, however, seems to be chiefly valuable in illustrating and developing the powers of association and memory in animals having greater capacity in this direction, as the lion, the dog, the horse, the elephant, and many kinds of birds.

The first and greatest difficulty encountered in studying the activities of free wild birds is in making continuous observations upon the same individuals from day to day or from week to week. This paramount obstacle can be overcome in very many species by the use of the observation tent, and when necessary by controlling the position of the nest, as I have described in a work upon the *Home Life of Birds*, to which the reader must be referred for details.

Some of the circumstances which render possible a near approach are as follows: birds usually build a nest for their eggs and young in a definite spot, and about this focal point their domestic life revolves for a period of weeks or even months. The nest is either open to view, or in many cases can be rendered accessible, by changes judiciously made at the proper time.

For the greater part of the year fear is the dominant instinct in the life of nearly every wild bird or mammal which has to contend with man, or overt enemies of any kind. But with the periodic revival of the reproductive functions, profound changes occur not only in the bodily parts, but in the instincts which govern their movements and life. The parental instincts, which are essential to the generation and successful rearing of the young, begin to assert themselves, and by blocking or supplanting the sense of fear, hold them to the focal point—the *nest*, and later the *young*—during the period when parental care, and even parental sacrifice, is necessary.

This wonderful parental instinct, or series of instincts, rises gradually like a fever, reaches a maximum, and then as slowly subsides. When at its height every sense seems to be lost in an all-absorbing passion. This is the time to approach the wild bird. We can watch and record with pencil and camera every act which occurs at the nest. We can approach as near as we please, and by aid of the tent are enabled to analyze in detail the behavior of the same birds for a period of from one to three weeks.

Presidential Possibilities

NEW YORK, *December 26, 1903.*

To the Editor of Harper's Weekly:

SIR,—If you ask the next man you meet, "Whom will the Republicans nominate for President?" his answer will be, "Roosevelt, sure." If you go on to ask him, "And will he be elected?" he will probably reply, "Well, it certainly looks that way." Yet Mr. Roosevelt has shown by numerous significant acts that he by no means regards either his calling or his election as among the sure things. He was not trained in practical politics without learning not only to handle political machinery, but also to dread its intricate and subtle arrangement of wheels within wheels. And, added to his general uneasiness, due to the wrinkling, hair-snatching uncertainty of American national elections, there is another and deep anxiety, born of his knowledge of several powerful forces that are striving to defeat him—in the convention, if possible; if that effort fails, then at the polls. The peculiar nature of Mr. Roosevelt's popularity is responsible for the origin and growth of these hostile forces. Like Blaine and McKinley, he is extremely popular. Crowds gather to cheer him, friends loudly sing his praises. But his popularity is of the Blaine or factional kind, rather than of the McKinley or conciliating kind. And factional popularity, while picturesque and interesting beyond conciliating popularity, has its disadvantages—sometimes its perils.

The general national situation may be tabulated somewhat after this fashion:

Electoral votes necessary to elect	239
Democrats sure of thirteen Southern States, with a total electoral vote of	151
Democrats must therefore find, if they are to win the Presidency	88

Now, the Republicans want a candidate who can prevent the Democrats from getting those 88 electoral votes. If it could be clearly shown to them, before the Republican national convention, that Mr. Roosevelt's success in preventing the getting of those 88 votes was highly improbable, it would be with some difficulty that he would secure the nomination. And if he should secure it and the pessimism of his opponents in the party should prove well founded we should have another Democratic President.

On the assumption that the Democrats nominate a man satisfactory to independent voters and run him on a platform equally satisfactory to them, the most likely—or, if you wish, the least unlikely—Democratic winning combination would be:

Maryland	8
New York	39
Indiana	15
Illinois	27
Total	89

On the face of the facts, Maryland will be conceded by the best-informed Republicans as probably Democratic, unless Mr. Bryan should control the Democratic convention to a repetition of 1896 and 1900. But why should Mr. Roosevelt be anxious about New York, which gave McKinley such overwhelming majorities in 1896 and 1900, and has not had a Democratic Governor since 1894? Why should he give either Indiana or Illinois a moment's disturbed thought when both have been overwhelmingly Republican since 1896?

Let us first look at New York. Into a recent speech in Congress, General Grosvenor, that old-fashioned, whangdoodling Republican stump-speaker, injected a forecast of the next election. Naturally, he gave no conclusions which, intentionally offered any comfort to Democrats. But he said several things, incidentally, which were highly suggestive. For example, although "against my better judgment," he did, nevertheless, include New York, with its 39 votes, as a Democratic possibility. New York, which went 143,000 for McKinley in the last Presidential election and chose a Republican Governor in 1902.

There are several far less general causes than its famous uncertainty, for Republican doubt about the "Empire State." The principal one is the bitter war now raging between Senator Platt and his one-time pupil and fetch-and-carry man, Governor Odell. Nominally, Mr. Platt has yielded the boss-ship to Mr. Odell. But actually he is eager to destroy him—or, to put it as Mr. Platt would put it, is willing to give him all the rope he needs to hang himself with. This year New York will elect a Governor on the same day that it votes for President. The nominee will be either a Platt man or an Odell man. If he is a Platt man, then wherever the Odellites can wield the knife in the up-the-State counties, there the knife will be wielded. If the nominee is an Odell man, then Mr. Platt's followers, very numerous in New York city and far from weak in some other parts of the State, will lay about with the knife even more vigorously than they did when Odell was running for Governor in 1902, even more savagely than they did when they were "doing up" Mr. Low, an Odellite, running for Mayor on Republican and non-partisan tickets last fall. Ferocious though the feud is, still the Presidential stake in the election might cause the infuriated factionists to suspend their activities were it not for two factors. First, both Mr. Platt and Mr. Odell dislike Mr. Roosevelt. It was Mr. Platt's intense dislike for him and passionate desire to get rid of him in New York State that caused his nomination for Vice-President. As for Mr. Odell, Mr. Roosevelt is the man who made him a Presidential impossibility. For Mr. Roosevelt's elevation to the Presidency made him the only New York man eligible in 1904. So, while Mr. Odell might give him an apparently loyal support, heart in it there could be none. The second factor also affects both Platt and Odell. The powerful "campaign contributors" of New York, the largest givers to Republican national campaign funds, are all hostile to Mr. Roosevelt. Part of this hostility is due to Mr. Roosevelt's attitude toward the big "combines." But by far the larger part arises from his attitude toward "organized labor," to which we will only refer here, as we shall have to return to that subject later.

Mr. Odell and Mr. Platt are the political dependents of these "campaign contributors," since it is their liberal payments for legislation and for protection that keep the machine well oiled. These men wish to see Mr. Roosevelt beaten—how, then, can Messrs. Odell and Platt wish to see him elected? It should be said, in fairness, that these men are equally powerful with the Democratic machine. The Republican machine is financed by them for standing guardwork at the State Capitol; the New York city Tammany machine is kept in funds by them in return for local favors.

Finally, Mr. Roosevelt has never been popular in New York State. In 1898, with the laurels of San Juan green and red upon his brows, he ran for Governor. The Democratic party was at a very low ebb. It selected about the weakest candidate it could have put in the field—a brother of the then Mayor of New York, and nominated at the dictation of Croker, who was then trampling the metropolis under his feet and insolently reaching out for the rest of the State. Yet Mr. Roosevelt was elected by less than 18,000, where, two years before, the Republican candidate for Governor had been elected by more than 200,000.

If the Democratic Presidential candidate or platform should not suit the independent, thoughtful, conservative voters, the Republicans will have a "walkover" in New York, as in the rest of the country. But, with a candidate like Cleveland, with a platform like Cleveland's in 1892, Mr. Roosevelt plainly sees that he would not get the electoral vote of New York.

Thus his opponents among his fellow Republicans are able to go about saying: "The Democrats are sure of 151 votes in the South, and of Maryland's 8—a start with 159 votes. And if they are at all wise, have we the ghost of a chance of carrying New York with Roosevelt at the head of the ticket? That means 39 more electoral votes—a total of 198. Is it wise for us to go before the country with a candidate who can't carry New York, and who has to concede at the outset enough votes to the Democrats to bring them within 41 of victory?" That figure—41—sounds small. In reality it is very, very large. But for all that, Mr. Roosevelt's friends can't help wincing when they hear their Republican anti-Roosevelt brethren state his position so unattractively and yet so unanswerably.

In considering Illinois and Indiana, the two other States in the Democratic possible combination for the precious 80 votes, the general situation throughout the country must be taken into account. For the same influences that might make the Republicans

extremely anxious about Illinois and Indiana next spring, and, with Mr. Roosevelt as the candidate, still more anxious next fall, might also decide the political complexion of Connecticut with 7 electoral votes, of New Jersey with 12, of West Virginia with 7.

In looking at the mass of voters we find that four-fifths of them, whether Republicans or Democrats, can be disregarded in a political calculation. No matter what the platform, no matter who the candidate, each party knows that the overwhelming majority of its voters will vote "the ticket." The voters who count are, first, those who stay at home on election day if they don't like the way things look; second, those who go to the polls to vote against their party if they disapprove of its performances; and third and finally, the independents—an increasingly large body—who stand aloof from machines and vote without reference to the "grand old party." These independents are of two classes, as far apart as the poles of political morality. In the one class are the purchasables; in the other class—and this is the class of independents that is so rapidly increasing—are the conscience voters. In most of the States the party machine of one party or the other is strong enough to control the election to a practical certainty—there is never a question but that the Republicans will get Pennsylvania and the Democrats Mississippi, for example. But in the doubtful States these three variable elements, though small in number in comparison with the mass of "regulars" of either party, hold the balance of power.

Let us take Indiana and Illinois. In Indiana there are about 650,000 voters, of whom about 300,000 are "regular" Republicans and about 300,000 are "regular" Democrats. Obviously what these 600,000 think one way or the other of Mr. Roosevelt is not of much consequence to him in casting up his accounts. What interests him and all the politicians is the opinions of the 50,000 voters who will decide the election. In like manner, of Illinois's 1,100,000 voters, less than 100,000 are of interest to us in this survey. And so we might go through all the doubtful States. Thus it appears at last that the election—the casting of those 80 electoral votes which New York and Illinois and Indiana can supply—depends upon the political will and action of less than 150,000 voters in New York, of less than 100,000 in Illinois, of less than 50,000 in Indiana—less than 300,000 voters in all.

For those who have not thought much about the matter, but have in a vague way regarded Presidential elections as dependent upon the mood of 15,000,000 voters, this conclusion will be rather startling. And it may give them a new idea of the meaning of political moves at the White House, at the Capitol, and in less high but far from humble quarters.

Now, it is obviously of prime importance to know who are these 300,000 voters—the unattached and the detachable. To begin with, they very rarely appear in political parades; they are not conspicuous at the railway station when a Presidential or a candidate's special train arrives; they usually sit unmoved at "rallies," if they go at all. By no means all of them are "thinkers." Not a few are influenced by sordid considerations. A melancholy number sell their votes. But the most of them—and with these rests the decision, usually—try to "size up the situation," and to vote as they think right. Mr. Blaine was weak with them, Mr. Cleveland was strong with them; Mr. Bryan attracted few of them in 1896, and was no more magnetic in 1900, though he had won back many "regulars" who fled the party in 1896; his small gains were more than offset by the Republican former "regulars" who returned from Populism to their old Republican allegiance. Therefore, unless unforeseen and rather unlikely circumstances arise, these unattached and detachable voters, Republican and Democratic and mugwump and "floater" will in 1904 once more decide the election.

The basis of Mr. Roosevelt's nervousness and of his Republican opponents' hopes and of Democratic optimism is the attitude of the "thinking" voters in the doubtful States toward several of Mr. Roosevelt's policies, notably, indeed chiefly, his "labor" policy.

New York, Illinois, and Indiana are all great manufacturing States. According to the census of 1900, New York had 78,659 manufactories, employing 849,092 workers; Illinois had 38,360 establishments, employing 395,110 workers; Indiana had 18,015 establishments, employing 155,956 workers. To consider only Illinois and Indiana, there are, at the lowest estimate, more than 100,000 employers of labor in manufactories alone—for no establishment has less than one owner; many have half a dozen or more. And there are no less than 550,000 workers in the factories of the two States. While the "thinking vote" is by no means confined to manufactories—indeed, the manufacturing is largely Republican, as a rule—still, whenever the manufacturing vote thinks that its interests have suffered by Republican policies, thinks that its prosperity has been injured or destroyed by a Republican administration, that vote tends to become detachable.

But manufacturers are far from being the only employers of labor. There are the great railways. There are the contractors and builders. There are the merchants. And, in this day of almost universal investment in stocks, there are the thousands on thousands who never saw the enterprises in which they are, none the less, employers of labor. Obviously, whatever should affect manufacturing and its allied industries, whatever should affect the rates of wages, the regularity of dividends, the relations between employer and employee, would gravely influence the minds of thousands upon thousands of more or less independent voters, would make up the minds of a multitude of them.

At first blush one might say that if Mr. Roosevelt attached to himself by conciliatory policies the masses of skilled laborers, among whom, including unprotected as well as protected industries, the majority are probably Democrats, he would be able to laugh at the employers, and would carry Illinois and Indiana triumphantly. But what disquiets Mr. Roosevelt and his friends is the rapid shrinking of prosperity in all the departments of industry which employ skilled labor. They fear that the skilled laborer may believe his employer when he says to him: "The reason I'm shutting down and discharging and putting on half wages is the nervousness your friend, Mr. Roosevelt, is causing me and everybody else who tries to do business on a large scale." Regardless of whether Mr. Roosevelt's attitude toward "labor" has or has not been correct, regardless of whether the employers' placing of the blame upon him is or is not just, what will be the feeling of the man put out of a job or put on half wages or threatened with one or the other of these calamities?

Above all, say Mr. Roosevelt's critics and opponents, what if he has alienated independent thinking voters by making them feel that he has been unwise in his position toward "organized labor"; that he has fomented dissatisfaction by giving "labor" the impression that in the event of a controversy of any magnitude, he will interfere, when for the President to interfere at all is for him to take sides with the party having the most votes?

It is one of the familiar facts of politics that there is no such thing as a "labor vote," or even an "organized labor vote." "Labor," especially "organized labor," knows that it can get about as much from one party as from the other. It accepts the compliments or the benefits of the politician in power with great calmness, knowing that his would-be successor stands ready to do likewise. Far more serious to a Presidential candidate than the dissatisfaction of labor organizers, who regard the Republican party as the party of employers and therefore not to be encouraged too much, is the dissatisfaction of employers of labor. And in Illinois and Indiana, and all the other significant doubtful States, the employers of labor are, for the most part, usually Republicans when they go to the polls. The loss of their votes and their influence would be a loss fully as great as was the loss of Republican farmers to Populism in 1892, which made Cleveland's victory a "landslide."

Further, to the employers of "labor" both parties look for campaign funds. If the Democrats nominate such a man as Cleveland on such a platform as his in 1892, Mr. Roosevelt's Republican opponents say, where would he get the money for his campaign? Hundreds of thousands are needed for legitimate purposes; other hundreds of thousands are needed for the control of the "floating" vote. With the big Republican barons of finance and industry against him, with the lesser but large Republican employers disgruntled, what would be the prospects for the success of the "fat-frying expeditions" of Mr. Roosevelt's campaign managers? These and similar "practical" questions are agitating the entire Republican machine from its head in the White House down to the smallest cog in the obscurest wheel. For, what is a machine without oil? Not even Mr. Roosevelt mounted on his highest horse of "the ideal citizen" would enjoy conducting a campaign with as little "oil" as Mr. Bryan had in 1896 and in 1900.

Probably the most sanguine Republican calculator would not claim Illinois next fall by more than 40,000, or Indiana by more than 20,000. A change of a few more than 20,000 votes in Illinois, a change of a few more than 10,000 in Indiana, and the Republican plurality would be transformed into a Democratic plurality. Of course, the cause that could produce these changes would have to be profound and all but country-wide in its operation. But Mr. Roosevelt's opponents—who faintly hope to defeat him in convention—allege that the pause in prosperity, becoming more marked each day from now on until convention-time, would be just such a cause. Mr. Roosevelt's admirers do not believe it. They ridicule—and not without reason—the idea that he could possibly be beaten in convention. They go on to profess perfect security as to the election; those who give no other reason for the faith that is in them say, "Well, anyhow, the Democratic party can be counted on to continue to make an ass of itself." Still, there is enough uncertainty in the situation to compel Mr. Roosevelt to keep his eyes sharply upon Mr. Hanna and the other Republican leaders who do not like or approve him, enough uncertainty to make the national political game mighty interesting to watch, even if Mr. Roosevelt is "as good as nominated."

In the speech referred to above, General Grosvenor suggested another possible Democratic combination—the thirteen sure Southern States and Maryland, 159; Delaware, Idaho, Montana, Nevada, Utah, with 3 votes each, making a total of 15; Indiana, West Virginia, New York, New Jersey, Connecticut, with a total of 80. Grand total, 254—a victory with 15 votes to spare. There may have been a trace of the "devilish sly" Ohio politician in that suggestion of Democratic hopes from the sage-brush deserts of the Rockies. No campaign could possibly be more attractive to a Republican than one in which the Democrats beat the sage-brush for votes while the Middle West was neglected. However, the Grosvenor complex and scattered combination depends for success upon the same element as does the simpler one on which this article is based. Mr. Roosevelt and his friends know that if the simple combination went Democratic, the complex one would probably go that way also; and the effort put forth to win New York, Indiana, and Illinois would be equally effective for all the doubtful States. The element in doubt is the same—the unattached and detachable voters in States with diversified industries. As those voters go so will the election go—it is even within the edge of the possible that they might influence the Republican convention almost as strongly as they are apparently going to influence the Democratic convention. Would those voters be for or against Mr. Roosevelt? As convention and election slowly approach, do those voters incline toward or away from him? Has he strength enough to carry him through both convention and election? If he can pass the convention post will he become winded in the home-stretch?

I am, sir, DAVID GRAHAM PHILLIPS.

"The Pretty Sister of José"

At the Empire Theatre, Miss Maude Adams is appearing in Mrs. Frances Hodgson Burnett's play, "The Pretty Sister of José." She plays the part of "Pepita," a Spanish girl, who is loved by "Sebastiano," a bull-fighter. But "Pepita" remembers that her mother was abused by the husband to whom she was devoted, and she wants nothing to do with men. So she repulses the matador. When he is wounded by a bull, however, her sympathies are touched, and while she tends him in his illness he succeeds in winning her love

"Merely Mary Ann"

In "Merely Mary Ann," the new play by Israel Zangwill at the Garden Theatre, tells the story of "Lancelot," a young composer living in a cheap London lodging-house, who falls in love with "Mary Ann," the pretty slavey, an innocent Yorkshire orphan. "Lancelot" is tempted to take wrongful advantage of her trust. The girl becomes an heiress, and the two separate. After six years the composer and the heroine, now a lovely and accomplished woman, meet, and are honorably united. "Mary Ann" is played by Miss Eleanor Robson, and "Lancelot" by Mr. Edwin Arden

"The Sacrament of Judas"

At the Princess Theatre, "The Sacrament of Judas," by Louis Tiercelin, is being used by Mr. Kyrle Bellew as a curtain-raiser for "Raffles." "Bernez" (Mr. Bellew) is a young French priest, released from his vows by the revolution of 1793. He has come to live in the Breton home of "Jean," a peasant, and has fallen in love with "Jeffik," the daughter of the house. An outlawed aristocrat, "Count Kervern," is given refuge by the peasant family, and while there betrays the girl. When the betrayal is discovered, the count confesses to his unsuccessful rival. The priestly instincts of "Bernez" are aroused, and, giving absolution to "Kervern," he helps the couple to escape, in exchange for the sacrifice of his own life. He dons his priestly garments, and is shot as he descends the stairs of the cottage

MME. LOUISE HOMER AS "MADDELENA" IN "RIGOLETTO"

Madame Homer, who is one of the principal singers this season at the Metropolitan Opera House, is shown in the photograph as "Maddelena" in Verdi's opera, "Rigoletto." "Maddelena" is the sister of the desperado who is hired by "Rigoletto" to assassinate the unscrupulous "Duke of Mantua." "Gilda," "Rigoletto's" daughter, is infatuated with the duke, and has been wronged by him. "Rigoletto," in revenge, contrives the nobleman's death by "Sparafucile," and has him lured to the murderer's resort through the blandishments of "Maddelena." Then, stationed outside the house, "Rigoletto" makes "Gilda" an eye-witness to the duke's inconstancy. At the end, "Gilda" sacrifices her life to save her lover

Correspondence

DEMOCRATIC CANDIDATES

HILLSBORO, TEXAS, *December 11, 1903.*

To the Editor of Harper's Weekly:

SIR,—The positive statement of Mr. Cleveland that he would under no circumstances again accept the nomination for the Presidency has occasioned much comment in the South as well as in other parts of the country. It is generally believed here that should he receive the nomination he would as surely win as in 1892, for the conditions would be very similar, with Mr. Roosevelt the nominee of the Republican party.

But it has never been conceded that he could receive the nomination under the present two-thirds rule, for the leaders of the Southern Democracy for the past decade have been bitter in their dislike of Mr. Cleveland.

The characteristic tone of Mr. Cleveland's letter, which is timely and modest, yet expressive of the deepest gratitude for past honors and of an unabated interest in the future welfare of his party, is especially gratifying to his many friends in the South, since it discredits the assertions of his detractors that his lively interest in all matters of concern to the nation was due to his ambition for further honors.

The Democracy of the South is as solid as it has ever been, without regard to who may be the nominee of the party, and for that reason it will not occupy the position in the councils of the party as its numerical strength entitles it, yet its advice will not go unheeded as to who can make the strongest appeal to other sections of the country. And no one well acquainted with the sentiment of the masses of the entire South can deny that place to Chief-Justice Alton B. Parker. It is true that a few of our prominent politicians, especially members of the United States Senate, no doubt influenced by a personal acquaintance and the glamor of his successful leadership, have expressed a personal preference for Senator Gorman, but not one has sought to commit his State to his own views. There is no disparagement of Mr. Gorman's ability as a partisan organizer and manipulator, but therein lies his weakness for this particular occasion, since Democracy cannot hope to win within its own party, but must look to the independent vote, as it did on the occasions of its two former victories. And who is so well suited to appeal to this vote throughout the country as Judge Parker? His judicial training and the splendid record he has made in his exalted position, and that too in a State where the strength of the two political parties are so nearly matched, considered together with his geographical situation, render him the most available candidate with which to win a great Democratic victory in 1904. I am, sir,

JAMES K. PARR.

FOX-HUNTING

EDGEWOOD PARK, PA., *December 12, 1903.*

To the Editor of Harper's Weekly:

SIR,—I read with mingled indignation and shame the account, in your issue of December 5, of "Fox-hunting in the Genesco Valley." It sounded so English I could hardly believe the scene was laid in our own country.

Why do people find "sport" in hunting, anyway? But this story seemed particularly pitiful. Fancy a dozen or more presumably able-bodied men (and women?) with a score of powerful brutes, chasing to the death a poor little fox, mutilating and tossing to the ferocious hounds the almost palpitating remains, and ending the heroic achievement with a song of mockery over the little creature's "departing spirit." I should think grown men of means and some intelligence might be in better business. Is it any wonder that working people, reading such stories, are some of them imbruted by them, while the great majority are inflamed against the idle rich? I am, sir, H. D. C.

[Fox-hunting is defended on the ground that the benefit of a large number of hunters more than offsets the inconvenience to an occasional fox. In the Geneseo Valley the hunted fox usually gets away.—EDITOR.]

SENATOR QUAY'S POSITION

BUTLER, PA., *December 3, 1903.*

To the Editor of Harper's Weekly:

SIR,—As a constant reader of your well-composed articles, I can readily see the tendency to induce your readers to believe, that notwithstanding the strong sentiment among the common people in his favor, there is still a possibility that Mr. Roosevelt might be beaten in the national convention. This may be all right on your part, but it seems to me that in your effort in that direction, you go too far when you draw on Senator Quay for this purpose. In speaking of Senator Hanna, you say, "As events have shaped themselves, he is the only member of the Republican party who conceivably might beat Mr. Roosevelt in the Republican national convention, and even he could not do it without the support of Mr. Platt of New York, and Mr. Quay of Pennsylvania." To one who knows the Pennsylvania Senator and recalls the fact that it was Mr. Hanna's vote that kept Senator Quay out of his seat in the Senate, leaving one of the seats of Pennsylvania's Senators empty for two years, the suggestion that he might help to put Mr. Hanna on the Republican national ticket seems ridiculous.

Be assured that even if Wall Street is not friendly to our present Chief Magistrate, the people are; and he will not only be renominated, but reelected, and in this good work both Senator Quay and the Keystone State will do their full share.

I am, sir, J. R.

THE TAMMANY MAYOR AGAIN

MOOSE JAW, NORTHWEST TERRITORY, *November 30, 1903.*

To the Editor of Harper's Weekly:

SIR,—I am sure many of your readers must feel grateful, as I do, to John B. Mills, for his letter of the 14th inst. Although a Canadian, I watched the progress of the civic election in New York with the keenest interest, and admired very much your editorials on the situation. I was simply amazed, however, when I read your remarks as to the result of the election. I could have understood your making the best of what you had all the time predicted would be a bad situation, but to describe the situation as not so bad after all, is baffling to an ordinary reader.

Where is the fair play you seem to advocate? There is a vast difference between crying over spilled milk, and attempting to show the milk is not spilled at all, which you evidently have done since the election.

If a possible Tammany administration would be as deplorable as you depicted, how can an actual administration of Tammany Hall be the hopeful thing you write of?

A story told in London by Mr. W. J. Bryan recently seems to hit off your position. A man drank whiskey to keep himself safe from snake bites, but the snakes got inside instead of outside. You have been writing much against Tammany Hall, and have tried to keep the reading public safe from its bites, but the remarks referred to by Mr. Mills would seem to indicate that the snakes are now inside the editorial sanctum.

The only explanation of this running with the hare and hunting with the hounds which occurs to me is the one that you have given of McClellan's success, viz., that a Democratic panic seized the electorate, and a fear lest Low's success in New York might be synonymous with Roosevelt's in Washington.

I am, sir, T. ERNEST HOLLING.

[We are still unable to be wholly depressed by the fact that, contrary to its custom, Tammany Hall elected a decent man to be Mayor.—EDITOR.]

MR. ROOT FOR CHAIRMAN

NEW YORK, *December 18, 1903.*

To the Editor of Harper's Weekly:

SIR,—In your current issue you suggest the possibility of Mr. Elihu Root as chairman of the national Republican committee. I take the liberty of endorsing this suggestion. Mr. Root knows, or should know, that he himself has no chance as a candidate for the Presidency. He is too closely identified with great corporations to "go" in the Middle West, but as chairman of the committee he is eminently the man. Cool, hard-headed, a great organizer, and one who has had the immense advantage of recent association with politicians, he is distinctly suited to the running of the committee for this next year.

Senator Hanna, while as good or even better in many ways for chairman, has the chance of possible nomination. He must give up one or the other—nomination or chairmanship—and with both in his mind he will carry out neither well, or will slight the chairmanship. That is merely human nature. If he is to be a candidate, either he or some one authorized to do so, must eventually announce it; if he is not to be a candidate, the sooner the party knows it the better.

The probabilities are, however, that he will make no announcement for some time to come, and in that event Root is the man. The party is none too unanimous. New York is doubtful. The Southern Republicans are nervous and disturbed. The Southern voters are not so much against Roosevelt as they are down on Republicanism itself. By the President's negro appointments, the Southern white is against the Republican party. He has been again united to his white neighbor in their common cause. There is nothing for Republicans to expect from the South, therefore. The vote to be studied is New York, New Jersey, Indiana, and Illinois. New York is more doubtful than Ohio, and Roosevelt will be more likely to carry the State than Hanna, while Hanna could carry his own State for Roosevelt after the nomination.

In the midst of this uncertainty the committee needs a great organizer with a clear mind and a certain bulldog tenacity. Mr. Root has these qualities as few men have, and Mr. Root has, in the minds of the Republican portions of this country, at least one thing more. By his extraordinary administration of the Philippines, Cuba, and Porto Rico, by his work in carrying out the reorganization of the army, he has established the fact that he can do a thing he sets out to do and do it well. Such a man is needed at the head of the Republican committee: such a man has an immense opportunity; such a man is Elihu Root. Your suggestion, sir, is a good one. I am, sir,

HENRY J. BARROWS.

[We have been informed that, since the suggestion referred to appeared in these columns, President Roosevelt has asked and Mr. Root has declined to serve in the capacity mentioned—which is a pity, from Mr. Roosevelt's view-point.—EDITOR.]

Alaska's Telegraph System

THE National Geographic Society has reported some interesting facts concerning the difficulties that have been encountered in the erection of the United States military telegraph system in Alaska. One thousand seven hundred and forty miles of wire were put up, and the magnitude of the enterprise is shown by the statement that from Fort Egbert alone, between November, 1902, and June, 1903, no less than 220 tons of supplies and material were sledded or packed into the interior, as it was impossible to move a ton by wagon. Most of the work was done between November and February, with the temperature averaging two degrees below zero, while temperatures of fifty or sixty degrees below zero were not unknown. Messages may now be sent by telegraph to Valdes, Fort Michael, and to stations along the Yukon River.

Recollections of a Journalist

By Julius Chambers

PUBLIC interest in the most bizarre figure in modern English history, the Earl of Beaconsfield, is likely to be revived by the appearance of a new biography. We are told that it is the volume that Lord Rowton, Beaconsfield's private secretary, was expected to have written. Doubt of his own ability to do justice to the career of the man who had ennobled him gave pause to the secretary's pen. It is regrettable that the volume does not contain more of the Boswell flavor than Lord Rowton alone could have supplied.

I was stationed in London nearly two years during the Seventies, when Disraeli was Prime Minister, and often heard him speak, frequently saw him upon Whitehall—walking home with Lord Russell by his side—once "interviewed" him, and witnessed the solemnities of his elevation to an Earldom. But the most characteristic and thoroughly Disraelian incident I recall has never been told.

An Anecdote of Disraeli

About one o'clock in the morning, shortly after the return of the Earl from Berlin, bearing "peace with honor," I left the press gallery of the House to go to the cable office. Passing a stand in the lobby, where a stoop-shouldered woman was wont to sell spirits and "soft" drinks, I dropped into line with half a dozen men, and waited my turn to be served. I paid no attention to the man directly in front of me, except to notice that he was hatless, and to comment mentally upon the dangers of such conduct in that cold and draughty place.

"Sixpenny 'orth o' brandy, neat," said the broad-shouldered little man directly ahead. The dame courtesied, an unusual attention to a customer, served the spirits, and the purchaser drained the glass at a gulp.

"Put it on the book," said the customer, as he replaced the glass upon the counter. Then he turned, facing me, and made his way through the crowd, toward the House of Lords. The man was unnoticed in the badly lighted corridor, although his name was ringing throughout the civilized world—the Earl of Beaconsfield!

The interesting feature of this episode was not that his lordship took a drink of brandy during a long night's session, but that he had an account with the woman tap-keeper, and from sheer force of habit had walked over to the Commons end of Westminster Palace to get his "brandy neat" at the familiar place.

The Interrupted Convention

The death of Albert Daggett, former State Senator of New York and Sheriff of Brooklyn, removes the last of a small band of devoted friends of General Arthur whose fidelity ended only with the latter's death. Mr. Daggett was a man of strong hatreds and warm friendships. He was a hard worker in politics. His most characteristic and audacious political act occurred at the Cincinnati Convention of 1876. Toward the close of the second afternoon the control of James G. Blaine was manifest to all his opponents. A caucus of Blaine's supporters had decided upon a night session, at which the nomination was to be made.

The New York delegation was bitterly hostile, but despaired of defeating the Blaine plans. The alert mind of "Al." Daggett found a way.

"The curfew shall not ring to-night," said he.

Securing the services of a plumber, and obtaining access to the cellars of the Convention building, Daggett first had the gas turned off; then, with an axe, chopped out all the pipes leading from the metre to the great hall above. An adjournment was thus rendered imperative, and Hayes eventually became the candidate. Daggett had occasion afterward to doubt whether he had not overexerted himself.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

THE PERFECTION of a pure, rich, unsweetened condensed milk is BORDEN'S PEERLESS BRAND EVAPORATED CREAM. It is always available for every use to which raw milk or cream is devoted, and is far superior to the average quality of either. Prepared by Borden's Condensed Milk Co.—[*Adv.*]

TELEPHONE Service at your home will save many small annoyances. Low rates. Efficient service. New York Telephone Company, 15 Dey Street, 111 West 38th Street.—[*Adv.*]

BRIGHTNESS of mind and strength of body come only from perfect digestion. Make the stomach strong with ABBOTT'S, the Original Angostura Bitters.—[*Adv.*]

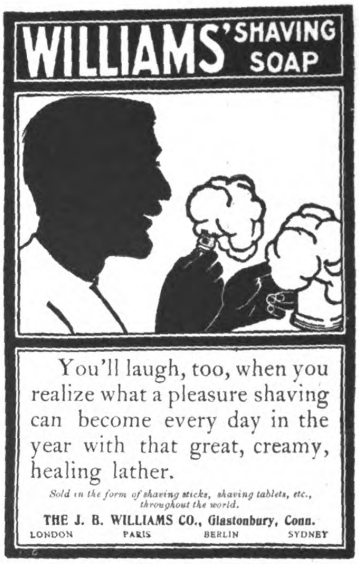
CORRUPTION wins not more than honesty. Money well invested in COOK'S IMPERIAL EXTRA DRY CHAMPAGNE.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

PISO'S CURE FOR CONSUMPTION has cured coughs for forty years. It is still on the market.—[*Adv.*]

JUDGE COLT, of the Circuit Court of the United States, District of Massachusetts, deserves the congratulations and thanks of the American people for the broad and sweeping decision rendered Nov. 9, 1903, restraining parties in Boston, Mass., from using the word "Club" in connection with bottled cocktails. The complainants, G. F. Heublein & Bro., have spent much time and money in introducing the celebrated Club Cocktails, which, like all well-known and staple articles, have been more or less imitated. This decision means not only protection to the maker of the goods, but affords equal protection to the purchaser, and simplifies the matter of getting what you want and pay for. We trust the courts will continue in this good work and protect known and established brands from the piracy to which they so long have been subject.—[*Adv.*]

ADVERTISEMENTS.



Pears'

Whoever wants soft hands, smooth hands, white hands, or a clear complexion, he and she can have both; that is, if the skin is naturally transparent, unless occupation prevents.

The color you want to avoid comes probably neither of nature or work, but of habit.

Use Pears' Soap, no matter how much, but a little is enough if you use it often.

Established over 100 years.

THE MAIDS OF PARADISE

Robert W. Chambers possesses, more than any other American novelist, the feeling and quality of romance. The present tale carries the reader into the heart of the Franco-Prussian war. The Boston *Herald* writes that "Mr. Chambers is a superb master of his art as a story-teller of romantic fiction." Another Boston paper calls this romance "a wide-awake book, with plenty of dash and crash in it and many tender passages." Indeed, this charming story is, to quote the Philadelphia *North American*, "the foremost of modern romances."

THE WAVERER

By MARGUERITE MERINGTON

IT happened among a small group of people, many of them young, some of them talented, all more or less interesting, who earned their daily bread.

One of the three about whom I write set out to be rich—and is rich and envied of men; another started forth to be famous—and is famous and envied of men; and the third, who only prayed to be happy—perhaps most of all to be envied!—is dead.

The sculptor was giving a feast in honor of a beautiful bust he had just completed. It was spring, and the studio was crowned with lilacs. A bronze Sheridan, a clay Rip-Van-Winkle Jefferson, a relief of Dreams, and an unfinished Night kept silent watch over the revellers. It was plain to all that Lingare regarded only Robert Cortelys, and that Cortelys spent the hours resting in the cool shadow of her dark eyes or sunning himself in her bright smiles.

The poet had sung his latest lyric, the editor had toasted everybody, and the wind-musicians behind the screen leaped with a grand blare into "Die Wacht am Rhein."

Just as the flash-light man was at his work, the door opened to admit Robert Munden Emery, and the general effect is pictured in the photographic record of the night. Lingare called Emery her brother's understudy. If Geoffrey was detained at a rehearsal, as a matter of course his life-long friend took his place as escort to Geoffrey's sister. A text-book on architecture gave Emery his footing in this circle, but he divided his allegiance to it with a partiality for the prosperous world of the unoccupied whose country villas he designed. He loved Lingare, and if his investments turned out well, he intended to ask her to marry him. But if these revenues should be too long delayed, why, there were heiresses to be won in the above-mentioned country villas.

Without, the terrace formed by an adjoining roof might have been a floating garden borne on a cloud from some far-off country. Ten flights below twinkled the city's lights, like the stars of an inverted heaven, and there were moving lights on the bosom of the distant river, seen through a soft, misty, lacelike fall of rain. The rain dripped from the beard of a sculptured satyr, and on the white shoulders of a nymph hiding from him among the box-trees. A lilac-covered trellis concealed the illumination that turned darkness into an opalescent glow as if from the rays of an enchanted moon. Emery's gaze followed Cortelys as, after the feast, he led Lingare to a station by the parapet, likening him to the satyr in his thought. Truly, though there was antagonism behind the estimate, it was not inapt. The almost classic, Puritanic mould that sometimes comes in good New England stock belonged to Cortelys, but was written over by the perverse contradiction of the artist's soul behind. All the lines of expression were traced by sentiment, pleasure, the love of beauty, and the joy of life. An early marriage had turned out unhappily, for which the man took all the blame, saying that an artist never should bind himself, early or late. The wife had returned to her parents, her husband supporting her while he deserted her, and as she had no wish to experiment a second time with matrimony, he retained the nominal tie as a protection against other permanent alliances.

The sculptor sold a statue to be set up in a great public park, and kept open house that summer. Two or three of his comrades built bungalows on the outskirts of his land for their summer lodgment. While his was being put up, Cortelys stayed at the Farm, as the sculptor's house was called. Emery also was there, superintending the construction of the cabins, botanizing, and giving and getting the small detailed information in which his soul found joy.

One evening Cortelys and Lingare were alone. Cortelys was planning out his new novel—the one on which his great fame rests—uttering disjointed phrases, giving bits of dialogue, snatches of description, as was his wont to a sympathetic listener, and Lingare commented, laughed, and made suggestions. Then he was silent, carrying a new train of thought to a wonderful climax, while Lingare mused. Her heart was following the barefoot steps of a little lad Cortelys had told her of, as he tramped across a continent from obscurity to fame. Born of New England parentage to a farmer's life in the far West, always he had felt that strange stirring of the blood—the spirit that sets the artist apart from other men, goading him to give it its outlet of expression and follow this or die! . . . . Keeping close to the soil whose son he was, he had fared forth, this child, cutting his own pathway, picking the ripening berries, following the triumphal progress of the harvest, but always moving on. Then youth, the cities, the struggle, the blinding years of waiting, but ever that seething of the blood that warms the artist's heart till it has ceased to beat; and then success, recognition, fame! . . . . Cortelys was fingering a letter in his pocket, by which his publisher offered a king's ransom for the novel that as yet existed only in his brain. He caught Lingare's dark gaze feasting on the face of the gifted child from which no artist ever grows away, and laughing, he drew her cheek down to his. "What is it?" he asked. Lingare took his long white shapely hand in hers, and kissed the fingers with a warm, maternal love. "Strawberries, two cents a quart!" she answered, thinking of the little barefoot lad earning his mite of bread.

Shortly afterward he drifted away on one of the absences with which he varied any life, however idyllic, that seemed on the verge of shaping itself to a routine. One evening Lingare sat on her loggia till all the light drew off the brow of heaven, immovable,

with fixed, unseeing eyes, like a modern saint in a mediæval trance. At last she rose, and with a sad sigh breaking whatever spell had bound her, went below. She refused to let Geoffrey or the sculptor convey her across the creek to the house on the hill where dwelt the editor's family, with whom she announced her wish to spend the night, so they watched, till in the clear stillness they heard her paddle touch the landing, and then till her white dress disappeared among the laurels. Late next morning on her return she found Cortelys. As she made to pass him without a sign, he caught her by the hand. "Lingare—why did you go away? I came back!"

"I gave you an hour's grace—you did not come!"

"I started the moment your message came to me. I was sitting on the Turners' veranda, talking with a lot of people. I rose abruptly, and came at once—why did you not wait for me?"

"I tell you I did. I gave you an hour's grace—sixty minutes too long to wait for any man!"

"What could it have been that kept me?" Cortelys ransacked his memory. "Oh yes! Mrs. Turner's sister had come by the same train—at the station there was no one to meet her, and she asked me to see her home."

"For another woman—another woman—" Lingare pushed him away.

He followed her. "Sweetheart, you know there is no other woman! . . . An hour—what is it to you who hold me for all time? . . . Surely you would not have me refuse to aid beauty in distress!" Even Lingare laughed.

"As I have told you"—she resumed her plaint—"if I cannot have the thing I want when I want it, then I do not want it at all—ever!"

He held her close to him. "You do not want me," he said, "as I want you—and I am here!"

But never did his most seductive pleading succeed in piercing the moral fibre that was ingrained in her soul.

Before long he again drifted away, and, excepting through his work, for over a year nothing more was heard of him.

It was no one's fault. Emery, most careful of men, was driving, and paying strict attention to it, in order to guard against asking the question that, despite the fluctuations of architecture and cranberries, would keep rising to his lips whenever he found himself alone with Geoffrey's sister. An axle-pin of the old country wagon broke, the fore wheel went flying, and the horse tore off with the mad speed of fright. Emery rose unhurt from a grassy ditch to find Lingare lying stunned, bleeding, unconscious in the road. Beyond a slight flesh-cut in the hand, she proved to be uninjured, but for several hours she lay, talking in a wandering way, coherently, loquaciously—even, it would seem, intelligently, except for a strange curiosity to know her own identity. Repeated explanations could not satisfy her. Her soul was seeking something in a foreign land. Her hand was cold from the cocaine where the doctor had put his stitches, and the sculptor held it against his cheek, and sang her the Italian songs she loved. Constantly Geoffrey and the housekeeper had to restrain her from rising to find that lost treasure-trove for which ever and anon she clamored so insistently.

Late in the night, "Robert, Robert," she moaned. "Why doesn't he come when I am calling him? . . . Why doesn't Robert find me?" The watchers looked at one another, and the editor, as the father of growing daughters, seized the situation.

"Send for Robert, if she wants him—send for anything, any one, she wants," he ordered. "He's here, in the garden, waiting for news of her!" And he himself bustled out and brought in Robert Munden Emery.

With the day Lingare awakened to consciousness, only a great fatigue and much uncertainty as to the night's events attesting to her accident. The housekeeper advanced with respectful importance. "Whenever you want to see him, miss," she announced. "He's never left the house, for fear you might be asking for him!"

"Shall I tell him he may come to you, dearest?" Geoffrey now was bending over her.

"Of course," dictated the editor. "What are you all paltering about? He was the

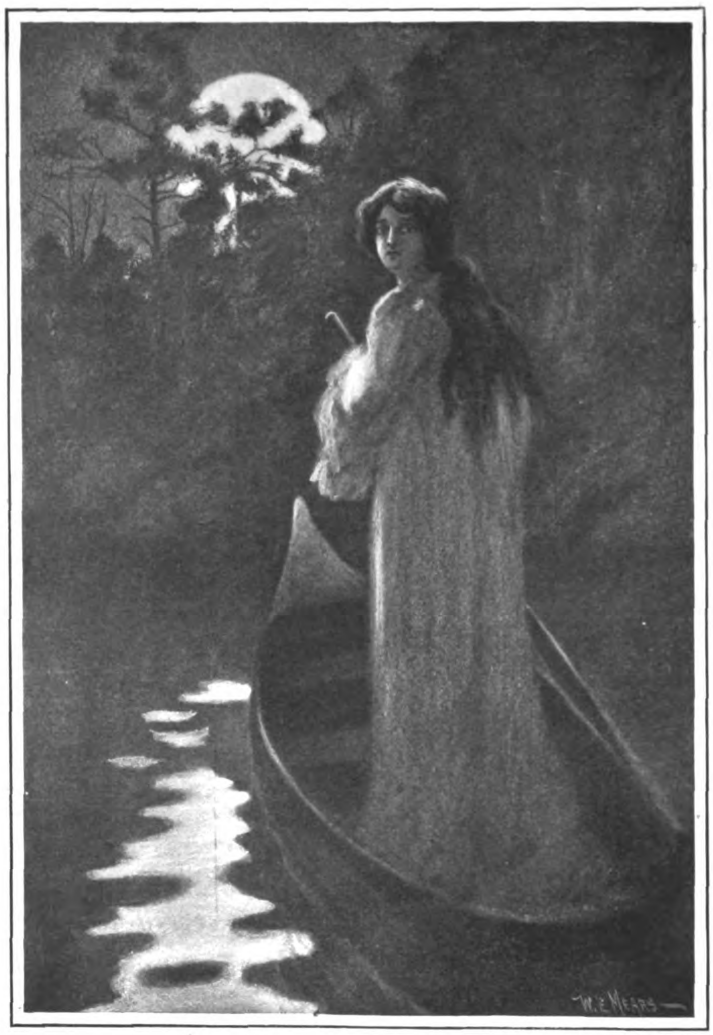
only man who could keep her quiet through the night. Call him!" he imperiously bade the gentle sculptor. Lingare wondered what they meant. It was like a fragment of a dream. She was weak, tired. Events came in their own fashion, just as in a dream. When Emery entered, with a new, tender anxiety in his proprietary air, she took everything for granted, as she lay there still, her soul not yet wholly recalled from its mysterious journey. She even found a kind, gentle smile for the man who sat by her holding her hand.

As Cortelys swung up the path he saw Lingare standing in the doorway, sweeter, more appealing even than he had remembered her. He was close to her—not before she caught sight of him, but before she believed in the substantiality of his presence. "Oh!" she cried. He drew her in and closed the door behind them. Then, with arms locked about each other, their lips were sealed.



Cortelys was weary with his journey, and Lingare gave him food, saying little, but devouring him with her eyes. The others were away on a fishing expedition, and they had the hours to themselves. He had reached the haven of deliberate choice he sought for himself at last. The complications in his life were cleared. He was free. He had come to full realization of what all along he lazily had apprehended — that this woman was his predestined mate, and he now was here to claim her. The stillness of a tremendous happiness fell upon Lingare. As he talked in his desultory style, and yet with set purpose in his new mental attitude, she only could reply with caresses and mute murmurings of love.

The stars hung low from the coldly bright September sky. Cortelys slowly rose to his long length, and Lingare led him toward the door. "You must go now."

"It hardly seems true." Cortelys turned her face up to his. "And yet it is the truest thing in life!"

"It is the only true thing that has happened in all my love for you!" Lingare hid her face on his breast. Again he kissed her good-by. "Dearest—it is only for a few hours—for to-night — a few hours!"

"A few hours—and then forever!" whispered Lingare.

Lingare looked back with a little laugh

Drawn by W. E. Mears

Cortelys was roused by repeated, urgent knocking, stones thrown at his window, and his name called insistently. He had thought at first that he heard Lingare's voice—but his bungalow was too far away from the Farm for that. Then he recognized Emery.

"Cortelys—Cortelys! Get up and come at once. My wife—she is asking for you!"

"Your wife! Charmed, I'm sure—but why at this hour should I call on any lady?"

"Mrs. Emery—she told me that you had returned—that you had been to the Farm this evening! She is very ill—there was an accident last year, you know. You and she are old friends. She is asking for you!"

For the space of a second that held a whole eternity, Robert Cortelys stood stupefied, looking beyond Emery into the heart of night. Then the power of action came back to him. "I beg your pardon, Emery. I was three-quarters asleep — I didn't understand. Lingare—Mrs. Emery—ill! I'll come at once!" The two men walked in silence toward the Farm.

"Robert—Robert, my love! Robert, is this you? Did you hear me call? Have you come back to me at last?"

"I have come back to you, Lingare!"

"Robert—Robert—do you love me at last in the only way—the only way—or is it all a dream?"

"I love you in the only way—better than my life—more than my soul, Lingare!"

"And you will never leave me now—never! You are mine—mine for all time—tell me, Robert!"

Sobbing, Cortelys hid his face in the bedclothes. A stern hand on his shoulder made him collect himself. "Tell her what she asks! Promise her that you will never leave her!" and looking neither to the right nor to the left, Robert Munden Emery strode from his wife's room.

When at last she seemed to sleep, Cortelys came out to the other on the veranda. He briefly imparted to Emery the fact that Lingare was resting quietly, and then they waited with a ghastly silence, stifling further speech. A soft rustle, as if the wind were bringing down the fading poplar leaves, a low moaning sigh like the voice of night among the hemlocks, and a white figure passed them noiselessly. "Oh!" cried Emery—"the water! Oh, my wife — Lingare!" They followed her with all the speed they dared. A few steps from the landing Emery stood still, giving Cortelys a slight impetus. "Go," he said. "Save her — bring her back!"

The other hesitated, restrained by a fine delicacy. "You—" he began. Emery's face worked convulsively. "Don't you see," he cried, "that you alone can?"

Lingare had got into her canoe, and loosening it from its moorings, had guided it beyond reach into the stream, where she now stood in it motionless. The only other craft, the sculptor's boat, was at the editor's dock, half a mile away. The water was over a man's head, and Cortelys feared to plunge in and swim to her, lest she should take fright and lose her balance. "Lingare," he cried, "come back!"

Lingare stood gazing at him, all white, save for her dark hair and eyes. She did not heed her husband, watching her with agonized sobs behind the hemlocks. "Robert," she said, "there is something I do not understand," and with a plaintive gesture she put her hand to her forehead. "Give me your word that what I think has happened is all a bad dream—and that you are to be my husband, as you have always been my love! — give me your word — your word and I will come back!"

"Give her your word!" bravely cried Emery. But Cortelys hesitated. How could he tell her this, when he had come back to offer her the spirit of truth at last!

"Lingare—darling—Lingare—" he began. "Oh!" She impatiently waved away his words, and with a sudden stroke turned the canoe into the swift channel. Emery rushed frantically into the water. "The outlet!" he cried. "The outlet!"

Lingare looked back with a little light laugh that they heard above the falling of the waters.

"Yes," she said—"the outlet!"

Atlanta Air is Like Champagne

Atlanta is the center of the Southeastern States, the natural distributing-point for a vast territory, and most great manufacturers, realizing this fact, have made Atlanta their southern headquarters. This has given the city the finest office buildings in the South.

It is the Capital of a State which produced this year one crop worth one hundred million dollars.

That is the price of the Georgia Cotton Crop, including seed and lint, uplands and long staple. It takes twice as much money to handle cotton at $60 a bale as it did at $30, but the Georgia banks are twice as strong in resources as they were ten years ago.

The deposits of Atlanta banks are four times as large as they were ten years ago, and one of them has as much money on deposit as they all had in December, 1893. All this makes business.

If manufacturers in New England and the Middle States find Atlanta the best gateway through which to reach the southern territory, the question naturally arises, why would it not pay to establish manufacturing plants at Atlanta and save the freight? Raw materials abound in great variety in Georgia and may be had for small cost. Labor's relations with capital are cordial. There is a good understanding between those who wish to work and those who need to have work done.

A good start has been made in manufacturing already. The product of Atlanta factories is worth over $20,000,000 a year, and about 12,000 hands are employed.

Here's a good combination:

12,000 pupils in public schools.
5,000 students in higher institutions.
12,000 operatives in factories.
25,000 engaged in gainful occupations.

Business growing four times as fast as population, and population growing twice as fast as that of the country.

THAT'S ATLANTA—A PART OF ATLANTA

If you want to know the rest, write the Atlanta Chamber of Commerce, or, better, come and see the town.
It is significant that people who have once lived in Atlanta always wish to return.
It is a good place to live and educate your children and a number one place to do business.
The climate is the best on the continent.

The North and South American Railroad

THERE is an immense appeal to the imagination in the scheme of building a vast railroad to unite all the countries of North, Central, and South America. Though this great line, when completed, will not compete in length with the railroad which now runs all across northern Asia, it will, nevertheless, be numbered among the world's greatest projects, a tremendous victory over space and time. There can be little doubt, also, that the regions to be opened up and united by the Pan-American line are of greater natural wealth, better supplied with almost untouched resources, and more promising for future development than the great wheat-fields and forests of Siberia, and the dry Manchurian uplands.

It would seem that the credit for first forming the idea of a Pan-American railroad, running from the northern to the southern extremity of the New World, belongs to the venerable Dr. Edward Everett Hale, who included it, in a lecture delivered several years ago, among the coming wonders of the world. The Pan-American Congress, which met in the city of Mexico two years ago, endorsed the project, and practical plans were there discussed, by which the natural and economic difficulties in the way of the line might be overcome. It was further brought out on the same occasion that very large sections of the Pan-American railroad were already in existence, needing only a series of missing links of relatively short extent, to complete the chain. Yet another step has just been taken, towards the realization of this project, in the appointment of Mr. Charles M. Pepper as United States Commissioner to the various Central and South-American countries concerned, who will be in a position to see with his own eyes not merely the difficulties to be overcome, but also the immense possibilities to be opened up by this gigantic undertaking. That two well-known men of business have volunteered to advance five thousand dollars each, towards the expense of Mr. Pepper's journey, shows that the plan appeals strongly to practical minds.

Details of the Scheme

In considering this great scheme, the first thing to get clear in our minds is, the extent to which its realization is facilitated by the railroads already built or building, which can be used as links in the chain. It is, of course, true that there are a dozen alternative routes from New York to Texas, the first stage of the journey, while several plans are at present under discussion by our railroad companies, for traversing the great Southwest by new and more direct routes. The striking deficiency, as far as our own territory is concerned, and from a theoretical rather than a practical point of view, is the lack of a great trunk road running north and south across the Western plains, and serving as a direct link between the wheat and forest lands of the Canadian Northwest Territory and our own Southwest, towards the Mexican line. There is no north and south railroad in the States which compares in directness and consequence with our various Pacific railroads, or with the Canadian Pacific. There are, of course, numerous combinations by which passengers or freight can go, let us say, from Manitoba to Mexico, but there is no single main artery, such as the Pan-American scheme contemplates. At present this is, as we said, rather a theoretical than a practical difficulty.

When we come to Mexico, the next link in the chain, we find that our sister republic makes an admirable showing. There are two main arteries connecting our railroads with the Mexican system: the one making connection at El Paso with the Arizona and New Mexico lines, which thus introduce the circulation of our Pacific coast; and the other at Ciudad Porfirio Diaz, joining the Mexican lines with San Antonio and Galveston, and the Gulf States. Southward through Mexico we have the Ferrocarril Central Mexicano, which practically covers the whole of the great Mexican plateau, culminating at Mexico city at an altitude of over 2000 meters, and for a considerable part of its length running at about 8000 feet above sea level. The huge masses of Mount Popocatepetl and the Serrania de Ajusco immediately to the south of Mexico city compel the line to deflect to the east, through Ometusco to Apizaco, and thence to Puebla, where the Mexican Southern Railway carries the line southward to Oaxaca city. The Mexican railroads pass through fifteen out of the twenty-seven Mexican States, and already tap a population of over eight millions.

In Central America

After Oaxaca there is a considerable break between the Mexican and Guatemalan lines, but the two governments have pledged themselves to supply the missing links, which will bring us to the south of Guatemala, whence a series of Central-American lines must be constructed, as follows: through San Salvador, 220 miles; through Honduras, 70 miles; through Nicaragua, 224 miles; through Costa Rica, 363 miles; bringing us to the northern border of Colombia, and thus technically to South-American territory, though still north of the Isthmus of Panama.

It is a little early to discuss the best form of bridge for this Pan-American line to cross the future Panama Canal, but, when we remember that the line which now joins St. Petersburg practically with Peking was begun only twelve years ago when Nicholas II., then Tsarevitch, laid the foundation-stone at Vladivostock, we may with confidence predict that the said canal bridge will not only be designed but actually built before this continent is many years older.

From Panama the line will run along the Pacific slope of the Andes till it reaches Peru. Here it will divide into two branches, one traversing the mountains, over grades no more difficult than those already surmounted in Mexico, and linking the railroads of Bolivia and Argentina with the Pan-American system; while the other branch will strike south—still along the Pacific coast, joining the Chilean railroads, and thus completing the line. It is estimated that this line will cost something like $175,000,000 to complete, as compared with $500,000,000, at which Minister Witté sets the outlay on the Trans-Siberian and Manchurian lines.

Facts about Colombia

SOME facts about Colombia which come by way of Washington are in point just now. Colombia, not counting Panama, is as large as California and Texas combined, and has over ten times the population of Panama; an estimate made in 1881 puts the figures at 3,600,000, exclusive of the people of Panama. Bogota, its capital, has been called "the Athens of South America." Its population is 125,000; the national university is located there, and the city has an excellent library of 50,000 volumes, a picture-gallery, an observatory, and a number of learned institutions. Twelve days are required to get from the coast to the capital. One lands at Barranquilla, at the mouth of the Magdalena River, goes up the river by steamer to Honda—592½ miles from the coast; then by rail for twenty-two miles to La Dorada, by mule journey for forty-five miles to Facatativa, and from there by rail again to Bogota, twenty-four miles.

Dr. Lavendar's People

by

MARGARET DELAND

Author of "Old Chester Tales," etc.

"When first we read *Old Chester Tales*," says the New York *Times*, "it was an event, and *Dr. Lavendar's People*, a second volume of these stories, is well up to the high standard set by the first. Dr. Lavendar himself is one of the creations of fiction that will not willingly be allowed to die." This criticism is one of the many that have greeted the book everywhere. If unanimity of praise is any indication of success, Mrs. Deland has again achieved a triumph.

Progress of Science

Thermite, a New Invention

HERR HANS GOLDSCHMIDT, of Essen, Germany, has invented a compound which has the property of producing intensely high temperatures in such a way that they may be readily used for industrial purposes. This compound, which has been aptly named thermite, is made by combining, in the proper proportions, oxygen, in the form of oxides, and aluminum, the metal found in common clay. When these two substances are combined and ignited an enormously high temperature is instantly obtained. The thermite is ignited by putting in a pinch of peroxide of barium, and a fuse is led to this and lit. The oxygen contained in the oxide combines with the aluminum, forming an aluminum-oxide. The fused combination is hot enough to burn a hole with clean edges through an iron plate of any thickness, according to the quantity of thermite used, without heating the plate, except at the point of perforation. The material is not explosive, and if thrown upon a fire will not burn. Some of the industrial applications of the new compound were recently demonstrated at the Stevens Institute. Rails and pipes were united very quickly, and the unions were as good as the body of the metal. The joining effected can scarcely be called welding; it is more in the nature of a fusion. The important process of obtaining a continuous rail of equal conductivity, a necessity of modern electric-railway construction, is much simplified by the new discovery. The union of the parts of the rail can be effected after the trolley track is in position. Results of great interest to the engineer have also been attained with thermite in such difficult operations as mending the broken stern-post of an ocean liner and the broken driving-wheel of a locomotive.

Manganite, a New Explosive

A new explosive, to which the name of manganite has been given, has been invented by Baudinet and Rusher, of Natal. It is claimed for it that it is stronger, safer, and cheaper than dynamite, while it does not give off any poisonous fumes. At some recent trials at Camp Bay, South Africa, a four-ounce cartridge of manganite was placed in a bored hole in a rock and fired, with the result that the rock, although bedded some three feet in the earth, was rent asunder, and large pieces were dislodged from their bed. Comparative trials with dynamite were also made upon boulders and rocks, and in one case the manganite succeeded in dislodging from the boulder a large block of stone of an estimated weight of about seven tons. Its safety was demonstrated by careful tests. Gunpowder placed in a cartridge of manganite had no effect upon it. A cartridge was placed upon the web of a steel rail, which it succeeded in cracking. Rifle bullets and shot were fired into a cartridge of the new substance, and a portion was burned in a fire, but without resulting in explosion or ignition. No concussion less than that exerted by a detonator will explode it.

Tests of the New Edison Battery

Some particulars were lately given in this column of the battery which Edison has perfected after many years of laborious experiment. So much has been claimed for this battery, and it has been so long in making its appearance on the market, that a certain amount of scepticism has been evinced concerning its efficiency. That there is no ground for these doubts, however, seems to be proved both by a writer in the *American Machinist* and by Mr. W. Hibbert, in England, who has read a paper, on the tests he has made, before the Institution of Electrical Engineers. Mr. Hibbert says that, on the average, the result obtained with the Edison battery is considerably better than that obtainable in practice with lead accumulators. He submitted the battery to severe tests, and found that its capacity is the same on the road as in the laboratory; that it will stand excessive discharges on the road; that it will take a rapid charge and utilize it on the road; that it will recover after lying discharged for some time. The tests described in the *American Machinist* are even more severe and equally conclusive.

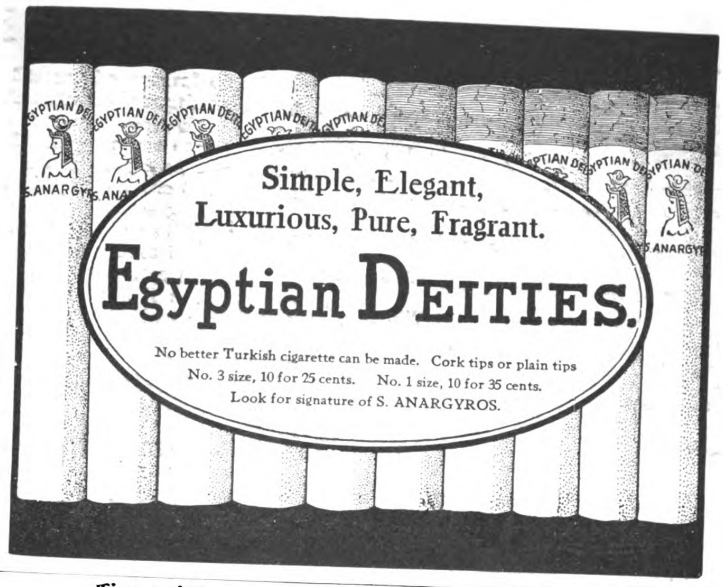
Music

"Parsifal" in New York.—II.



It has been pointed out that Mr. Conried's only justification for the importing of "Parsifal" in its complete form would be in a fully adequate representation; and adequacy being, in this case, very nearly synonymous with perfection, the task was a sufficiently difficult one. A bungling, an ineffective, a careless production of "Parsifal" would be intolerable. It is alone among Wagner's works—and, indeed, among all works for the lyric stage—in the inexorable demands which it makes upon its producers. Its just effect is conditioned upon an almost impossibly flawless harmony and finish in the representation. Wagner has distributed his effects with such subtle and delicate proportioning among the different factors through which the work makes its address to the emotions and the imagination, that unless these are coordinated with the utmost dexterity the illusion is fatally disturbed. To say that Mr. Conried has fulfilled these vital requirements is virtually to say that he has accomplished a marvel. In an opera-house wholly unsuited to his special purpose, in an environment unfavorable to its best reception, he has succeeded in giving a production of "Parsifal" which, in the opinion of those who are best qualified to make comparisons, transcends at many points the standard of Bayreuth. That he has embodied Wagner's wishes and ideals with eloquent impressiveness is beyond dispute.

In the matter of scenic effect alone he has realized the intentions of the dramatist with a completeness of detail and a poetic appropriateness quite beyond praise. Nothing so beautiful and effective as the settings of the woodland scene in the first act, the Temple interior, and the magic flower-garden of the second act have been seen on the stage of the Metropolitan. Moreover, the stage management is, in the main, admirable. The difficult transformation scenes are not yet quite smoothly worked, and it is a mistake to lift the walls of *Klingsor's* castle into the flies instead of sinking them beneath the stage. Especially unfortunate defects are the too-brilliant lighting of the temple and the shockingly casual manner in which the chief attendant in the Communion scene of the first act handles the Grail and its shrine: but, on the whole, Mr. Anton Fuchs has ably justified, by his success with "Parsifal," his reputation as the first stage manager in Europe.

Of Ternina's *Kundry* and Van Rooy's *Amfortas* it is enough to say that their Bayreuth experience in these parts has been productive of excellent results. The *Kundry* of Ternina is of a piece with her superb *Isolde* —deeply and truly perceived, intensely imagined, magnificently realized; and the impersonation of Van Rooy is on a level with it,—as fine an achievement, within its scope, as his *Wotan*. Burgstaller's *Parsifal* is disappointing—here the teachings of Bayreuth (the Bayreuth of Cosima, not Richard, Wagner) have worked decided harm. Mr. Burgstaller is exaggerated, at times oversentimental, and in one place inexcusably at variance with the significance of the scene; he has, though, undoubted merits of simplicity and manliness. The *Gurnemanz* of Blass and the *Klingsor* of Göritz are competent, and the several parts of minor importance are capably filled.

Mr. Hertz's reading of the score has caused his admirers some uneasiness. It appeared, on the opening night, to lack breadth and solemnity in the weightier portions, and his tempi seemed excessively energetic. But with these exceptions, his conducting was masterly—impassioned, rich in nuance, and charged with power and authority. On his shoulders rested the chief musical burden of the production, and he has nobly deserved all the honor that may come to him.

One cannot conclude a review of the first American production of "Parsifal" without testifying to the unique and haunting effect of this incomparable score when heard, at last, in its just relationships. Nowhere else has Wagner written with so intense and deep a tenderness, with so grave, so majestic, so intimate a loveliness. Those who can find here a decadence, a futility of effort, are sincerely to be commiserated.

ALL THE WORLD WAITS.

The Russian Advance

by

SENATOR ALBERT J. BEVERIDGE

An important book on the situation in the Far East. Senator Beveridge recently spent many months in Russia, Manchuria, and Korea, studying the controversy over Korea, and making an investigation of Russian conditions as compared with those in the United States. This book contains the result of his valuable work, and seems to point to war between Russia and Japan over the situation.

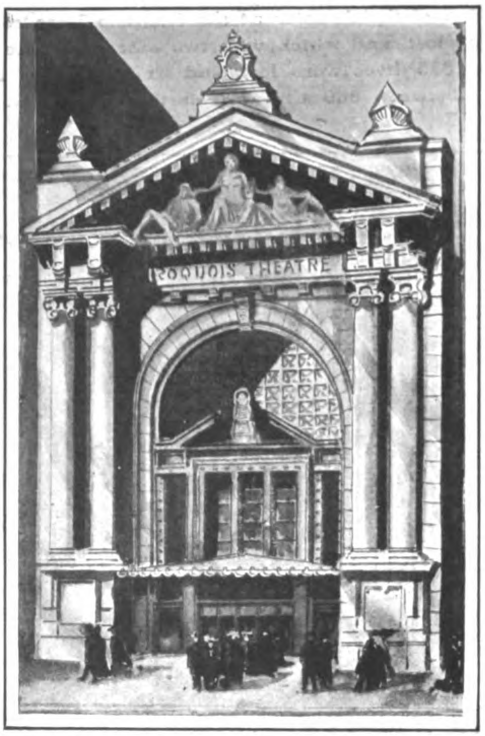
CHICAGO'S THEATRE FIRE

Photographs and description of the disaster at the Iroquois Theatre in Chicago on December 30, in which 585 lives were lost, and which, with two exceptions—the fires at the Ring Theatre in Vienna, in 1881, when 875 lives were lost, and at Lehman's Theatre in St. Petersburg, when the loss of life was between 600 and 700—is the worst disaster of the kind in history

THE STAGE OF THE THEATRE IN RUINS



At the back of the theatre building a door opens into an alley. Through this exit the members of the "Mr. Bluebeard" company escaped from the burning stage. Some who attempted to leap into the orchestra pit were restrained by Stage-manager Cummings. Fifty supernumeraries and members of the ballet who were caught beneath the stage and were prevented from reaching the exit by the jam on the stairways, found their way out through a coal-hole which led from the basement

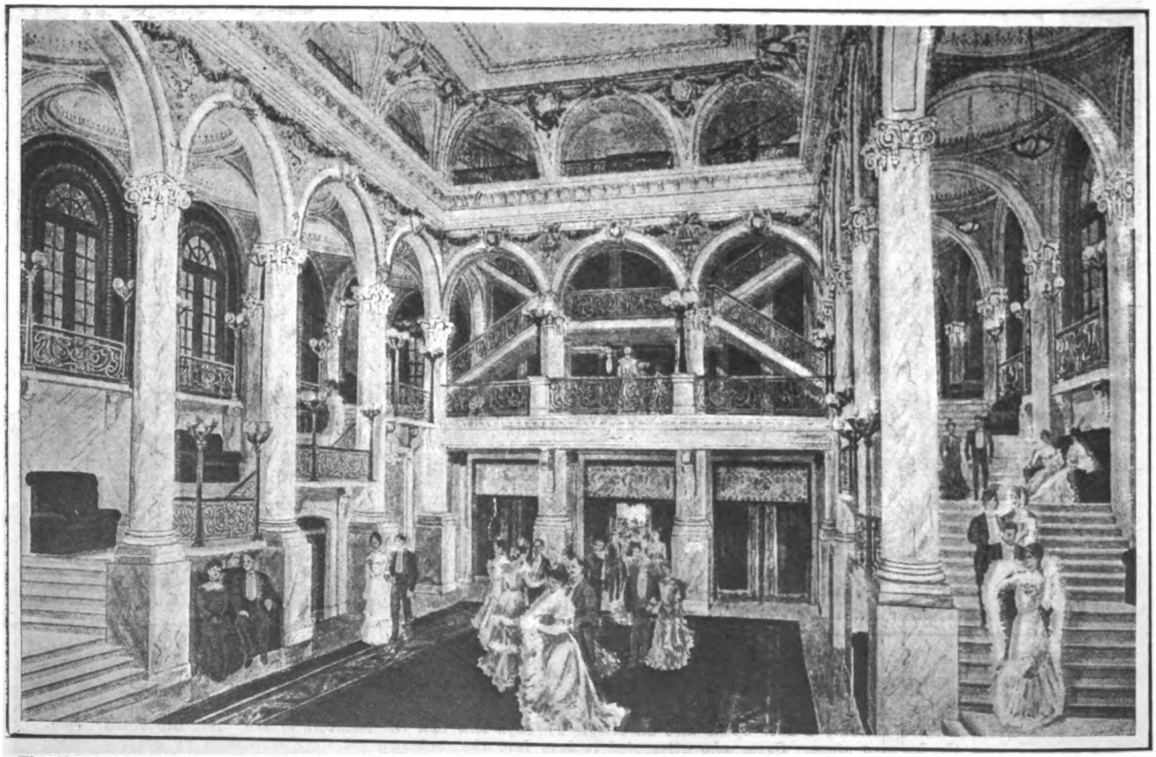
Incidents and Scenes at the Fire

ON December 30, during a fire and panic at a matinée performance at the Iroquois Theatre, Chicago, 585 lives were lost and 142 persons were injured. With two exceptions—the fire at the Ring Theatre in Vienna, in 1881, when 875 lives were lost, and the burning of Lehman's Theatre, in St. Petersburg, in which between six and seven hundred perished—the disaster at the Iroquois Theatre is the most appalling in history. The fire was started by a defective electric-light wire, and spread quickly over the auditorium.

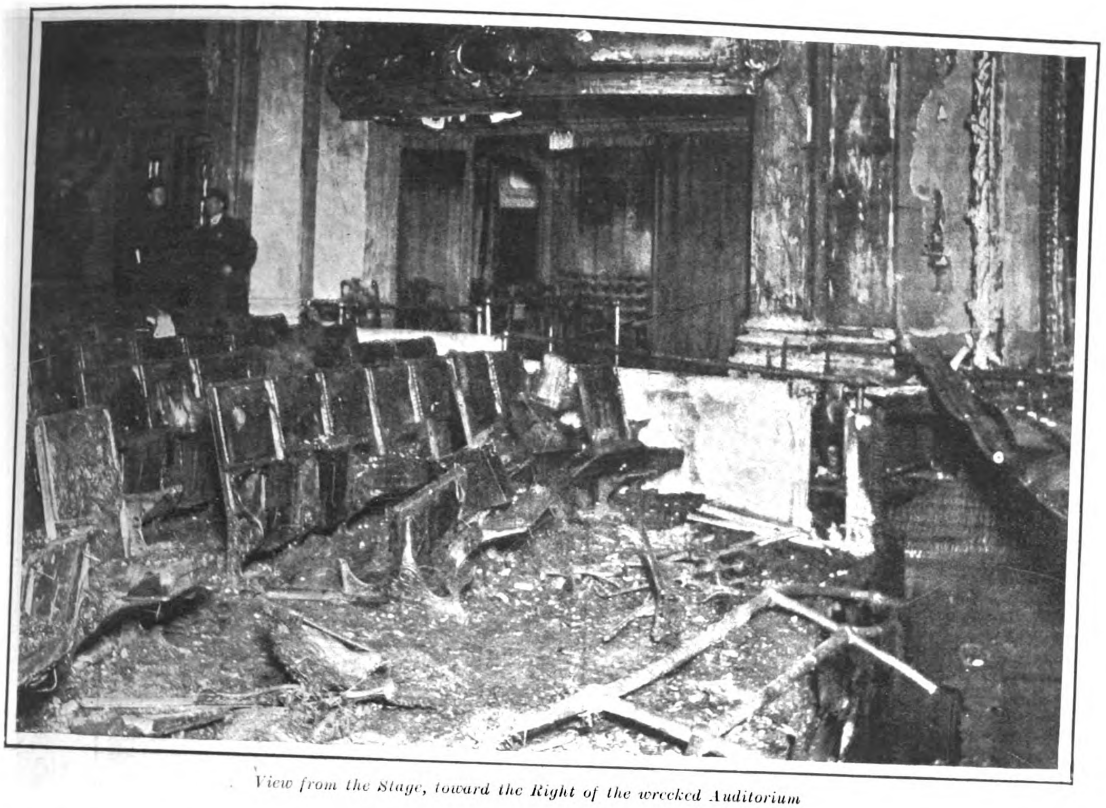
"Mr. Bluebeard," the Drury Lane extravaganza, was being played, and an unusually large audience, made up mostly of women and children, filled the theatre. An effort was made to lower the fireproof curtain, but it was unsuccessful. When the rush for safety began it was found that, although the theatre had thirty exits, only one door, at the Randolph Street entrance, was open. People in the balcony and gallery had little chance of escape. Those who were not burned were crushed in the struggle at the exits and on the stairways.



The Iroquois Theatre as it was before the Fire

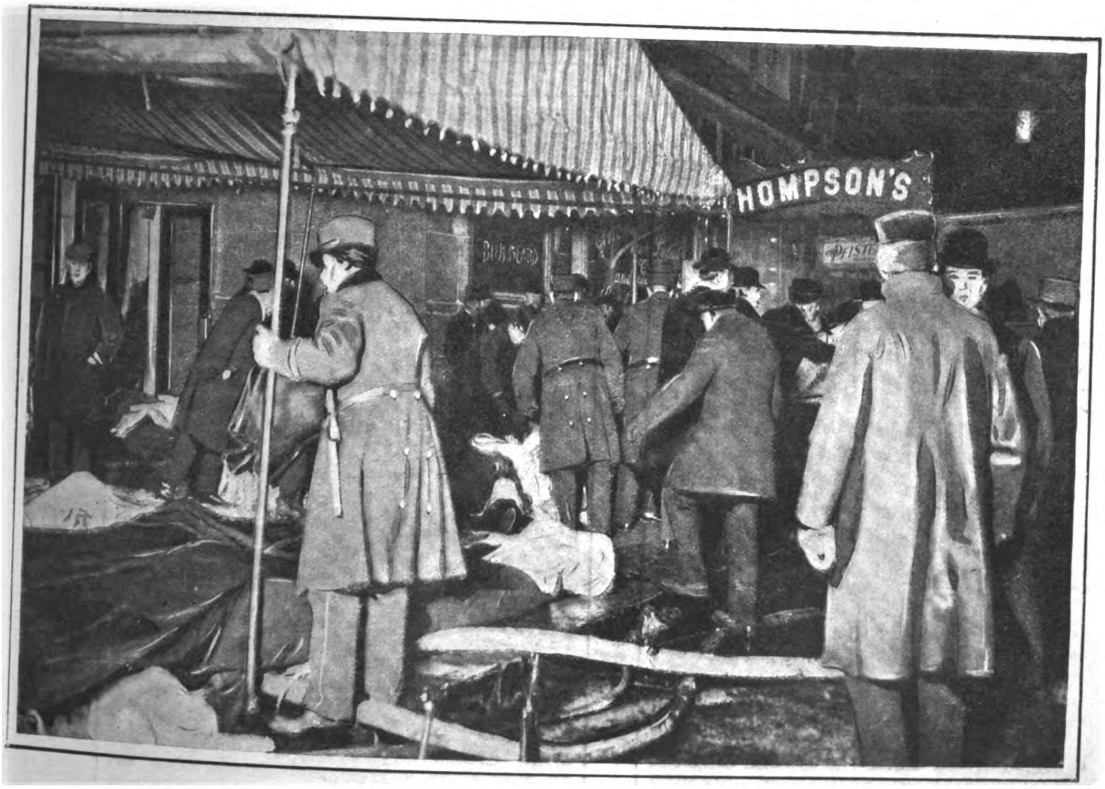
The Iroquois Theatre is situated on Randolph Street, between State and Dearborn. It was only recently completed, at a cost of $500,000, and was opened on November 23, 1903. It was supposed to be of the most modern and improved construction, and was considered one of the safest theatres in the world. The building was inspected by the proper official, who reported on November 25 that it was completed and ready for use. Among other defects in equipment, however, some of the fire-escapes were not in position, and the asbestos curtain, supposed to be fireproof, was almost entirely destroyed. The loss to the owners of the building is estimated at $20,000.

New-year's day in Chicago was observed throughout the city as a day of mourning. No bells were rung to celebrate the beginning of the new year, and all festivities were suspended. Mayor Harrison issued a proclamation requesting that the day be observed in quiet as a tribute of respect and sympathy. On the following day, Saturday, January 2, business and public offices, the Board of Trade, and the Stock Exchange were closed.



On Friday, January 1, Mayor Harrison ordered an investigation of Chicago's playhouses. The conditions which were discovered resulted in an order to close nineteen of the city's theatres, because they were unprovided with an asbestos curtain, in violation of the ordinance. The report of Building Commissioner Williams, who made the investigation, showed that of the nineteen theatres condemned some had curtains of burlap, others curtains of linen and canvas; none had the proper asbestos protection. There were, moreover, other dangerous defects in some of the houses which the managers will be required to remedy.

As a result of Chicago's calamity, the new Fire Commissioner of New York, Nicholas J. Hayes, has issued an order requiring a specially careful enforcement of the provisions of the law relating to the safeguarding and inspection of theatres in New York city. A competent assistant foreman in each fire-department battalion wherein a theatre is located will be put on duty as inspector, and will work under the supervision of the general theatre inspector. It will be their duty to make weekly inspections of all places of amusement in their district for the purpose of seeing that the stage, wings, traps, flies, etc., are in proper condition; to examine all the fire appliances; to report in writing to the supervising inspector once a month, stating whether or not such appliances are in perfect condition; also whether all exits, diagrams, and lights indicating exits are in compliance with the building laws.



The Foyer of the Theatre—At the top of the Stairway, to the Right, occurred the Crush which resulted in the greatest Loss of Life

SCENES AT THE IROQUOIS THEATRE FIRE

The photograph at the top gives a graphic idea of the effect of the fire in the auditorium of the Iroquois Theatre. Many of the seats in the front part of the orchestra are destroyed and the decorations burned. The damage is estimated at $20,000. As soon as the extent of the disaster was known, ambulances, doctors, and nurses from all parts of the city hurried to the aid of the injured and dying. The lower photograph shows the scene in front of the theatre as victims were being carried out

PHOTOGRAPHS OF THE INTERIOR OF THE THEATRE

A comparison of the number of lives lost in the Iroquois Theatre fire with the casualties in other disasters of a similar kind, shows these results: Loss of life in Iroquois fire, five hundred and eighty-five; the number in the Ring Theatre, Vienna, on December 9, 1881, eight hundred and seventy-five; at Lehman's Theatre, in St. Petersburg, which was partially destroyed, between six and seven hundred; in the Brooklyn Theatre fire of December 5, 1876, two hundred and ninety-seven; at the Paris Charity Bazar fire, May 4, 1897, one hundred; in the Opéra Comique fire in Paris, on May 26, 1887, seventy-five. In the great Chicago fire of 1871, the loss of life was less than at the Iroquois

William Makepeace Thackeray
Complete Writings
IN TWENTY-FIVE VOLUMES

A Set of Thackeray is not a Luxury—it is a Necessity

THACKERAY'S creations place him at the head, perhaps, of the English novelists of the nineteenth century. His characters are always human. There are no immaculate heroes, no perfect heroines, no utterly unredeemed persons of either sex to be met with in the pages of his books. He conceived it a duty to describe the world as he saw it, and he drew his characters with admirable realism, and with a marvellous insight into the natures of men and women. We take pleasure in announcing a new edition of Thackeray's complete works, and we feel confident that this edition will meet with the approval of all lovers of good library books.

Lux Crucis

A Tale of the Great Apostle

BY

SAMUEL M. GARDENHIRE

NO figure in religious history stands out so vividly — no historic personality is so magnetic — as that of Paul the Apostle. In the palace at Cæsarea this story opens, when Paul took the stand which called out that famous comment: "This man might have been set free if he had not appealed unto Cæsar."

In and out of the great drama of Rome in her throes of change moves Paul, quietly wielding his titanic power. In "Lux Crucis" we learn to know him as a tender, loving man. We see Nero and the rottenness of his court; we see the Christians going triumphantly to their dooms; we see Rome burn and evil flourish; and we see at last the tumbling of the old gods. And all the time we are following the story of a Roman officer's love for a Christian maid — a tale that even without this wonderful setting would stand out as a love story of strangely vital power and charm.

COMMENT

A CONCERTED movement is about to be made by Massachusetts Democrats to put forward as the candidate for their party's nomination for the Presidency Mr. Richard Olney, who, it is well known, was successively Attorney-General and Secretary of State in Mr. Cleveland's second administration. Mr. William S. McNary, Chairman of the Democratic State Committee of Massachusetts, is said to have announced that, at a meeting of the committee to be held presently, a resolution will be adopted asking for Mr. Olney the united support of Maine, New Hampshire, Vermont, Rhode Island, and Connecticut. It is quite possible that the delegates to the Democratic National Convention from Maine, New Hampshire, and Vermont might, on the first ballot, vote for Mr. Olney, if they thought he had a fair chance of securing the nomination. Rhode Island, on the other hand, has in Governor Garvin a candidate of her own; and experience has shown that, in national conventions, Connecticut is apt to follow the lead of New York, except when the latter's delegates have been dominated by Tammany Hall, as was the case on the occasions when they opposed Mr. Cleveland. If New York should put forward a candidate acceptable to conservative Democrats, he would be reasonably sure of support from the Connecticut delegates. That Mr. Olney (if New York should name Judge Parker) could obtain any votes in the convention from the Southern States is improbable. Could he hope for assistance from the Bryanites, headed by Mr. Bryan himself, and by Messrs. Johnson, Carter Harrison, and Hearst?

It is true that he advocated the election of Mr. Bryan in 1900, believing anti-imperialism to be the chief issue before the country, but he, like Judge Gray of Delaware, was an avowed opponent of the Democratic nominee for the Presidency in 1896. Chief-Judge Parker, on the other hand, voted for Mr. Bryan in both years, although, as a representative of his State judiciary, he did not take, and was not expected to take, a conspicuous part in the campaigns. As for Mr. Olney's qualifications for an energetic and successful canvass, he is more effective with the pen than with the tongue, and his best friends would scarcely describe him as "magnetic." It may be, however, that, since Mr. Bryan delivered his "cross of gold" speech, Democrats have had enough of "magnetism" to last them a lifetime. A weighty objection to Mr. Olney is, as we have said, the undisputed fact that he could not carry his own State. For the Democracy at this critical conjuncture to select for its champion a man who could not carry his own State is as if a university crew should take for stroke-oar a man who could not pull his own weight. On the other hand, there is no doubt that the far-reaching and powerful influence of ex-President Cleveland would be exerted on Mr. Olney's behalf. Yet it would not surprise us if many of those to whom he may urgently commend the choice of his Secretary of State should answer as the Puritan maiden replied to John Alden: "Why don't you speak for yourself, John?"

Some people are inclined to smile when the daily newspapers talk about the composition of Mayor McClellan's "cabinet." As a matter of fact, the functions discharged by his principal coadjutors are more comprehensive and weighty than those entrusted to ministers in many a monarchy. Even in respect of population the city of New York may be bracketed with several kingdoms, while as regards command of capital she is far more powerful than Portugal, Rumania, or Sweden and Norway, and may be compared with Belgium and Holland, if not with Spain. Her ocean-borne commerce is second to that of London alone, and she is one of the greatest manufacturing centres that the world has seen. Her annual budget is much larger than was that of the whole United States before the civil war. Under the circumstances, we can scarcely term it magniloquence to speak of the new Mayor's chief assistants in the administration of the affairs of the colossal municipality as constituting a "cabinet." In proportion, of course, to the importance of the function is the public interest attaching to the selection of the men who will discharge them during the next two years. We did not advocate the election of Mr. McClellan, but we are bound to recognize that he enters upon the Mayoralty under good auspices, so far as auguries may be drawn from many of the appointments that he has made. It is true that not Mr. McClellan, but Mr. C. F. Murphy, the leader of Tammany Hall, is to be credited with the nomination and election of Mr. Grout to the Comptrollership, and of Mr. Fornes to the presidency of the Board of Aldermen. So far as these two officials are concerned, we may be confident that the honorable traditions of the Low administration will be upheld.

It is, of course, by his distribution of the appointive offices that Mr. McClellan will be judged. From this point of view, it is gratifying to find him insisting on retaining in office Major John McGaw Woodbury, who has been Street-Cleaning Commissioner under the fusion administration, and who, as such, has an immense amount of patronage at his command. Not less acceptable and promising is the appointment of Mr. William McAdoo, for several terms a member of the Federal House of Representatives from New Jersey, and Assistant-Secretary of the Navy in the last Cleveland administration, to be Police Commissioner. This appointment is by no means calculated to fulfil Dr. Parkhurst's prediction that the advent of the Tammany administration would "lift the lid off of hell." We have no more doubt of Mr. McAdoo's firmness of purpose than we have about his probity, and we expect to see him administer his important office as efficiently as it was conducted by General Greene. Welcome, also, to all those who know him, is the designation of Mr. T. C. Crain for the post of Tenement-House Commissioner. Satisfactory, also, is the selection of Dr. Thomas Darlington for the place of Health Commissioner. No reasonable objection can be offered to the appointment of Mr. Patrick Keenan to be City Chamberlain, or to that of Mr. John J. Delaney to be Corporation Counsel. Neither is anybody likely to criticise the designation of Mr. J. Carroll Beckwith as art commissioner. On the other hand, the offices of Fire Commissioner, Correction Commissioner, Water Commissioner, Charities Commissioner, and Dock Commissioner have obviously been bestowed for political services rendered to the Tammany organization. There is no reason to suppose that Mr. George E. Best is qualified by professional experience to perform the duties of Bridge Commissioner, and it is an ominous fact that he is connected with a Tammany firm of contractors. We observe, finally, that, among the new Park Commissioners is Mr. John J. Pallas, a labor leader who seems to have acquired his connoisseurship in landscape gardening as a walking delegate. We are well aware that the Tammany district leaders would not suffer their "claims" to be repudiated utterly, and that there are limits beyond which they would not let their party go in "pandering to the better element." We repeat that we cheerfully acknowledge that Mayor McClellan has done the best he could, and much better than the fusionists expected.

The speeches made at the banquet of the Jacksonian Club of Nebraska on the ninety-ninth anniversary of the battle of New Orleans were interesting as indicating the present attitude of the Bryanites. We are by no means certain that Senator Newlands of Nevada and Representative De Armond of Missouri would have been so outspoken in their rejection

of the chief planks in the Democratic platforms of 1896 and 1900 had Mr. Bryan been present. That effective rhetorician, however, was thousands of miles away, engaged in the process of broadening his mind by a study of the effete monarchies of Europe. When the cat's away the mice will play, and if Mr. Bryan's tour had been prolonged much further he might have lost control of what following he has left. Thus, Mr. De Armond, who was formerly a rabid silverite, admitted that free silver was a "dead issue," and about anti-imperialism he had little if anything to say. He welcomed the reunion of all former Democrats, and warned his auditors that if the party should drive away elements which were not with it, or which left it in its recent past, the promise of victory offered by the conditions of the hour would prove delusive, and it would go down to defeat.

But while his voice was for harmony, and Mr. De Armond was willing not only to take back the Democratic seceders, but even to kill a fatted calf for them, he was indisposed to assign to them the highest places at the banquet table. No man, he thought, who did not support the ticket in both 1896 and 1900 would be "available" for the Presidential nomination in 1904. In other words, he would be opposed to Mr. Olney or Judge Gray, both of whom took an active part against Mr. Bryan eight years ago. How Mr. Cleveland voted in the years named is as yet unknown. Evidently Mr. De Armond would have no objection to Judge Parker. Senator Newlands told Nebraska Democrats that their fellow citizen, the Democratic standard-bearer in the last two campaigns, was now an impossibility. He went on to express the conviction that tariff revision will be the pivotal issue this year. He does not believe, however, that duties should be so much reduced as to lower the wages paid to American labor, and, on the whole, he seemed to answer the definition of a "Sam Randall Democrat." If the Democratic party ever gains control of both Houses of Congress and of the Presidency—a position which they attained in the second Cleveland administration—the majority of them are likely to demand more drastic measures than will meet with the approval of Senator Newlands, or, for that matter, Senator Gorman, of whose mangling of the Wilson tariff bill we have a lively remembrance.

At the hour when we write, there is no confirmation of the report that the Colombian gunboat *General Pinzon* has been sunk by the United States cruiser *Olympia* and the United States gunboat *Castine* off the San Blas coast of the isthmus. There seems to be no doubt that Colombia committed an act of war against the Republic of Panama by landing troops on December 21 at Carti, a village in Panama territory, and in conveying thence to Cartagena an Indian chief named Inanaquina, who is credited with a good deal of local influence. When the aggression became known at Colon, Admiral Coghlan transferred his flag to the *Mayflower*, and ordered the cruiser *Olympia* and the gunboat *Castine* to proceed to Carti. What instructions were given to the commanders of these vessels is not yet known, but we presume that they went no further than to authorize the transmission of a warning to the commander of the *General Pinzon* that Colombian soldiers must not again be disembarked upon the territory of a state that we have bound ourselves by treaty to protect. Critics of the Roosevelt administration point out that Carti is about a hundred miles from Colon, and that the landing of Colombian troops at that point could hardly be construed as a menace to the canal and railway zone.

The criticism is not well founded. If for the purpose of safeguarding trans-isthmian communications we mean to fulfil our promise to protect the Republic of Panama, it is obvious that no precaution should be neglected, and that our protection should begin at the Panama frontier. We cannot permit subordinate officials, whether naval or civil, to determine at just what line or point protection ought to begin. Common sense will justify the President in conveying a respectful intimation of this view of his duty to the Colombian authorities. A collision that would aggravate the already bitter feeling of many Colombians against this country would be obviously regretable. It would frustrate the efforts which General Reyes, the well-informed and high-minded representative of Colombia at Washington, is making to avert an outbreak of hostilities. Nobody knows better than he that Colombia would have nothing to gain, and everything to lose, from a war with the United States; whereas, if Colombia should recognize the independence of Panama, the latter republic would, no doubt, consent to assume a proportion of the Colombian foreign debt. We also take for granted that Panama, if approached in a friendly way by Colombia, would enter into a tariff agreement with the last-named country, which might prove of no little value after the resumption of work on the canal shall have immensely increased the isthmian demand for food products.

The rivalry between Governor Odell and Senator Platt for the leadership of the Republican party in the State of New York is still an interesting feature of current politics. It would be thought at first sight that the contest is uneven, not only because Mr. Odell is much the younger and more vigorous man, but because, besides wielding the patronage belonging to the Governorship, a patronage certain to be immensely increased when the enlargement of the canals is begun, he is supposed to have been entrusted by President Roosevelt with the distribution of Federal offices in the State and city of New York. There seems to be, however, a good deal of life left in the Senator, and he is making a sturdy fight for the retention of his influence. Although, at first, his invitation to the district leaders throughout the State to confer with him at the Fifth Avenue Hotel, met with an unsatisfactory response, there was later a strong reaction in his favor, and, eventually, Governor Odell himself thought it prudent to visit New York city and provide a pretext for asserting that party harmony prevails. A compromise is said to have been arranged, in pursuance of which the delegates-at-large from the State of New York to the Republican National Convention will be, on the one side, Senator Platt and Senator Depew, and on the other, Governor Odell and ex-Governor Black. It remains to be seen which of the two factions will be preponderant in New York's delegation, and will secure a majority of the Republican State Committee. Whether Governor Odell will be renominated for his present office this year is doubtful. His experience at the ballot-box in 1902 conclusively demonstrates that he would add no strength to the Republican national ticket, even if he were not likely to be "knifed" by the friends of Senator Platt.

Apparently the only kind of harmony now attainable in New York was exemplified in the case of the lady who returned from her ride on the back of a tiger, inside the animal. The political situation in the State of New York this year is, indeed, strikingly analogous to that which existed in 1882, when the defection of the Half-breed Republicans from Judge Folger, the Stalwart candidate for Governor, caused the election of the Democratic nominee, Mr. Cleveland, to that office by nearly 200,000 plurality. We believe that Mr. Roosevelt regards himself as having, by dint of practice, ceased to be a "tenderfoot" in politics, but it seems to us that the present discord among Republicans in his native State might have been averted had he insisted that the veteran Senator should retain the leadership of his party in New York so long as he should live. It looks as if the President had committed a blunder precisely similar to that to which Mr. Arthur's friends attributed their chief's failure to attain the nomination for the Presidency in 1884. We shall soon know whether Senator Platt will be able to control the New York Legislature, the session of which begins on January 6. It is not likely that Mr. Platt will encounter any difficulty in maintaining an ascendency in the Lower House, where the Republicans will number 97 and the Democrats but 53. It may be remembered that last year, when the State Senate contained 28 Republicans as against 22 Democrats, Mr. Platt's purposes were often thwarted by four insurgent Republicans headed by Senator Brackett. This year the Republicans will number 29 against 21 Democrats, and it follows that if the revolt against Mr. Platt's authority were confined to the four former insurgents, the utmost that they could accomplish would be a tie vote. It is scarcely credible, however, that Governor Odell, with all his actual and prospective patronage, both State and Federal, cannot manage to win over at least one other member of the State Senate.

The advocates of Statehood for Arizona, New Mexico, Oklahoma, and the Indian Territory flatter themselves, we are told, that the opposition to their projects has died away. It

has not died away among the people, and so members of Congress will learn when they hear from their constituents. There is not a citizen of New York, Pennsylvania, Illinois, Ohio, Missouri, Texas, or any populous and growing commonwealth, who, if he thinks at all about the matter, is not indignant at the proposal to repeat the shameful Nevada experiment, by conceding to Arizona, which at the last census had fewer than 123,000 inhabitants, two Senators and a Representative, and three electoral votes. The claim of New Mexico is scarcely less preposterous, for in 1900 its population fell short of 196,000. Oklahoma alone of the applicants has a right to be heard, not only because her population was nearly 400,000 three and a half years ago, but because it is increasing rapidly, and would now entitle her to four Representatives. If Oklahoma and Indian Territory were admitted as a single State, their united population would be about a million. Indian Territory, however, ought not to receive Statehood, either singly or in conjunction with Oklahoma, until the process of transforming collective into individual ownership of land has been completed. The Indians have suffered enough from the frauds perpetrated by Federal officials, but their lot would probably be far worse under a State administration. They are wards of the nation, and until they are qualified to take care of themselves we ought not to renounce our guardianship. As things are now, the best method of treating Indian Territory has been indicated by Representative Moon of Tennessee, who has introduced a bill conferring full Territorial rights on Indian Territory, and naming it the Territory of Jefferson. There is no reason why the civilized Indians of that region, when their tribal status has been superseded by the régime of individualism, should not have a spokesman in the Federal House of Representatives. This, then, is the utmost concession to the advocates of Statehood that, in our judgment, the American people will sanction. If Arizona and New Mexico are to be admitted at all, they must be admitted as a single State. Even united, they scarcely measure up to the standard of Statehood. To the admission of Oklahoma as a State and to the concession of full Territorial rights to Indian Territory we see no insurmountable objection.

Taxpayers in Philadelphia, who have lately seen their real estate assessed for purposes of taxation, at figures said to exceed the prices obtainable at auction sales, are scarcely likely to advise their friends in the adjoining portions of Delaware and Montgomery counties to favor the movement for the creation of a "Greater Philadelphia." There is reason to believe that the proposal to expand the area of the city is simply a device for raising the debt limit. As a matter of fact, Philadelphia was the first among the large cities of the United States to include within its municipal boundaries a large amount of land used for farming or gardening purposes, and, with the exception of Chicago, it is, by comparison with its area, the most thinly peopled of all the great cities of the world. The present area of Philadelphia is 129½ square miles. Her population, by the last census, was 1,293,697. The area of the city of New York is 308 square miles, and the population, by the same census, was 3,437,000. The area of London—we speak of the superficies controlled by the London County Council, to which we add that of the City of London proper—is 118 square miles, and the population in 1901 was 4,536,000. In Chicago alone the ratio of population to area was smaller than it is in Philadelphia, being 1,698,000 inhabitants living on 190 square miles.

It used to be said that buffalo could be hunted within the limits of Chicago. At the present rate of growth a century would be needed to make the existing Philadelphia as densely populated as are some European and Asiatic cities. For example, Tokio, which in 1898 had a population of 1,440,000, covers only 60 square miles. Canton harbors 1,600,000 inhabitants within a circuit comprising only 20 square miles. Vienna, with a superficies of 25 square miles, had in 1901 more than 1,674,000 inhabitants. Berlin covers only 25 square miles of ground, yet in 1900 it contained 1,888,000 inhabitants. Still more dense is the population of Paris, which in 1901 contained 2,660,000 human beings packed closely together on 30 square miles of soil. In view of these facts, the notion that Philadelphia is crowded will be recognized as ridiculous. Under the circumstances, we advise the citizens of Chester, Norristown, Phœnixville, Pottstown, Lansdowne, Media, and other large places in the coveted counties to postpone annexation to Philadelphia until that city ceases to be held up to the rest of the United States as an example of triumphant and inexpugnable "graft." We can scarcely believe it possible that the Constitution of Pennsylvania will permit the annexation of those towns against their will. We observe, however, that State Senator Grady, one of the sponsors of the ill-meant but abortive libel act, expresses a different opinion. He says that it is for the friends of the "movement" to decide whether a bill to be introduced in the Legislature shall provide that annexation shall require a majority not only in the city, but also in the outside territory which it is proposed to annex; or whether a majority of the entire vote should suffice. It is obvious that in the latter event the Philadelphia machine could and would override the wishes of the outlying towns. We repeat that we cannot believe that such a performance would be sanctioned by the Constitution of Pennsylvania.

General Arthur MacArthur was invited by the War Department to explain whether he did or did not say at Honolulu that our next war would be with Germany, and that it might not be far off. The General replied that what he said had not been intended for publication, and that the tenor of his remarks had been distorted. There is no doubt that the German Empire, with an eye on the commercial results likely to follow the completion of the Panama Canal, wants a naval station in the Caribbean, and, had we permitted it, would have secured one at the expense of Venezuela. It is now reported that the Berlin government is making a determined effort to purchase St. Thomas, the most desirable of the Danish West India islands, from a strategic and commercial point of view. The refusal of the Danish Parliament to sanction the sale of the Danish West Indies to the United States was not based upon the alleged inadequacy of the price offered, but on a professed unwillingness to alienate national territory. If now Denmark, after withholding the islands from us, should sell them to a power which, in 1864, did its best to obliterate her from the map, we should be justified in regarding the proceeding as an unfriendly act on the part of both vender and purchaser. The view which our State Department, with a close approach to consistency, has taken of such transactions was repeatedly formulated in the case of Cuba. We held that Spain might retain the latter island, or sell it to the United States, but that under no circumstances would we suffer her to transfer it to another European power. We shall take, or ought to take, the same position with regard to St. Thomas. It is true that if Denmark, or Holland, were to be politically incorporated with the German Empire, it might be difficult for us to frame an objection to the acquisition by the last-named power of the Danish or Dutch West Indies. To the attainment, however, of such coigns of vantage by either purchase or conquest, we should certainly be opposed.

The appalling consequences of the fire in the Iroquois Theatre in Chicago might have been averted had the builders, managers, and employés profited by the warnings conveyed in the similar catastrophes at the Brooklyn Theatre, the Ring Theatre of Vienna, and the Opéra Comique in Paris. On this occasion the persons responsible for the awful loss of life seem to have done many things that experience should have taught them not to do, and to have omitted many precautions that they were legally bound to take. In the first place, the rows of seats were much too near together, so that if a woman at or near the end of a row happened to faint, there was no possibility of passing her except by trampling upon her body. Several of the doors leading from the auditorium to the lobby were locked, and the keys were missing, so that the avenues of escape were limited. The lighting apparatus had been so arranged that, shortly after the outbreak of fire on the stage, the auditorium was plunged in darkness. There seemed to have been no firemen on duty in the theatre, and the nearest fire-alarm was at a considerable distance. The seating capacity of the house was greatly exceeded, with the result that, when a cry of alarm was raised, the aisles and passages were blocked. Owing to a defect in the mechanism, the so-called fire-proof curtain could not be lowered, but stopped half-way, thus creating a tremendous draught, which caused a cyclone of flame to shoot across the auditorium. Even could the curtain have been lowered, it might not have helped much, being

made of a cheap "asbestos," which could not long withstand the impact of a blaze. To complete the evidence of criminal recklessness, we add that, while the platforms of the fire-escapes had been finished, the connecting staircases were absent. In a word, the theatre was a death-trap, into which nearly two thousand women and children were lured.

The existing laws in most cities regulate theatre construction wisely and provide for due supervision of audiences, but since this horror in Chicago it has come out that these laws were scarcely anywhere strictly observed, and in very many instances were scandalously neglected. Mayor Harrison in Chicago closed all the thirty-five theatres of the city until their managers should be able to comply absolutely with the laws and make their houses safe. In New York there has been a great overhauling of playhouses, and a general waking up of the authorities on whose vigilant execution of the laws the safety of theatre audiences depends. The like seems to have happened in a greater or less degree in every large city in America or Europe. The Emperor William, on January 4, closed the Royal Opera House in Berlin until thorough reconstruction should make it more safe. Such results naturally follow a great object-lesson. As the result of Chicago's sorrow all the theatres will be safer for a time at least. The pity is that such terrible lessons should be needed to induce the employment of precautions the vital need of which was already perfectly well understood.

It has been pointed out that, despite the preferential advantages granted by Canada to Great Britain, our own trade with the Dominion grows more rapidly than England's. This is in part due to proximity, and consequent cheapness of transport, in part due to the fact that we produce, and Canada requires, much raw material. It is also due, we can hardly doubt, to the likeness of conditions that prevail over the North-American continent, almost unconsciously assimilating the needs and activities of life in the Dominion and the republic. That this assimilation is going on very rapidly in the intellectual and moral world, as well as in the products and forms of material life, is evidenced by certain very interesting statistics, covering the last five years, and applying wholly to moral and mental wants and their satisfaction. Beginning with imports of books, pamphlets, and periodicals, we find that, five years ago, England sent Canada a hundred and thirty thousand dollars' worth. During five years this has grown only to a hundred and seventy thousand dollars' worth, as against five hundred thousand dollars' worth from the United States. Five years ago Britain sent Canada twenty-two thousand dollars' worth of novels; this has dropped to fifteen thousand dollars; while the United States, which sold Canada forty-four thousand dollars' worth of novels five years ago, sent her over eighty thousand dollars' worth in the year just past. While last year Great Britain sent Canada less than two thousand dollars' worth of posters, the United States sold her nearly twenty-five thousand dollars' worth. In the item of labels, the States show a total of eighty-four thousand dollars, as against eight thousand nine hundred dollars from England. There is an even greater discrepancy in our favor in the department of show-cards, advertising periodicals, price books, almanacs, and the like; and of printed music we sell Canada three times as much as does England.

Of photographs, chromos, drawings, and engravings we sell Canada a quarter of a million dollars' worth, as against forty thousand dollars' worth coming from the mother country. And the sum spent by Canadians on English Bibles, prayer-books, psalm and hymn books has diminished by a half in the last five years, while our own exports across our northern frontier have exactly doubled in the same time. Perhaps the most striking fact of all is that, taking under a single heading books on the application of science to industry, in a score of different departments, works on agriculture, horticulture, forestry, fish and fishing, mining, metallurgy, architecture, electric and mechanical engineering, carpentry, ship-building, mechanism, bleaching, dyeing, tanning, weaving, and kindred arts and crafts, we find that, while Great Britain five years ago sold Canada ten thousand dollars' worth of books, the colony took from the mother country last year only four thousand dollars' worth. On the other hand, the United States, which five years ago sold Canada only seven thousand dollars' worth of technical and educational books, sent her last year something like seventy-five thousand dollars' worth, or about seventeen times as much as Canada took from England. A Canadian writer, commenting on these very remarkable facts, asks whether any one can explain why Canada's imports of British works on applied science should fall off sixty per cent. in five years, while imports of similar works from the United States should increase a thousand per cent. during the same period. Has the copyright law anything to do with it, he asks, or is it another instance in which the mother country is beaten by the United States in intelligence and skill? It seems to us that the answer is to be found in similarity of conditions and similarity of needs, in the more or less uniform life which covers the whole North-American continent, in contrast with the very different conditions which exist in England and, more or less, in Europe generally.

The elaborate devices for the restraint of inebriety which were put into operation in London about a year ago have not all proved to be workable. The licensing act, which made a great stir, provided for a blacklist for habitual drunkards. Persons twice convicted of drunkenness forfeited for three years the privilege of buying drinks in the district where they lived. Photographs of them were furnished to the barkeepers of the district, who were forbidden to sell drinks to such blacklisted persons under penalty of forfeiting their licenses. Another section of the act provided for ordering drunkards to homes for inebriates, but this section the Lord Chief Justice found to be bad law. The blacklist scheme broke down of its own weight. More delinquents were blacklisted in London than the barkeepers could possibly remember, and exceeders who were blacklisted in one district found no trouble in getting drinks in another. One saloonkeeper in the Strand reported that the police had furnished him with photographs of 573 persons to whom he was forbidden to sell liquor. The lists grew so long that the police stopped adding to them. This failure of a scheme from which much good was hoped for is disappointing, but we hope the British lawmakers will keep on trying. To restrain or even regulate drinking by legislation is one of the hardest things there is to do. Every new law is an experiment, and it is only as the result of such experiments that progress is possible.

Democrats throughout the country are holding more or less of their breath till they can determine whether New York's new Tammany administration is as good as it looks. Their solicitude found due expression in Mr. Cleveland's letter to the chairman of the McClellan dinner on January 4, when he said:

> While the assumption of the duty involved in the government of the greatest city of our country creates grave responsibilities, the impressive thought cannot be evaded that the manner in which the Democracy of the city shall meet its municipal responsibilities will in a large degree determine the extent to which our fellow-countrymen, in every part of the land, will be willing to treat the Democracy of the nation in broader fields of governmental rule.

All the good Democrats are hoping diligently that Tammany will be good, and give the country an alluring illustration of the beneficence of Democratic rule. Tammany government will be good if Mayor McClellan can effect it. The Police Department will be clean if Mr. McAdoo can contrive it so; the tenement-house population and the city's health shall not suffer if Mr. Crain and Dr. Darlington can prevent it. But behind these worthy gentlemen there is a roaring and devouring element. Will they hold out against it? Can they stand between it and the public, and can they last? Are they asbestos, wire-woven and triple thickness, or are they fire-proofed burlap? That is the question. The roaring and devouring element is going to be pretty hot. If they are no better than the best burlap they will crumble.

What Mr. Roosevelt is said to have said:

"In John Hay I have a great Secretary of State."

What Mr. Hay might say:

"In Theodore Roosevelt I have a great President. McKinley also ran."

The President's Message on Panama

PRESIDENT ROOSEVELT'S special message to the Senate on the Panama affair is one of the ablest, most illuminative, and most conclusive state papers that have emanated from the pen of a Chief Magistrate.

There are two crucial points concerning which the minds of some Senators and a good many citizens needed to be clarified. The points are these: First, did our treaty of 1846 with New Granada guarantee the sovereignty of the Bogota government over the Panama isthmus, not only against foreign aggression, but also against internal revolution? If it did, then we are bound, not only to withhold recognition from the new republic of Panama, and to permit Colombia to stamp out the revolution, no matter how incompatible the coercive proceeding might be with the maintenance of peace and order in the zone of the interoceanic railway and waterway, but also to cooperate with our naval and military forces in the work of resubjugation. Secondly, if it be admitted that the treaty of 1846 imposed on us no duty with reference to internal revolution against Colombian authority, but left us at liberty to act as justice and expediency might be indicated by circumstances, the question arises whether the revolution at Panama on November 6, 1903, was of a kind that morally justified a prompt recognition of the new state's independence, and the conclusion of a treaty with it for the mutual advantage of the parties. Those are the two pivotal inquiries, on the answer to which the decision of Senators concerning ratification, and the judgment of the American people on the conduct of the Executive in the Panama affair, must inevitably hinge. On the replies given to these questions depends the conclusion whether the President did or did not act in conformity with the clear intent of the Spooner act, when, instead of recurring to the Nicaragua route, he secured by treaty from the republic of Panama, the actual and rightful owner of the territory concerned, permission to complete the waterway which the Lesseps company began. There is needed, indeed, no argument to show that the primary purpose of Congress in the Spooner act was to insure, if possible, the construction of a canal across the Isthmus of Panama, and that, in the eye of Congress, whether the republic granting the title to the requisite franchise should be called New Granada, Colombia, or Panama mattered not one whit, provided we acquired the privilege with clean hands—*i. e.*, without repudiating any previous treaty obligation, and without collusion in the revolution against Bogota's authority.

Now let us look at the President's exposition of the pivotal points above defined, an exposition which we do not hesitate to pronounce adequate and decisive. There is no doubt that, by the thirty-fifth article of the Treaty of 1846, the United States secured the right to free and open transit across the isthmus of Panama, and, to that end, agreed to guarantee to New Granada her rights of sovereignty and property over that territory. It is, on the face of things, absurd to suppose that the guarantee just named constituted the sole object of that article, and bound the United States to protect the sovereignty of the government temporarily established at Bogota against domestic revolution. Nothing, as Mr. Roosevelt says, could be more erroneous than the supposition. That our wise and patriotic ancestors, with their dread of entangling alliances, would have entered into a treaty with a power calling itself New **Granada,** itself the outcome of secession, solely, or even primarily, for the purpose of enabling that remnant of the original republic of Colombia, already resolved into the states of New **Granada,** Venezuela, and Ecuador, to continue forever to rule from Bogota over the Isthmus of Panama, is unquestionably a conception that would, in itself, be incredible, even if the contrary did not clearly appear. It is true, as Mr. Roosevelt admits, that, since the Treaty of 1846 was made, the United States have again and again been obliged forcibly to intervene on the isthmus for the preservation of order and the maintenance of an open transit, and that this intervention has sometimes indirectly operated to the advantage of the titular government of Colombia. It is equally true, as the records show, that the United States, in intervening for the protection of the transit, with or without the consent of the government installed for the time being at Bogota, have disclaimed any duty of defending a Bogota government, whether *de facto* or *de jure*, against domestic insurrection or against the erection of an independent government on the Isthmus of Panama.

No other position could be taken by us with any show of consistency. Never had we protested against the secession of Venezuela and Ecuador from the original republic of Colombia; or against the dissolution of the original Central-American Confederation into five independent republics; or against Uruguay's declaration of independence from Brazil, on the one hand, and Argentina on the other; or against, finally, the secession of Texas from Mexico. It would have been ridiculous in 1846, only a year after we had justified the secession of Texas by the annexation of that republic, to declare that we would cooperate in preventing the secession of any of the provinces which of their own free will had consented to compose the republic of New Granada.

It is indisputably true, as Mr. Roosevelt says, that the attacks against which, by the Treaty of 1846, the United States engaged to protect New **Granada** sovereignty were those of foreign powers, whether European or American. It is also to be borne in mind that even this engagement was only a means to the accomplishment of a far more important end. The primary, the controlling design of the thirty-fifth article of the treaty was to assure the dedication of the Isthmus of Panama to the purposes of free and unobstructed interoceanic transit, the consummation of which would be found in an interoceanic canal. To the accomplishment of this object the government of the United States had for decades directed its diplomacy. That object had occupied a place of eminence in the instructions given to our delegates to the Pan-American Congress held at Panama during the administration of John Quincy Adams. The same object formed the subject of a resolution adopted by the Senate in 1835, and of another passed by the House of Representatives in 1839. In 1846, the importance of that object had become still more unmistakable and paramount by reason of the Mexican war.

There is not an atom of doubt that the primal, the fundamental, the exclusive purpose of the Treaty of 1846, so far as the United States were concerned, was to facilitate the building of a canal between the Atlantic and the Pacific oceans. Again Mr. Roosevelt is right in saying that if, in specific terms, the treaty did not bind New **Granada** to grant reasonable concessions for the construction of means of interoceanic communication, it is only because it was not so much as imagined that such concessions would ever be withheld. The obvious intent of the treaty seemed to render it superfluous to stipulate that permission for the provision of a mode of communication should not be withheld.

So much for the obligations contracted by the United States in 1846 toward the government installed, temporarily, as it proved, at Bogota, under the name of the Republic of New **Granada.** Now let us look at the question whether our Federal Executive can justly be charged with connivance, either before or after the fact, at the secession of the department or state of Panama, from the so-called republic of Colombia, itself the outcome of a *coup d'état* accomplished by the usurper Nuñez in 1885-6, and continued by the usurper Marroquin. The evidence adduced by Mr. Roosevelt amply justifies the indignation with which he repels the insinuations of complicity on the part of the American Executive in the revolutionary movement at Panama. The documents brought forward prove to any intelligent and honest man that no one connected with our Federal government had any part in preparing, inciting, or encouraging the revolution on the isthmus. They prove that, save for the reports of military and naval officers, every one of which is recited in the President's message, no one connected with the Executive had any previous knowledge of the intended revolution, except such as was accessible to any person of ordinary intelligence who read the newspapers, and kept up a current acquaintance with public affairs. To everybody conversant with South-American history, it was well known that the department or state of Panama was united to Colombia only by a loose tie of federal relationship, the centralized constitution proclaimed by the usurper Nuñez in 1886 having no binding authority on any Colombian citizen. Under the circumstances, every well-informed and intelligent onlooker knew, long before the outbreak of the insurrection, that, in the event of the rejection of the Hay-Herran treaty, the secession of the state of Panama was possible, but it was not until nearly the end of October, when the Bogota Congress adjourned, that secession was recognized as imminent. The orders sent by our Federal government to the commanders of vessels in isthmian waters—orders reproduced in the President's message—attest a determination to pursue the policy on which we had repeatedly acted. The orders were to maintain a free and uninterrupted transit, and, if interruption of such transit should be threatened by armed force, to occupy the Panama Railway. As an ounce of precaution is worth more than a pound of cure, the naval commanders were instructed to prevent the landing of any armed body with hostile intent, either government or insurgent, at any point within fifty miles of Panama, provided such landing seemed likely to precipitate a conflict. That our government had no foreknowledge of the outbreak on November 3, and was not an accomplice therein, is manifest from the fact that on that date we had in the bay of Panama no American man-of-war, and no American troops or sailors, and were, therefore, unable, if we wished, to prevent the bombardment of the city of Panama by the Colombian gunboat *Bogota;* while at Colon on the day named, Commander Hubbard of the *Nashville*, had but forty-two marines and sailors with which to protect the lives and property of American citizens threatened by 400 Colombian soldiers. Under the circumstances, our Federal government obviously cannot be accused of promoting the isthmian revolution. In view of the many warnings of an uprising conveyed through the newspapers, it might more justly be charged with criminal neglect in not placing betimes considerable naval forces in the harbor of Colon and the bay of Panama.

It remains to ask whether, after the isthmian revolution was accomplished, a revolution more amply justified than any that

ever took place in the New World, our Federal government can be justly described as an accessory after the fact, because it saw fit to prevent the conversion of the isthmus into a shambles, by recognizing the republic of Panama, and in declining to permit a Bogota invasion of the canal and railway zone. The position taken by Mr. Roosevelt, after the revolution had been perfected without collusion on his part, may be said to have been sanctioned by the approval of the whole civilized world. His recognition of the independence of the new republic has been followed by like recognition on the part of France, Germany, Great Britain, Russia, Italy, Austria-Hungary, Sweden and Norway, Denmark, China, Japan, Peru, and even Nicaragua and Costa Rica, the Latin-American powers most deeply interested in the adoption of the Nicaraguan route for an interoceanic waterway.

Our own belief is that the President's message has accomplished its author's purpose. We believe that it has cut, as it ought to cut, the Democratic minority in twain, and has thwarted Mr. Gorman's intention to secure a caucus resolution against the ratification of agreement with the Panama Republic. It is probable enough that some Democratic Senators will try to extract what party advantage they can from the inevitable debate, but we take for granted that many, if not most of them, will ultimately agree to ratify the treaty.

Mr. Olney is for Cleveland

THE whole tenor of the speech delivered by Mr. Richard Olney, at the dinner given in New York city on January 4 to Mayor McClellan, would have pointed his auditors and readers to Mr. Cleveland as the preeminently fitted standard-bearer of the Democracy this year, even if he had not named, as he did name, the ex-President in his peroration.

Never have the basis and the scope of the Democracy's present opportunity been more distinctly and impressively outlined than they were by Mr. Olney. It is no secret that during the last few years not a few influential Republicans have come keenly to realize the truth that Mr. Olney called to mind, the truth, namely, that government by party, without a strong, consistent, and coherent opposition, without an opposition which is founded on principle and not mere gain, is the most dangerous of governments. Unpleasant and recent experience has shown that there is no limit to the excesses it will indulge in if it be long continued; no limit to the corruption that will taint every branch of the public service. It is the misfortune, not only of the country, but of the Republican party itself, that during the last seven years that party has been in continuous and undisputed control of all the departments of the general government. Who will deny, no matter what may be his party affiliation, that if, during the last seven years, the Republican party had been confronted with a united, well-organized, and patriotic opposition, it would have escaped the commission of many follies, and the country would have been safeguarded from some dangerous precedents and serious calamities. What far-sighted and patriotic citizen will refuse to concur with Mr. Olney in viewing as a good omen the fact that in the future, at all events, such an opposition will be forthcoming.

Sensible and honest Republicans who know what President McKinley and Representative Dingley meant to accomplish by the reciprocity clauses of the last tariff act will secretly, if not openly, applaud Mr. Olney's declaration that, in matters domestic, the Democratic party will repudiate the "stand-pat" policy, and, on the contrary, will advocate such tariff reform and revision as general industrial conditions and the interests of the whole country shall require. It is high time, too, as Mr. Olney said, that a great and formidable party should stand for some reasonable relation between governmental revenues and governmental requirements; for clean administration, and for official conduct free from every suspicion of "graft."

There were few of Mr. Olney's auditors, and there will be few, we imagine, of his readers, to whom another passage of his speech will not appeal with irresistible force. Many a unionist workman galled by the yoke of the walking delegate, many a non-unionist workman craving to avert starvation by labor, and many an employer crippled by extortionate exactions, will draw a long breath of relief to learn that the reorganized Democratic party means to give equal rights to every citizen, to non-unionist and unionist workmen alike, and to employers as well as the employed. Mr. Olney spoke for his party when he said that the Democracy would always stand for the supremacy of law; the same law for capitalists and for wage-earners; the same law for Presidents and cabinets as for the humblest private citizen. There is not a thoughtful man among our readers who does not know that Mr. Olney spoke the truth when he said that, if these be not topics of the highest and most vital moment, no such topics exist; and when he added that the recent practices and present tendencies of the Republican party make those topics burning issues of the hour. To believe the contrary would be to believe that the American ship of state has cast off forever from its old-time moorings, and is never again to be anchored to the bed-rock principles on which the foundations of the republic were laid.

In a word, it is Mr. Olney's conviction that the mission of the Democratic party is to be instrumental in restoring to the national life the sane and normal conditions upon which health and stability depend. For the fulfilment of that mission is needed a standard-bearer whom the American people, Republicans and Democrats alike, will recognize as preeminently qualified. Where is such a man to be found? "Mr. Chairman," Mr. Olney said, "the man of all men most thoroughly representative of the national policies I have indicated, the most capable and sure of making them effective; the man who possesses and has proved the courage of his convictions; the man who never yet turned his back upon the approach of public duty, and is now too old to learn how to do so;—that man, unfortunately absent at this time, but a New-Yorker, by adoption, though not by birth, and one whom New York has delighted to honor—that man is Grover Cleveland, of New Jersey, whose splendid record in the past is an all-sufficient guarantee of his action in the future."

Probable Course of a War in the Far East

THE real bone of contention between Russia and Japan is not Manchuria, but Korea. It is evident, therefore, that if war comes, Japan's first move will be to take possession of Korea.

Japan is, at first sight, favorably placed for this purpose. Her fleet is somewhat stronger than that of Russia; for although both count seventy-four war-ships of all classes in Far Eastern waters, yet the gross tonnage of Japan's fleet is about two hundred and fifty thousand tons, as against two hundred thousand tons for Russia. To land troops in Korea, Japan must draw a line of vessels across the Korean Strait, of sufficient strength to keep back the whole Russian fleet, should the latter attempt to cut the line of communication, which, it should be remembered, must be kept open during the whole course of the war. This at once makes an opening for Russia, for, if almost the whole of Japan's navy is tied to the Korean Strait, there is nothing to hinder the fleet of Russia, or some part of that fleet, from making an attack on any part of the Japanese coast. It is true that a part of the Japanese fleet could follow, and attempt to keep off, the supposed Russian war vessels; but this Japanese squadron would, nevertheless, be compelled to keep in touch with the rest of the fleet in the Korean Strait, and to guard carefully against the danger of being cut off, and very possibly destroyed in detail, by the war-ships of Russia.

The attempt to land troops in Korea will, therefore, be very perilous for Japan, so long as the Russian fleet is effective; the reason being that, the moment a secondary base is established by Japan in Korea, the Japanese fleet is to that extent tied to a particular locality. Should the fleet of Russia seek to strike at some other point, the fleet of Japan would be forced to divide itself into at least two squadrons; in which case the Russian fleet, following the old stratagem of the Horatii against the Curiatii, might attack each of the Japanese squadrons in detail.

Japan will, therefore, probably seek to fight the naval side of the war to a finish, before entering on a land campaign on an extensive scale. She should, therefore, try to bring the Russian fleet to a general engagement at the outset. But this will be far from easy, since it is evident that Russia will keep to the defensive, not merely because it is part of her diplomatic position to make Japan in all things the aggressor, but also because the experience of the Boer war, like Russia's own experience before Plevna in the fall of 1877, has demonstrated the immense strength of the defensive as against the offensive position. Should the Russian fleet decide to keep on the defensive, the task of Japan will be one of great difficulty. Her best plan will be to try to shut the entire Russian fleet in, somewhere near Port Arthur, thus neutralizing it completely and leaving the road to Korea open for the Japanese army. In this case, it is probable that the torpedo-boats of the Russian navy will come into play, the rest of the Russian fleet keeping on the alert for an opening, and able to choose its own time for attack. This the Japanese fleet will not be able to do, for the fleet of Russia need only retire towards the harbor of Port Arthur, when it will become dangerous for the fleet of Japan to follow, because of the heavy guns, placed at a considerable height, and therefore having a very long effective range, in the Port Arthur forts.

The Russian land army would meanwhile have its work cut out. It would have a strategic problem of some complexity to face. One line of force which it would have to meet comes from the direction of Peking. A second comes from the Manchurian coast, between Port Arthur and the Yalu River. A third comes from Korea. A fourth, from the coast near Vladivostok. All these lines of force would tend, in a general way, towards Mukden, in the effort to cut off the southern group of Russian strongholds, Dalny, Talienwan, and Port Arthur, from the railroad and Russia's main line of communication, through Siberia.

Russia's land forces would have to guard all these lines of ap-

proach. She might find it to her interest to keep within the boundaries of Manchuria; or, supposing the Japanese army was considerably divided, she might send a wedge down into Korea, which would dispute the advance of the Japanese army inch by inch. Japan would thus be compelled to fight on the offensive—a tremendous disadvantage, on land as well as at sea. And there is nothing to prevent Russia's planting a dozen Plevnas between Seoul and Mukden.

While Russia thus, on hypothesis, remains on the defensive, every step in advance will cost Japan tremendously, both in men and in money. There will be no such thing as "rushing in and destroying" the Russian fleet and army. That has already been attempted at Sebastopol. It will be, for Japan, a question of "pay, pay, pay." And, meanwhile, Russia can reinforce herself continually from behind, along the Siberian Railroad; and as her soldiers are unpaid, and used to simple fare and hardship, it will not cost her very much more to maintain a defensive army in war than it does to maintain the same army in peace. As the railway is government property, there will be no bill for transporting men and supplies; as the engines burn wood, and run through immense forests, there will be no great outlay for fuel. As for feeding the Russian army, the government has immense accumulations of wheat and rye, bought from the peasants, under a scheme of Minister Witte's, so that Russia will have no such money drain on her resources as England suffered during the Boer war.

Japan's accumulated resources are not very great. It is obviously Russia's policy to create a military deadlock, which will make such a call on Japan that these resources will be steadily consumed. Should Japan become exasperated and try to force the pace, she will repeat the experience which Russia gained in trying to storm Plevna, when the Russian army lost two thousand men in an hour. As the present Minister of War, General Kuropatkin, fought with desperate valor in that very storm, holding the most advanced point at the place of fiercest fighting, it may be expected that whatever lessons of experience are to be gained from Plevna will be available for the Russian army.

These considerations should make it apparent that Japan, in taking an aggressive position towards Russia, has assumed a very difficult task.

Letters from the South

It was remarked in the WEEKLY of October 17 that a Northern student of affairs in the South, who lately spent several months there, found in the same State townships which no negro is permitted to enter, and laws against the encouragement of *negro* emigration. These findings being disputed by some Southern newspapers, the WEEKLY published on December 5 a letter from Professor A. B. Hart, of Cambridge, Massachusetts, in which he said that though it was a mistake to speak of "townships" in the Southern States, because the local subdivisions were called "parishes" or "precincts," it was true that there were areas which the negroes were not allowed to enter. Mitchell County, North Carolina, is one such place, he said. He said further that emigration of negroes on a large scale was *not* permitted in the South, and that "the Southern *people* do not cordially like the negro in any relation."

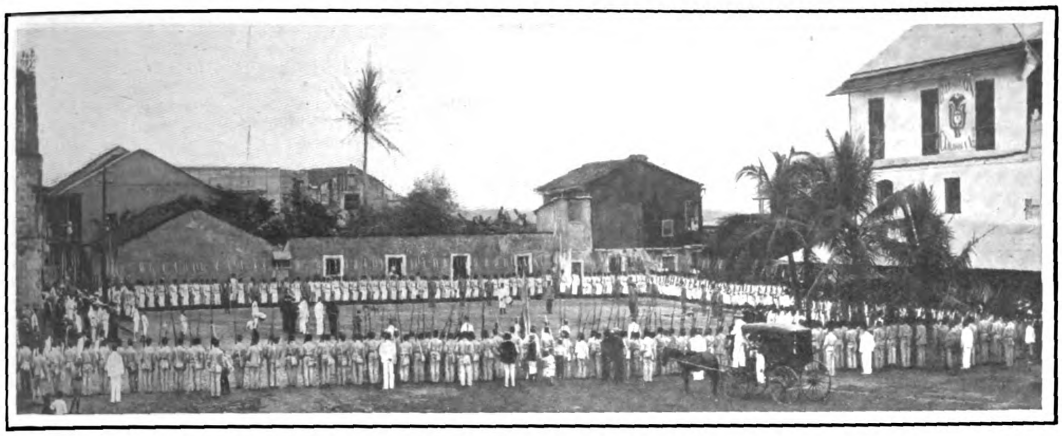
To this letter from Professor Hart our friends in the South have sent us a number of replies, two of which are printed on another page this week. Mr. Charles L. Coon, of Knoxville, points out, as do others, that the census of 1900 credited Mitchell County, North Carolina, with 536 negroes. He explains that in certain cases negroes have been restrained from emigrating in masses "after their crops had been planted, and after the negro farmers had received advances in the way of food and other supplies for the year." But, except in such cases, he thinks it would be hard to find instances in the South where the negro is not allowed to come and go at will. He does not believe that there is any civil district in the South where any law-abiding citizen, black or white, may not live in peace so far as race is concerned.

Mr. Huffaker, of Eagle, West Virginia, says there are hundreds of districts in the South where *no* negroes live, but their absence from them is voluntary, though in such places a negro is regarded with suspicion when he does appear. Mr. Huffaker denies absolutely Professor Hart's assertion that the Southern white *people* do not cordially like the negroes in any relation. "We like him and he likes us," says Mr. Huffaker, "far better, if the truth must be told, than either of us likes the Northerner."

A view somewhat different in this particular is that of a correspondent, Mr. Bruce Craven, who says, in an interesting letter from Charlotte, North Carolina, that "as to Mecklenburg County, North Carolina, I believe it is conservative to say that a considerable part of the population would celebrate with 'joy and feasting' the day on which the last of the negroes should depart from the county."

A conclusion suggested by these letters is that the South is a big country, and that all its people have not the same information or the same opinions about negroes. A large proportion of them seem to feel that what any Northern man knows, or may learn, about the South is of doubtful value, and they tend to resent any claim on his part that he has found out anything. Yet there are extremely few Southerners who know the whole South, and it is conceivable that an intelligent outsider who travelled extensively enough and observed with sufficient care might have things to say about Louisiana which would be news in North Carolina, and *vice versa*, and might get a general view which would be worth the consideration of many resident Southerners. One of our correspondents says: "As to the reasons for the absence of negroes from thirty-nine counties in Texas, I am unadvised, as I do not go that far from home to attend to other people's business." But it is precisely to persons who go from home to observe that we must be indebted for most of our knowledge of all our neighbors in the world. The looker-on at every game has some advantage over the players, and may see important things which they are too near the game to observe.

It is amusing to notice, though not very important, that though half a dozen of our correspondents argue that no one who is so ignorant of political divisions in the South as to speak of Southern "townships" can have opinions of value about Southern conditions, yet no two of them agree about these same political divisions. A friend in Arkansas writes, "I know of no State in the South which is *not* subdivided into *townships*, and if Professor Hart wants to make the experiment, I can take him to *townships* in the good old State of Arkansas where the negroes are forbidden to live." The truth seems to be that the nomenclature of the minor divisions of the Southern States is complicated and various, and not easy to learn and remember.



Amendment of the Copyright Law

The amendments to the copyright law of the United States made in 1891 provided imperfectly but very usefully for international copyright. The law, as thus amended, works very well as between the United States and Great Britain. But it is very faulty in its practical dealing with the authors of Continental *Europe*. It provides for granting American copyright in the work of an author who is a citizen of a country that has established reciprocal copyright relations with the United States, if such work is printed from types set in the United States and is published simultaneously with its publication abroad. In the case of English books it is not hard to comply with these conditions, but with French or German books the case is different. The sale for such books in the original is not great enough in this country to warrant the expense of resetting them for the purpose of getting copyright, and though under the law it would be possible to copyright an American translation if its publication here could be made simultaneously with the publication of the original abroad, such simultaneous publication of American translation and French or German original has in practice been found to be so difficult that French and German authors have received, and are receiving, little or no advantage from the copyright agreement of their respective countries with ours. France and Germany, finding our law of so little use to them, have been for some years on the point of retiring from the reciprocity arrangement under the law of 1891, but have as yet stayed on in hopes of an amendment to our law which would do them better justice.

Mr. George Haven Putnam points out in the *Critic* that such an amendment has been carefully drafted, and has been introduced into both Houses of Congress. It is a compromise between what the American publishers would like and what the American typographers are willing to concede. It provides that a work originating in language other than English is left open to "appropriation" unless an authorized American edition shall have been produced within the term of twelve months after the first publication of the book in the country of origin, and unless such edition shall have been produced and duly protected by copyright in advance of any unauthorized edition. In case, however, copyright shall be granted under the law as thus amended, it shall cover not merely the particular American version printed, but the entire text in any version. This last provision is important, for under the present statute the producer of an American version of a Continental work gets the protection of the law only for his own version, and another translator's work may be put into the market to compete with his.

This concession of a year in which to copyright an authorized American edition of a Continental work, provided some unauthorized edition is not issued sooner, does not seem especially generous, but it is as much of a concession as the typographers are willing to endorse, and Mr. Putnam is of the opinion that practically it will work pretty well, since the unauthorized reprinters are apt to be slow in appropriating a Continental work, and prefer, as a rule, to follow the literary judgment of the publishers who act as the representatives of the authors. It is very much to be desired that Congress shall find time during the present session to pass this amendment.

The First Isthmian Battalion, formerly a Colombian Regiment, in Formation at their Barracks

General Huertas, Commander-in-chief of the Army of Panama

Captain Salazar, of the Army of Panama

A Detachment of American Marines barricading themselves in Preparation for the Arrival of Colombian Insurgents

THE SITUATION IN PANAMA

The photographs show some interesting incidents and figures connected with the progress of the Republic of Panama. Soon after the revolution began, the Colombian government sent an officer with an order to shoot General Huertas, Commander-in-chief of the Panamanian army. By a counter-plot General Huertas succeeded in taking the Colombian prisoner, with the aid of Captain Salazar. General Huertas's account of this incident is published on page 108 of this issue of the "Weekly"

Some New American Plays

By W. D. Howells

A CERTAIN range of American and English plays which I have lately been seeing seem to divide themselves, broadly, into two sorts quite according to their nationality: the domestic sort and the society sort. The distinction applies both to such realistic and fantastic satires as "The Admirable Crichton," "Whitewashing Julia," and "Candida," and to such widely differing pictures of our own life as "The County Chairman," "Her Own Way," "Glad of It," "Our New Minister," and "The Other Girl." The English plays have to do with man as a society man, both in the narrower and the wider sense, and the American plays have to do with man as a family man; and I hope that a little thought about them will confirm the reader in any impression he may have that with us the main human interest is the home, and that with the English the main human interest is society. But lest we should be unduly proud of our difference from the English in this point, I hasten to suggest that this is because in the narrower English sense we have no society, and if we have a great deal of home, it is because we are still almost entirely rustic in origin, and preponderantly simple in our conceptions of happiness. In the wider sense we certainly have society; and it is a defect of our playwrighting that it does not carry over from the home to humanity. Its interest does not live from man to man, but from men to women, and from women to men; it has no implications; its meanings are for the given time and place only. When it comes to artistic merit in the plays, we have still less reason for national pride. Few of the American plays will compare with the English, in dramatic art, though I think one or two of Mr. Clyde Fitch's recent plays will compare well with the best of them.

I was especially interested in "Her Own Way" because it added the final touch of proof which convinced me of the truth of what I have been saying, and turned my latent theory into an opinion which I was at once eager to urge upon others. Here was, if ever there was, an American society play, and the motives were those which animate the sex which has such society as we have in its keeping. The ambition to get on and up was in the foreground with the thoughtless and restless young wife, and her delightfully ridiculous mother, and the desire to give her the means darkled in the background in the disastrous speculations of the husband and son-in-law. Of course there was the fine girl who, being already up and on, could afford to respire an atmosphere of womanly dignity, to wish to give herself in unselfish love to the man of her heart, and to give all she has to her wretched brother when he has ruined himself to gratify his wife's senseless aspirations. But when it comes to the operation of the motives, one perceives that the real interest of the play is domestic, and that the interest does not pass the instance. The family ideal pervades it, and the whole family insists on getting itself represented. At any rate I prefer to believe that Mr. Fitch was instinctively yielding to this insistence, and not merely indulging his desire to do the scene, when he did that admirable little scene of the children's birthday dinner which opens the play. It is not the less admirable because the children are mostly spoiled brats, but perhaps the more so, and they are such natural children that the children who do them have no difficulty in doing them perfectly. Their mother is a spoiled brat, too, and when opportunity comes in the crying and scolding and screaming scene with the husband who owns that he has muddled her money away, she too is so natural that the actress has no difficulty in doing her perfectly. In her and her mother, and her cousin who serves as the villain of the piece (a very frank scoundrel), the obvious pretence is that the question is social, but the fact is always that it is domestic. It scarcely transcends in its suggestion the four walls of the house where the action passes, and it reaches the spectator only through the domestic atmosphere which so thoroughly involves American life. The villain himself practices his darkest misdeeds that he may win the fine girl for his wife, and make a home for her which shall be her kingdom, and in this he is morally of the same fibre as the gallant captain who goes out to the Philippines, and in a process of our benevolent assimilation has both his arms shot through and has to let her take him in hers when he comes back.

It was almost the only moment in the play when I could have accused the author of excess, or not have owned that he was giving me evidence of his growth as a dramatist and a student of human nature. I thought he went far in "The Girl with the Green Eyes," but in "Her Own Way," he goes farther and always on the right road. I am not saying that he does so consciously; perhaps no one gets on consciously; and I am still vexed with a suspicion, which may be unworthy, that he does not much mind doing a bad thing æsthetically, if he thinks he has to do it. But all through this play I realized that I was witnessing the work of a man who was more and more sensible of the two kinds of conscience which a man must almost equally have if he will go to the end of the right road. Mr. Fitch's errors, indeed, are of a sort that can be promptly put behind him and forgotten; they have the property of displeasing the public so entirely that they are not even remembered against him. The rule of his production seems to be now a good play and now a bad play, and they follow each other in such swift succession that the good ones instantly blot out the sense of the bad ones. I am not of those who would make his fertile invention a reproach to him. Rather, I think it is something for us to be glad of, for in a way his rapidity supplies our numerical defect of dramatists. Besides, fertility is hardly a fault in a dramatist. Lope de Vega wrote plays all but without number; Goldoni wrote them by scores; Scribe did them by hundreds; and the dramatists who live in a few plays are apt to be the dramatists whose other plays have been lost. Mr. Fitch seems to have the gift of getting New York, or the spirit of New York, not only recognizably but unmistakably upon the stage. Somehow, he has this gift, and I think it a great one, for of all the world's capitals, New York is the most difficult to seize in that essence by which she differs from the others. This is so impalpable that it seems almost aerial, it seems almost ethereal. It is a glancing light, a flying odor, but Mr. Fitch knows how to capture it and imprison it in a volatile moment. The light may be lurid and the odor offensive, but that is beside the question.

He has caught it again and again in his very newest piece, "Glad of It," which I found still more convincing of his growing power and skill. It was certainly no slight feat to grasp all those fugitive details of a certain order, or disorder, of New York life, and reduce them to a unity which had form and life. But this was what Mr. Fitch had done in his comedy, which with all its farcical excesses had still the complexion of comedy, and with all its extravagance was not unnatural. There were times when it seemed to splay helplessly about, but it arrived individual and shapely, and in the retrospect it showed like a work of art. If its vulgarities made the flesh creep, they were vulgarities of the author's observation and not of his invention, and he was no more trammelled in the immoralities than in the vulgarities of his material: his shoppers and shop-girls, his actresses and their "angels," his floor-walker and stage-manager, and the frightful squabbles of their loves and hates. It was as if he had said to himself, that if he were going to do this thing, he would do it unsparingly; he would not put a pretty face on it; these mean and ugly passions should not even wear tights, but should show themselves naked in his scene. It was his sole duty, if he regarded their representation as a duty at all, not in anywise to tell flattering lies about them; and he has told the truth to the extreme of letting his shop-girls and chorus-girls scold and scream and even swear, when it is their nature to. He has sufficiently defined the fact that others whose nature it is not to, do not indulge these violences; just as in "Her Own Way," he distinguishes society women according to their temperaments and ambitions. The play imparts an extraordinary sense of vitality, of life crude and raw, but most potently gifted in getting there, whatever the destination may be. It is as naïvely pretty and sweet in certain rather spare moments as it is naïvely coarse and selfish in certain other moments which are rather lavish. It is full of the riot of the competition which is the motive of our commercial and political life, and such social and professional life as it shows is seen distinctly as *business*. From first to last it is business which rules the aspirations and intentions, not less in the heart of the good girl who will do any good thing for her lover, than in the heart of the bad girl who will do any bad thing for herself, and will even "marry temporarily" the man she is betrothed to, in order to marry finally the man she really wants. A multitude of things are got into the scheme of a shop-girl blazing into a theatrical star, and then quenching her own light with the fool wilfulness of a wanton; but I do not feel that too many things were got in. There was a vivid and incessant play of invention, but there was no sense of repetition except in the rehearsal scene, though perhaps the love-material was rather eked out at the last. Mr. Fitch's last acts, indeed, are so apt to give way under him that I wish he could invent some means of not having any last acts; I think the dramatic effect would be better, notwithstanding the generally accepted convention of their necessity. What one can more seriously say of the piece, even with its last act, is that it is vastly amusing, and even if sadly amusing, still amusing. Of all its amusing passages, it seems to me that those embodying the shopping scene, with the shabby motives of the shoppers worked, as it were, by the rising and falling elevator, were the most amusing; or there, at least, the pang of regret was faintest. It was such a scene as Miss Beatrice Herford might have imagined and presented, but being adapted to the stage, and not to the ends of her more delicate art, it was so finely done. Much the same might be said of the twilight scene on the veranda of the seaside boarding-house, with the mosquitoes stealing upon the gossip, and inarticulately recognized by the slapping long before their presence was acknowledged by a word.

I hope Mr. Fitch will go on giving us more and more plays, since he seems apt to work free of his faults in that way; and I wish Mr. George Ade would make haste to get "The County Chairman" behind something truer as quickly as Mr. Fitch wipes out a bad thing with a good one. The figure of the chairman himself is what redeems the play, but, excellent as he is, he is not sufficient to do all the work. The chairman is a genuine product of our political conditions, and as Harold Frederic discovered, now a good many years ago, he is where he is more for power than for spoil. Mr. Ade imparts the mid-Western quality of his chairman in characteristic crises, and he does not altogether disable our belief in him by attributing to the whole-souled, cynical politician, in a certain exigency, the mouldy motive of an unaging young love for the wife of the sad deacon whom he is trying to beat for prosecuting attorney. But all the same the motive is too mouldy for use by any but a theatrical playwright. I was troubled in several events of the piece, by the fear that the stage had prevailed too much with the caustic wit, the unerring realist of *Fables in Slang*, of *Pink Marsh*, of *Doc Horne*, of *Artie*; and that he had done what it wished him to do, rather than what he wished himself to do. There was a whistling and a too opportune boy who had come out of the property-room, and there was a troop of Indiana vil-

THE LATEST PHOTOGRAPH OF GEORGE B. McCLELLAN, MAYOR OF NEW YORK

The snap-shot is the latest photograph of New York's new Mayor, taken in front of his residence in Washington Square. On New-year's day, Colonel McClellan formally took control of New York's municipal government. He is the son of General George B. McClellan, commander of the Army of the Potomac, and was born in 1865. After some years' work in journalism, he became, in 1889, Treasurer of the Brooklyn Bridge. He entered the Columbia Law School, and was admitted to the bar in 1892. His service on the staff of Governor Hill gave him the title of colonel. In 1892 he was elected President of the Tammany Board of Aldermen, and two years later was elected to Congress. In the Mayoralty election his plurality was 82,480

lagers who had been translated from a comic-opera chorus for the purpose they were put to. The purpose was such as sopranos and contraltos are never put to in the Middle West, as I recall it; for women take no part in politics there, though they sometimes do so at the East in emulation of Englishwomen politicians. In democracies, women stay at home during political campaigns, quite as much as if the campaigns were military, and the Middle West is distinctly a democracy in this respect. There is indeed one fine instant in which the youth of both sexes mingle in Mr. Ade's play, not only probably, but inevitably, and all flock to see the five-ten express come in, and enjoy the one excitement of their forty-eight-hour day. That is like a touch in some of the *Fables*, and there is a preciously worthless darky in the piece, who is like a vision of the real thing from *Pink Marsh*. There is also an admirable sage in butternut who

Obeys at eve the voice obeyed at prime

when it calls to the saloon, and who otherwise spends his unbroken leisure on a bench under a tree. He is beautiful because true, but the rest, except the county chairman himself, are not true, even when they are beautiful. Of course all this is not saying that there are not many laughs in the piece, or that in spite of the structural unnaturalness there is not much naturalness in it; but it was as if, being perplexed in the extreme by the theatre's insistence as to what a play was, the author had yielded, and let it make something out of his material which, if it was a play, was hard work for the enlightened imagination, and with all its cheer must be a grief for the judicious.

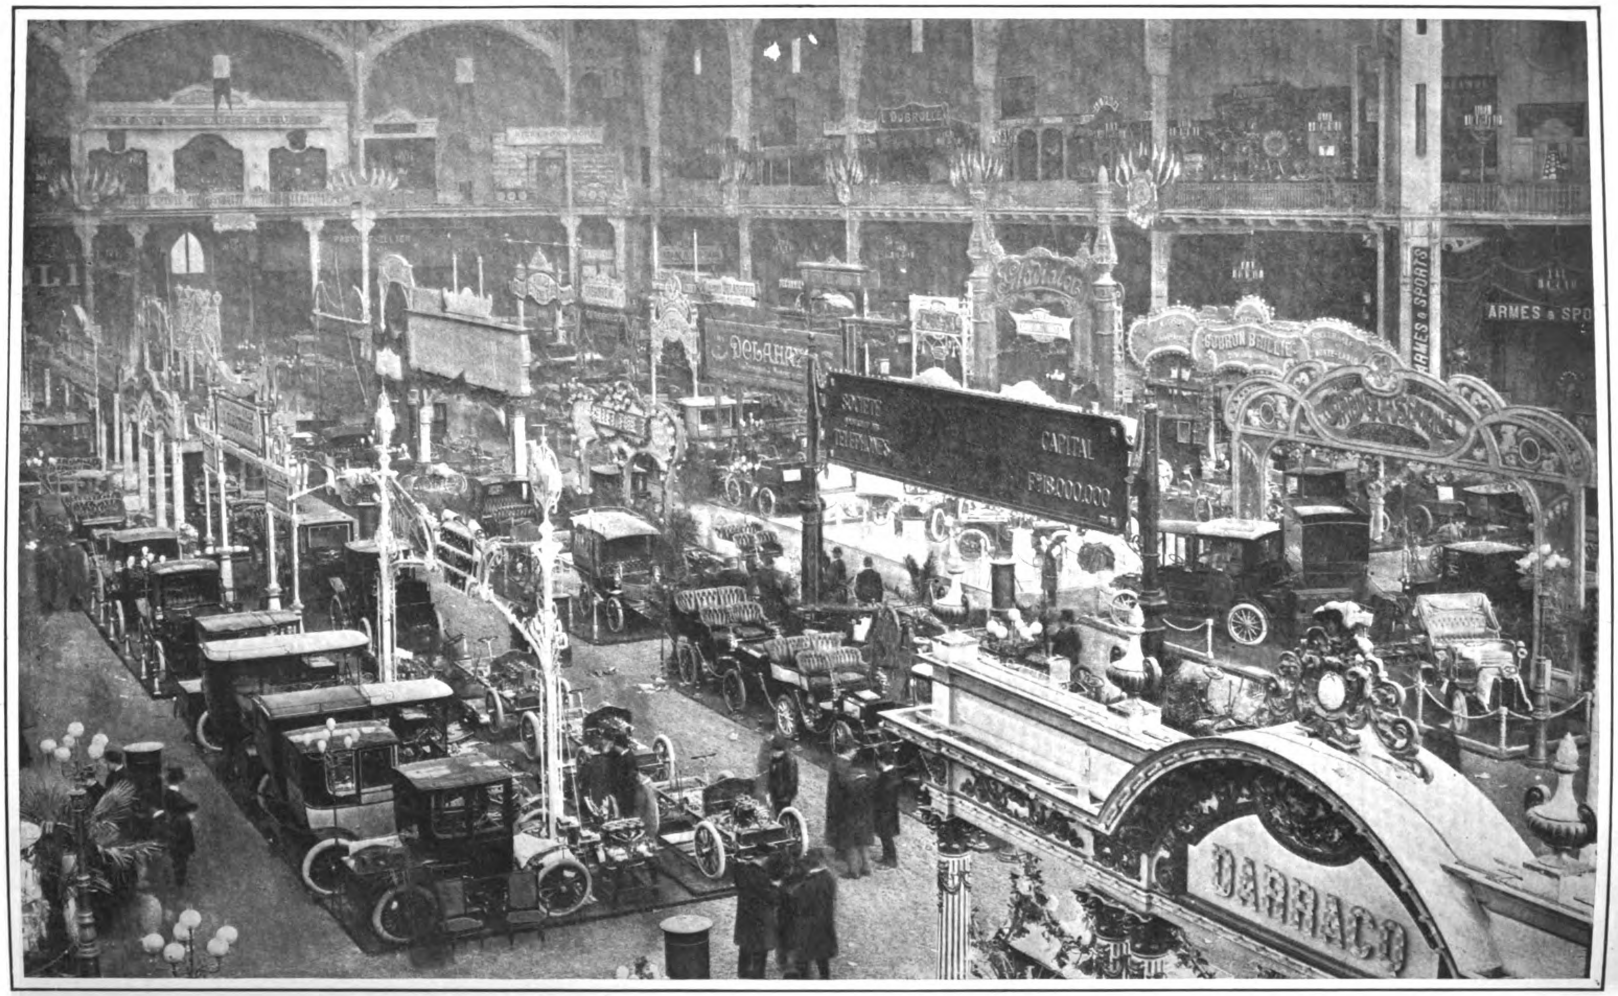
There were really some things in it that no one but Mr. Ade himself could fitly characterize, and I should like especially to have him try his trenchant hand on that boy who has whistled his way through so much rural drama, to such unmerited permanence that my expectation ached for him throughout "Our New Minister," though it ached in vain. Many other things that I could have expected were there, and I think the audience liked them when it got them, largely because it had been looking for them. It was a very simple-hearted audience, which one could easily love, and it filled the popular theatre where the piece was given fairly well. It roared throughout at the Yankee village types represented, and stood a lot of preaching with the interest which the average American still feels in preaching, especially when it assails the old theologies and quotes Scripture against them. Charity for the erring was the theme of these generous homilies, so unsparing of biogtry, hypocrisy, and villainy; and the love interest which is supposed to play so main a part in winning the popular favor was of the slightest. The piece, though perhaps new in New York, was not new, and I was lured to see it in spite of a feeling that I had already seen it somewhere, by the attribution of the authorship to Mr. Denman Thompson, an artist to whom I was willing to make the offering of almost any risk. Without him we should not have had "The Old Homestead," sweetest and simplest of the dramas which are native to us, or in their generations "Shore Acres" and "The County Chairman"; and to an author-actor of his rare quality one must be willing to sacrifice much. I do not say that seeing "Our New Minister" was not too much; but I knew that all about me were people who would have been willing to repeat the sacrifice almost indefinitely. I heard them telling one another what was coming next, and apparently finding great comfort in their foreknowledge. For their sakes, one could wish something better than they were having in "Our New Minister," and something truer than they would have got in "The County Chairman." They seem to me quite worth while, those simple hearts, and I believe their heads are not unworthy of the best the drama can do for them.

One was as far from them as one could well get, both in the action and the audience at the house which witnessed the representation of Mr. Augustus Thomas's play of "The Other Girl," and still remain within the reach of the same dramatic art. Mr. Thomas has come home in this charming comedy from Arizona, Alabama, Mizzoura, Kentucky, and wherever else he has been in Greater America to still Greater New York, and has given us a society play in which passionate girlhood, Philadelphia propriety, self-sacrificing friendship, athletic religion, and physical manhood are the motives that mingle for an effect purely comic. The piece brims with actuality; it is all here and now; and it has a frankness in the operation of its motives, which is in itself very wholesome and refreshing. It is in obedience to the same law which rules in the heart of *Natasha* in "War and Peace," when she is mad to elope with *Anatole Kouraguine*, and in the heart of the society girl who marries the pugilist *Cashel Byron* in Mr. Bernard Shaw's novel, that *Catherine Fulton* tries to run away from her betrothed with *Kid Garvin* the prize-fighter; and in this she is no less natural than mystical. But her friend *Estelle Kitteridge*, who smuggles herself into *Catherine's* place in the *Kid's* automobile, and "saves" her, as women are saved in the theatre, is neither mystical nor natural, but a fake of the novelist's, long past its first youth. It is a pity, for this is almost the sole blemish of a piece, which within the limits of the supposed case, is delightfully possible, and has many moments of delicious veracity. It sparkles with wit, and abounds in humorous satire, which if it never implies a meaning beyond the given instance, is hearty, genuine, and unforced. It is full of laughs, for which one need not afterwards be ashamed, and by this negative praise, I mean almost the highest praise. I could not well give a due sense of the perfection with which each of the persons is characterized, without giving an undue sense of it; but in the case of *Kid Garvin*, I should say that I do not see how he could be better suggested than in the lying frankness, the manly meanness, the strictly limited magnanimity, and business-like chivalry of which his strange mixture is compact. He is to my thinking the great triumph of the piece, which has its chief defect in the fake I have mentioned. Among its minor triumphs I should like to mention the Philadelphia father of *Catherine*, and the absolutely New York actuality of *Waterman* and his wife. It is easy to mention these persons, but to do them as Mr. Thomas does them, could have been by no means easy, even for Mr. Thomas, who has taught us to expect such good work from him.

His comedy pours no such swelling tide of life, life wilful, powerful, forceful, as Mr. Fitch's satire pours upon the scene, but in its one moment of passion, smilingly yet thrillingly recognized, it touches a corner of the heart unreached by the brilliant audacities of the brother dramatist. But here I have confronted two playwrights whom I have been all along saying to myself I would not compare, because that would be useless and senseless, since their qualities are as positive as the defects of their qualities, and a comparison of them could only involve injustice to both. I should like to put the blame on them, as they finally face each other in spite of me, for my intention has been so good. What I can say without regret and without censure is that I am glad to have them both on the New York ground, and to get a notion of how they view it. It is the American ground, with all the American interests densely grouped and vividly foreshortened. I wish they could see above it and beyond it to those wider human interests to which the English dramatists are now inviting our gaze.

Politics in England

By Sydney Brooks



LONDON, *January 2, 1904.*

LIVELY times, possibly tumultuous times, are ahead of us. There is no need to remind Americans that a tariff debate is not a tea-party. No question makes such a universal appeal as that which touches a man's pocket; none, too, arouses such an intensity of personal passion. Englishmen are surprised at the amount of bitterness they are injecting into the discussion of Mr. Chamberlain's programme. Both in quantity and quality it threatens to surpass even the partisan fury of the Home Rule crisis. I have attended many meetings on both sides of the question. Not one of them has passed off without more or less disturbance. The English are not naturally a very orderly people. In their political campaigns, especially, they always seem on the edge of a riot. They have none of the American instinct for legality, moderation, system. The election of an American President is a far more decent and impressive proceeding than the election of an English Parliament. It is therefore no new thing to hear of meetings broken up, platforms stormed, speakers howled down, and all the other playful relaxations of Demos in England. What is new is to find these arguments brought into play so early in the game. After all, we have only had eight months or so of the Chamberlain policy. No general election is on hand: no engagement between the rival forces all down the line has yet taken place; at the most, there have been skirmishes and small affairs of outposts. And yet the public mind is already violently stirred. The running commentaries on the speaker's address which every English audience supplies, the interruptions, the heckling, and the "booing" already show the keenness of the popular temper. When Parliament meets the excitement will be so much the greater, both in and out of the House. When the general election comes—and it is conceivable that, as in 1900, so in 1904, England and America will be holding elections at the same moment—we shall be in the thick of a campaign as intense as the Bryan-McKinley contest of 1896, and far more tumultuous.

I am bound to say that the discussion so far has been on a singularly high level. No democracy anywhere could receive better instruction than the English electorate is having dealt out to it at this moment. In many ways it surpasses even that campaign of education which overwhelmed Mr. Bryan. English speakers excel in this sort of work. They are far better at handling a concrete than an abstract topic. They like to come to close grips with their subject, and to thresh it out without rhetoric or vapid generalization. Tariff questions just suit their prosaic, matter-of-fact minds, and they inundate their audiences with figures and statistics, and explain to them the mechanism of foreign exchange, and read out pages from the Board of Trade blue-books, and delve into the incidence of indirect taxation, in a way that only an English-speaking people could possibly relish. Enlivening it is not, but as a mental exercise nothing could beat it. You get some of the finest intellects in the country expounding the principles and the details of a subject that is exceeded by none in its ramifications or its difficulties. Every nation once in a while should go through such an experience, should make a return to first principles, and examine the foundations of its structure. England especially needs a periodic shaking-up, and there can be no question she is getting it now. Thanks to Mr. Chamberlain, there is a mental stir throughout the country such as has not been felt for a dozen years or more.

And what progress is protection making? It is difficult to say.

THE AUTOMOBILE EXHIBIT IN PARIS

At the Paris Automobile Show, opened at the Grand Palais des Champs Elysées on December 10 by President Loubet, 970 exhibitors showed machines of all classes, representing the automobile models for 1904. One of the most interesting exhibits was the new motor-train of Colonel Rénard. By an ingenious method of coupling, the train can turn corners without the aid of rails. A jointed, revolving shaft connecting the train transmits the power of the locomotive to all the cars, turning two wheels on each; and by a contrivance under the control of the engineer each car, in turning, makes exactly the same arc as the locomotive

England is intensely local in its politics. The most Radical and the most Tory constituencies lie cheek by jowl, each to all appearances unaffected by its neighbor, each firm and even stubborn in its own faith. It is only very rarely that those "tidal waves" of opinion that are so common in America sweep over England. Perhaps it is not more than once or twice in a generation that you can infer the opinions of the country from the opinions of the average man. Local circumstances, local influences, peculiarities, interests, hold their own more successfully here than anywhere else I know of, and make the gauging of public sentiment a matter of the greatest difficulty. The English Demos has a habit of keeping silent till the last moment, and then of roaring in a way that those who profess to know him best have least expected. One finds, therefore, the most divergent opinions expressed by men in whose judgment one has equal confidence. Some say that Chamberlain will sweep the country; others, that his policy has been so thoroughly pulverized that to expose it any further is a mere waste of time, and that Liberals in consequence would be better employed in preparing an alternative policy, and no longer resting on the mere strength of negation.

What makes the question all the harder to answer is that there are two policies before the country — Mr. Balfour's and Mr. Chamberlain's. Mr. Balfour, while sympathizing with protection, food taxes, and preferential treatment of the colonies, believes that the country is not yet ripe for them. He therefore advocates retaliation. He wants a mandate that will enable him to reverse the doctrine that taxation is only to be imposed for purposes of revenue. He has expressly disclaimed the idea of setting up a permanent tariff. All he asks for is the power to erect one to meet a special emergency.

Mr. Chamberlain, of course, goes further. His policy is naked protection, complicated and to some extent alleviated by colonial reciprocity. The inconsistencies and ambiguities of such a situation are practically endless. You have the Premier applauding a policy which he refuses to advocate. You have members of his Cabinet supporting Mr. Chamberlain's bolder scheme in the open. You have Parliamentary candidates returned as Balfourites, and yet claimed by the Protectionists as Chamberlainites. The truth is that no one believes in the Balfourian half-way house of retaliation. The force of circumstances, it is thought, must in the long run make the Prime Minister toe Mr. Chamberlain's mark. At the same time, the adroitness and usefulness of his intermediate policy are, from the party point of view, unmistakable. There have been several by-elections since Mr. Chamberlain started his campaign. At not one of them has a single candidate yet ventured to say that he approves the taxation of food. All have taken refuge in the Balfourian formula of retaliation, well knowing that before long that formula will be stretched to cover the whole of the Chamberlain programme. It is at least skilful electioneering: it embarrasses the Liberals; and by confusing the issues it misleads the electorate. At the same time, it is essentially disingenuous and demoralizing. The only way to meet it is the manly way of the Duke of Devonshire. The duke has advised his supporters—those Unionists, that is, who are also free-traders—to vote against any candidate who favors either Balfour or Chamberlain. The duke sees, what before long every one will see, that retaliation and protection must ultimately merge. Meanwhile the milder policy has done duty as a shelter for the doubters and fence-sitters, and accustomed them gradually to the larger programme. That is to say, it has in great part served its purpose of keeping the party together.

Nevertheless the Unionists have split beyond hope of reconciliation. Mr. Balfour's consolation must be that the split is *not* so serious as it might have been. The Duke of Devonshire, Lord Goschen, Lord George Hamilton, Mr. Ritchie, Mr. Winston Churchill, and Lord Hugh Cecil have seceded *in toto*, and Sir Michael Hicks-Beach, while apparently in favor of retaliation, has pronounced firmly against the food taxes. The secession perhaps is more formidable *in* quality than in quantity, in the character, position, abilities, and experience of its leaders than in the number of their followers. Like *all* "bolters" they *find* themselves for the moment awkwardly placed, belonging neither to the one party nor the other; but the stress of events must in the end force them into alliance with the Liberals, an alliance that may perhaps embrace more than the fiscal question. The Liberals themselves ought to be grateful to Mr. Chamberlain. He has done what nobody else could have done — he has actually united them. But though Liberal unity is now a fact, it is not a fact which everybody recognizes. The divisions and dissensions of that unhappy party have for years been so acute and so publicly exploited that even professing Liberals are slow to believe that harmony reigns once more. To bring it home to them as emphatically as possible, some ocular demonstration is needed—a meeting, in short, with Lord Rosebery, Sir Henry Campbell-Bannerman, and representatives of every section appearing on the platform together. Such a meeting is now by way of being negotiated, and possibly before Parliament meets it may already have been held. Nothing, at any rate, could do more to strengthen the opposition to Mr. Chamberlain or to convince the country that the Liberals really possess sufficient cohesion to form an alternative government, if and when their chance comes.

So that Mr. Chamberlain has a pretty long row to hoe. Not a single statesman of the first rank has openly sided with him. He has welded his opponents together; he has split his own party; he is fighting one of the most ingrained prejudices that the English people possess; and he is within a very few years of seventy. And yet this indomitable man keeps it up with a courage and confidence impossible not to admire. Were he to die to-morrow the whole movement would utterly and entirely collapse. It is a one-man agitation, drawing all its sustenance from his inspiring personality and the lucid power of his eloquence. As an electioneering performance it could scarcely be surpassed. As an essay in economics it has, as I believe, displayed a monumental ignorance alike of fact and theory and British conditions. As a revelation of Mr. Chamberlain it has been more than adequate. Never has he seemed so great and yet so small, so entirely unscrupulous in his arguments and yet so skilful in dressing them up, so vicious and petty in his sneers and abuse and yet so finely moved by his imperial mission, so self-reliant or so shifty, so supreme a tactician and yet so poor a statesman. With it all, I still believe he will win.

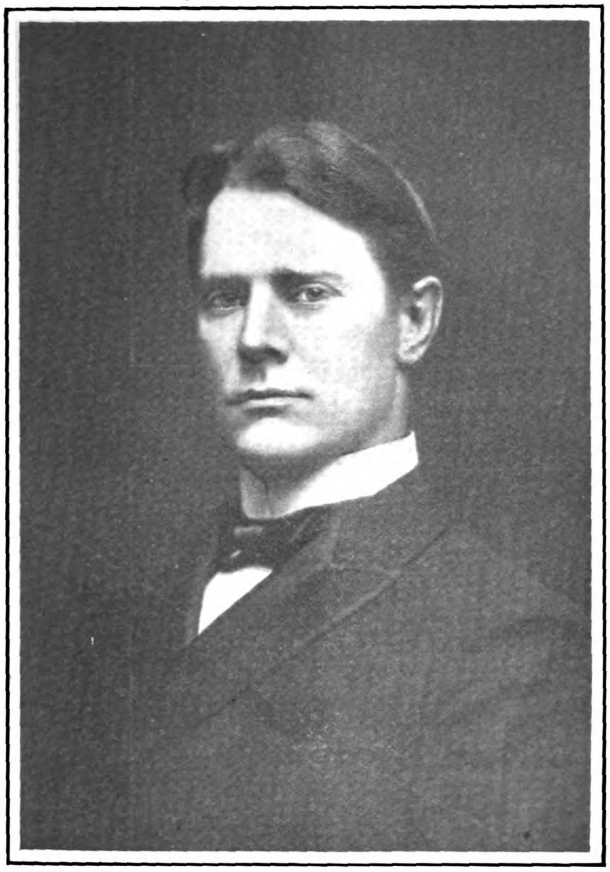
The Derelict

By Louise Morgan Sill

A DERELICT am I,
A child of mournful fate—
No home but the sea and sky,
No captain and no mate.
My steersman is the wind,
And never a crew I see,—
They wrecked me here at the cold New Year,
And straight abandoned me.

I've sailed a many a mile,
And curious sights I've seen.
I've rocked where the tropics smile,
And far to the North I've been,
Where ice-bergs threatened me
With a cell in a frozen grave,
But here and there some unseen care
Contrives my hulk to save.

I've passed in the long Gulf Stream
A thousand ships or more.
I've seen the lookout dream
Of his wife and babes ashore.
I've floated by his prow,
All menacing of death,
So near, so near, that I could hear
The indraw of his breath.



I flee in the desert night,
Before the storm alone,
For peace and the morning light
My tortured timbers groan.
No crime is on my soul,
Yet, with a thousand jaws
To harry me, the pitiless sea
It gnaws, and gnaws, and gnaws.

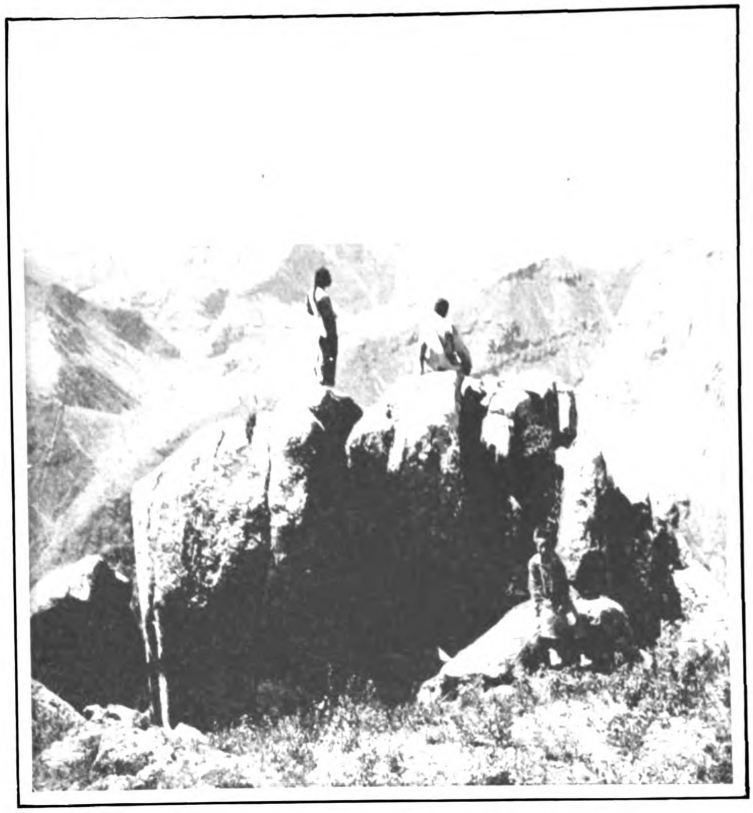
Books and Bookmen

By James MacArthur

ONE of the most important volumes of 1903, treating of a subject of universal and timely interest and of grave international significance, was published just before the close of the year. *The Russian Advance*, by Mr. Albert J. Beveridge, Senator of Indiana, comes to us at a critical moment affecting the great world empires, while negotiations between Russia and Japan are being daily reported in the newspapers, and war between these nations seems imminent. The dispute over the possession of Manchuria and Korea has suddenly found us eager to be informed on a question that has hitherto been of remote interest to the general public, however well informed the various national diplomats have kept themselves since Manchuria was ceded by China to Japan, and Russia stepped in to colonize it. Senator Beveridge is well equipped to enlighten the public on conditions existing in Manchuria, having spent some months in Russia, Manchuria, and Korea studying the Russian-Japanese controversy, and making a complete investigation of the political, social, military, and industrial situation. "Preparedness," says Senator Beveridge, "is the secret of most successes in this world." The secret of Mr. Beveridge's qualifications to present in a cogent, luminous, impartial, and graphic manner the last word on this momentous Eastern problem, which has become the engrossing question of the hour, lies in the close study he has made during the past few years of this special field, which has found him of all men most prepared to report at first hand the historic facts of the case, and to make philosophical application of them. Two years ago, on his return from the Far East, he published a series of articles in the *Saturday Evening Post*, which excited great interest at the time, and form the basis of his book. At that time Mr. Beveridge described the situation in China as affected by the operations there of two or three European nations, and pointed out the causes and conditions which seemed to presage the probable conflict between Russia and Japan, which has now come.



Senator Albert J. Beveridge
Author of "The Russian Advance"

The story of *The Russian Advance*, as Mr. Beveridge tells it, has all the fascination of opening a new page of history, and unfolding a panorama of progress which has been going on silently and unheeded, that almost startles and takes one's breath away. For decades, he points out, the world has been dimly conscious of a gray-clad militant figure standing on the frozen shores of the Pacific, gigantic in proportions, but vague and indefinite in outline. The world, and especially the American people, have gone about their business without a thought of the spectre, which, after the first surprise at its appearance, was allowed to become a mere commonplace, without meaning or interest. But within the last five years the Russian's presence on the Pacific has claimed the acute attention of every cabinet in Europe, and of every thoughtful American citizen; for he is now manifest on the Asiatic shores of that ocean in other guise than that of the uniformed bayonet-bearer of the Czar. "I thought that Japan took the lower part of Manchuria, including Port Arthur, as the price for ending her war with China," remarked a travelled American to Mr. Beveridge on board a great German liner bound for Hong-kong. "How, then, can Russia be occupying that same land?" This is the pertinent question of the moment, and its answer, which Mr. Beveridge has set forth in his lucid and picturesque narrative, relates to the most fascinating part of Russia's Manchurian advance on Asia. From the time of Peter the Great, whose vision embraced all future Russian policy, so far as the eye of man can now discern it, one vast purpose of Russia has become so fixed as to be almost a religion, and that is the determination of the Slav to reach the seas where summer skies await him and over whose waters the winds of commerce blow. "There is something pathetic about the effort of the Russian to reach the oceans of the globe—to sail the seas that other men sail, to make the ports that his brothers make, and to meet his fellows face to face in all the harbors of the world. There is something that wins our sympathy in the Russian's almost instinctive attempts to escape from his vast and mighty cage, unequalled in its own extent though that cage may be. . . . For this priceless privilege of the seas, the Slav has for centuries been battling, until by sheer experience in the concentration of his energies and thoughts on foreign policy, he has become the most finished diplomat in the history of negotiation, and the first in foreign affairs among the statesmen of the nineteenth and twentieth centuries."

With the colonization of Manchuria and the occupation of Port Arthur, Russia has gone far to achieve its end—an achievement so simple and so easily accomplished that, as Mr. Beveridge says, to readers of the world's affairs it appears as sheer luck or else a very miracle. In the summer of 1901 a single ship of the "Russian Volunteer Fleet," which Mr. Beveridge inspected at Port Arthur—Russia's Manchurian stronghold on the ice-free sea—had landed at another port 1500 Russian peasants. These peasants were not sent into Manchuria, of course, but they were set practically on the Manchurian frontier; and surely and swiftly the agriculturalist and the artisan, the humble hut of the Russian peasant and the untiring patience of the Greek Church planted new seeds of the Slav empire on the fresh fields of the extending Russian dominion, and have kept pace with the hundreds of miles of railway lines being built by Russia across Manchuria, granted by Japan. In the late summer of 1899 three Russian war-ships lay in the beautiful harbor of Nagasaki, Japan. "Oh yes, we are getting used to that," said an English merchant, whose attention was called to the Russian colors. And it was natural enough, for Nagasaki is a coaling-station. But in 1901 the sea-flag of the Czar floated from a ship in the roadstead from which the Woosung River leads up to Shanghai, the commercial clearing-house of China. "Ten years ago that flag was seldom—in fact, hardly ever—seen in these waters." Again it was an English merchant who spoke, one who had spent his entire life since boyhood in commercial enterprises in the Far East. "It is a multiplying circumstance," he went on, "and it has its counterpart right here among our business houses. The most active, aggressive financial institution in Shanghai to-day is the branch at this place of the Russo-Chinese Bank. It is not yet so great as some of our other banks, but it is making itself felt very effectively." So the Russian advance is a commercial and financial as well as a military movement—a diplomatic advance, too—throughout every province of the Flowery Kingdom; an advance by merchant vessels and war-ships; by railways, by Russian peasantry, cultivated farms, and permanent homes, by all the activities of peace into the very centre of Manchuria, which, until this very moment the world's wisest statesmen have insisted and believed was permanently Chinese territory. It was thus the Slav took his first step in Manchuria; it was thus that he found himself prepared to extend his advantages, his railroad, his power, his dominion southward through Manchuria, and to occupy and fortify the best ports for commerce and war, with only two exceptions, on all the coasts of China. Thus has been realized, at last, part of the nation's great passion and dream, and thus the world beholds the beginning of the fulfilment of the policy of Peter the Great—open ports on open seas

Is the Sun Hot or Cold?

By R. W. Wood, F.L.P.S.

Professor of Experimental Physics at Johns Hopkins University

THAT the earth receives heat from the sun must seem to almost every one a self-evident truth. A certain Mr. Warder, however, denies it most emphatically in a recent magazine article. The fantastic and wholly illogical arguments which the author makes use of are hardly deserving even of adverse criticism, and it is doubtful if he is taken seriously by any save the feeble-minded. I have been asked by the editor of HARPER'S WEEKLY to prepare a short article setting forth some of the arguments for and against the emission of heat by the sun.

So far as I know, no reasons at all for doubting the high temperature of the central body of the solar system have ever been found. There are in general three distinct ways in which heat can be transferred from one body to another—conduction, convection, and radiation. The first two are dependent upon the presence of matter, the latter will take place across a perfect vacuum. We may receive heat from a stove by all three methods. If we place our hands upon it we receive heat by conduction; if we hold them above it they are warmed by convection, the heat being brought to them by the rising current of hot air. If now we stand in front of the stove we still feel its warmth, the sensation in this case being produced by the heat waves which it emits. These waves are similar to the electric waves used in wireless telegraphy, differing from them only in their length. They bear the same relation to them which the ripples on a mill-pond bear to the Atlantic rollers. With the instruments at our disposal at the present time we can measure the length of these waves as accurately as we can measure the length of a table with a foot-rule, and we can prove that they will pass through a vacuum, a plate of glass, or a tank full of liquid air, without losing their ability to warm our hands. We find, however, that if we pass this radiant heat through certain substances, water-vapor, for example, its intensity is diminished, owing to the fact that some of the waves have been absorbed. It is possible to determine the exact length of the waves of heat which have been removed by absorption in the vapor, and if we test the radiation which comes to us from the sun, we find that waves of this same length are absent, the water-vapor in the earth's atmosphere having refused to transmit them. This fact, taken alone, is pretty good evidence that the sun and the hot stove are pouring out the same kind of energy.

Mr. Warder tells us that heat cannot possibly penetrate the cold of space, and that it is impossible to force an atom of heat from the sun to the earth. It would be interesting to hear his definition of a heat atom. The philosophers of the seventeenth century believed heat to be a substance, but their material theory was disproved more than a century and a quarter ago. Mr. Warder appears to have raked it out of the refuse heap of science.

Experiments in the laboratory have shown that when a body is heated it emits heat waves, the lengths of which are governed by a certain law. As the temperature is increased, we get shorter and shorter waves, until finally the very short ones which we call light begin to appear, and we say the body is red hot. Measurements with the spectrometer and bolometer show just what proportion the waves of a certain length bear to the total radiation at any definite temperature, and it is therefore possible to determine the temperature of a body merely by examining the radiation which it emits. Now it is found that the proportion of long to short waves in the radiation which comes from the sun is precisely what we should expect from a body heated to a temperature considerably above that of the electric furnace. The same law which governs the emission of heat by bodies heated to a high temperature in the laboratory, governs the heat emitted by the sun, and by studying the proportion in which the waves of different lengths are present in its radiation it has been possible to make a fair estimate of its temperature, which is probably not far from 6000 degrees.

Let us now examine some of Mr. Warder's alleged proofs that the sun is a cool body, sending no heat to the earth.

"Heat is not from the sun," says the author, "as is proven by the flight of meteorites, for when the meteors strike our atmosphere they have an opposite polarity to the earth, and they create friction and generate heat." Disregarding the preposterous and meaningless statement regarding polarity, which exists only in the imagination of the author, what possible connection is there between the heating of a meteoric stone and the emission of radiant heat by the sun? It would be as logical to argue that a stove radiates no heat into a room because pounding a penny with a hammer makes it hot.

Mr. Warder next informs us that the sun's photosphere and the earth's auroræ are of similar nature, a statement which is so absolutely false that one cannot but feel that he has made use of the word photosphere without knowing to what part of the sun it is applied. In another place he contends that the nebulæ are cold, and shine by reflected light, refraining, however, from giving us his reasons for contradicting the evidence which the spectroscope furnishes us that they consist of masses of incandescent gas. His hobby appears to be to make the entire universe cool and inhabitable—everything shining by reflected light—but he does not tell us where the light comes from by which they shine. Heat he imagines to be the result of a transformation of electric waves (coming originally from a cool body) in the atmosphere of our earth. Planetary bodies which are devoid of an atmosphere cannot then be heated by the sun, for he makes the positive statement that heat cannot exist where there is no atmosphere. In spite of this ultimatum the millions of carbon filaments in our electric lamps continue to give out both light and heat.

The law of gravitation is next demolished by the ambitious author, who refers all planetary motion to electricity, thereby placing himself in the same class with the peripatetic quack doctor, who loudly shouts, "Electricity is life," believing that he has explained it all.

"There is an unanswerable fact," we are told, "that proves the sun's corona is cold, like our auroræ, and that is the unquestioned fact that comets have passed through it without being affected in the slightest. These comets were excessively cold, and the corona must have been cold, or there would have been a disastrous explosion."

Assuming the comet to be cold, which is by no means certain, what evidence can Mr. Warder cite which proves that the comet was not heated to a high temperature during its passage around the sun? The substance composing the comet could be heated to a temperature of a thousand or two degrees without experiencing any change that could be detected with the telescope when the comet again came into view. It is possible to calculate the approximate temperature of bodies heated by solar radiation at different distances from the sun, and the statement that the comet would explode is absurd, unless Mr. Warder's comets are made of gunpowder, a notion which is quite as reasonable as some of his ideas.

He makes no reference to the indisputable testimony of the spectroscope, which proves that the sun is surrounded by a dense atmosphere of metallic vapor which can only exist at an exceedingly high temperature. The presence of iron vapor in the sun's atmosphere is as definitely proven as the presence of salt in the ocean.

The electric waves, which we are told come from the sun, are described as being exactly similar to the waves used in wireless telegraphy. As soon as they strike our atmosphere they are transformed into heat in some remarkable way,—the precise mechanism of the transformation being left to our imagination. We are not told, however, why the same thing does not happen to the precisely similar waves used in telegraphing, which, according to Mr. Warder's theory, ought to be detected at the distant receiving-station with a thermometer instead of a coherer. It is quite true that the heat waves from the sun are similar to the electric waves, as I have already said, but we can measure their length, and we know that waves of such shortness and intensity as those coming from the sun can only come from a solid or liquid body heated to a temperature far hotter than the electric arc. Heat waves are about 1-25000th of an inch in length, while the electric waves which we employ in signalling may be many hundred feet long.

Mr. Warder's writings ably illustrate the old saying that "It is better not to know anything at all than to know so many things that are not so."

How Shall I Educate My Boy?

By Charles F. Thwing, D.D., LL.D.

President of Western Reserve University

IN certain great fundamental respects of purpose, method, condition, and force, the education of your boy and mine and of all lads is to be made alike. One of these primary conditions relates to health.

Before me, as a college officer, there pass reports of hundreds of boys and of girls, largely Freshmen, touching the condition of their bodies. The statement of defects and deficiencies, of malformations and of no formations, is surprising and painful. The ills and the weaknesses extend from ankle bone to optic nerve. Curvature of spine, unequal height of shoulders, defects in vision, are the more common ailments, and they are painfully common. A teacher of gymnastics, who has met hundreds, and I might almost say thousands, of students, has said to me never had but one perfectly formed and thoroughly healthy student been placed on official hygienic lists. Of course the standard was high, as it ought to have been. But it is safe, at all events, to say that the bodies of most boys and girls are not so well formed at the age of twenty as they would have been had proper care been given and taken. A certain share of children are not well born; but even of those who are not well born, the larger share are allowed to abuse and to injure themselves. Therefore the first thing that I have in mind in the education of my boy is his health. My youngster goes to a school, of which the buildings are large, well warmed, well ventilated. He goes away with me in the morning at eight o'clock; he returns at six o'clock. The intervening hours he is spending under good physical conditions, as I have intimated, in the pursuit of knowledge. His lunch he takes at the school building. His play, at football or tennis, he takes every afternoon under the supervision of the school authorities. Such outdoor play belongs to the fall and the spring months. The close of each day of the winter-time he spends in the gymnasium, also under an instructor. But in every season of the year he closes the day's work and play with

a shower-bath or with a swim in the pool. He walks home after five o'clock, about two miles. Reaching home, he rushes in crying, "I'm as hungry as a bear!" I presume my boy is getting some knowledge; I know he is. But I also am assured that his growth in stature is well cared for; he is a healthy boy.

The vigor of maturity, the energy of permanent working power, the length of service and of life, depend, in a very large degree, upon the growth and the health of the years of the second decade of the boy's life.

I have intimated that my son is at what may be called a home school. It is a school in the city wherein he dwells. But it is not a school in the sense in which many schools are called a home school. That condition in which the boy is able to have the advantages of a school away from home,—which is the advantage of independence,—and also the advantage of home itself, which is the comprehensive advantage of love, is, in my thought, the best for most boys. I think that the ordinary home parts with its sons at a too-early age. Jean Ingelow somewhere says, speaking for a mother and her children, "to bear, to rear, to love, and then to lose." For their own comfort and happiness parents want their children, and for their own growth in noblest elements of character parents need their children. Boys, too, need their parents; the supervision, wisdom, suggestiveness, direction, and love of the home they require. Most boys are savages. No ruler is so well fitted to transmute the savagery of boyhood into the dawning civilization of early manhood as the wise, strong parent. Therefore the school which gives independence without alienation from the home, and the home which gives motherliness and fatherliness without an excess of the manifestation of affection, represent the best condition.

Your son and my son also should have as long a training as possible. By long I do not mean merely length in time; I mean richness in quality as well. Merely temporal length should not be gained through the heavy cost of sacrifice of essential values. But most boys have a training altogether too brief in time, as also altogether too poor in quality. The course of a class from the day of its entering the public schools until the day of its graduation is a course like the march of an army in retreat—it is marked by what is lost. "Of the 7785 pupils who were in the first grades of the Cleveland schools in 1889, 2024, or about 26 per cent., were in the highest grade of the grammar schools about eight years later. Of these, 1253, or about 16 per cent. of the original number, were in the first-year high school in the following year, and 664 of them, or between 8 per cent. and 9 per cent. of the original number, were in the senior classes of our high schools four years later." Such a decimation may not be so thorough in many schools as obtains in the schools of Cleveland, but in every system of schools the slaughter of the innocents is great. To think that three out of four of all the pupils who enter into the primary school have dropped out before the close of the last year of the grammar school, and to think that more than nine out of every ten pupils who enter the primary schools do not survive until the close of the high-school period, represents a tremendous fact for not only the American school, but also and more for the American home and American civilization. Therefore, the duty of doing all that can be done to make the education of the ordinary boy and girl as long as possible is absolutely plain. A prolonged infancy, of course, not being too prolonged, represents a prolonged and more efficient maturity.

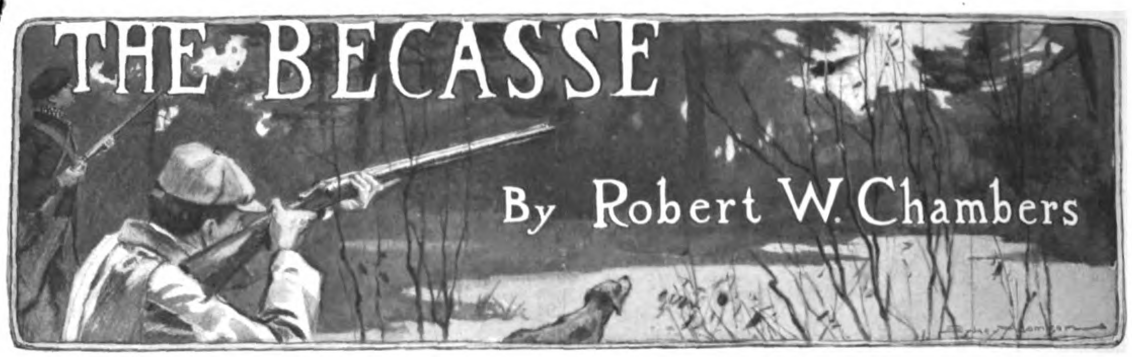
The chief method of prolonging education, either in point of time or through efficiency, lies in better teaching. Two years, at least, in the school period between six and eighteen, could be saved by the enrichment and improved discipline of the teaching staff. The teacher under whom we wish placed your child and mine is to represent and embody fundamental elements of the best character. The teacher is to be sympathetic. He is to be able to put himself inside of the student's brain, to see with the student's eyes, to hear with the student's ears, to feel with the student's heart. Such sympathy is quite as valuable, and some would say more valuable, than a knowledge of the subject taught or than aptness to teach. In fact, aptness to teach arises in no small degree from intellectual and emotional sympathy. This sympathy represents the essential element of love. This love is not a mere emotion; it is a will for the betterment for the boy. The teacher is to use knowledge as a means of helping the student. He is to teach not German, Greek, geometry, he is to teach boys. The teacher, too, is to use knowledge as a means, not as an end. The primary intellectual end is to promote the power of thinking. Accuracy, a sense of proportion, thoroughness, represent qualities of thinking which the conveying of knowledge should train. I also want the teacher of my child to have enthusiasm for humanity. I wish to inspire my child with the abounding desire to do something worthy, to help men. Constantly I wish to be placed before my child the highest purposes, of doing his work for the sake of helping forward, even in the least degree, the great movements that constitute the essence of civilization.

I wish, as I have intimated, that my son, while he is being educated, shall have a purpose; but this purpose I wish to be of the most general character. Both parents and children are overinclined to desire to conceive and to select a specific purpose at a too early age. A father, whose son is sixteen, frequently says to me, "I don't know what work my boy will take up." Of course he does not know; neither parent nor son ought to know. Education is largely a process of self-discovery. Education reveals the potentialities, the aptitudes, as well as, be it said, the essential weaknesses of the youth. One chief reason of education lies simply in the purpose of finding out one's essential nature and character. In fact, if the choice of a life's vocation be made early a mistake often results. Temporary preferences are misinterpreted as permanent choices. Waste, disappointment, failure, misery, may thence result.

But, although the specific purpose should not be entertained, the general purpose of self-enlargement, self-enrichment, self-control, should obtain. Mr. Gladstone wished for a time in his early career to become a clergyman; many of his friends thought that he ought to, and would, become a clergyman. His father did not desire that his son should become a clergyman. If Mr. Gladstone's early wish had controlled, there would, of course, have eventuated a great bishop or archbishop; but it is probable that Gladstone made richer contributions through not following his early purpose, Downing Street, not Canterbury, was his proper seat of power. Yet the great qualities of mind, heart, conscience, will, character, were so well disciplined in the course of his education that when specific problems were set for his doing he addressed himself to them with superb efficiency. Gladstone speaks of concentration as his chief characteristic. But with this mental and moral quality were united a magnanimity and gravity, a courage and a courtesy, a sense of orderliness, patience, practical aptitude, a union of self-confidence and self-distrust, self-control, a tact and a tolerance, which constituted one of the greatest men of modern times. These elements were the qualities which received signal discipline through the associates and associations of his educational career. *The training of a great manhood*, therefore, in order to render effective service to humanity, I would place before my boy as an atmospheric and general purpose. I would not so place this purpose before him as to develop self-consciousness. Let all intimations of a mission or a career be eliminated from his conscious thinking. Let his boyhood be natural, simple, happy. Let not the boyhood be spoiled by trying to make it a *jejune* manhood. But so far as the boy at the age of fourteen or sixteen does at all live in the future,—and many boys live in the future more than we think they do,—let that future be large, great, high, worthy of the best.

If such a future, in such conditions, I can keep before my boy, then at the age of twenty-one or twenty-two he will be able to choose his life's vocation. I will gladly let him choose his own career. Not a few fathers hurt their sons and damage the careers of those sons by picking out careers for them. Train up the boy in the way he should go, and then let him choose his own work. In the choice of a vocation, as in the choice of a wife, every young man should be left alone. If he is not worthy of being left alone, the parent has grievously injured the boy in the preceding decade of his life.

The sum, therefore, of what I am trying to say about the education of my son relates (1) to the promotion of his health, (2) to his being at once at school and at home, (3) to the best use of his time and education, which use is made more effective by good teaching, (4) by holding before my son a general, although not a specific, purpose of the highest character.



These interpretations mean that I would not educate my boy under a private tutor. I would educate my boy with boys, although not entirely by boys. Boys do, however, educate boys; but a boy who is trained alone is liable to fail in adjusting himself to his membership in humanity. He is to become a brother of the common lot. He therefore should learn early how to adjust himself to his fellows. Furthermore, he will lose a great deal of fun by not being with the boys. It is, furthermore, difficult, practically impossible, for me and for most people to employ a private tutor. When I associate myself with a score of other people in a private school we can afford to get great men and women as tutors; but alone it is impossible. An unworthy man, too, as a private tutor is, indeed, a fearful looking forward to a yet more fearful judgment day.

Neither would I educate my son abroad; he is an American boy. I should be glad to have him get all that is best from the private school in Lusanne or Geneva, but not for one instant would I have his ideals formed by the French master, or his methods by the German. A primary note in his character should be the American, although a note more fundamental is the human. He is, as a human boy, to be trained up for service in this great, interesting, new life of our New World.

In closing, there are two words which represent two elements of education that seem to me of utmost importance for the home and school to represent. The child should be trained in the atmosphere of trustfulness. The parent should rely on the child's honor, should have confidence in the child's statements, should believe in the child as seeking the best. Nothing so makes a child worthy of trust as trust; nothing makes a child so worthy of distrust as distrust. At the age of fourteen I went away from home to fit for college. The temptations of that early time and of the remaining years of the 'teens were the severest I have known. Nothing more constantly or greatly helped to keep me pure than the knowledge that my father and mother trusted me. It used to be said by the boys at Rugby, "We would not lie to Arnold; he'd believe us."

It is also, I think, as blessed as it is important, and important as it is blessed, for the child to be brought up in the companionship of his father and mother. I have seen children in whose companionships I have felt that parents could not take much happiness; the vision was a sad one. I have also, be it said, seen parents in whom children could not find companionship; the vision was still more sad. A companionship, however, of an inferior with a superior, or of a superior with an inferior, may be noble and helpful on both sides. The companionship of a parent and child may be, too, a companionship as of two brothers. It is told of a boy, a member of a public school in the Boston district, that he was asked who was the Governor of Massachusetts; his reply was, "I don't know." The teacher said, "When you go home ask your father who is the Governor of Massachusetts." On returning, the boy was asked, "Who did your father say was Governor?" and the boy said: "He said he was! But, you know, I could not believe him, for he is always fooling with us!" That intimacy of companionship embodied in such a story, in case the parent be worthy, represents one of the most beneficent conditions for the education of a son.

THE BECASSE

By Robert W. Chambers

SICK and tired of hearing the very word "becasse,"—the word to which so many unconvincing tails had been appended,—the word which had become a keystone for the fabric of lies builded by every French and Breton sportsman in the vicinity,—I made up my mind that when again that word "becasse" was uttered in my presence, I too should have something to say on the subject. And I hoped, for the sake of my morals, that what I had to say might be more or less truthful.

"Becasse," in French, means woodcock; not our own smart little American gamebird with his ochre or deeper saffron-colored breast, and his treble twitter and his fascinatingly uncertain habits which endear him to us all; but the European bird, a big bull-headed, mottle-breasted creature, almost as large as a young ruffed grouse, rising with a deep whir, in which lingers a faint thunderous sound long after two barrels of No. 9's have speeded him over the pines and into a too-distant tangle of hopeless swamp.

In England the becasse is appallingly scarce; in France less so; in Brittany, Department of Finistère, I had not yet found out whether there were any or many. But I meant to.

My first information came from a breezy specimen of American artist: "Woodcock? Why, last year an Englishman bagged eight brace—"

And so forth.

In the long smoke-stained oaken room of the tavern where Bretons and Frenchmen collected to drink Morlaix cider and lie to each other and to me, the impassioned torrent of prevarication was always checked by the word "becasse"; and one and all laid down their pipes and shoved aside their glasses, while a spontaneous and simultaneous "A—h!" echoed the introduction of that word "becasse."

"Are there any?" I would demand, sulkily.

"Any? Parbleu! T'nez, m'sieu, Gilbert and I, on the last day of October—"

And so forth.

"*Are* there any?" I would repeat, more sullenly.

"'Crè nom! Why, on Saturday the pilot of the port, passing by St.-Julien—"

And so forth.

"No doubt," I would sneer, "but it's funny that *I* never put up a becasse. Monday we were all day with the partridges, Pierre Marie and I,—and Luff quartered St.-Julien so close that a cliff-mouse couldn't have escaped. Tuesday we cut up the Laïette cock-coverts and drew two pair of mallard, a curlew, and a dozen vanneaux. Wednesday was a mixed bag; becassine on the marsh, curlew and widgeon west of the semaphore, and a hare on the cliff. Thursday we scored pheasant and partridge beyond St.-Jean; and if I can't hit everything that flushes I can *see* it. And it's very funny, isn't it? that I never saw a becasse," I sneered, swallowing my cider and walking out of the door amid a pained silence from the ancient and honorable guild of liars.

Down on the sea-wall there was moonlight. Alex, a giant Breton, was also there; and when at a whistle my pointer, Luff, joined us, the company was complete.

"As a matter of fact," I said, "repetition does its work sooner or later. Alex, there are woodcock here, aren't there?"

"Dame,—when there is a flight we have them sometimes."

"Many?"

"No, monsieur. Where are there many woodcock?"

"To listen to those buffaloes in the tavern you'd think the woodcock were crowding out the chickens in Finistère," I said.

The quiet Breton smiled, patted Luff, and turned a sober eye seaward.

"We have them sometimes," he said. "We understand that the becasse breeds far to the north,—Norway, perhaps. Then when frost comes, the becasse moves slowly, by stages, southward, stopping to feed in certain spots until the frost appears and hardens the mud. They go to Greece, do they not, m'sieu?"

"Men tell me the cock-shooting is good in Greece," I replied. "But men have told me too many things. I never know, Alex, until I see for myself."

"I also, m'sieu," he observed, seriously.

We sat smoking in the moonlight; the perfume of coast-grown roses filled the night air. October had been mild; yet there was frost in the moon's glitter, frost in the sea rime, frost surely lurking somewhere beyond the blue-black splendor of the northern sky.

"I wish you were fond of shooting, Alex," I said.

"I am, m'sieu," he replied, tranquilly.

I gazed at him, astonished.

"You shoot?"

"Yes, m'sieu."

"Well, why the devil didn't you say so? Here we've been friends for six months, and you never told me you could shoot? That's a Breton! That's a Breton all over. Oysters are garrulous compared with a Finistère Breton. And here you've allowed me to go out every day with that ragged poached Pierre Marie—!"

Indignation choked me silent.

"Because," observed Alex, thoughtfully, "you never asked me."

"Asked you? Confound it, I never knew you went out with a gun!"

"I don't any more," said Alex.

"Why not?"

"I have a family. Powder and shot are too dear, m'sieu. . . . I love the sport." He was very quiet, and I looked at him keenly. It is like that with Bretons; a craving unsatisfied is endured in silence. And nobody except a lover of out-door sport can understand what it is to be denied the satisfaction of that wholesome passion. And through poverty, too!

"Alex," I said, pretending to yawn, "I've a seven-and-three-quarters gun that I never use. There are several hundred shells filled for it. We'll shoot together till New-Year's—at your regular rate."

"I shall be very, very happy," he said, simply. I saw his great brown sea-burnt hand trembling on Luff's silky head.

"Suppose we settle this becasse question to-morrow?" I suggested.

"I think we can, m'sieu. There is a skin of ice on the moon."

"A flight? Do you think there might be a flight, Alex?" I asked, eagerly.

"Dame—if there is I know where we shall find them, m'sieu."

"Alex," I said, "I've simply got to get a becasse. If I don't, those marksmen of the Estaminet yonder will drive me to Greece by their chatter. Show me a becasse, Alex,—only one single becasse! And if I miss him I'll never ask you again."

He was laughing, the full frank Breton laugh, musical and almost noiseless,—for in such manner is the mirth of the men of the sea. And he was one of the "Icelanders" who left for the north on the *Deux Pigeons* when the fleet had been blessed in Concarneau Bay.

I rose; he also stood up to his full height in the moonlight.

"If I do not show you a flurry of snow, a skin of ice in the bog, and a becasse at sunrise, my name is not Alex le Roux!" he said.

"Strike, m'sieu!"

We struck palms in the Breton fashion; and the bargain was sealed.

"Come on, pup," I said to Luff.

Who but an "Icelander" could prophesy so exactly? Over the fair Finistère landscape a color of snow lay at dawn: the swamps, cased in delicate films of ice, glittered gold and rose as the sun pushed up.

Afield, knee-deep in frozen gorse, we breasted the landward-rolling ascent; he in sea jersey beret, embroidered leggings, and sabots, game-sack slung and crossed with his cartridge-pouch; I shivering in that accursed yet indispensable fabric called canvas-duck, gun slung, digging my frosted fingers deep into flannel-lined pockets.

It was becasse or bust that day; but in translating the phrase for Alex's benefit, he seemed to gather the idea that my one object in life was to eat becasse sautée; and I was too cold to explain.

We now arrived on the undulating plateau and struck across country, wading shin-deep through frozen grasses and weeds over which lay miles of stiff silver frost spangles.

Now that sort of thing, before the sun melts the icy films, is baffling to the keenest dog that runs; and we were not at all prepared when Luff, quartering an immense white pasture, stopped rigid. Before we could unsling our guns a snipe darted off, *squakking*, and soared up into the sky, where he was soon lost to sight in the dazzling blue-white ether.

Then that pup advanced on signal, gave one disgusted sniff at the spot where the self-flushed "Englishman" had been, and, wheeling, proceeded to cut up the ground in field-trial form and at a speed that warmed us to behold.

He was only a stray Breton pointer, muddy white, with yellow saddle and ticked muzzle, and those discerning gentlemen who award three kinds of prizes at bench-shows would have called for help if anybody had attempted to show Luff, son of Icelander, son of Malheur. Personally, I have never loved but two dogs as well as I loved Luff. And what a certain celebrated financier said of the public, I might say of the bench-show—if I ever used the language of commerce, which I don't know how to use.

The muddy-hued son of Icelander came in to heel as we plunged into the gorse. He wanted no thorns in his feet at that stage of the game, nor did I. But when a vista of frozen turnips stretched away westward, the dog cut up that vista as an expert carver manipulates a grouse.

"Lookout, m'sieu," said Alex.

I was "looking out." A peasant's house of gray stone stood on the edge of a thicket, flanked by flat wastes of frost-killed vege-

tables. Into these wheeled Luff and pointed;—a statue moulded out of mud.

There was no need to say "partridges." Alex advanced on the left, I on the right; but the covey flushed wild as sea-swallows. Bang! from Alex; down went a partridge. Bang! again; down went another. I stopped a partridge with the first barrel, then fired a long shot with the second. The bird aimed at immediately rocketed, rising higher, higher, straight up like a skylark until he had dwindled to a speck. Then the speck became larger, increasing in size as it descended, whirling downward, and apparently striking the ground behind the peasant's hovel.

The son of Icelander had dropped to fire; signals were exchanged for retrieving the three in the fair ground; then I sent the dog over behind the house.

After a while I said, "The bird is hung up somewhere," and we started after the dog, and found him thrashing about, at fault.

"Dead!" I said, mechanically, but it was useless. Alex shook face, I fitted and strapped on Luff's collar with my numb fingers, while Alex fumbled in his pockets for the tiny silver bell.

Then, down in a hollow behind us, a cur began to yap and yelp. There was a peasant's hut down there, half hidden in the pine and willow scrub.

"What's that cur yapping at?" I said, tying the bell to Luff's collar.

"Mark!" came the sudden shout from Alex like the crack of a pistol in the frosty air.

Stupefied, I looked up; across the dazzling disk of the sun a bird whirred, a big, black, ungainly silhouette with long bill outlined and strong wings beating.

"Becasse!" breathed Alex, gaping, empty gun clutched tight. "The cur put him up in the pines. Sacré nom!"

"He's down," I said, striving to speak calmly. "I've marked him. Come on!"

The bird had suddenly tipped sideways and plunged into a bunch

Drawn by Sydney Adamson

A moment later I knelt to receive from Luff's pink and quivering mouth my first becasse!

his head, and we prowled about the house, hunting everywhere, until, by accident, I looked in through the window.

An old Breton woman sat there knitting; on the table beside her lay a dead partridge.

"Madame," said I, politely, "have you seen anything of a partridge?"

"This one fell down the chimney," she observed, nodding her white coiffe toward the bird on the table.

I wouldn't have claimed that bird for a fortune.

Going out again, I said to Alex: "There's your Bretonne for you. She's seen us for the last fifteen minutes grubbing about after that bird, and she never said a word!"

"She told the truth when you asked her," commented Alex.

"Oh, they're honest," I assented, with a grimace.

Swinging *au large* once more, we came to the crest of a slope. To the left were low pines; to the right, more pines; in the centre, willow swamps.

"Now for a becasse," said Alex, grinning.

"Do you mean it?" I said, sharply.

"Parbleu! m'sieu, it may be the willows, and it may be the pine scrub. In either case it is well to bell the dog for close cover."

And now the unexpected happened. I had unloaded my gun; Alex unloaded his; it was a rule I insisted on when we were obliged to lay down our pieces.

Standing on the crest of the hill, the eastern sun flashing in my of pines which stood half-way up the slope of an otherwise bare hill-side opposite.

Down the hill we hurried over the thin coating of snow. Under the pines there was no snow and no frost; that's where the birds would be.

Straight at the bunch of evergreens went Luff, Alex to left, I to right; and the dog had already winded the bird, for he advanced, head up, tail level, eyes snapping, slower, slower, then a halt, then an advance, then another halt.

The becasse was moving on the ground, somewhere in that dense covert. Presently the dog disappeared; the bell tinkled, then ceased. I ran around the tangle of brier and evergreen, and halted just as a drumming, whirring bird burst through the bushes almost into my face and went kiting off.

Crack!

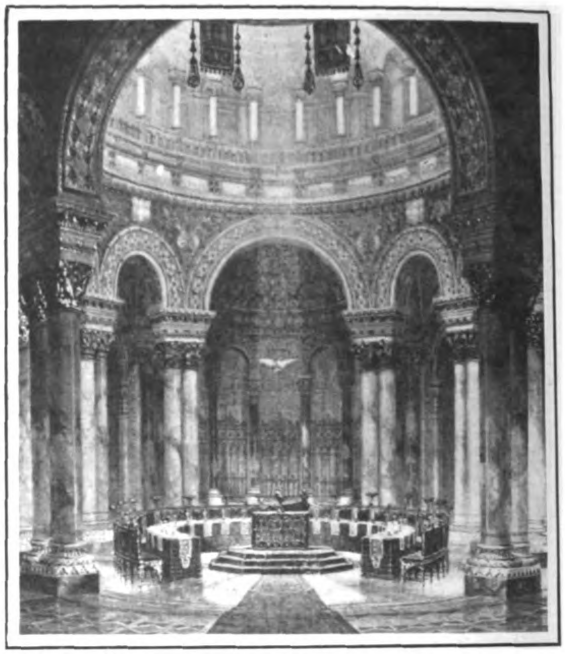
Smothered in a cloud of flying feathers, the brown-winged lump seemed to stop in the air, then drive slanting to the ground.

"Alex," said I, trying to speak coolly, "they can talk becasse all day at the inn, now."

The tall Breton laughed.

"And," said I, "it was very generous of you to give me that shot. It was yours, Alex. Why didn't you take it?"

The tall bronzed fellow laughed again, too shy to reply.



A moment later I knelt to receive from Luff's pink and quivering mouth my first becasse!

The Changing-Scene in the First Act

"Parsifal," conducted by "Gurnemanz," is taken from the forest glade of the first scene to the Communion Hall of the Gralsburg, to witness the unveiling of the Grail and the administering of the Sacrament. The progress of the two is represented by the moving scenery, which changes panoramically

The Communion Hall of the Gralsburg

The second scene of the first act shows the interior of the Communion Hall in the Castle of the Grail, where the Grail is unveiled and the communion supper celebrated. The knights enter and take their places about the table; the Grail is uncovered, and with it "Amfortas" blesses the Wine and Bread

A Forest Glade near the Gralsburg

The opening of the first act reveals a woodland scene in the Domain of the Grail. The illustration shows "Gurnemanz," the aged knight, arousing the young esquires from sleep at the sound of the reveille from the castle

"PARSIFAL" AT THE METROPOLITAN OPERA HOUSE

Weekly performances of Wagner's "Parsifal," which was produced at the Metropolitan Opera House on December 24 for the first time outside of Bayreuth, will be given at the Metropolitan during January and February. The action of the drama is simple. "Amfortas," chief warden of the Grail, has forgotten his holy office in the enchanted garden of the wizard "Klingsor," where the Knight has fallen a victim to the seductions of "Kundry," a temptress in the service of "Klingsor." While there "Amfortas" is wounded with the sacred spear of the Grail, stolen from him by the magician. He cannot be cured except through the agency of a pure fool enlightened by pity. "Parsifal," a wild forest lad, comes to the Grail's domain, and is brought into "Amfortas's" presence in the hope that he may be the awaited deliverer; but he remains unmoved, and is angrily dismissed. Leaving the Gralsburg, he is enticed to "Klingsor's" castle and subjected to the wiles of "Kundry." Her kiss awakens him to a sense of "Amfortas's" sin and suffering, and, repulsing "Kundry," he regains the sacred spear from "Klingsor," and sets out for the Gralsburg to fulfil his mission. He finds it after long wanderings, and is taken to the Temple. Healing "Amfortas" with a touch of the spear, he is proclaimed the new guardian of the Grail

MISS IRENE BENTLEY IN MUSICAL COMEDY

Miss Bentley has the principal part in "A Girl from Dixie," the musical comedy by Harry B. Smith, which has recently been playing at the Madison Square Theatre, New York. The plot deals with the fortunes of a young Southern woman, "Kittie Calvert," played by Miss Bentley. At the time the play begins she is a pupil at the district school at Tammarack, Maryland. Her cousin, "Nick Calvert," falls heir to an estate, which by mistake is given over to "Kittie." "Nick" is aware of the error, but refuses to claim his property, and so "Kittie" is permitted to retain possession. She moves to New York, where she is made love to by an English nobleman, "Lord Dunsmore." Here "Kittie" discovers that the fortune does not really belong to her, but to "Nick." "Lord Dunsmore" discovering this makes love to another girl with a fortune, and all ends happily

Correspondence

"WHERE NEGROES MAY NOT GO"

BUREAU OF INVESTIGATION AND INFORMATION,
SOUTHERN EDUCATION BOARD,
KNOXVILLE, TENNESSEE, *December 8, 1903.*

To the Editor of Harper's Weekly:

SIR,—In HARPER'S WEEKLY of December 5 Professor Albert Bushnell Hart says:

"It is true that there are no townships in which negroes are forbidden to *live*, because townships in the South are called parishes and precincts, but it is equally true that there are regions, areas, counties, or what you will, that are surrounded by an invisible wall which no negro is allowed to pass. The particular county, existence of which is thought impossible by your Texas and Tennessee contemporaries, is Mitchell County, North Carolina."

As to whether negroes are permitted to live in Mitchell County, North Carolina, I think it in point to refer to the United States census of 1900. That authority says there were in Mitchell County, North Carolina, during the census year, 536 negroes. The same authority also says that there were 126 native negro males twenty-one years of age and over among those 536. The State Superintendent of Public Instruction, of North Carolina, reports two negro schools in Mitchell County as late as June 30, 1902. Personally, I have been in Mitchell County three times within the last ten years, and have seen a number of negroes walking about the hills and valleys of that county unmolested.

In North Carolina, Alabama and some other Southern States, the minor divisions of the county are known as townships. In Tennessee the minor divisions are called civil districts. In Louisiana there are no counties, but parishes. The minor divisions of the parish are called wards. If I mistake not, Louisiana is the only Southern State that still retains the term "parish."

Of course the South has its negro problem and its labor problem which grows out of the negro problem. There are localities in the South where emigration agents have been *waited on* by committees and asked to leave the country. This conduct on the part of the whites was due to the fact that the emigration agent was trying to induce the negro farmers to leave the farms after the crops had been planted and after the negro farmers had received advances in the way of food and other supplies for the year. Less *provocation*, perhaps, has caused labor riots in other localities. I think it would be hard to find instances in the South where the negro is not allowed to go and come at will except in such instances as the one cited above. Nor do I believe there is any county, township, or precinct, ward, or civil district in the South where any law-abiding citizen, black or white, may not live in peace and quiet, so far as race is concerned.

The last census of the United States warrants the assertion that the negro population in several States has been declining, relatively to the white population, since 1860. This is notably true of Kentucky, where the negroes formed 20 per cent. of the total population in 1860; they now form less than 14 per cent. of the population. In Missouri there has been a still more rapid decline in the *negro population, which formed 10* per cent. of the total population in 1860, but which now constitutes less than 5 per cent. of it. There has also been a marked falling off in the negro population of Maryland and Tennessee *since* 1860. *In that year* the negroes constituted 26 per cent. of the total population of Maryland, but now they are less than 21 per cent. of the population, while the negro population of Tennessee has declined from 27 per cent. of the whole in 1860 to less than 24 per cent. in 1900.

There has also been a marked decrease in the negro population of many rural districts of the South during recent years. The tendency of the negro element of the population seems to be to congregate in the towns and the regions of the South known as the "Black" belts, where slavery planted the largest negro population in the days before the civil war. But white antipathy and shotguns are not the cause of all this.

The cause of this local decline in negro population is no doubt that the negro of all peoples dislikes isolation. A scattered population can have no schools, churches, and social life. But the great mass of the negroes still live in the South, and will continue to live here. I am, sir, CHARLES L. COON.

EAGLE, WEST VIRGINIA, *December 8, 1903.*

To the Editor of Harper's Weekly:

SIR,—The question recently raised as to whether or not a township is to be found in the South where the negroes are not allowed to enter is not of itself very important, nor does the fact that there are no townships in the South signify anything except that a writer who is ignorant of the political divisions of the Southern States is hardly in a position to speak authoritatively as to Southern conditions. There are parishes in Louisiana, and a few in Florida, but elsewhere the county is the territorial unit, the counties being subdivided into districts, which are sometimes designated as precincts, and in some parts of North Carolina as townships.

These districts, precincts, or townships are usually from one to four miles across, and if one such exists in the South where negroes are not allowed to enter it is difficult to see how any great importance can be attached to the fact.

It is certainly true that not one, but hundreds of districts are to be found in which no negro lives, but it is of his own volition that he keeps away. The negro is gregarious in his instincts, and invariably drifts into the towns or on to the railroads or into the mining districts, if the means of support are to be found there. There is, or ought to be, no question that in those regions where the negro is seldom seen, he is regarded with a measure of suspicion when he does put in his appearance, and it is equally true that the negro is most liked where he is best known.

In his letter to HARPER'S WEEKLY of December 5, 1903, Professor Albert Bushnell Hart says,

"No Southern newspaper has denied that the negro is not allowed to leave communities in which he does not feel comfortable, because everybody in the South knows that the emigration of negroes on a large scale is never permitted."

The Southern newspapers have not deemed it necessary to deny preposterous charges nor to correct the erroneous opinions of Northern writers, and as for the latter part of the charge, the Southern people know nothing of the sort, for the reason that the experiment has been made too infrequently to enable them to form an opinion or even to set them thinking about the matter. We are not concerned about what happened once in 1889, nor twice, nor a hundred times, but only with those things which are or have been of regular occurrence—that is in so far as they bear on the negro problem.

Professor Hart further says that thousands of negroes are now moving out of the Southern States *in* twos and threes and families. In reply it may be said that thousands are moving back in twos and threes and families. Whether the Northern climate is too cold, or their reception not what they had expected, or that they find that they are regarded as negroes wherever they go, and begin to long for their old homes, they unquestionably come back in such numbers that their exodus has no appreciable effect on the population.

"The Southern white people do not cordially like the negroes in any relation," says Professor Hart. The truth of this statement we may unhesitatingly deny, and it is the only serious charge that the professor has brought against us. No man can speak authoritatively in regard to this matter until he has mingled for years with both whites and negroes *in the* South, and by such the charge is not made. Isolated facts amount to nothing in such a discussion as this; the rule is everything, and, as a rule, the relation existing between the two races is most cordial. It is a mistake to suppose that we look askance at the negro and the negro askance at us. We laugh and jest and talk, and each bears an affection for the other race which is altogether real. We like him, and he likes us, far better, if the truth must be told, than either of us likes the Northerner. Each race understands and appreciates the other, and there are not many things which either would not willingly do for the other in the way of favors in the ordinary affairs of life. The negro does our heavy work, digs our coal, builds our railroads, sweeps our houses, does our washing, and is glad of the opportunity; and for all these things he is paid. The service is voluntary, and is given cheerfully. If he rises no higher the fault is largely his own. The negro who, perhaps more than any other, enjoys the respect of the whites is the school-teacher, who invariably stands high in the estimation of everybody. You will find men who are opposed to the education of the negro, but they do not represent the people. The negro takes kindly to education, and we see to it that he gets every dollar that is appropriated for him. We also see to it that he does not take the leadership in the management of our affairs, partly because he is black, more because he is incompetent, and because the exercise of power at times makes him intolerably insolent. But when all is said the fact remains that considering the better element of both races, which constitutes the great majority, the existing relation between them is cordial to a marked degree. We who see him every day, working with him and talking with him and laughing with him, know that we like him, and are equally sure that he likes us. We do not take his property away from him, nor drive him out of doors, nor prevent his going when and where he will, and if most of us had our way he would never be lynched. These, Mr. Editor, are the sentiments of the writer, who believes that they are likewise those of ninety-nine-hundredths of the people of the South. I am, sir, E. C. HUFFAKER.

[The letters above, and others on the same topic which we have not space to print, are discussed on another page of this issue of the WEEKLY.—EDITOR.]

WESTERN SENTIMENT

DETROIT, *December 4, 1903.*

To the Editor of Harper's Weekly:

SIR,—The evidence of dyspepsia is so strong in the letter from Monroe Dobbins in your issue of November 21, that it is scarcely worthy of a reply. I am surprised that a paper of the character of the WEEKLY would have published it.

President Roosevelt *is* popular with *all* classes—excepting Wall Street and some Democrats—the *people* are for him, and if Mr. D—— has not found such to be the case, it is probably because his travels have been confined to Tennessee.

I have within the year covered over 15,000 miles, from the Atlantic to the Pacific, and fail to find any sentiment opposed to the President.

There will be no "force" to his nomination, as no other name will be presented in the convention, and no nominee within thirty years will have received such an overwhelming recognition of popular favor.

The people will see that he is both nominated and elected.

I am, sir, C. F. HAMPTON.

Our Trade With Canada

COMMERCE between Canada and the United States shows a rapid gain both in the figures of the year just ended and in those of the decennial period which ended with the year 1903. The year's commerce with Canada is estimated at nearly 200 million dollars, against less than 100 millions in 1893. The increase occurs both in imports into the United States from Canada and in exports from the United States to Canada. Our imports from Canada, which in 1893 amounted to only 34 million dollars, reached in the past year about 55 millions. Our exports to Canada, which in 1893 were 57 million dollars, aggregated in 1903 about 130 millions. Our total commerce with Canada has thus grown from 91 millions in 1893 to approximately 185 millions in 1903. The total commerce of the United States in the calendar year 1893 was 1652 million dollars, and in 1903 about 2460 millions. Thus the total commerce of the United States from 1893 to 1903 has increased about 50 per cent., while its commerce with Canada has more than doubled.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

THE OLD CAMPER

has for forty-five years had one article in his supply—BORDEN'S EAGLE BRAND CONDENSED MILK. It gives to soldiers, sailors, hunters, campers, and miners a daily comfort, "like the old home." Delicious in coffee, tea, and chocolate.—[*Adv.*]

A WELL-APPOINTED home is scarcely complete without telephone service. Low rates. Efficient service. New York Telephone Company, 15 Dey Street, 111 West 38th Street.—[*Adv.*]

GIVE honor where honor is due. The World's Columbian Exposition thus recognized COOK'S IMPERIAL EXTRA DRY CHAMPAGNE.—[*Adv.*]

BRONCHIAL troubles are often permanently cured by PISO'S CURE FOR CONSUMPTION. 25 cents per bottle.—[*Adv.*]

A BAD stomach means poor health. ABBOTT'S, the Original Angostura Bitters, restores health.—[*Adv.*]

ADVERTISEMENTS.

GIVES "GO"

Food That Carries One Along.

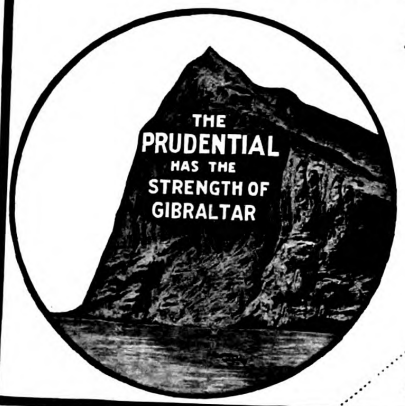
It's nice to know of food that not only tastes delicious but that puts the snap and go into one and supplies staying power for the day.

A woman says: "I have taken enough medicine in my time to furnish a drug store, but in later and wiser years, I have taken none, but have depended, for the health I now enjoy, on suitable and sustaining food, of which I keep on hand a tested variety, plain but nourishing.

"Of these my main dependence is Grape-Nuts, especially if I have before me a day of unusual effort either mental or physical. In this case I fortify myself the first thing in the morning with about 4 teaspoonfuls of Grape-Nuts moistened with cream, and not much else, for breakfast, and the amount of work I can then carry through successfully without fatigue or exhaustion is a wonder to those about me, and even to myself.

"Grape-Nuts food is certainly a wonderful strengthener and is not a stimulant, for there is no reaction afterwards, but it is sustaining and strengthening, as I have proved by long experience." Name given by Postum Co., Battle Creek, Mich.

There's a reason four teaspoonfuls of Grape-Nuts and cream will add more strength and carry one further than a plateful of coarse, heavy food that is nearly all waste. Grape-Nuts food is condensed, pre-digested and delicious. It contains the parts of the Wheat and Barley grains that supply the rebuilding parts for Brain and Nerve Centres.



Look in each package for a copy of the famous little book, "The Road to Well-ville."

Last Month

We spoke to you about the advantages of Endowment Life Insurance. We told you how statistics show that there are over One Million Endowment Policies in force in this country, representing ultimate accumulations of over Two Billion Dollars. Also that 80 per cent. of the men who take Endowment Insurance at age 30 live to reap the reward of their foresight at the end of 20 years. We said that some interesting information would be sent on request. This offer is still open and you can avail yourself to-day. Suppose you do.

LETTERS HOME: A Novel

By WILLIAM DEAN HOWELLS

From the "New York Times Saturday Review"

"There are some of Mr. Howells's most delightful visions of the physical aspects of New York and the quality of New York life seen through the eyes of his several characters. And the book leaves us with the impression of something noted from life, of living reality, caught and enmeshed in its pages, but also with the consciousness of the strength and skill and delicate selective power of the art that has created it."

Of all Mr. Howells's recent works none will appeal to a wider field.

Uniform with Mr. Howells's Other Works. Red Cloth, $1.50

THE WAVE

BY MORGAN ROBERTSON

SCOTTY strolled down to the dock and sat on a spile. He had no particular business there, aside from the business that every sailorman, out of a berth, out of money, and down to his final pipeful of tobacco, has near the shipping. Downstream at another dock lay his last ship, the tow-barge *Anita*—from which berth he had retired in deep disgrace—with her consort, the *Champion;* and here at this dock lay the big ocean tug *Proserpine,* which towed the two barges, and belonged to the same owner, Mr. Jacob Steiner. Having been honored with a personal discharge from the owner himself, Scotty did not hope for a berth in any craft of the employ; but he yearned for sympathy and companionship, and he might have accepted an offer to work his passage to some other port in the stoke-hold of the tug, whose captain and crew he knew. As he smoked and brooded, Captain Anson of the tug came out of the engine-room and spied him.

"Hello, Scotty," he said, genially, "when did you get out?" Then he stepped over to the dock and joined him.

"This day, Cappen," answered Scotty, rising and taking the extended hand. "I expect ye've made a couple o' trips since I was locked up."

"Yes, two. Twenty days you got, didn't you?"

"Aye, Cappen," replied Scotty, sorrowfully. "Twenty days for tappin' a ship-owner on the nose. I wadna mind the twenty days nor the shame o' the thing; but it was twenty dollars' fine too, and it was all I'd airned on that last trip. Now what 'll the poor mither do?"

He took from his pocket a letter and handed it to the captain.

"She says she'll be a charge on the town soon if you don't help out. That's it, Scotty," said the captain, when he had read.

"Aye, a charge—an object o' charity in her old age. It 'll kill her, Cappen. I've sent her most o' my pay, right along, but this business stopped it." There were tears in Scotty's eyes.

"I'd give you a berth, Scotty, only that I'd lose my own if I did."

"But could ye gi' me a passage, Cappen, to Philly, where I can ship?"

"Yes, I will. Hang around, and sneak aboard at the last minute. But don't let him see you. I expect him down soon, as we make a start this afternoon. Here he comes, though, and he's seen me talking to you. Too late now."

Scotty sat down on the spile again, and the captain climbed aboard the tug to receive the owner. Mr. Steiner came down the dock with a businesslike stride, and a scowl on his face made more rigid and intense by crossing strips of adhesive plaster that almost covered his large nose. He passed Scotty without a glance at him, but when he had joined the captain aboard the tug he turned and shouted, "Here you, McPherson, get away from here."

"Is this your dock, Mr. Steiner?" asked Scotty, mildly, removing his pipe for the speech.

"Get away, I say."

"Go ye to the de'il, ye bad example." Scotty spoke mildly.

"If you don't take yourself off, you loafer, I'll direct Captain Anson to drive you. Understand?"

"Aye, I do; but Captain Anson won't do that."

"Won't he? Why won't he?"

"I won't let him."

Captain Anson grinned behind the owner.

"That's right, Mr. Steiner," he said, quietly. "Look at the size of him."

"Well, the police can do it. Police," yelled the owner. "Police, police. Here, boy," he said, addressing a near-by gamin. "Go get two policemen."

Scotty had lifted his six feet of bone and muscle upright, and now extended his hand—a mighty hand it was—toward the owner, opening and closing the fingers menacingly. Mr. Steiner was palpably alarmed, and retreated to the open door of the tug's dining-room. Close to this haven of refuge he was braver.

"Move on, now," he said to Scotty, with spirit. "Just go right on up the dock and keep out of trouble, you ruffianly jailbird, or I'll have you in jail under the habitual-criminal law. I can jail you at any time under that law. You're an habitual criminal."

"D—n your heart and soul!" yelled Scotty, rising from the spile. "You lie, you lie! And who be you to call me that, you—you—ship-owner. You're naught but a ship-owner."

As an adequate response to this insulting epithet Mr. Steiner got inside the door, reached his head out, and said, "You're a Sawnee."

Sawnee Beane, the cave-dwelling cannibal, who with his numerous progeny enshrined his name and fame in Scottish history, is the one disgrace that a Scotchman will admit rests upon his native land. One who calls a Scot a Sawnee should be prepared to run, or fight, or intrench himself behind stone walls. Mr. Steiner was ill prepared to do either, though he closed and locked the door.

With the roar of a bull Scotty cleared the rail, brushed Captain Anson aside, and pulled on the door knob. It held, but the woodwork gave way, and he entered the dining-room, followed by the captain. Mr. Steiner was just opening the opposite door, and through this, and aft along the alley, Scotty pursued him. The captain glanced out at them, then hurried across to the other door to head off the animated tandem on the other side. Loudly yelling "Police," Mr. Steiner raced forward, with Scotty, growling hoarse profanity, close in his rear. Captain Anson flung himself between them. He disturbed Scotty's headlong rush to the extent of crowding him half over the rail, and while the owner ran round the house, he and the engineer seized him. Then the deck-hands came aft to help.

"You confounded fool," said the captain, while Scotty struggled in their grasp, "do you want to go to jail again? He's got a sure case now. Think of your mother, you imbecile. Think of her."

"Mither," repeated Scotty, looking at the captain helplessly, almost pathetically, like a frightened child. Most of his fury had passed from him with the utterance of the word, and the rest was going. He trembled in every limb.

"Stand quiet," said the captain, "till I see where he is."

He darted through the dining-room, peered out the door, and returned.

"He's ashore with the coppers," he said, "and they're coming. Down in the stoke-hold, Scotty, and hide. Take care of him chief," he said to the engineer. "We'll tell 'em he jumped overboard and swam under the dock. But it's all my job's worth if he finds it out."

In darkness and silence Scotty spent the next three hours seated on a coal pile far down below the deck. In this time not a word reached him from above, yet his trained apprehension took note of every move of the tug, in picking up her barges, by the sound of the engine bells. He knew when she had stopped alongside the *Champion* to take her line to the *Anita;* he knew when the *Anita* had passed hers to the tug; he knew when it had straightened out, with tug in midstream and the first barge leaving the dock; he knew when the second barge was clear; and when he heard the "jingle bell" he knew that the tow was heading down-stream and that soon he would be called. He anticipated this by coming up, and sought the captain, to offer apologies and thanks. He found him at the fantail, inspecting a brand-new tow-line.

"It's a peach, Scotty, isn't it?" he said in answer to Scotty's halting overtures, while he patted the bright, straw-colored rope, thirteen inches in circumference, and rigid as an iron bar. "He's a poor feeder, and won't insure, but he will furnish good, safe gear instead. Seems that nothing could part that big rope."

"And is he no insured this trip?" inquired Scotty.

"Insured? No, not with this new tow-line and brand-new canvas on the *Anita.* Looks fine, doesn't she?" He pointed to the *Anita,* heeling under the weight of three new mutton-leg sails and a jib.

"Does he know I'm aboard, Cappen?"

"No," answered Captain Anson, looking him squarely in the eyes. "He thinks you're drowned, and is a little scared about it. They couldn't find you under the dock. It's up to you to ship for home and that old mother o' yours and keep still about this."

That night Captain Anson tested the new tow-line. The wind had been strong from the east when he started, and he had expected that it would moderate and come more from the northward, so had not made the offing that he would had he been a better prophet. Before eight bells that evening it was blowing a gale, and he

headed out to sea a little to allow for leeway; then, in the middle of the night, the wind hauled to the southeast, heading him still more, and blowing harder, and his problem of navigation was reduced to steaming head to wind and sea in the effort to keep off a lee shore, with judicious attention to the effect of wind and sea upon the helpless barges in his care. He had seen with the night-glass that they had taken in the now useless canvas, and he went aft to the fantail to watch the straining of the tow-line. Scotty went with him, but the rest of the crew were under cover.

The powerful and high-sided tug was making good weather of it, though steaming at full speed into combers that met her at fifteen feet a second. Far astern the red and green lights of the *Anita* twinkled in the darkness, and now and then, as she yawed and brought them in sight, those of the *Champion* behind her. Captain Anson clambered aft and gauged with his hand the stretch of the line from bitts to taffrail as it grated back and forth over the smooth wood.

"A new line ought never to be stretched more than six inches to a fathom," he shouted in Scotty's ear when he returned. "It kills it, and the next strain parts it. I'm going to slow down."

He moved toward the bell-pull on the after end of the house, but then, as though deciding to inform the engineer by word of mouth, passed on to the engine-room door. Scotty, bowing to the blast, saw him enter the engine-room, and then heard faintly from within the sound of a bell.

"One bell," he muttered. "That's to slow down. But why does he go below to ring bells?"

Another stroke of the bell came to him, then two more in quick succession.

"The stoppin' and backin' bells," he exclaimed. "What's up?"

An indistinguishable cry, containing, however, a note of warning, came out of the darkness forward, then the slamming of a door. He looked against the pelting rain and spume, and saw a high wall of blacker darkness lifting up ahead. The next instant the tug stood on her tail. And even as he slid, blindly groping for support, toward the taffrail, Scotty felt the vibration of the reversed engine in the deck. Then he was struck by an avalanche of water that lifted him clear of everything, buried him, and swept him away. Choking for air, in the black envelope surrounding him, he yet knew that he was overboard, and with presence of mind born of large experience, he kicked off his rubber boots, and struggled with his last remnants of strength with the buttons of his oilskins. Soon he was free of these, and he swam, with the unerring instinct of a dying animal seeking life, upward—toward the air that he needed. He shot head and shoulders out, and as he plunged back a breaking sea submerged him still further; but he had obtained one mouthful of air, and it sufficed until he came to the surface, when he paddled, rested, and breathed.

He could see nothing of the tug nor her lights. They were extinguished, no doubt, by the terrible tidal wave that had struck her. Then it came to him that a wave that could reach up to the masthead lights would leave but little of the tug. It would crush in her house and her deck, beat her down, fill her, and sink her. All hands were below at the time; they had gone down with her. He turned and swam to leeward, now looking for lights or shadowy shapes of the barges as the seas lifted him—shouting, shouting, hailing for help.

There came a thought to cheer him. They had been well within the hundred-fathom curve. The tow-line was new, securely fastened to the bitts of both craft, and ninety fathoms long. If it had not parted as the wall of water struck the *Anita*, and she still floated, she was riding to it, with the tug for an anchor—stationary, but far away. He swam with redoubled vigor, breasting the sea with long, powerful strokes, and making actual progress, through that angry turmoil, of two feet a second. His mind, supremely active from the peril, reduced fathoms to feet, and speed to minutes. If the *Anita* still floated, anchored to the sunken tug, he should reach her in twenty minutes; if she was drifting, his battle would be longer. He began counting his strokes.

Twenty minutes passed by his calculation,

Locomobile
Gasolene Touring Cars

A 16–22 H.-P. four-cylinder car with front vertical cylinders and cellular radiator. All 1904 cars have longer wheel base and longer springs.

EQUAL to the best imported cars in material, workmanship, and finish—but **better adapted to American conditions.** Ample clearance and interchangeable parts. All this means much to the Auto-Tourist in the United States.

As handsome and luxurious as money can buy. A marvel of comfort and durability. Powerful engines developing 22 horse-power give great speed when desired, and ample reserve power for hills, bad roads, and unusual conditions. Sewing-machine quietness. Complication avoided.

IT IS A TRUE SIMPLEX

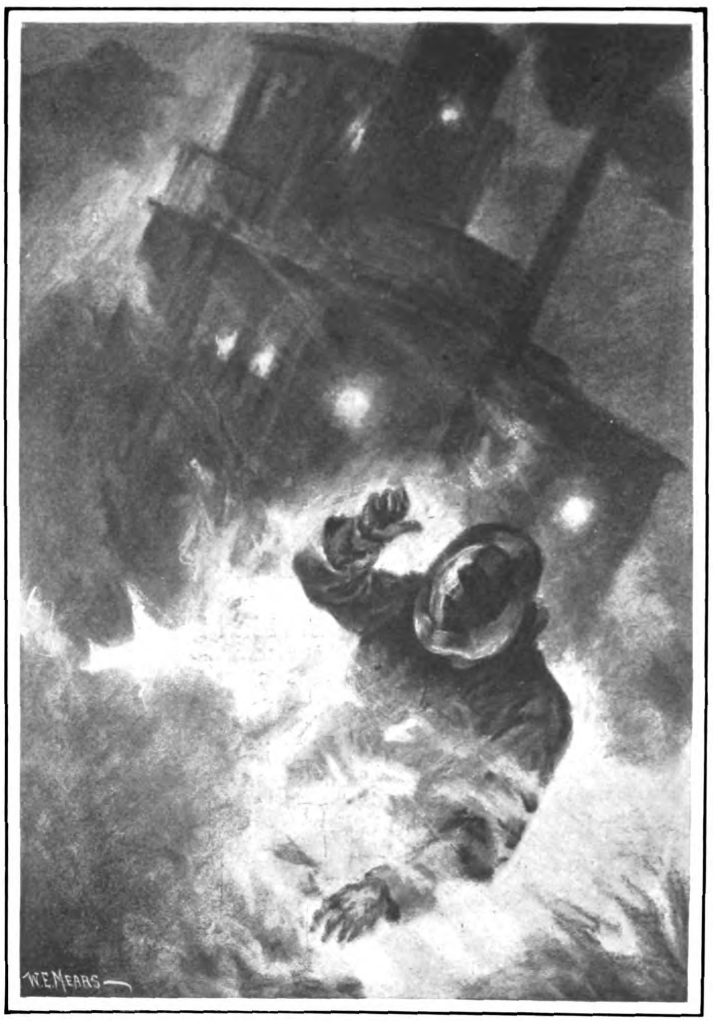
and still he stared at blank darkness, unrelieved by aught but the phosphorescent gleam of breaking seas; then twenty-five, then thirty, and the strong, desperate swimmer was about to give up, when he made out a cluster, or centralization, of the phosphorescent gleams, far ahead and a little to the right. He swam toward it, abating nothing of the furious energy of his strokes, and soon distinguished a vague shape above them. It was one of the barges, adrift in the trough, and it was the wash of the sea along her side that had lighted the way to her.

"God be thankit," he groaned, hoarsely; then shouted: "Barge ahoy—ahoy! On board the barge! Man overboard!"



There was no answering shout, and, saving his breath, he swam on. Soon he could see that she lay stern toward him, and he knew by the shape of the stern that it was the *Anita*. And he knew that there was nothing fixed or pendent to which he could cling, or by which he could climb, nearer than the bobstays, at the other end of her. And toward this end he swam, shouting occasionally, but getting no answer. He swam under the bowsprit, watched his chance as the barge buried her bow, and, seizing the chain bobstays as high as he could, was lifted up as she rose. He was doused but twice, and then reached the bowsprit, where he clung for breath a scant moment before scrambling inboard. His movement from the knightheads to the break of the forecastle deck was on hands and knees, and his descent of the steps a headlong lurch.

An hour later he wakened from the swoon, and with every bone and joint in his body aching from the violent strain put upon them, made his way toward the forecastle door. He found a misshapen pile of wreckage in place of the forward house. Ropes washed from the pins, and capstan-bars from the racks, littered the deck. The poop-steps were gone, and the forward side of the cabin was crushed in, but he shouted in through the apertures before mounting the sacred poop-deck. Going aft he found the wheel and binnacle intact, but the lights were out, and the green and red lights on the quarter, screens and all, were gone, while the boat had been torn from the davits at the stern. The *Champion's* steel-wire tow-line hung up and down from the chock in the taffrail, proving its disconnection from the *Champion*, and on going forward again Scotty found that the brand-new Manila tow-line that Captain Anson had been so proud of had parted at the bitts. Worn out in body and mind, Scotty crept beneath the forecastle deck and went to sleep.

It was high noon when he aroused himself, and, stiff and sore, crawled out to the dismantled and deserted deck. The wind still blew briskly from the southeast and the barge still wallowed in the trough of a sea that showed an occasional comber, but the gale was over. Seamanlike, Scotty's first look was aloft, and he noted with gratification that the three new mutton-leg sails, brailed into the masts, and the furled jib on the bowsprit, seemed uninjured by the wash of water, though sagging baglike in their fastenings.

He inspected the interior of the wrecked forward house. No one, living or dead, was in the forecastle, carpenter shop, or galley. He found the cabin deserted, and every apartment and stateroom in it more or less drenched and upset. Securing the skipper's binoculars, he climbed to the poop by the after companion, and searched the horizon. Directly to windward, rising and falling in the trough, about a mile away, was a craft that at first glance looked like a house-boat adrift, but which, after a keen scrutiny, Scotty knew for the tug—low in the water and minus her funnel. But there was no sign of the *Champion*, unless she was one of the craft on the horizon, making port under sail.

A six-foot able seaman may do some heavy work with purchases. With the aid of a watch tackle, Scotty set the three mutton-legs and the jib. The mutton-legs had booms, which would swing free for either tack, but the jib, inasmuch as he could not attend to it when wearing ship, as he would need to in that sea, he trimmed down amidships with both sheets, making of it a good balancing sail, but depriving it of driving power. Then he began a beat to windward, and three hours later, by the simple operation of hauling aft his spanker-sheet as he luffed, hove the barge to under the lee of the tug, and within hailing distance.

Drawn by W. E. Mears

Then he was struck by an avalanche of water that lifted him clear of everything

"Halloo-o-o, Scotty," came Captain Anson's voice from the bridge, where he stood, looking through his glasses. "How'd you get there? You're born to be hung, you Scotchman. Are you alone?"

"Aye; all alone. All hands washed off, I s'pose. I swum it. What's wrong wi' ye?" asked Scotty.

"Half full o' water, boat and funnel gone, pumps out o' gear, and the tow-line fouled up in the screw. We were backing, and backed over it."

"Aye, I remember the bells. What aboot the *Champion?* Seen her?"

"Saw her makin' for port early this morning. Couldn't see us, I suppose, and expected you to follow."

"Well, what's to be done, Cappen? If I had your line I could tow you in wi' this good fair wind. How can I get it?"

"I can float a heavin'-line down to you on a fender."

"Aye, but if I could get it I could na get the tow-line up, and steer, and handle sail at the same time. S'pose you try to get the *Champion's* line here"—he indicated the dragging steel-wire rope hanging from the taffrail—"you've got the men."

"How long is it, Scotty?"

"Don't know, but I'll tell ye what. I'll fill away, and come back nearer to ye and headin' your way. Throw me a heavin'-line as I pass, and I'll make a bow-line on the line, and you can get the bight. I'll luff around ye, and if it's lang enough make it fast to your niggerhead forrard, and I'll fill away."

"Good enough, Scotty. Go ahead."

Scotty let fly his spanker-sheet, and the barge, falling off, gathered way. He made a long board to the northeast until he judged that he had the weather-gage of the tug, then wore ship, and came back with a "good full," steering so as to pass close under the lee of the tug, whose head lay to the southwest. Scotty caught the heaving-line as it whirled over his head, hurriedly cast a bow-line (a noose) about the dragging tow-line, and as the tug men pulled, ground the wheel down and luffed around the *Proserpine's* bow. The barge lost way as her canvas rattled in the wind, and as he could not now depend upon steerage way, he ran forward, ready to manipulate the jib should she fall off to port, and threaten

to drift down upon the tug. But this did not happen; she lay steady, head to wind, and soon began making stern way. Then, as she slowly sagged back and brought the *Proserpine* abeam, a shout went up from the tug, and he saw that they had the end, and were taking it forward to the nigger-head, or mooring bitt, in the bow. He hauled the jib to port, and, running aft, slacked off the spanker and took the wheel. She slowly forged ahead, and soon she was before the wind. Then Scotty slacked off the sheets and took the wheel again.

When darkness closed down, he picked up the revolving search-light on Navesink Highlands, and, later, Sandy Hook light. He did not stop for a pilot at the lightship; he could not have stopped had he wished to. For the wind had again become a gale, and his sails were jibing from side to side as the barge yawed, necessitating his whole attention to the steering. But he knew the way in, and once in the Swash Channel and past the dangerous Romer Shoal, he took advantage of a smooth time and clear track, and by a mighty effort of his great strength succeeded in brailing in the spanker. Then, resting as he steered, he sailed into the comparatively smooth water of Gravesend Bay, and here he took in the mainsail, the dragging weight of the tug keeping the barge fairly on her course while he worked.

In the Narrows he took in the foresail, and made a hurried inspection of the big anchor. It had been "fished," but not stowed inboard; it hung by its ring stopper and the corner of its upper fluke, the latter resting in a grooved casting on the rail from which it would slide when the former was slipped. Shouting joyously, he again took the wheel, and steering the drifting craft up to the crowded anchorage, where, picking a good spot, he unlocked the windlass, dropped the anchor, and gave her chain. When the anchor bit, and enough was out, he stowed the jib, saw that the tug was anchored, hailed her, and cast off the wire tow-line with a fender for a buoy, ate some supper, and turned in.

In the morning when he appeared on deck he found a gray gale of wind blowing from the northeast, and the barge, with every craft at the anchorage, tailing inshore against the pressure of the ebb tide. Among these craft he recognized the missing *Champion*, and as he looked a boat left her side, propelled by four oars, and containing three men in the stern, who, as it drew near, he recognized as Captain Anson, Captain Bolt of the *Champion*, and Mr. Steiner, the owner. He took and secured the painter as it was thrown up, then assisted them over the rail. Captain Anson immediately seized his hand, gripped it fiercely, but said nothing. Captain Bolt did the same, but uttered the words, "Good for you, Scotty." Then Mr. Steiner, smiling painfully under his bandaged nose, offered his hand—which Scotty politely received—and said, in a strained voice, as though the speech cost an effort, "I hear some very good things of you, Mr. McPherson."

"Aye, and is that so, Mr. Steiner?" asked Scotty.

"Ya-as. I hear that you swam from my tug to my barge, and saved your life; but you would have been drowned, wouldn't you, if my barge had not been right there?"

"And if *he* hadn't been right there, Mr. Steiner," broke in Captain Anson, warmly, "your barge and your tug would be going to pieces on the beach now."

"Well, I've a counter claim for saving his life," spluttered the owner, the smile on his face giving way to the easier scowl. "You're not working for my interest, Captain Anson."

"You forget, Mr. Steiner, that you discharged me half an hour ago, and have not reinstated me."

"And I won't," answered the owner, bitterly, "either one of you."

"Very well. Then Bolt and I will be witnesses for Scotty."

"Well, what do you want?" inquired Mr. Steiner, patting the air with both hands in his agitation. "You are trying to ruin me, and I am a poor man already. Father in heaven, how much do you want?"

"Want my tug back and a two years' contract. I've a family."

"Same here," said Captain Bolt. "My barge and a contract."

This half-tone reproduction of "Summer Flowers" only partially conveys the beauty and design of the lithographed plaques.

The four Season Plaques containing no advertising and the Calendar Plaque make beautiful and artistic decorations.

The Anheuser-Busch Art Plaques

With Calendar Plaque for 1904

AT GREAT expense, Anheuser-Busch Brewing Ass'n has secured from the brush of the celebrated color artist, A. Von Beust, a series of magnificent oil paintings, representing the artist's conception of the four seasons. These are reproduced with splendid fidelity as to detail and coloring, in the form of four plaques, "Spring Breezes," "Summer Flowers," "Autumn Riches," "Winter Winds," and an additional plaque containing the twelve monthly calendars for 1904. The five plaques are each 12 inches in diameter, lithographed in the highest style of art, fourteen printings on finest ivory china-finished cardboard, with relief embossing, giving the effect of hammered metal rims.

The five plaques will be mailed to any address on receipt of 25c in money or stamps sent to the Malt-Nutrine Dept., Anheuser-Busch Brewing Ass'n, St. Louis, U. S. A.

Malt-Nutrine A food in liquid form easily assimilated by the weakest stomach. Invaluable to nursing mothers and feeble children, gives appetite, health and vigor to the weak and ailing. Sold by druggists and grocers.

BOOKS BY THE AUTHOR OF

"The Martyrdom of an Empress"

THE MARTYRDOM OF AN EMPRESS
(ELIZABETH OF AUSTRIA)

A personal account of the Empress Elizabeth of Austria, written by a close friend, and one of the very few to whom this remarkable woman ever really opened her heart. The volume has proved to be one of the most popular biographies of our time.

Illustrated with Portraits from Private Photographs. Crown 8vo, Ornamented Cloth, Deckel Edges, Gilt Top, $2.50

A KEYSTONE OF EMPIRE

The intimate association of this anonymous writer with the Austrian court enables her to continue in this volume the entertaining recital of events known only to her. The Emperor is made the subject of the book, but anecdotes and incidents concerning the late Empress are related, as in the author's former volume.

Illustrated from Private Drawings and Photographs. Crown 8vo, Ornamented Cloth, Deckel Edges, Gilt Top, $2.25 net (postage extra)

THE TRIBULATIONS OF A PRINCESS

The anonymous biography of the author of *The Martyrdom of an Empress*. Its charm lies in the way in which it is told; its grace, its good-tempered naturalness, make it as fascinating as a romance, yet it is a volume of reminiscences of true facts in the life of a woman of the great world, the friend of royalty.

Illustrated. Crown 8vo, Ornamented Cloth, Deckel Edges, Gilt Top, $2.25 net.

A DOFFED CORONET

The volume includes peeps into the princely harems of Cairo, and a portrayal of the Khedival Court written in a manner worthy of Pierre Loti himself. The opening scenes of the book are laid in Egypt after the Arabi Pasha rebellion, when Cairo was a hotbed of international intrigue.

Illustrated. Crown 8vo, Ornamented Cloth, Deckel Edges, Gilt Top, $2.25 net.

Club Cocktails

The art of cocktail mixing is to so blend the ingredients that no one is evident, but the delicate flavor of each is apparent. Is this the sort of cocktail the man gives you who does it by guesswork? There's never a mistake in a CLUB COCKTAIL. It smells good, tastes good, is good—always. Just strain through cracked ice. Seven kinds—Manhattan, Martini, Vermouth, Whiskey, Holland Gin, Tom Gin and York.

"And you," said the owner, glaring at Scotty.

"He wants the salvage on the *Anita* and the tug," said Captain Anson, speaking for him. "And he wants a two years' contract as skipper o' the *Anita*. She's lost all hands, and you'll need a skipper, anyhow."

"How much do you want to sign a quit-claim on salvage?" said the owner, desperately.

"Let's see what he wants," said the tug captain, making figures in a note-book, while Scotty looked on in sheer bewilderment. "Make out a check to Scotty for this amount"—he opened the note-book before the owner's face—"and a receipt for the same, which Scotty will sign."

"It is pure robbery," said the owner, brokenly, "and I am a ruined man, but I must pay. I will give you your contracts."

"I see," said the captain, "publicity is bad, sometimes—for bankrupts."

"But what does it all amount to?" said Scotty, as he looked at the retreating figure of the owner, making aft. "How much do I get? Enough to help oot the old mither?"

Captain Anson opened the note-book and pointed to the page on which he had made his calculations. "How many hours did you work?" he asked.

"Aboot twenty-four, counting the swim," said Scotty. Then he read, with popping eyes, the figures indicated by the captain's forefinger.

"I'm going to send you a bill for the door you smashed, Scotty," said the captain, with a smile. "But aren't you glad you didn't catch him? Your bill is a thousand an hour."

"Twinty-foor thousand dollars," said Scotty, his eyes devouring the page. Then came, in a choking gasp, the word "Mither!"

An Interview with Gen. Huertas, Commander of the Army of Panama

By Jorge Nelken y Walberg

General Huertas gave the following account of his experience with the Colombian emissaries to the correspondent of "Harper's Weekly" in Panama:

On November 3 General Tovar, of the Colombian army, came to assume command of my troops, having in his pocket orders from the Colombian government to shoot my officers and myself. This massacre would have happened, to the shame of the civilized world, if I had not followed exactly the orders given to me by him—with the exception that instead of constituting my officers and myself prisoners, I placed the general and his companions under arrest.

On the morning of the 3d of November I was called to the house of Dr. Amador, our Presidential candidate, where I met also Mr. Zachréson, who told me that they had positive knowledge about an order which General Tovar carried with him, directing him to take command of my troops, and, on the arrival of his own troops from Colon, to shoot my officers and myself. Both gentlemen proved this to my satisfaction, and invited me to join them in the liberation of the isthmus. Considering the ingratitude of Colombia, for whom I fought victoriously in thirty-six battles, in one of which I lost my right hand, I decided to join them.

For seven months previous my troops had not received a cent of pay from Colombia, and all were on the verge of starvation and mutiny.

As is customary when a new commander arrives, I went to the station with my troops and band, and received General Tovar and his generals with the honor corresponding to their grade, afterwards returning with them to the barracks, without any suspicion of wrong on their part.

As soon as we reached the barracks General Tovar passed the troops in review, and asked me to show him my arsenal and relate what artillery and arms and ammunition I had; he next asked me how many officers and troops I had. Also, how many of those officers were married and how many had children.

When he left the barracks I requested the honor of presenting my officers to him that evening at the residence of Señor Jovane, where the general was stopping, to which he consented. In the mean time it was hard for me to keep down the excitement of my troops and officers, who, knowing the fate in store for them, had held a stormy indignation meeting. I succeeded, however, in calming them, at the same time preparing myself for the crucial moment.

Contrary to agreement, General Tovar, accompanied by three other generals and fifteen high officers, appeared at the barracks, and asked me for a private interview, at which the other officers requested to be present. I agreed immediately, as I knew that every moment the people of Panama, who had been given arms that morning, might arrive to rescue me and take the barracks.

General Tovar asked me if I knew that there was a secessional movement on foot, and what I was going to do. I answered indirectly that I intended to fight, but did not say for whom, and that my troops were prepared.

We were sitting at this time upon banks near the entrance to the barracks, and General Tovar invited my officers to sit down, taking his place in front of them. I understood his intention, and requested permission to appoint a special guard of thirty soldiers to scout for any movement. I then detailed Captain Salazar with thirty of my trusted men on this commission. As soon as he was ready I myself took command, and, calling the captain, told him to follow me with the thirty men. When we reached the spot where General Tovar stood with his officers, the general was prepared to give the order for my detention. Instantly I formed a carré with my troops round the general and his companions, and told him that Panama had declared its independence, and that they were our prisoners of war, by order of the provisional government.

General Tovar attempted to draw his revolver, but he was told that he would shoot at the risk of his life, and that he and his officers were not recognized as officers, because they were in citizen clothes, contrary to the Colombian military rules. I then requested him to turn over our death-warrant. This he refused to do, and we were obliged to take the order from him as a means of justification. Accompanied by the same band which had received him at the station, the general and his men were then taken to police headquarters, where they were held.

Hawaii To-Day

Some interesting facts about present conditions in Hawaii are presented by the Department of Commerce and Labor through its Bureau of Statistics. These facts reached that bureau in the Hawaiian Annual for 1904, which arrived on the opening day of the new year.

Regarding population, the figures show a steady decrease in the number of natives and a steady increase in the number of persons of foreign birth, especially Japanese and Chinese. In 1872 the number of natives was, in round terms, 50,000, and in 1900, 30,000. In 1872 the number of Chinese was, in round terms, 2000, and in 1900, 25,000. The record of Japanese among the population only begins with 1884, when the number was 116 persons, but in 1900 the number was over 61,000. The total population of 1872 is given at 56,897, and in 1900 at 154,001. The relation of nationality to plantation labor is indicated by a table which shows the nationality and number of sugar-plantation laborers, the number of Japanese being 31,029 out of a total of all nationalities of 42,242, these figures being for the year 1902. The Japanese plantation laborers increased from 13,884 in 1894 to 31,029 in 1902; while the Chinese laborers on sugar plantations fell in number from 8114 in 1897 to 3937 in 1902. Portuguese are next in rank in the number of sugar-plantation laborers, the number of Portuguese being 2669; the next following this is Porto-Ricans, 2036, while native Hawaiians are only 1493 in number.

Sugar, of course, continues to be the principal crop of Hawaii, though a number of other tropical products are now receiving careful attention, including coffee, tobacco, Manila hemp, vanilla beans, and pineapples.

Music

Some Remarkable Songs

In the course of a musical season uncommonly fertile in events of moment, we can recall no occasion yielding more rare and persistent pleasure than the production, at a recent concert of the Kneisel Quartet, of five songs by Mr. Charles Martin Loeffler. Mr. Loeffler, who is an Alsatian by birth but a Bostonian by profession, occupies a peculiar place, entirely of his own selection, in the field of contemporary music. He is a seeker after the realities of shadowy and dim illusions, a painter of grays and greens and subtle golds. The "purple patches" in which Richard Strauss delights, with the exuberance of his fiery temperament, have no attraction for Mr. Loeffler. The obvious splendor, the expected richness, the continual iridescence of Strauss's schemes are wholly absent from the strange and intimate music of this tonal Verlaine. Mr. Loeffler is, primarily, a creator of atmosphere, a weaver of evanescent and slender arabesques. His music has the subdued and elusive beauty of antique tapestries. He reminds one, at times, of Brahms in his more ascetic moods; yet he has a concentrated intensity, a veiled yet stinging poignancy, a sensuousness of mood, quite foreign to the frankly Teutonic temperament of that master.

The songs by Mr. Loeffler, of which we write, are settings of the verse of Gustave Kahn, Baudelaire, and Verlaine: of the first, "Timbres oubliés," "Adieu pour Jamais," and "Les Paons"; Baudelaire's tragic "La Cloche Félée," and Verlaine's "Sérénade"—"Comme la voix d'un mort qui chanterait. . . ." For this reticent and singularly effective verse Mr. Loeffler has written music of exquisite beauty. Here is work of authentic distinction, of vivid individuality—music that has not its superior, that has, indeed, few equals, for distinction of thought, for originality of contrivance, for delicate eloquence. For Mr. Loeffler, Verlaine, Baudelaire, Kahn, and their poetic kind, are as bone of his bone, flesh of his flesh. If he is, with them, as his detractors are fond of maintaining, slightly decadent, he is their peer in artistry, in force of temperament, in fineness of accomplishment. Nothing could better summarize the quality of his imagination than these haunting lines of Gustave Kahn, for which he has written unforgetable music:

"Timbres oubliés des charmants jardins,
Timbres argentins des Thulés lointains,
Timbres violets des voix consolantes
Epandant graves les bénédictions,
Timbres bleus des péris aux féeries,
Timbres d'or des mongoles orfèvreries
Et vieil or des vieilles nations."

Concerning Brahms

Will the Brahms controversy ever come to a final settlement? How often have we been assured that Brahms is the only modern composer who is worthy of being ranked with the immortals? Yet here is Mr. Vernon Blackburn, of London and the *Pall Mall Gazette*, again throwing us into doubt and confusion. "Brahms," says Mr. Blackburn, with refreshingly positive conviction, "remains the most extraordinary, though uninspired, composer that the world has ever seen. . . . Brahms knew everything worth knowing about music; why did he not put that knowledge to beautiful uses?" Perhaps he did. Has Mr. Blackburn ever heard the E-major Intermezzo for piano, opus 116, or the B-minor rhapsody, opus 76, or the D-major symphony? No doubt he has; and that merely deepens the mystery.

Scottish Song and Burns

An eminent but erratic English critic has aroused the ire of lovers of Scottish music by some vigorous deliverances on the subject of Burns. Gaelic song, and that treasured institution of the Highlander — the bagpipe. The critic does not set very much store by the poetry of Burns, nor does the musical element in his songs greatly appeal to him. But, says an indignant correspondent, "he begins by stating that he does not understand the language in which Burns's poems are written"—a fatal confession!

A KEYSTONE OF EMPIRE

By the Author of "The Martyrdom of an Empress," "A Doffed Coronet," etc.

This is the story of the life of Emperor Francis-Joseph of Austria, told by the biographer of his consort, the late Empress Elizabeth, in *The Martyrdom of an Empress*. It constitutes a companion volume to the latter, completing it, in fact, and presents the doyen of the Old World monarchs in a singularly fascinating light, describing his many bitter trials, his relations with his wonderfully clever and imperious mother, with his kindly old father, as well as with the other members of his family. The historical portions of his career have served as a sort of framework for the portrayal of the private life of the Emperor, with interesting details never before printed.

Beer Keeps One Well

It is a noticeable fact that those who brew beer, and who drink what they want of it, are usually healthy men.

You find no dyspeptics among them, no nervous wrecks, no wasted, fatless men.

And so in those countries where beer is the national beverage.

The reason is that beer is healthful. The malt and the hops are nerve foods. And the habit of drinking it keeps the body supplied with fluid to flush out the waste.

The weak, the nervous and sleepless must have it. Why isn't it better to drink it now, and keep from becoming so?

But drink pure beer—Schlitz Beer. There isn't enough good in impure beer to balance the harm in it. Ask for the brewery bottling.

HARPER'S MAGAZINE

for FEBRUARY

PART I

The Sphyx—A Story in Two Parts

By ROBERT W. CHAMBERS

A story that shows Mr. Chambers in his most charming vein. A delicate little comedy, amusing from its very impossibility, and a charming and entirely real love story. Illustrated in color by Henry Hutt.

A ROYAL ELEPHANT HUNT

A brilliant description of a royal elephant hunt given by the King of Siam for some English guests. The narrative is by F. S. Burgoyne, F.R.S., one of the party.

CRUISE OF THE "TONQUIN"

Cyrus Townsend Brady tells the true story of this tragic voyage, now almost forgotten—a voyage which played a most important part in the history of one of New York's early industries.

THE COMPASS

Professor Simon Newcomb, the eminent astronomer, contributes an important and interesting study of the mariner's compass, its history, and some of the problems connected with its use.

MR. ZANGWILL IN ITALY

A poetic picture of another bit of the Italy of to-day, accompanied by many pictures in tint by Louis Loeb.

THE TRICK OF EDUCATION

A paper of international interest by Alice Meynell, the well-known English essayist. It brings up some new phases of the question of English pronunciation.

THE UNIVERSITY OF ATHENS

President Charles F. Thwing writes of the University of Athens as it is to-day of the life there and of the great work which this institution has accomplished.

TAILORING ANIMALS

Dr. Henry C. McCook, LL.D., tells of the birds and animals which weave shelters for themselves and show an almost human intelligence in their selection of materials, etc.

EIGHT SHORT STORIES

There are eight short stories. Among the authors are Norman Duncan, van Tassel Sutphen, Roy Rolfe Gilson, Margaret Sutton Briscoe, and others.

MANY PICTURES IN COLOR AND TINT

Lux Crucis

A Tale of the Great Apostle

By SAMUEL M. GARDENHIRE

Through this story of Rome of the time of Nero moves the Apostle Paul, quietly wielding his titanic power. It is an intimate picture, in which Nero's corrupt court, the sacrifice of the Christians, the burning of Rome, and the final triumph of the Cross figure conspicuously. And through it all runs the tale of a Roman officer's love for a Christian maid—a love story of strangely vital power and charm. $1.50

COMMENT

THERE is no change in the political situation, so far as the attitude of the great majority of Republicans toward the nomination for the Presidency is concerned. Their national convention is but five months distant, and the talk about the emergence of competitors for the nomination has almost died away. If there ever was a chance of launching a Hanna boom, the pernicious activity of Perry S. Heath on behalf of the Ohio Senator seems to have killed it. Never had any politician more cause than Mr. Hanna to pray for deliverance from "fool friends." The sole effect of the campaign literature concocted and circulated by Heath has been to provoke the Senator to declare for the hundredth time that he is not a candidate; and his chief lieutenant in Ohio, Governor Herrick, has clinched the denial with the assertion that "all talk of Mr. Hanna being a candidate for President is bosh." It is possible, however, that Ohio may figure on the Republican ticket, for we are beginning to hear the name of Judge Taft mentioned for the Vice-Presidency, though the impression has been current that his ambition pointed to the place of Justice of the United States Supreme Court, and that when a vacancy on that bench should occur, he would resign the post of Secretary of War. In view, however, of the tremendous victory lately won by Mr. Hanna in his State, it seems superfluous to conciliate Ohio by the selection of one of her sons for the Vice-Presidency. That would be a waste of ammunition which may be needed urgently elsewhere, as, for example, in Indiana or Illinois, should the Democrats in a lucid moment manage to frame a unifying and electrifying ticket.

Is Mr. Roosevelt to be congratulated because he now appears to have a clear field for the Republican nomination for the Presidency? It seems certain that his opponents inside of his party, who, although they do not control the machinery, are numerous and powerful, will concentrate their energies during the next five months on securing the nomination by the Democracy of a man whom they can support. What Mr. Roosevelt now has to fear is the fate that awaited Mr. Harrison in 1892. Triumphant in the convention, the latter encountered a landslide at the ballot-box. To those who were living in Washington at the time, it is well known that until late in the evening of that eventful November Tuesday in the year named, President Harrison felt entirely confident of reelection. He believed, as the present President believes, that he could win without New York, and hope did not expire until the report of the catastrophes suffered by the Republicans in the Middle West was verified. The true explanation of those catastrophes is that in Ohio, Indiana, Illinois, Wisconsin, and Michigan tens of thousands of anti-Harrison Republicans refrained from voting. That is to say, throughout the Middle West in 1892 the devoted friends of James G. Blaine followed precisely the same tactics which they had adopted with such memorable success against Judge Folger in New York ten years before. *Mutato nomine, de te fabula narratur.*

The Democratic politicians are now taking the centre of the stage. Notwithstanding the loyal and magnanimous eulogy of his former chief, delivered by Mr. Richard Olney at the McClellan banquet, the Democratic State Committee of Massachusetts, on January 9, voted unanimously to urge the Democratic national convention to nominate Mr. Cleveland's ex-Secretary of State for the Presidency. A firm conviction was expressed that, under his leadership in the coming campaign, important New England States could be swung over into the Democratic column. We presume that the States which the committee had in mind are Connecticut, New Hampshire, and Rhode Island. If Mr. Bryan and his friends would accept him, Mr. Olney would probably get the electoral votes of New York; indeed, it now looks as if that State would support any conservative Democrat capable of uniting his party. Whether Mr. Olney could regain New Jersey from the Republicans is, as we have often said, a very different question. The Republican leaders in New Jersey believe their organization to be well-nigh unconquerable, except by a native of the State. Hitherto Mr. Cleveland has been the only man of whom they would confess themselves in fear, but they are now beginning to admit that McClellan's name also might be one to conjure with.

It has been hitherto taken for granted that Mayor McClellan's youth put his candidacy in 1904 out of the question, but, as a matter of fact, he is not much younger than President Roosevelt, and has had a far more extensive experience of public life than Mr. Roosevelt had when he was elected Governor of the Empire commonwealth. From the view-point of certain veteran Senators both Roosevelt and McClellan are boys, but we have had boy Senators and boy Speakers. Henry Clay was but twenty-nine years old when he first entered the United States Senate, and only thirty-four when he was chosen Speaker of the House of Representatives. It would be a profoundly interesting incident in political history if Mayor McClellan should be nominated and elected to an office which his illustrious father, though nominated, failed to secure.

On Saturday, January 9, Mr. William Jennings Bryan, who had just returned from his tour in Europe, made, at the Victoria Hotel, an admirable speech to a large number of citizens representing both political parties. If the speech delivered by him at the Thanksgiving dinner of the American colony in London was equally happy, we are not surprised at the profound impression it is said to have made upon his hearers. It is evident that he kept his eyes and ears open when abroad, and we look forward with curiosity to the publication of his experiences and observations. Unquestionably, he draws an important distinction not always recognized, when he says that in some parts of Europe—in England, France, and Switzerland, for instance—there is as much freedom of thought and speech as there is on this side of the Atlantic, but, on the other hand, in no other country is there such an opportunity to make the most of one's life as the United States afford. Here is applied the greatest stimulus to good work, physical, mental, and moral. The speaker's good sense and modesty were attested by the evident sincerity with which he disclaimed accepting the courtesy with which he was received in Europe as a personal compliment. He is thoroughly alive to the fact that the deference was paid simply and solely—and very properly—to one who had twice been the candidate of a great political party for the highest office in the gift of his fellow citizens.

It is manifest that Mr. Bryan has widened and grown since 1896 almost as much as Mr. McKinley grew between March 4.

1897, and the day when he was assassinated. Do we mean to imply that Mr. Bryan is for a third time a candidate for the Presidency? No one sees more clearly than Mr. Bryan himself that, for some years to come, his place is in the ranks, but that, if he strives to bring about the reunification of his party, and gives the loyal and able support of which he is capable to its standard-bearer in this campaign, his hour may come again. In an interview with a representative of a New York newspaper on Saturday, he repeated in the most explicit and emphatic way his former declaration that he will not be a candidate for the Democratic nomination this year. He added that he would not pledge himself never again in his lifetime to run for office. He did not view with favor the suggestion that the Democratic National Committee might decide to hold the national convention in New York. Mr. Bryan was quite right in thinking that, not even a suspicion of being influenced by "Wall Street" should attach to the nominee of the Democracy, and, in order to avert such a suspicion, it would be judicious to hold the convention in some inland city. The committee, meeting in Washington on January 12, chose St. Louis, and named July 6 as the date. As to the platform to be framed by the Democracy this year, Mr. Bryan adheres to the ground taken by him in the *Commoner*, that while, of course, there will be new issues, the party should take no step backward. With a prudence which Senator Gorman might have done well to imitate, the former nominee of the Democracy for the Presidency declined to say what he thought about the Panama affair, on the ground that he was not sufficiently familiar with the facts. It looks as if he were more likely to concur in Mr. John S. Williams's view of the matter than in Senator Gorman's. Mr. Williams holds that the Democratic party must recognize accomplished facts, and, consequently, should not oppose the ratification of the canal treaty with the Republic of Panama.

It will be remembered that a resolution introduced in the House of Representatives for an inquiry into the alleged connection of certain members of that body with the postal frauds was sent by the Republican majority to a committee which is expected to smother it. A similar resolution introduced in the Senate encountered strenuous opposition on the part of Mr. Lodge and other Republican Senators. What do Republican members of the Federal Legislature expect to gain by such an attitude? Have they been divested of common sense? Do they expect to convince the people that no Senator or Representative has been guilty of complicity in cheating the government? How can it avail them to refrain from an inquiry of their own when judicial investigations have already proved that one Representative was an accomplice in the perpetration of a fraud upon the Post-office Department, and that a United States Senator charged with a similar offence has confessed himself afraid to stand a trial on its merits? When the case of Senator Charles H. Dietrich, of Nebraska, accused of receiving a bribe in connection with the appointment of a postmaster in that State, came up on January 8 in the United States Circuit Court at Omaha, the technical point was made that the defendant was not a member of Congress at a time when the crime imputed to him was said to have been committed. The presiding judge held the point well taken, on the ground that a man elected to either House of Congress does not actually become a member until he has qualified and taken the oath at the bar of the Chamber to which he has been chosen.

Precisely the same point was raised by ex-Representative Driggs of New York, charged with corruptly receiving the sum of $12,500 for selling to the Post-office Department, at the price of $150 each, 250 registering machines for which the manufacturers received but $50 apiece. In this case the presiding judge refused to rule upon the technical point, and left the jury to decide whether the term of the accused person in Congress had begun at the time when the crime was perpetrated. The jury found the defendant guilty, but, strangely enough, added a recommendation to mercy, of which, still more strangely, the trial judge approved. The extraordinary reason given by the judge for his approval was that he believed the prisoner not to have been cognizant of the existence of the Federal statute which he violated—the statute prohibiting a member of Congress from robbing the government. It is obviously immaterial whether Driggs had or had not read the statute in question. He had read the Ten Commandments, and knew that he was forbidden to steal.

The printed testimony taken before the Senate Committee on Military Affairs concerning the nomination of Brigadier-General Leonard Wood has been furnished in confidence to individual Senators, and, through one of them, has found its way into print. It is intensely interesting. Between General James H. Wilson and President Roosevelt there is a distinct issue of fact. The President asserts, and General Wilson denies, that General Wood participated actively in the battle of San Juan. It appears that Secretary Root, who was not, of course, in Cuba at the time of the battle of San Juan, testified before the Senate Committee that the records of the War Department show General Wood to have "been there." He further testified that President Roosevelt could, of his personal knowledge, bear witness to General Wood's presence in that fight, and to the extraordinary gallantry and efficiency which he displayed. On the other hand, General Wilson affirmed on oath that he had an interview with Mr. Roosevelt after the latter had been elected Vice-President of the United States, and told him that General Wood had never been under fire in his life until the Spanish war began, either in the Geronimo campaign, or at any other time; and that in the Spanish war, he was never in but one battle, that at Las Guasimas, where, but for his rescue by colored troops, he would have been badly handled. To this statement Mr. Roosevelt rejoined: "Oh yes, he was at San Juan." Whereupon General Wilson replied: "I beg your pardon, he was not. You know that he was in the rear, looking for ammunition." General Wilson swears that Mr. Roosevelt then admitted the fact to be as his interlocutor had put it, but expressed a wish to keep the truth a secret. "Yes," said he, "but do not tell anybody."

The President himself has not, under his signature, contradicted General Wilson's assertion, but Secretary Root testified before the committee: "The President informs me that General Wilson is mistaken, and that no such conversation regarding General Wood's presence at the San Juan fight ever took place between him and General Wilson. It could not have taken place, because General Wood was there, and the President saw him there." General Wilson did not deny that General Wood was "there," namely, at San Juan, or thereabouts. What he said was that Wood was at the rear, and took no part in the fighting. It ought to be easy to find out just where Wood was during the battle, and it is important to do so, for the principal ground for the extraordinary promotion of Wood is his alleged gallantry in a battle which, according to General Wilson, he took no part in. If it be true that General Wood has never in his life seen any fighting except at Las Guasimas, where the negroes had to rescue him, he certainly is not qualified for a rank, which, should we become involved in a great war, would almost certainly cause him to be placed at the head of the army.

New York is not the only State which is contemplating extensive canal improvements. The banquet given on Friday, January 8, by the Wilmington Board of Trade, and presided over by Judge George Gray, was intended to promote the conversion of the existing shallow canal between the Delaware and Chesapeake bays into an artificial waterway deep enough and wide enough to accommodate the largest vessels of our war fleet and our merchant navy. If this project should be carried out, the water distance for large steamships between Philadelphia and Baltimore would be shortened from over four hundred to about one hundred miles, and some thirty hours would be saved. Baltimore would then be two hundred miles, or twenty hours, nearer by water to New York and Liverpool. The strategic value of such a canal is obvious. As its terminals would be well above the ports which guard the entrances to the bays named, it would enable all the warships and torpedo-boats in both the Delaware and the Chesapeake to be quickly concentrated at the point of hostile attack on either bay. If, moreover, a ship-canal were once con-

structed between the Delaware and the Chesapeake bays, a second connecting the Delaware and Raritan bays and a third cleaving the Cape Cod peninsula would be of such manifest utility that their eventual construction would be assured. When those three links in the chain are forged, we shall have interior water communication from Norfolk to Boston. As for the preliminary step, the proposed enlargement of the present Delaware and Chesapeake Canal—an enlargement which presents no engineering difficulties, and, probably, could be carried out at the cost of two battle-ships—it interests not only the five States that would be most directly affected—New Jersey, Pennsylvania, Delaware, Maryland, and Virginia—but also the Federal government.

It will be remembered that in the curt order retiring Lieutenant-General Miles not a word was said about his memorable services to his country during the civil war and, subsequently, against the Indians. The order of the War Department, on the other hand, by which Lieutenant-General Young is retired recites his services at great length and in the most eulogistic terms. It may be recalled that the pretext given for ignoring General Miles's honorable record was an order issued in the second Cleveland administration by Secretary Lamont, prohibiting the issuance of complimentary general orders on the retirement of general officers. That rule has never been formally set aside, but not the slightest heed is paid to it in the general order retiring General Young. After reciting in detail all the incidents of his military career, from the time when he entered as a private a volunteer regiment in 1861, up to the time when he returned from the Philippines and undertook the task of presiding over the army war-college board, the Secretary of War declares that "he goes into retirement with the respect and esteem of all his associates." Secretary Root adds that there can be no better wish for the regular army in the future than that its officers shall remember how distinction and the highest rank came to General Young, not as the result of self-seeking or of political and social influence, but as the result of duty well done, a high standard of honor, sane and kindly judgment, and unselfish loyalty to his commander-in-chief, to the army, and to the country.

Some newspapers have thought they could detect in the grounds specified for the commendation bestowed on General Young a backhanded blow at General Miles. We have never heard the successive promotions of General Miles attributed to self-seeking or to political or social influence, and we have never heard him accused of disloyalty to his country, to the army, or even to his commander-in-chief. Major-General Chaffee, who succeeds General Young in the headship of the army, as chief of staff, with the rank of lieutenant-general, has had, in one respect, a unique career. He is not a West-Pointer, neither did he secure his position in the regular army through the exhibition of gallantry and efficiency as a volunteer during the civil war. He served, indeed, throughout the four years of the war between the States, but when he enlisted, in 1861, it was not as a volunteer, but as a private in the regular army. He presently earned promotion from the ranks to a commission, and at Gettysburg was brevetted for gallantry. After the civil war was over, he, like Miles, gained distinction as an Indian-fighter, but many years were to elapse before Chaffee rose to the command of a regiment. He commanded, it will be remembered, the American contingent in the joint expedition for the relief of the foreign legations at Peking, and his circumspect conduct in a delicate and difficult position reflected the highest credit on his country.

Death has removed two of the most distinguished figures in the history of the war between the States. With the exception of General Lee and General Stonewall Jackson, there were no better soldiers in the Confederate army than General James Longstreet and General John B. Gordon. To those that admired and esteemed them both it is a matter of regret that Gordon should have asserted in his recently published memoirs that the Confederates lost the battle of Gettysburg because Lee's orders were wilfully disobeyed by Longstreet. So far as we know, this charge was unheard of until after General Longstreet accepted an office at the hands of a Republican administration and frankly expressed his recognition of the military greatness of General Grant. Thereafter a disposition was evinced in certain quarters to make Longstreet a scapegoat for Lee, although the reputation of the latter was too firmly established to need the disparagement of any subordinate. Lee himself never gave any countenance to the impeachment of Longstreet's acts or motives. After Stonewall Jackson's death, Lee unquestionably regarded Longstreet as his greatest lieutenant. Longstreet was a West-Pointer. Gordon, on the other hand, was a lawyer by profession when the war broke out, but organized an infantry company and joined an Alabama regiment, of which he was successively chosen captain, major, lieutenant-colonel, and colonel. Notwithstanding the fact that he had no military experience before the war, his handling of troops in the seven days' fighting around Richmond was pronounced admirable by expert observers, and certainly was wonderfully successful. At Antietam he was shot four times, but continued to hold his men to their work, until a fifth bullet, striking him in the face, knocked him senseless. At Fredericksburg he led the storming of Marye's Heights. At Gettysburg he took a conspicuous part in the attack upon the Federal right wing, earned the fervent commendation of Lee for his services in the Wilderness, and, on May 12, 1864, fought the battle of Spottsylvania Court House. On that field he was made a major-general, and had risen to the rank of lieutenant-general before he surrendered at Appomattox. It is, we repeat, a pity that he and Longstreet in their later years should have become involved in a controversy. Great soldiers both, they did what they believed to be their duty to their respective States and to their section, and the fame of each is secure.

In a letter elsewhere printed our correspondent, Mr. J. Aubrey Jones, asks whether the United States did not violate the obligation imposed upon us by the treaty of 1846 with New Granada when we forbade Colombia to reassert her former sovereignty over the seceding state of Panama. We answer that the treaty named, as repeatedly interpreted by Attorney-Generals and Secretaries of State, bound us to defend New Granada's sovereignty over the isthmus against aggression on the part of any foreign power, whether European or American. It did not bind us to assure, as against an internal revolution, control of the isthmus to any government, *de jure* or *de facto*, which, at a given moment, might happen to be installed at Bogota. Had our correspondent's construction of the treaty of 1846 been the true one, it would have been our duty in 1861 to defend the Bogota government against the Democratic uprising which substituted for the centralized republic of New Granada the confederation known as the United States of Colombia. As a matter of fact, we did nothing of the kind. In the following year, 1862, the Conservatives, being in power at Bogota, invoked the aid of the United States, suggesting for the first time that the treaty of 1846 imposed upon us the duty of upholding their faction on the Isthmus of Panama. The Washington government declined to comply with the wishes of the Colombian Conservatives.

Some time later the Attorney-General of the United States declared that our guarantee referred only to foreign governments, and did not pledge the United States to take sides with one or another faction in the internal troubles of Colombia. Such, according to Mr. Raúl Pérez, himself a Liberal, and the son of the greatest leader of Colombian Liberals, has always in Colombia been understood to be the purport of the treaty of 1846. The letter written in 1866 by Secretary-of-State Seward is not irreconcilable with this view of our treaty obligations. In that letter Mr. Seward said, speaking of the isthmian interests of Colombia, that if those interests should ever be assailed by "any power at home or abroad," the United States would be ready to defend them. An examination of the context and of the circumstances should convince our correspondent that by the words "at home" Mr. Seward did not contemplate an internal revolution, but an invasion of Colombian territory by Venezuela or some other American republic. In 1903, as in 1861, and at several intervening dates, the United States were at liberty to recognize, if they chose, the *de facto* government which happened to be in possession of the Panama isthmus. In 1885, for instance, the Liberal revolutionists against the

usurper Nuñez not only held the isthmus, but also the Magdalena River, the only means of access to the interior of Colombia and to its capital. That our failure to exercise the privilege at that time is a matter of deep regret to Colombian Liberals is evident from the article contributed by Mr. Raúl Pérez to the December number of the *North American Review*.

At the hour when we write, it begins to look as if Japan might forfeit some of the sympathy which hitherto has been hers in Great Britain and the United States. There is no doubt that, by the offer to recognize Japan's preponderance in two-thirds of Korea, provided the northern third of the peninsula should be converted into a neutral zone, Russia would have but little to gain, and very much to lose. The request for the neutralization of the northern third of Korea looks like an attempt to save Russia's dignity, which might be seriously impaired in the eyes of her Asiatic neighbors by complete acquiescence in Japan's demands. None of the purposes, economical or strategic, which Japan has had in view would be frustrated by her acceptance of Russia's offer. Two-thirds of Korea would afford for decades to come an ample outlet for the overflow of Japan's surplus population, and her control of Massampho and the southeastern coast of the peninsula would enable her to interrupt at any hour that intercommunication between Vladivostok and Port Arthur which is of so much importance to Russia. By securing the neutralization of a belt of territory adjoining the Manchurian frontier, Russia would really accomplish nothing of substantial moment, beyond what to Orientals seems of vital moment, namely, "saving her face." The Japanese should be warned betimes that, while Americans and Englishmen have looked with approval on their recent pretensions to ascendency in Korea, they have no desire to see Russia humiliated. Neither do they wish to witness a war in the Far East if it can be averted without making of Japan a victim. It would be absurd to assert that the Japanese would be victimized by an acceptance of Russia's last proposal.

The commercial treaty with Menelik, Emperor of Ethiopia, has been duly concluded, through the very successful efforts of Consul Skinner and his Abyssinian expedition. All parties are to be congratulated. To the United States the chief immediate effect of the treaty will be to transfer to American hands something like a million dollars' worth of trade in American cotton goods, which now finds its way by indirect routes through various third parties. Abyssinia will doubtless pay us in "jungle products," such as ivory, wax, and gum arabic, the chief articles of export, but it is by no means likely that the ultimate result of the new commercial agreement will be limited to this elementary exchange. When we remember that the Ethiopian empire is about the size of California, with thrice the population, a somewhat similar climate, and great natural resources, we can easily look forward to a time when these resources will be exploited by American enterprise and skill, and when the whole country will be so opened up that its exports and imports will be multiplied tenfold. The French have set us an example of enterprise by opening two hundred miles of railroad from Jiboutil to Harrar, with telegraph and telephone, and there is no reason why American bridges and steel rails should not do as well in Abyssinia as in Uganda or the Sudan. Abyssinia now imports steel goods from France and Switzerland.

English politics have been enlivened by a skirmish between the Duke of Devonshire and Mr. Chamberlain, the two great Liberal seceders who lead the right and left wings of the much-divided Tory party. The bone of contention, in the present case, is the Liberal-Unionist Association, formed when the Liberal party went to pieces over Mr. Gladstone's first home-rule bill. Of this association the Duke of Devonshire is president, and he has been in much perplexity over its future destinies, since the fiscal controversy has divided its members into two hostile camps. In view of this division, the Duke, as president, recently suggested to Mr. Chamberlain that the association should dissolve, since it no longer had a sufficient excuse for existence. Mr. Chamberlain wrote a reply, full of his characteristic energy and audacity, and showing that he ardently desires, and confidently hopes, to capture the association outright, and use it for the purposes of his fiscal campaign. He declared that the matter should be put to the vote, and that the minority party should retire in a body from the association, leaving the majority to shape its future career. The Duke of Devonshire, with his customary moderation and conservatism, replied that it would be a pity thus to rend the association asunder by violent means, and asking Mr. Chamberlain to consider the matter in a friendly spirit, to see whether arrangements for dissolving the association in some more urbane and orthodox way could not be devised. Mr. Chamberlain at this point took the bit in his teeth, and announced that since the president of the association refused to call the meeting he asked for, he himself would do so on his own responsibility. This he intends to do immediately after the assembling of Parliament, and it is evident that he expects to oust the Duke of Devonshire from the presidency, and to take his place as head of a purified and enlightened Liberal-Unionist Association. This procedure is directly opposed to the traditions of English public life; but it is uncertain whether Mr. Chamberlain will cause displeasure by his abrupt and revolutionary methods or win admiration by his audacity and decision. This controversy once more demonstrates, what we recently affirmed, that the ex-Liberals are by far the most prominent personalities in the Conservative party.

It is welcome news that lynching—especially the lynching of negroes—seems to be on the decline. The newspapers, in reviewing the lynching record for 1903, report very few cases for the last half of the year. The particularly horrifying destruction of a negro in Wilmington last June made a great stir, and the vehement protests which ensued appear to have had an effect. At any rate, the record of fifty-two lynchings for the first seven months of the year has had so few additions that the year's total is placed as low as sixty. We are told that there were two hundred lynchings in 1882, and that the record showed a slight annual reduction until 1901, when it rose a little. But in 1902 the total fell to ninety-six, and this year's total—if the figures given are correct—is a third less than that. Possibly the partial disfranchisement of the negroes in some of the Southern States has resulted in more peaceful conditions, but most of the improvement is, doubtless, due to an aroused public opinion. Southern leaders have set their faces hard against lynching, and newspapers, both North and South, have discussed and denounced it so urgently and with such persistence that the habit seems to be losing its grip. Arthur Stewart, a negro who had shot a white man, was lynched late in December, at Pineapple, Alabama. But the lynching party set fire to the jail and burned a large hole in the business part of the town, which so angered the townspeople that they held a mass-meeting and resolved to call a special term of court to punish members of the mob. That was discouraging to the lynchers. Still better was the recent case at Council Bluffs, where a mob that had gathered to take two negroes out of jail was dissuaded from its purpose by Congressman Walter I. Smith. Every case in which lynching is punished or prevented strengthens the tide against it.

The death list for the first ten days of 1904 includes an unusual proportion of well-known names. The deaths of General Longstreet and General Gordon are noticed above. New York has lost a venerable and familiar figure in Parke Godwin. Yale has lost Francis Wayland, Dean of its Law School; Charles Foster, of Ohio, formerly Governor of that State, and Secretary of the Treasury under President Harrison, died on January 9; Jean Léon Gérôme, the French painter, on January 10, and on the same day, in London, Antoinette Sterling, the singer. Mr. Godwin came to New York to live about 1836, being then twenty years old, and became the assistant editor of the *Evening Post* under William Cullen Bryant. For nearly seventy years he was active in the life of the city, and in close association with its writers and its politicians. He edited *The Harbinger*, the mouthpiece of the Brook Farm reformers; he became an editor of *Putnam's Magazine;* he succeeded Mr. Bryant as editor of the *Evening Post*, and later edited the *Commercial Advertiser*. He published many books and made many public addresses, among which will be remembered his eulogies on Edwin Booth, Kossuth, Audubon, Bryant, and George William Curtis.

What Might Be Done for Colombia

It seems to be settled that the canal treaty with the republic of Panama will be ratified, more than the sixty votes needed for the purpose being obtainable in the Senate. The willingness exhibited by many Democratic Senators to recognize accomplished facts and to accept the treaty has, naturally, caused the Republican majority to adopt a conciliatory attitude, and to consider seriously such amendments of the treaty as may be offered from the Democratic side. It is understood that the aim of one contemplated amendment is to enlarge and strengthen the control over the canal zone which is already conceded by the terms of the convention to the United States. Would it not accord even better with the position assumed by Democratic leaders with reference to the Panama affair if another amendment should be proposed which should have in view the offer of a certain amount of compensation to Colombia for the loss of her principal asset? We incline to regard with a good deal of favor a suggestion on the subject made by the Philadelphia *Public Ledger*. Why, it asks, should not our Federal government pay for the canal franchise a somewhat larger price than the ten million dollars promised by the treaty to the Panama Republic, on condition that the excess over the sum named should be transferred to Colombia, which, in return, would give to the seceding commonwealth a quit-claim to the isthmus? The *Public Ledger* argues that, if it be true that the canal will prove of inestimable value to the United States and to civilization, it might be expedient, by paying a few more millions of dollars—say, for example, by increasing the lump sum from ten million to twenty million dollars—to extinguish whatever claim Colombia possesses, or that she may think she possesses, in the forum of equity. In the opinion of our Philadelphia contemporary, it would be better policy to renew our old ties of friendship with the Colombian republic at the cost of a few additional millions than to spend an equivalent or larger sum on fleets and armies in the prosecution of an inglorious war against a power so feeble. Let us look a little closely at this proposal.

There is a section of the Colombian population—the most liberally educated and high-minded section—for which, at this conjuncture, we cannot but feel a good deal of sympathy. It has been the victim of events which, for about eighteen years, have exposed its country to usurpation, civil war, anarchy, and bankruptcy, and which have culminated in the forfeiture of the American isthmus, that has long and justly been regarded as its most precious possession. The Liberals, who for many years preceding 1886 strove to give Colombia an adequate and invigorating system of public education, to establish a régime of law and order, and to develop their country's agricultural and mineral resources, have made a gallant but fruitless fight in the interest of civilization since in the year named the usurper Nuñez abrogated the organic law then existing, and substituted by his personal fiat the present reactionary constitution, which neither the department of Panama nor any other part of Colombia was morally bound to obey. The moneys successively extracted from the French company for extensions of the canal franchise granted to M. de Lesseps have been used to frustrate the efforts of the Liberals for the regeneration of their country. It is not the Liberals, but their unscrupulous opponents, the Reactionists, installed in power at Bogota since 1885-6, who are responsible for the foolish attempts to blackmail the United States, if not, also, to rob the French company of its franchise, attempts the inevitable outcome of which was to provoke the department of Panama to secede from the rest of Colombia, and to proclaim its independence. It is hard that Colombian Liberals, who have borne so many wrongs in the past, should now have to witness also the dismemberment of their native land. For their sake, for the sake of the innocent, it may be well for us to ask whether something cannot yet be done to uphold the dignity and honor of their country by the offer of a reasonable compensation for the grievous loss brought upon her by corrupt politicians at Bogota. Although to the usurping government headed by President Marroquin, or to the greedy Senators, who, for motives they dared not avow, rejected an equitable treaty, we may be under no obligation, either in international law or in the forum of morals, it by no means follows that the plea of Colombian Liberals, powerless and hopeless though they are, for a show of generosity on our part which should leave to their country at least a remnant of prestige, ought to go entirely unheeded.

There is a recent precedent for such an act of generosity on the part of the United States. When, in the autumn of 1898, our commissioners met those of Spain in Paris, to arrange a treaty of peace, we were virtually masters of the Philippines. We had annihilated the Spanish fleet in Manila Bay, and Spain would have been unable to send a single regiment to strengthen the feeble force which she possessed in the archipelago. We had but to stretch forth a hand to take the islands. We resolved, nevertheless, to offer despoiled and humiliated Spain some compensation for a territory which, practically, was the prize of war. We, accordingly, tendered, and she accepted, the sum of twenty million dollars for the renunciation of her nominal claim to the Philippines. Of all the features of the Treaty of Paris, it is this one that is viewed with most satisfaction by fair-minded and magnanimous Americans and it should, undoubtedly, be credited with the willingness of Spaniards to resume, with unexpected promptitude, friendly relations with the United States. We were neither legally nor morally bound to pay one penny for the Philippines, but it was well for all concerned that Spain's commissioners went not away, with hands quite empty, from the sad conference, at which were surrendered the last remnants of the empire which Columbus gave to the Castilian monarchy.

What we did for Spain we might do for Colombia. Nay, in proportion as Colombia is by far the weaker power, the act would be more graceful and more gracious. But, it may be asked, should we agree to pay a lump sum of twenty million dollars, instead of ten million dollars, for the canal franchise, on condition that half of the amount should go to Colombia, what assurance have we, or can we have, that Colombian Liberals will ever profit to the extent of a penny by our generosity? The only precaution that now occurs to us by which we might avert or postpone the confiscation of the consolatory sum awarded to Colombia by the corrupt politicians now in power at Bogota, or the application of it to the extermination of Colombian Liberals, would be a proviso that Colombia's share of the purchase-money should be paid in ten or twenty annual instalments. A payment of $500,000 a year in gold for twenty years would be an acquisition of importance to Colombia, and it is extremely probable that, before the expiration of the term, the Liberals would recover power.

The effect on other Latin-American republics of such an act of generosity as the Philadelphia *Public Ledger* has proposed, and as we also are inclined to recommend, would be far-reaching and profound. It would prove to the satisfaction of our sister commonwealths in the New World that we are sincere in protesting that our quick recognition of the republic of Panama was prompted by no selfish motive, but was, in truth, dictated by a regard for the interests of the civilized world. Those commonwealths, and Colombia herself, no less than Europe and the United States, are certain, eventually, to profit by the opening of an interoceanic waterway.

Some Fresh Suggestions about the New Negro Crime

On January 10 Dr. Felix Adler discussed the negro question at Carnegie Hall in New York city. He sensibly said that the North, while it cannot evade its share of responsibility for the difficulties presented, ought not to assume any airs of superiority over the South, but, on the contrary, should recognize that the South, by long experience, is peculiarly qualified to solve, or at least attempt a solution of, the problem. We have no doubt that Dr. Adler and the many thousands of Northerners who concur in his views will read with interest an article on the cause and prevention of the lynching of negroes, contributed to the January number of the *North American Review*. Before and since the civil war, the author of the article, Mr. Thomas Nelson Page, a native of Virginia, has been an eye-witness and a student of the relations between the whites and the blacks. He lends the weight of his name to the assertion, supported by innumerable authorities, that the assault of white women by colored men may fairly be described as the "new" negro crime. In conjunction with many other careful students of Southern history, he avers that during the whole period of slavery the crime did not exist. Even during the civil war, when all able-bodied white men were away in the army, the negroes were loyal guardians of the white women and children. On isolated plantations and in lonely neighborhoods, white women at that period were as secure as in the streets of Boston or New York. Neither were many examples of the crime here contemplated observed for a good many years after emancipation. The particular crime to which we refer did not become frequent at the South until the old paternal relation which had survived even the strain of reconstruction passed away with the departure of the old generation of negroes from the stage. There was no extensive outbreak of the new negro crime until the teaching that accompanied the attempt to impose carpet-bag government had borne its fruit in the new generation of negroes. The substance of the teaching was that the negro was the equal of the white, that the white was his enemy, and that the black must assert his equality. The growth of the idea was gradual in the negro's mind, but, when it became widely and deeply rooted, its effect was shown in many ravishings of white women by negroes, sometimes in the presence of the victim's family. Mr. Page points out that conditions in the South render the commission of the crime peculiarly easy. The white population is thin, the forests are extensive, the officers of the law are distant and difficult to reach. Above all, the negro population, as a whole, seems inclined to condone the fact of mere assault. Touching this point, the author testifies that the average negro does not believe in the chastity of women. Such a belief could not be evolved from his acquaintance with the female members of his race. He cannot accept the credibility of an assault being com-

Public Domain, Google-digitized / http://www.hathitrust.org/access_use#pd-google

mitted against the will of the victim. Such a state of facts is beyond his comprehension. On the other hand, his sexual desire, which always was a controlling force with him has become, since the new teaching of political and social equality, a desire for the white woman. This assertion is confirmed by William Hannibal Thomas, himself a colored man, in the interesting work entitled *The American Negro*.

It is obvious, however, that the negro had the same animal instincts under the slavery régime that he exhibits now. Neither is it deniable that the punishment which follows the crime is no more certain, terrible, and swift to-day than it would have been in slavery times. To what, then, must be attributed the alarming increase of the horrible brutality? By Mr. Page the emergence of the new negro crime is attributed to two things—first, as we have seen, to racial antagonism and to the talk of social equality that inflames the negro, unregulated and undisciplined; but, secondly and mainly, to the absence of a strong restraining opinion among the negroes of any class, however enlightened and law-abiding. It is manifestly important to note what a specially qualified observer like Mr. Thomas Nelson Page has to say upon the latter point. He tells us that a close examination of the examples of rape and lynching, and of the ensuing public discussion thereon, has led him to the painful conviction that most of the leaders of the negro race have rarely, by act or word, evinced a right appreciation of the crime of ravishing and murdering women. Their denunciation has been levelled almost exclusively at the crime of lynching. Underlying most of their protests against that supersession of the law is the suggestion that the victim of the mob is a martyr. Mr. Page avers that, so far as his own observation has gone, the records of negro meetings will show, for one righteous outcry against the violation of women, much furious reprobation of the attacks of mobs upon the criminals. As to any serious and determined effort to stamp out the atrocious crime that is blackening the whole colored race to-day, and arousing against them the deadly and, possibly, undying enmity of their white neighbors, he has been able to find scarcely a trace of such a thing, except in the utterances of a few individuals like Booker Washington, who always speaks for the right, of Hannibal Thomas, and of Bishop Turner. A crusade against the lynching of negroes has been preached as far as England, but no crusade has yet been heard of against the ravishing and tearing to pieces of white women and children. In a word, so far as Mr. Page's observation goes—and whose is wider—the sympathy of negro orators and preachers, and of the whole negro race, is generally exhibited for the object of mob violence, and not for his victim.

Mr. Page does not touch upon the fact—we believe it to be a fact—that, since colored men were practically excluded from the exercise of the franchise in Mississippi, there has been no instance of the new negro crime in that State. Evidently he does not believe that the crime can be exterminated by statute or by any exterior pressure, but thinks that it can only be gradually eliminated by the inward regeneration of the colored race itself. He holds that, until the negroes shall create amongst themselves a sound public opinion—such as existed before the civil war—which, instead of fostering and condoning, shall reprobate and sternly repress, the crime of assaulting white women and white children, the new negro crime will never be extirpated; and that, until this crime is stopped, the crime of lynching will never be suppressed. Never will lynching be done away with while the sympathy of the whites is with the lynchers; no more will the ravishing of white women be done away with while the sympathy of negroes, more or less veiled, is with the ravisher. When the negroes, as a race, shall stop applying all their energies to harboring and shielding negro criminals, no matter what their crime may be, so long as it is against the whites; when the negroes as a race shall distinguish, sharply and sternly, between the law-abiding negro and the colored law-breaker—a long and effective step toward the extinction of the fundamental cause of lynching will have been taken. It is Mr. Page's belief that the arrest and prompt handing over to the law of negroes by negroes for assaults on white women would do more to break up ravishing and to restore amicable relations between the two races than all the harangues of all the politicians, all the resolutions of all the conventions, and, we presume that he means us to add, all the discriminating laws of all the Southern legislatures. Should the negroes, he says, sturdily and faithfully set themselves to prevent the raping of white women by members of their race, the crime would be stamped out. Should the whites, on their part, set themselves against lynching, that defiance of the law would cease. The remedy, then, he thinks, is plain. Let the negroes, he says, take charge of the crime of ravishing, and put it firmly away from them; let the whites take charge of the crime of lynching, and renounce it with equal firmness.

Is Mr. Page's suggestion Utopian? He is by no means prepared to assert its practicability. He submits, however, that the method of dealing with the new negro crime which he advocates is worth trying, and that from foreign countries a little evidence may be gathered in favor of its feasibility. Is it not possible, he asks, that, in every American community which contains a large colored element, negroes might be appointed officers of the law for the express purpose of controlling law-breakers of their own race? Attention is directed to the fact that in the Mediterranean and in the East the English manage such matters pretty well under similar, if not equally complicated and delicate, conditions. On the island of Malta, for example, where the population is composed of different nationalities, between whom a good deal of jealousy exists, there are several divisions of police, to each of which is assigned the charge of one of the three elements of which the insular population is composed. In Hong-kong, also, where the situation presents an even more complicated problem, there are several kinds of police—English, Chinese, and Hindoo. The first alone have comprehensive powers; the two other classes of officers are authorized to arrest members of the races to which they respectively belong. Mr. Page suggests that, similarly, negro officials might be clothed with powers sufficiently large to enable them to keep order among their own people, while for the efficient exercise of such powers they would be held accountable. It seems that the recent vagrant laws of Georgia represent an effort in this direction.

To what conclusion are we driven if Mr. Page's suggestion be pronounced impracticable; if, in other words, it be impossible to entrust the suppression of the new negro crime to colored men themselves? We should, then, as Mr. Page admits, be driven to the conviction that the ravishings of white women by negroes and the resultant murders of black criminals by mobs, have their roots so deep in racial instincts that nothing can eradicate them, except a desperate resort to the supreme arbitrament of force.

Women Voters in Australia

AUSTRALIA has just turned a new page in the political history of the world, adding another to the many daring innovations conceived and carried out beneath the Southern Cross. At the federal elections, which were held a few weeks ago, nearly a million women voted, for the first time since the formation of the commonwealth. Their votes were cast in the broad arena of general politics, not confined to some one limited sphere, such as the schools, or some department of local or municipal sanitation.

The women of Australia, following the now stereotyped methods of modern democratic politics, drew up a platform, and, to some extent, voted as a separate party; that is to say, they attempted to throw all the weight of their sex on the side of certain well-defined principles and ideas, for it does not appear that they chose and supported separate party candidates. They had a platform, but no slate. Their first principle, very naturally, was that the sexes should be equal before the law, and that all government offices should be equally open to men and women. We shall comment on this proposal shortly.

The second article in the woman's platform called for the total suppression of the opium traffic, a reminder that so many Australian towns have their Chinese opium and fan-tan dens, centres of degeneracy and demoralization for the curious persons of white race, who begin to smoke opium in a spirit of mere idleness and novelty-seeking, and presently find themselves slaves for life. There is also a demand for the restriction of the alcohol trade, but, as we have so many prohibition States where women do not vote, this cannot be called specially characteristic, or the revelation of a new force in political life.

Thirdly, there is an assertion of the principle of arbitration, rather, it would seem, in the domain of economics, and the struggle between capital and labor, than in the larger world of international law. We are further told by the rather brief cable summaries that there is also a demand for the reorganization of the army and navy, but we have not enough detail to make this quite intelligible; perhaps it is a question of separate colonial forces or of certain ships to be owned and manned exclusively by colonials. This, however, is not very important for our purpose, which is rather to seek certain general principles, taking this Australian election, with its million women voters, as our text.

The matter of real and enduring interest is the question of the true relation of the sexes, of men and women, in the region of law and law-making, and, as a corollary, in the larger region of intellectual and moral life. We may clear the ground by pointing out that women have hitherto had practically no part in politics, simply because, in the earlier and ruder epochs, politics was only organized force, systematized fighting, having its origin in the desire to hold certain territories as cattle-pastures; the ownership of cattle being everywhere the motive of territorial sway. As women were not warriors, and, moreover, were likely to suffer misery and degradation if taken captive, the force of circumstances kept them out of politics, in the days when politics meant only organized force. The European states, with their ruling classes and their immense standing armies, are a survival of the union of politics and force, and there is little vitality in the woman-suffrage movement, for instance, in Germany or Italy.

England laboriously worked out, for all mankind, the theory of

civil rights; of the citizen who, in virtue of his citizenship, and not as a result of force, had certain defined rights and immunities, recorded in such instruments as Magna Charta and the Habeas Corpus act, and in the general proposition, fought out through centuries, that there should be "no taxation without representation." This is England's splendid and lasting contribution to the treasures of mankind; arrived at, not by design or calculation, but through the individual force and self-assertive life planted in so many robust and self-reliant persons, throughout a long succession of centuries.

The idea of woman as a citizen is directly derived from this English discovery of citizenship based on rights, rather than on force, and the conception of law as the total of the separate rights of all the individuals in a community; their individual rights and duties collectively stated. It is, therefore, logical that the theory of woman suffrage should become a fact on a large scale for the first time in a great English colony, in the commonwealth of Australia, which is rather a separate sovereign state of English origin than a colony, in the old dependent sense.

If we fully admit the idea of woman as a citizen, by right, and not merely through toleration, we come at once to the most interesting of all questions: the inherent likeness or unlikeness of the intellectual life of the two sexes. Are women, as Tennyson said, only "weaker men," whose passions, and, presumably, whose intellects, are to ours "as moonlight unto sunlight, and as water unto wine"? Or are they, as is sometimes maintained, really the stronger sex, especially in the moral qualities? Or, to take a third possibility, are they essentially different?—different, for instance, as poetry is different from algebra; so that it becomes absurd to say either that poetry is better than algebra or that algebra is better than poetry.

We have here, perhaps, a genuine clue. Let us say, provisionally, that while the minds and souls of men and women seem to us to be compact of the same essence, yet the minds of men are, generally speaking, more abstract, while the minds of women are more concrete. Or we may go at the problem in a different way. If we say that our powers are divided into three great groups: Intellectual, psychic, and physical, we may be justified in saying that, in men, the first and the third, the intellectual and material, are the more pronounced; while in women the mid-region of the mind, the psychical nature, predominates.

To put this in a concrete way: man's mind intellectually conceives the idea of a house, and makes an abstract plan of it, as architect; this is the intellect, the first of our three groups of powers. Again, men do the actual building, the matter of bricks and mortar, the grappling with the sheer nature forces. Thus the man builds the house. But woman makes the home.

The difference between a house and a home is the added psychic element. It is a matter of feeling; yet here feeling, we will all admit, is the vital matter.

This is merely a simile. We have not used it to arrive at the platitude that "woman's sphere is the home," and that, consequently, she should keep out of politics. On the contrary, we hold, and by this instance sought to illustrate, that into every completed work of humanity all three elements should enter—the intellectual or spiritual; the element of concrete feeling or psychic; and the material and physical; and that, in general, men will supply the first and the third, while women will supply the second. There may be exceptions; certain men accounted saints, like Francis of Assisi, have given exquisite expression to feeling and tenderness; certain women have excelled in abstract mathematics, suggesting that, in the last analysis, all souls are alike. Yet, generally, the distinction we have made holds good; the power to reach new abstract and general principles is more pronounced in men, as is also the power to grapple with material nature. The psychic region, the domain of feeling, is stronger in women, though all three qualities exist in both. It would seem, therefore, that in law, as in all else, there is work for both sexes. The large general abstraction, the conception of law as universal, is masculine. The application, in thought, of this abstraction, to definite and concrete persons, is feminine. The final enforcement of the law, not merely by police force, but by sanitary engineering, by constructive material work, is again masculine.

If this be true it will follow, as a larger generalization, that the creative activity of both sexes is essential to success in every range and department of human life; that active and willing cooperation is the true law; that much of human misery and perplexity would be removed by understanding this; by each sex taking the attitude of helpful cooperation towards the other; that each should seek to be of real and lasting benefit to the other, rather than, by more or less tortuous and unavowable methods, to extract selfish advantage from the other, to sacrifice the other to the ends of vanity or sensation. But, like all great questions of human life, this one must be solved in practise, not by theory. It was not the dictum of a Rousseau that confirmed the rights of man, but the ages of hard struggle which won the Great Charter, the writ of Habeas Corpus, and the difficult successive victories on which are built the fortress of civil rights.

"Old Ironsides" Again

THE Massachusetts Historical Society, by its officers and council, has addressed a memorial to Congress asking that the old frigate *Constitution* be repaired and put in commission as a training-ship, and at suitable seasons in future be stationed at points along our coast, where she may be visited by Americans who are interested in her and her glorious history. At present she lies, dismantled, out of repair, and liable to injury at a dock in Charlestown. The memorial sets forth some of the incidents of her career, and especially notes the timely solace she brought to American hearts by bringing into Boston Harbor, as prisoners, on the morning of August 30, 1812, the captain and crew of the *Guerrière*. The Boston newspaper which published on the following morning the story of General Hull's surrender at Detroit, was able to print in another column the story of Captain Hull's victory in a great sea-duel, in which two frigates, evenly matched to a man, deliberately sought one another out, and tried conclusions in mid-Atlantic. "In less than thirty minutes from the time we got alongside of the enemy," reported Captain Hull to the Secretary of the Navy, "she was left without a spar standing, and the hull cut to pieces in such a manner as to make it difficult to keep her above water." Her crew were taken aboard the *Constitution*, and the *Guerrière* went to the bottom. No victory was ever more timely. New England was inexpressibly cheered by it, and the whole country shared New England's delight.

The *Constitution* was built in Boston in 1797. In July, 1812, she escaped from a squadron of six British ships, which chased her for three days; in August, 1812, she sunk the *Guerrière*, and in December the same year she captured the *Java* off Brazil. In February, 1814, she captured the *Cyane* and the *Levant*. In 1830, when it was proposed to dismantle the old ship and sell her, Dr. Holmes came flaming out with "Old Ironsides," the lines beginning,

"What, tear her tattered ensign down!"

and from that day to this the recurring schoolboy has regularly protested against any slight to the *Constitution*. The Massachusetts Historical Society protests that our old "fighting frigate" is at least as worthy of preservation and honor at our hands as Nelson's *Victory* is in England, and that opinion rests on facts which may reasonably be expected to appeal to Congress. "It seems strange to me," writes the president of the society, "that, when every petty struggle on land in the history of the nation is commemorated by some monument, the memory of the achievements of the *Constitution* cannot be preserved in the preservation of the ship itself."

It should be preserved. We hope Congress may make the modest appropriation that is necessary, and that when our North River sees another naval review the old *Constitution* may be on hand to see it and to be seen.

"Parsifal" and the Public

WE have read commentaries innumerable upon "Parsifal"—musical, literary, ecclesiastical, social, ethical, frankly journalistic—but we have seen none which takes note of what is perhaps the most striking aspect of the current production at the Metropolitan Opera House: we mean the strikingly complete manner in which it confutes those who held, in advance of the event, that the New York public was unfit for the proper reception of Wagner's work. How often were we not assured that "Parsifal" on Broadway, "Parsifal" in an opera-house of the conventionally fashionable type, "Parsifal" disclosed in an atmosphere of decolleté gowns, shirt-fronts, and small talk, would be quite unthinkable. Those who had heard the work at Bayreuth, or who wished it to be assumed that they had, had much to say of the reverent and prayerful attitude assumed at the Wagner theatre and made possible only by conditions obtaining there. How was it possible, protested these excellent persons, to give the master's unique work among proper conditions at the Metropolitan Opera House under even the most favorable circumstances? Would not its subtle and intimate appeal, its profound significance, be lost in the vast and unholy spaces of Mr. Conried's gilded temple of the lyric muse? It was asserted, moreover, that our presumably lightsome, pleasure-loving, commercialized public was not of the stuff of which "Parsifal" audiences should be made. Well, the "Parsifal" first night has passed into history, and the second, third, and fourth performances have come and gone, with what result? Wagner's music-drama, which some have chosen to call sacred, but which we prefer to call merely inspired, has been heard, at a rough estimate, by 16,000 persons, most of them New-Yorkers; it has been listened to with the utmost absorption, with reverence for a great work most beautifully interpreted, with an intentness and quick sympathy which have amazed even those who chose to think best of New-Yorkers and their capacities. It has been, in a singular degree, a vindication of our American public—for New York is representative enough to express us all.—Let there be no more impolite references, then, to pearls and pork.

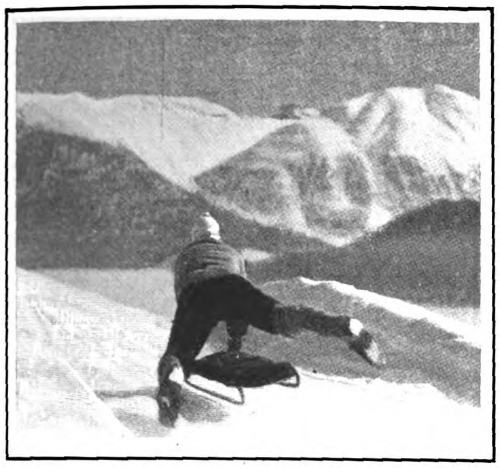
Some New English Plays

By W. D. Howells

THAT difference between English and American plays which I noted last week, seems to me more evident now, after seeing so many more of both sorts, than when I first adopted, as a working hypothesis, the theory that English plays were social and American plays were domestic in their nature. The reader who wishes to agree with me need not be at the pains to limit himself as to the meaning of my words, for I do not limit myself very strictly. By social I do not mean solely that which relates to society, and by domestic I do not mean solely that which relates to the home, though I believe that even with this limitation my hypothesis is sound. If we extend the sense of domestic to cover the region in which a man lives by his love for his family, or by his love for a woman, and mean that the play psychologically ends with his conquest of the woman, or with the happiness of his family, we have a just definition of the American drama. This is true of the best pieces I have seen, with "Her Own Way" and "Glad of It," with "The Other Girl," and with "The County Chairman" on its level. Brilliant as three of these pieces unquestionably are, fresh and true as they measurably are, honest and courageous as they comparatively are, they do not leave one thinking, when they are done, of anything but how well they are done. They have scarcely a suggestion beyond themselves; they concern the intelligent spectator only as a technical critic, and not also as a man or a fellow man. They are very personal to the characters and their supposed interests, but they are not personal to the witness after he leaves the theatre.

The English plays, on the contrary, follow him out, and keep him busy with their social implications. I do not mean that such a thing as "Lord and Lady Algy" does this, and still less that such a hash of stale French motives as "The Marriage of Kitty" does it; both of a dramatic creed outworn; but I do not feel bound to consider these, as I do not feel bound to consider the inferior American plays. If we come to the better English plays, to "The Admirable Crichton," to "Whitewashing Julia," to "Merely Mary Ann," to "Candida," I believe my case is made out. Such plays are of the high lineage of "The Second Mrs. Tanqueray," "The Notorious Mrs. Ebbsmith," "The Gay Lord Quex," "The Case of Rebellious Susan," "Lady Windermere's Fan," "Judah," "Ghosts," "Honor," "Magda." That is, they invite, and not only invite, but they compel, you to think of somebody besides the *dramatis personæ*. They bid you consider the whole social world, and how it is made of men and women in a complicity which you yourself cannot escape. We rashly suppose, those of us who wish to suppose anything, that the English plays are of larger scope because they concern a larger world than ours, but this is not so. It is because our plays do not pass the bounds of the narrow personal world, not merely in their facts, but in their implications, that our plays are not as great as the English, that they are provincial, and not universal. Mr. Fitch had a glimpse of vaster things in "The Girl with the Green Eyes," where he dealt with an eternal and universal passion like jealousy; and the lamented Hearn had it in his "Griffith Davenport," where he dealt with the problem of public and private conscience. He had it still more distinctly in "Margaret Fleming," where he touched with the clean and sanative hands of antiseptic surgery the dreadful evil that lives from sex to sex. But our public would not have either of those great plays of Hearn's, and it might not have had Mr. Fitch's play if it had known how far and deep it went. That is because our public is, if it will allow me to be so frank with it, often a shallow and a silly public; and I do not believe it would have the admirable English plays which it is now accepting, if it realized quite what they were. Because they are in a foreign air, and amidst strange circumstance, it feels itself safely remote from their challenge. If the London terms of "The Admirable Crichton" could be translated into New York terms, our public would not have had it; and I doubt if even the intellectual elect whom I saw keeping their courage up at a matinée of "Candida" would have enjoyed it so much if it had been naturalized to our conditions. Our public, then, is not likely to get the truth of life direct from the native drama, and the good that the alien drama can do it is not in the ratio of the pleasure it gives.



Still I should hope that the message of "Candida" was not lost in midair, but was at least partially caught in the wireless-telegraph apparatus of our consciousness. It was not a very new message, having been sent us already in the whole body of the Ibsenian æsthetics, and the whole soul of the Ibsenian ethics. It was, indeed, the old message which bids men everywhere and always not be humbugs, and it spoke equally in the bohemian who found himself humbugging, and in the philistine, who was rather more deceived through being such a large-minded philistine. The instruction beyond that was not very absolute, in Mr. Bernard Shaw's play, as it is not absolute in any of Ibsen's plays. The most one could say of it was that it made room in one's mind for one to think whether he was at that time or at some other a hypocrite, and whether his habitation was built upon a rock or built upon the sands. You were not invited to suppose that the wretched little neurotic poet whom the Christian socialist clergyman brought home out of the midnight street was a nobler man than the clergyman, or more deserving of the clergyman's wife whom he tried to make love to. In fact, all his bravery of sincerity does not commend him till that last moment when he has to own that there is a poison drop of insincerity, which he has not known of, at the bottom of his own heart, and he confesses that he is "nothing but attitudes." Really, the clergyman is the sincerer of the two, because the active good of his pose does not allow him to realize the passive evil of it. He remains true because he remains true to himself, and if his wife cleaves in unswerving fidelity to him it is not because, as she says, he is the weaker and has the greater need of her, but because he is the better man, as her silent instinct teaches her. Perhaps this meaning, which I read into the play is not the author's meaning, but if it is not, I make bold to believe it should be, and I will not consent to another, where one is allowed such large liberty in choosing one's meaning.

The part of *Marchbanks* was wonderfully well taken by Mr. Arnold Daly, and I wish to say of the playing in nearly all the pieces that I have seen, that it was satisfyingly equal to the writing. I have the greater pleasure in saying this because I do not find it often said; because I see the actor so commonly made the scapegoat of the author's sins by the criticism which conceives of its office as the duty of being rather rude to both, but rather ruder to the actor than the author. It has seemed to me that the actor generally, by instinct or inspiration, has now seized the ideal of truthfulness, and that when the author has given him a true thing to do, he has done it well. Whereas, when he has given him a false thing to do, he has seemed embarrassed and helpless, in several cases which I will not specify. I do not say that he has yet thought out the reason of his defeat, in such cases, but I will say that the unreality of the work given him was the reason of it. I have fancied him almost pathetically glad of the chance of being natural and lifelike, and when he could not be so because the part given him had no life or nature in it, that he pathetically did his best to put life and nature into it. I speak of him, when I mean her too, and I think it a duty, as certainly it is a pleasure, to bear witness to the general advance of the histrionic art among us. It has advanced because of the refinement and elevation of all art through the insistence of the ideal of truthfulness which most critics of art have contested. Without the prevalence of this ideal, on the modern terms, such a piece of exquisite work as Miss Eleanor Robson's portrayal of the simple goodness in the character of *Mary Ann*, the slavey in Mr. Zangwill's beautiful play, would not have been possible. I venture to say, what I firmly believe, that if a playgoer of fifty years ago could have seen that masterpiece, he could scarcely have credited his senses, so far was it beyond what used to satisfy the playgoer. There was not a flaw in its constant perfection, and it was subdued in its beautiful restraint to an effect of nature which the play itself often enough transcended. Because such innocence, if not such ignorance, does exist on just such terms and in such circumstances, Miss Robson could dedicate her best to its expression in a scheme of which you had so often to say that it was in the region of poetry, in order to reconcile yourself to its aberrations from reality. But however unfaithful to reality "Merely Mary Ann" might be, *Mary Ann* herself was always true.

The play had many most fortunate events. It was amusing, and it was touching, and it was edifying; it made you laugh, and it made you want to cry; and if it was not always socially it was humanly natural. You felt in it the stir of the revolt against man-made conditions which is the animate thing in the modern English drama, and the absence of which from our own leaves it the poorer, leaves it inferior, in spite of our dramatists' equal skill. It is a virtue which they of course do well not to affect if they have it not, but I believe that upon the analysis which I have no time or place for here, it would be found the vital difference between the work of Mr. Fitch and Mr. Pinero, and the work of Mr. Thomas and Mr. Jones or Mr. Barrie. I do not say its defect is the fault of our playwrights; perhaps it is rather the fault of our civilization, which seems less generous and less hopeful than the English in its present forgetfulness of its primal inspirations, its love of liberty, its faith in equality, its longing for fraternity. We cannot blame our dramatists for not imagining something like Mr. Barrie's fantasy of "The Admirable Crichton," if this is true, and still less if it is not true; and we cannot claim that the English dramatists are always in their highest mood.

Mr. Henry Arthur Jones apparently was not in it when he wrote "Whitewashing Julia," and yet here was that revolt too, though rather on the personal than the social grounds. It is society in the narrower sense which makes a victim of *Julia*, and her martyrdom moves one rather to smiles than to tears. The satire lies in the fact that the scruples of society concern her situation more than her behavior, and that it does not condemn her for being a wife of the left hand, so much as for being a wife of the left hand while the wife of the right hand is still living. It recognizes that there are necessities of royalty which do not exist for even the nobility and gentry, and its complacency in this is Mr. Jones's opportunity for social satire. He does not neglect it, though most of his satire is personal, and has its finest effect in poor *Julia* herself, whose positive and negative sinuosities are charmingly intimated in the extremely clever handling of the part by Miss Fay Davis. In the reality of this again, I felt how essential to the actor was the truth in what the author had done. If he had been at any time false to the character he was portraying, the delicate fabric would have fallen to pieces even in hands so skilful as the hands of Miss Davis. *Julia* is socially rehabilitated by her marriage with a socially accepted gentleman who needs moral rehabilitation even more than herself, and the realization of his, her, and its ideal by the event, is the author's expression of the revolt which I find no trace of in our drama. If there is now, or has been any American play treating of our conditions, as importantly and significantly as the poorest of these English plays treat of English conditions, I have not seen it, and I should like very

much to see it. We have the portrayal of people whose lives are given to getting to the top in society and business, but nothing to intimate that there is anything structurally wrong in the card houses where they hope to dwell. The satire does not go beyond this or that individual; it has no social implications; and when you go away from the theatre, privately well pleased, and patriotically content with the artistic qualities of the show, you do not go away thinking; for it has not vitally concerned you; it has not touched your actual meanness as a man, or appealed to your potential greatness as a human being.

That is not the sterile mood in which you turn from seeing "The Admirable Crichton," or "Merely Mary Ann," or even "Whitewashing Julia." I should not mind it if our plays had to do with society in the larger sense of humanity, and taught some moral which we must take to our hearts as men and women, if not as citizens. But do they? If they do not, why is it that the English plays are obedient to a nobler ideal of the theatre than ours? Is it true that in the English conception, however unconsciously, the theatre is or ought to be a school of morals? I think that our dramatists, when they set honestly about it, paint manners entirely as well as the English. They get character equally well, and they are beginning to get conditions, though for the present they content themselves with the outer rather than the inner likeness. One could hardly ask for better work of that sort than some of the work in Mr. Fitch's later plays, and I think Mr. Thomas goes even farther in his latest. The New York broker, with his sort of self-satisfied, arrogant *bonhomie;* the New York *grande dame* as she realizes her ideal in the broker's wife; the saloon-keeping prize-fighter, with his mixture of honest simplicities and duplicities; the independent clergyman, with an athletic Christianity which does not know where to stop; the heavy Philadelphia father with his locally limited ideals of a parent and a gentleman—are all delightfully genuine, as to the lifelikeness. But we get no hint of any human kindness inside of them. They join, the broker and the clergyman, in doing an abominable injustice to the butler, whom they punish for an infraction of servile discipline, with no hint to the spectator from the dramatist that they were wronging him in his higher conception of duty as a man. It is all as hard as nails.

Is it true, then, that the English have really more of what used to be called "heart" than we have? I do not venture to say so; it would be almost as fearful a treason as saying they have more humor. But one may safely, I trust, say that they seem to have more heart, or that they at least make more show of it in their modern drama. It may be that in their social conditions, where the lines are distinctly drawn, and the lower class cannot hope to pass to the upper, it is possible for them to be kinder, just as for each Englishman, on his own level, it appears possible to be manlier than we. The logic of the situation would be a deepening of the divisions between Americans, for those virtues are worth having at the sacrifice of the beautiful social ease which is now our boast. Of course there may be some other way out. I wish our dramatists would try and find if there is. I do not like the English dramatists' being more democratic than ours.

A View of Mr. Barrie

By Sydney Brooks

LONDON, *January 6, 1904.*

THERE are some people who simply cannot stand Mr. Barrie. His mawkishness revolts them. They complain that he wallows in sentiment, and exaggerates tenderness almost into a disease. "I feel," said one man after reading *The Little White Bird,* "as though I had been standing underneath a Niagara of treacle." The comment, of course, was extreme, but it had its spice of truth. Mr. Barrie's recent plays and novels show an unmistakable and progressive decline in the power of self-criticism. He would seem to be losing the knack of putting the brake on at the right moment. He is allowing simplicity to straggle into effusion, pathos into a harrowing intrusiveness, fancy into undisciplined phantasy. Happily for Mr. Barrie we live in a world whose average intelligence feeds only too readily on sentiment. Were it not so, "Quality Street" could hardly have been the amazing success it has been, and, indeed, still is. The multitude has a passion for the smaller domesticities, and Mr. Barrie stimulates it, as no one else can, by his artless prattle. In doing so he must of course repel the few by the very qualities that attract the many; and those who can enter most fully into the spirit of his quick, dry turn for humor and of his delicate half-feminine fancy are precisely the ones who are beginning to complain the loudest of his sugary sickliness. To dramatic critics he is an endless puzzle. They never can quite make him out. I remember assisting some years ago in New York at a Barrie play, with the most distinguished of English-speaking critics for my right-hand neighbor. He almost groaned in his efforts to find the secret of Mr. Barrie's success. "Here is a fellow," he said, "who is no more a dramatist than I am. He is just a man of letters writing plays; and he writes them as they were never written for. He breaks all the rules, cuts clean through every accepted convention, and yet, somehow, gets there all the same. How the deuce does he do it?" Personally I confess I don't know; but you in New York had another chance of finding out when Mr. Frohman, who, by the by, is already almost as great a success and as big a power in London as in New York, presented "The Admirable Crichton." London awaited New York's verdict on that play with a good deal of eager curiosity. The atmosphere of it, its motif, its central problem are all so unmitigatedly English that there is some interest to see whether and how far Americans will appreciate it. Here it is considered not only the best of Mr. Barrie's plays but one of the most remarkable productions of the English stage for the last twenty years.

Meanwhile we have Mr. Barrie's latest effort to amuse, bewilder, and tease us. "Little Mary" has the hall-mark of its author all over it. You would think it impossible for any man to write a play that turns on a joke which is not explained until within five minutes of the fall of the curtain; or rather you would think it impossible that a play so written could hold its audience. Yet this is the miracle which Mr. Barrie has accomplished, which none but Mr. Barrie would even have dreamed of attempting. His innocence of ordinary canons and conventions is like that of a child in the presence of danger, an innocence so superb as to be genius in itself. Nothing is so impertinent or so uninteresting as to boil down into a paragraph the plot of a play. Yet the plot must be unfolded to show the defiant waywardness of Mr. Barrie's humor in all its fulness. *Lord Carlton,* then, enters a chemist's shop in London to get some powders made up. The chemist, an old Irishman named *Reilly* who has an unbridled admiration for England and the English aristocracy, asks his lordship to wait in a back room while the powders are being mixed. In the back room *Lord Carlton* discovers a sort of amateur crèche, four or five boxes with children in them. They turn out to be the property of *Moira Loney,* the chemist's granddaughter, a girl of twelve, who has taken them in and "mothers" them from a pure instinct of maternal sympathy and love. During the conversation between the lord and the girl it comes out that the old chemist has been engaged all his life on a book which will "cure" the English aristocracy. What they suffer from and what the cure is we are not told. The scene closes with the chemist handing over the volumes to his granddaughter, bidding her study them and carry on his work when he is gone. Six years pass by. *Moira Loney* is now *Miss Loney,* "the Stormy Petrel," famed for her almost miraculous cures. She is asked down to the *Countess of Plumleigh's,* *Lord Carlton's* sister's, in order to cure the countess's daughter, *Lady Milly.* The nature of her treatment and of the medium through which she works is unknown; it is spoken of throughout as "Little Mary." At the countess's country cottage there are some delightful scenes. *Lord Carlton's* son is in love with an actress and determined to marry her, and the conversations between father and son, full of slyness and restraint and yet revealing their mutual affection, could hardly be bettered. The two doctors who have been attending on *Lady Milly,* one of them a famous London specialist, the other a local physician, are inimitably sketched in. The other characters who are staying at the *Countess of Plumleigh's* include her son, the *Earl of Plumleigh,* a lazy lubberly schoolboy, and the actress, *Eleanor Gray,* with whom *Lord Carlton's* son is infatuated.

It is into this company that *Miss Loney* is introduced, to the scandal of the professional doctors, with "Little Mary" her medium. *Lord Carlton* recognizes in her the little girl of six years ago, whose motherliness had so fascinated him. He is disgusted to find her now living by what he believes to be systematic quackery. She protests that her cures are genuine, and entreats him to let her prove it. He consents, and goes away for a fortnight. When he returns it is to find a household transformed. His son has tired of the actress; the actress has tired of him; the worldly countess has had distinct symptoms of religion; her son has suddenly developed a passion for athletics and Greek grammar; *Lady Milly,* whom he left in an apparently fatal decline, is now skipping about like a four-year-old; and the whole household breakfasts at eight, dines at two, and has high tea at six. *Miss Loney* and "Little Mary" have done it all. But how? What is "Little Mary"? Is it a symbol for spiritualism, Christian Science, faith-healing, or what? The answer is late in coming, but when it does come it is shattering. *Miss Loney* explains that the grand discovery her grandfather had made was that the English aristocracy suffered from overeating. His cure for all their ills was to reduce the number of their meals to one good one a day. That was the simple secret of all she had been able to effect. The "medium" she worked through she called "Little Mary." "Little Mary" was—the stomach.

Even from this brutal summary you may see that here we have the mocking, whimsical, tantalizing Barrie almost, if not quite, at his best. No doubt his moral that sympathy and common sense are the best of doctors is a sound one, but one does not go to Mr. Barrie to learn things. Enough that he has this happy, this unique gift of pleasing and provoking at one and the same time; that his sly, unexpected, topsyturvy wit is still as quietly agile as ever, and that in "Little Mary" he hardly for a moment "slops over." Every one will criticise and condemn the construction of the play, every one will go to see it, and every one will like it. It ends, by the by, with a true Barrie touch. *Miss Loney* marries *Lord Carlton,* but the rest of the characters, outraged at being saved through their "Little Mary's," revenge themselves on their benefactress by ordering dinner for eight o'clock. A wit summed up the whole production in a brilliant epigram. "Sentimental Tummy," he called it.

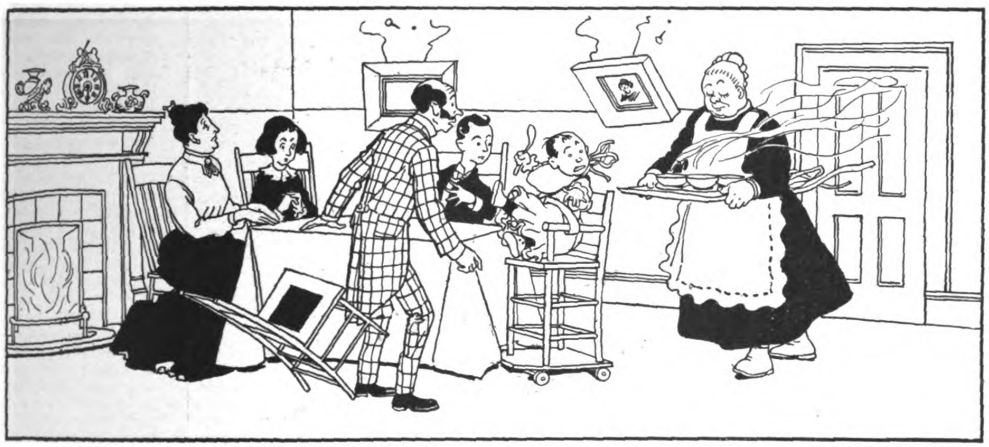
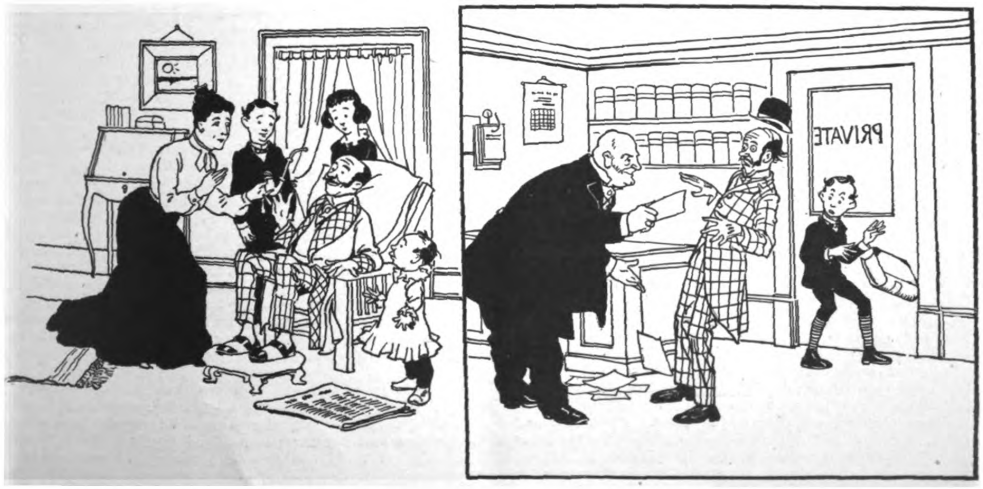
Leap-Year Proposals

A Few Reversals of Customary Forms



Drawn by Albert Levering



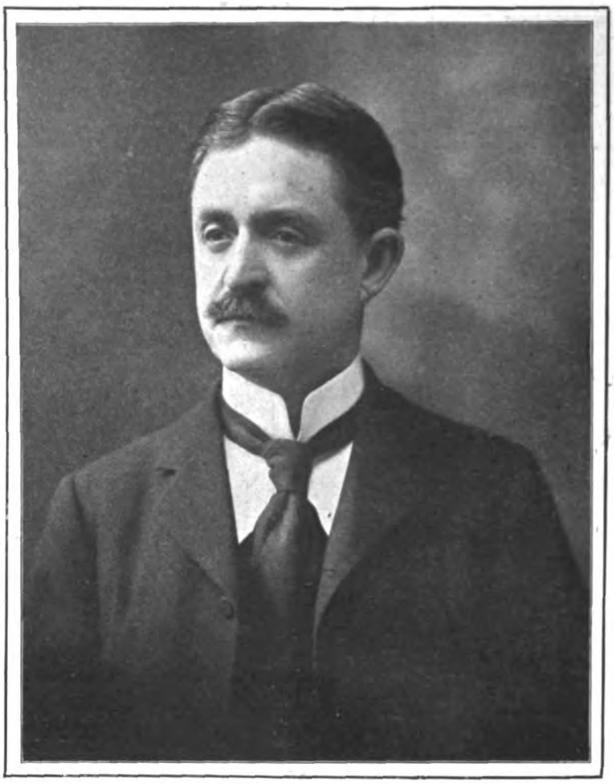
Your neighbor proposes returning everything borrowed during the year.

Your "joy and pride" proposes sweeping off the front walk unasked.

Your landlord proposes a reduction on the rent of the house.

Your cook proposes to have breakfast throughout the year at 7.30 sharp.

Your wife proposes smoking all over the house.



Your banker proposes unlimited credit for the coming year. (Don't refuse this.)

Books and Bookmen

By James MacArthur

SOMETIMES the best criterion of public taste in reading is to be found in the composing-room, where the book is set up in type, and not in the literary department of a publishing house. If this be true in a recent instance, then *Lux Crucis*, by Mr. Samuel M. Gardenhire, has an enviable popularity in prospect. It so happens that the manuscript of *Lux Crucis* passed through the hands of the same man who set up *Ben-Hur*, nearly a quarter of a century ago, and it appears that his enthusiasm was roused to such a pitch that he declared he had not read any story that excited his interest in such a degree since he read *Ben-Hur*. *Lux Crucis* possesses, undoubtedly, great elements of popularity. Just as *Ben-Hur* was "a tale of the Christ," so *Lux Crucis* is "a tale of the Great Apostle." Paul is a very human and picturesque figure in the story, of a commanding yet loving personality. Without detracting from his high calling as an Apostle, the author has insisted on the human side of his character; and has woven his mission into the thread of fiction without violating the truth of history. I know of one reader whose interest in Paul and the momentous part he played in planting the early Christian Church was so freshened by a reading of *Lux Crucis* that it sent him back to the familiar pages of the Acts of the Apostles with renewed zest. But *Lux Crucis* is not a religious novel in the strict sense of the word. The background is Rome in the days of Nero, when that cruel monster's malignant humor was wreaked on the innocent sect of Christians nourished and promulgated by Peter and Paul and their followers within the purlieus of the Roman city, and which was represented to Nero as a menace to the throne of the Cæsars. The crowning tragedy of Nero's reign—the massacre of the Christians by gladiators and wild beasts—is the climax of *Lux Crucis*. The action of the tale itself involves the drama of conflict betwixt Roman and Christian, the decadence of luxury and lasciviousness, and the new uprising life of simplicity and unselfish devotion to the Christian ideal. It is a tale of love and sacrifice, of passion and power, of turbulent emotions and human strife, of court intrigue, of the things of this world that pass away, and the things that endure. The story is told with great power and simplicity, with force and intensity of feeling. It is wonderfully vivid and graphic in its descriptive style, and the reader cannot fail to be thrilled by the narration of the closing scenes in the amphitheatre at Rome which inaugurated the reign of Christianity. Mr. Gardenhire has conceived a story of this ever-interesting epoch in the making of Christian civilization, which he has carried out with great constructive skill and human interest, and which is likely to command a wide and far-reaching audience. The drama of the early Christians in the reign of Nero has served the ends of fiction in several notable instances, and the outstanding landmarks of the period are familiar to us; but the author of *Lux Crucis* has brought a fresh imagination to bear on the subject, and has added a novelty of plot and characterization to the familiar dignity of the theme which invests it with a new and exciting interest.

Samuel M. Gardenhire
Author of Lux Crucis: A Tale of the Great Apostle

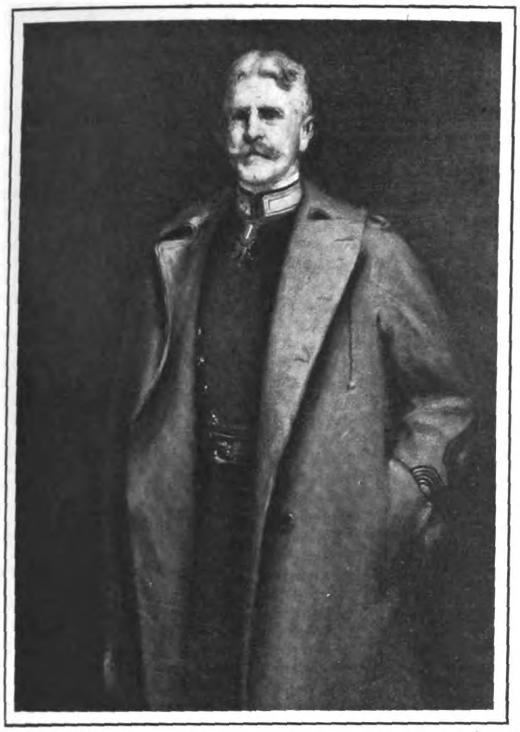
The story begins with a premonition of things to happen. The scene opens in Cæsarea. The city is awakening to life. We are transported to the prison of the palace and find ourselves in the presence of Fabyan, a young Roman tribune, and Paul the Apostle, both awaiting trial before the tribunal that very day. The conversation of the two prisoners reveals the causes of their imprisonment, and also hints at a future relation which remotely yet closely binds these two brought together by accident. Paul touches, as was his wont in season and out of season, on the message of eternal life through the risen Christ. His fellow prisoner is interested. "There is a rhythm in thy speech that falls pleasantly upon mine ear. The life eternal—it seems that I have heard the words on Myrrha's lips."

"Myrrha," muttered the Jew, his head upon his breast, speaking softly and earnestly. "'Tis a beloved name to me."

"And to me, good Paul," said Fabyan, his eyes sparkling with a glad light. "Thy wife, perhaps?"

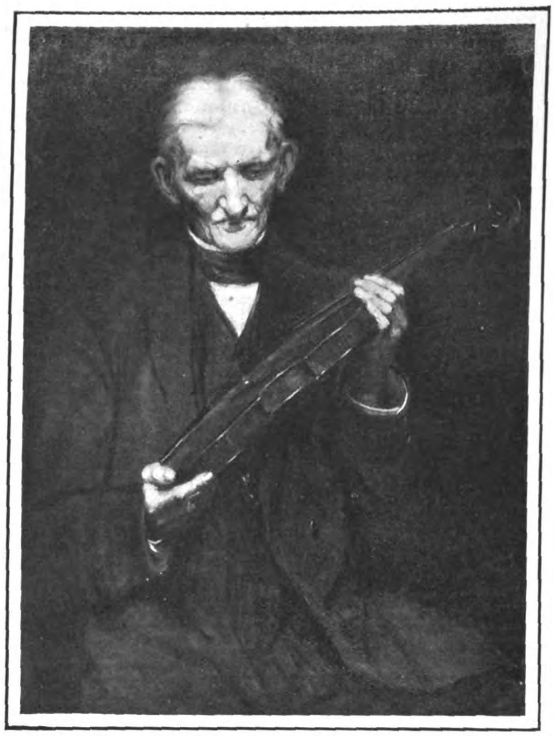
"Nay," and the gentle expression upon the Jew's face deepened into a frown, which grew severe and took on a suggestion of pain. "A sister, dear to my youth, and woven in all my better memories. I have been a Roman soldier, but I have much to forgive the Cæsars and their armies. She married a man of Sicily; there were two children, little Myrrha and a boy. They are lost, and, though I have preached to many people in many lands, God hath not given me trace of them."

"Lost?" asked Fabyan. "Being a soldier, I can guess the meaning of thy words. They were lost in war!"



"In war," replied Paul, sighing deeply. "But there is yet Rome—no matter; the story is a long one, and would interest thee little. In his own good time, God maketh all things to come to pass."

Had Paul only known, the story would have interested Fabyan beyond all things, for that same little Myrrha had been adopted by his uncle in Rome, and it was while on a seemingly vain quest to learn, if possible, something of the lost brother of the beautiful young Jewess whom he loved, that he had fallen into his present plight through an untoward event. Paul's prophetic words, "But there is yet Rome," spoken on the eve of his appeal to Cæsar, point to the development of the story which begins at this dramatic stage in the Apostle's career, when he had reached the parting of the ways, and, turning his back on Jerusalem, faced westward toward Rome. "This man might have been set at liberty," said Herod Agrippa to Festus, "if he had not appealed unto Cæsar." The constraining human motive which the author joins to the urging of the Spirit that compelled Paul to journey to Rome at this time is a pleasant and agreeable fiction, and in no way molests the dignity of his mission, while it magnifies his manhood and emphasizes his gentle virtues. Fabyan and the Jewess princess Berenice, an old love of the young tribune's, and a troublous element in days to come, embark for Rome on the same ship that carries Paul. Their lives are thereafter linked together in the good and evil days that follow. Paul lives to see the children of his beloved sister Miriam, and has the happiness of knowing that they and their friends have escaped, as by fire, the awful vengeance of Nero when he imputed to the new sect the burning of Rome. The day that saw the final tragedy closing in on the Christians in the arena witnessed a cavalcade of travellers pressing along the Via Triumphalis and moving toward the north. That night to the watchers on the hillside there came a strange spectacle. The stars hung like fireflies low down on the horizon, where the martyrs impaled on stakes were set like living torches. Gradually the starlight mounted into the vast abyss as it were the ascension of departed spirits. "What is it?" asked Myrrha, as they looked in awe and wonder. "I could almost fancy it the flight of souls to heaven," said another. "But look!" cried Fabyan, "how the stars group themselves; 'tis a strange and familiar outline." And, indeed, "far up in the deep blue arches of the sky the eternal stars were circled over a cross of light, shining like a promise above the summit of the radiant hill." Hence the title, "The Light of the Cross"; the full significance of which is only borne in upon the mind of the reader as he views the story in its reflected radiance.



It is impossible to do more than indicate the large scope and range of *Lux Crucis*. We see the salient events of those memorable years pass in procession across its pages. Nero and Tigellinus, Poppæa and Berenice, Festus and Agrippa, Paul and Peter, are conjured up from the past and made to reenact one of the great triumphant tragedies of human history. Unquestionably, *Lux Crucis* is a novel that will appeal widely to the popular imagination. It will be read wherever the New Testament story is read; nor are its most avid readers likely to be confined to the religious public. It is a book that knows no distinctions of class or prejudice.

Portrait of Colonel Mills.—By J. Carroll Beckwith

"Finale."—By S. J. Woolf

"Girl in Green."—By Charles W. Hawthorne

"Sisters."—By Louise Cox

PAINTINGS AT THE NATIONAL ACADEMY EXHIBITION

The seventy-ninth annual exhibition of the National Academy of Design is now in progress at the Fine Arts Building, New York, with more than three hundred and fifty exhibits. The four paintings selected for reproduction are the "Girl in Green," by Charles W. Hawthorne, which took the first Hallgarten prize; "Sisters," by Louise Cox, which took the second Hallgarten prize; "Finale," by S. J. Woolf, which took the third; and J. Carroll Beckwith's portrait of Colonel Mills

The New Unions of Employers

In a series of four articles published in recent issues of "Harper's Weekly," our special representative Mr. John Keith, traced the influence of organized labor upon the cost of transportation, of food, of clothes, and of every-day necessities. In the present article Mr. Keith shows how the employers throughout the United States are meeting the power of organized labor by counter-organization. In an article to be published in a forthcoming issue of the "Weekly," Mr. Keith will consider some of the plans proposed for a solution of the difficulties encountered by these two great opposing forces in all parts of the country

By John Keith

THE most important social revolution in many years is quietly taking place to-day. Upon the horizon there is a portent of the most enormous industrial war that has ever taken place. Those of the past few years have been disastrous enough, but they have been the more or less successful struggles of one or more capitalists against organized labor. To-day, capital is organizing and preparing for a mortal combat which shall forever decide the existence or at least the authority of organized labor.

In this new union of employers, the labor-union has been frequently taken as a model, and it is to be feared that the ruthlessness of labor-unionism will be adopted. In several cases these methods have already been used; the sympathetic strike has been met with the sympathetic lockout, and the boycott with the blacklist.

Perhaps the most surprising feature of the organization of the employers is its novelty. On this point one of the leaders of the movement, John Kirby, Jr., said the other day:

"Employers must face the fact that organized labor has fifty years start of them. As a matter of fact, associations of employers are of but recent growth in this country, and they have been forced into existence by the arbitrary and dictatorial attitude of the labor-unions. Moreover, they could not and would not exist were it not for the conditions imposed upon employers by labor-unions, which make such organizations imperative as a matter of protection against unlawful interference by the unions."

The interference of the labor-unions has taken various forms, as I have shown in previous articles. Not only has the employer been told what wages he should pay, and what hours his men shall work, what men he shall employ or discharge, to what men he shall give his work, and what men shall act as foremen in the shop; but he has been told where he shall buy his raw material; he has been compelled to discuss his financial standing with the labor men; his shop has been used as a battle-ground for the quarrels of rival unions and for the discipline of union men who have failed to pay fines; he has been ordered to discharge faithful and efficient workmen; he has been forbidden to employ apprentices; he has been compelled to decide between running his shop at a loss or giving it up altogether on account of the high wages and conditions demanded; and he has been in general so contemptuously treated that he has often been rather the hireling of his workmen than their employer.

Labor-unions are not to blame for organizing or for acquiring a giant strength, but they are to blame for the multitudinous tyrannies to which they have put their strength. And some of them will have deserved almost the worst that could happen to them in the coming war of the organized employers.

At first sight it seems curious and perhaps hypocritical to see the employers choosing for their watchwords, "Americanism," "Liberty," the "Constitution," and the "Protection of the Workingman." And yet there is only too much in the history of the labor-unions to justify these words, to justify the employers in issuing what they call "A Declaration of Independence." Their devotion to the cause of the laboring-man is also something more than a pious pretence, for the reason that, strange as it may seem, organized labor is not in the majority in the labor world. And yet this minority not only oppresses the majority, but it shows that great tyranny and folly toward members of its own faction.

Furthermore, without the aid of the non-union men, or of the liberal-minded union men, the employers would fight without troops. The ease with which they enlist non-union workmen is eloquent proof of the unpopularity of many unions in their own field.

A few years ago there were only a few associations of manufacturers, and they were organized for chiefly social reasons, or for the purpose of increasing trade, or of influencing tariff legislation.

In Dayton, Ohio, there was, however, an Employers' Association of thirty-eight firms as early as June, 1900, which grappled with the labor tyranny with some success. It secured the defeat of Police-Judge Roehm, who had overstepped the limits of his power in favor of the labor leaders. A sheriff of like sympathies was also defeated.

In May, 1901, there was a machinists' strike, which caused a great recruiting of the Employers' Association. The practical achievements of this association are numerous. The boycott, which was a frequent weapon, has gone out of use in Dayton. The labor-unions have been reduced in numbers, and several large manufacturing concerns have refused to employ union men. Charles Atherton, the labor candidate for Legislature was defeated; a non-union union of working-men, called "The Modern Order of Bees," was fostered; thousands of copies of pamphlets describing its methods and achievements have been distributed around the world; the association was instrumental in stopping several bills in the Legislature with regard to the use of injunctions in labor matters; furthermore, the association has secured the arrest and prosecution of men who have assaulted non-union workmen, or who have interfered with the employers. It has brought suit against the national and local Plumbers' Union, and has had a large part in the suit for $25,000 damages against the Metal Polishers' Union. During the pending of this suit no member of the union could lend or sell his property.

The Dayton association has been, in fact, so successful that it has become, in the words of its president, "The pivotal point of this most important movement." And it is this same captain of industry who said not long ago that the organization of employers is "the most important question that has ever confronted the American people, because of its immediate relation to the whole people. The Revolutionary war was fought by our forefathers that we might enjoy the rights which, as free men and citizens, organized labor, through its tyrannical leaders and walking delegates, says we shall not enjoy."

The Dayton association is a type of many local associations throughout the country. Perhaps no other has occupied so prominent a place or gained so complete a victory as the Building Trades Employers' Association of New York city, which had the honor of meeting and defeating Sam Parks. The story of the infamous exactions this man forced out of the builders of New York and the members of his own union is too well known to need repetition here. The whole country breathed a sigh of relief when Parks and others of his crew were safely shipped to the penitentiary. The history of the association which fought him and his methods is not so well known, and is worthy of a brief sketch, as a type of the manner in which purely social clubs of employers have been led to put on the armor of battle.

In 1888 the Building Trades' Club was organized by Mark Eidlitz, mainly as a place for luncheon and social meetings. He was the first president. Mr. Eidlitz died in 1892. In 1903, Charles L. Eidlitz, then the president, took business offices in a new building. There was the usual harrowing series of strikes to postpone completion, but at last the office was ready. He sent for two men to fasten to the floor a low iron railing for the front of his office. These men were union men, who came from a union shop. But as they got ready to put the screws into the floor a walking delegate strolled into the building and forbade them to finish the simple task. Mr. Eidlitz was told that these men could not do the job, as they belonged to an "inside union."

"But this is an inside job," said Mr. Eidlitz.

"No, it isn't," said the walking delegate. "This is an outside job that is done on the inside, and an inside man can't do it."

Mr. Eidlitz was hardly more bewildered than indignant. At this moment one of the carpenters at work laid down his tools to join the walking delegate, and he demanded:

"What right has an iron-worker got to put screws into a wooden floor, anyway? That there job belongs to the carpenters' union!"

Mr. Eidlitz finally solved the difficulty by announcing that he would do the work himself with the aid of the office-boy. The consequence of the trivial squabble was not only the loss of the job itself, to the three unions—inside, outside, and carpenters'—but also the organization of a new power, which has coerced all the building trades unions and cowed them by the amazing application of their own methods.

Mr. Eidlitz went that night to a meeting of the Building Trades' Club. With the remembrance of the three-sided interference with his liberty still fresh in mind, he called for a postponement of the formal reading of minutes and reports of various committees, and summoned the club to a larger cause. This was on May 11, 1903. Shortly after, a meeting of all the building trades employers in New York was convened, and there was a large response. One paragraph of Mr. Eidlitz's address to the meeting is worthy of note. He said:

"It is unnecessary to describe to you what is meant by the labor situation. There is not a man in this room who does not appreciate that we have been gradually backing down and giving way to the outrageous demands that have been made upon us year after year, and not one who does not feel that he has gone as far as he can without surrendering completely. At first you were asked simply to take down the bar from the door. Later the chain was to be taken off. Still later the key must be left on the outside. All these demands and many others were granted; and now what is asked of you? That the door shall be taken off the hinges and thrown into the street. What will be your answer to this request?"

The result of the meeting was the instant formation of the Building Trades Employers' Association. One of the first problems of this organization was the binding of the employers so fast that they could not be separated by any of the inevitable dissensions and rivalries. This was done in the most effective manner: the employers are under heavy individual bonds to obey the mandates of an executive board known as the board of governors. The bond ranges from $500 to $2500, and is deposited with a surety company under an iron-clad agreement to pay that bond to the board of governors upon its written demand. The board is not compelled

to give the surety company any reasons, and the fact that forfeiture is put down in the contract, not as a fine, but as "damages," has kept the courts from declaring the contract illegal, in the one or two test cases that have been brought by employers who disobeyed willingly and paid reluctantly. There are now a million and a half dollars on deposit as bonds for the 1000 members of the Employers' Association.

The members are divided into four classes—the honorary; the associate (such as selling agents for plaster and other materials); these are not represented on the board of governors; third, the individual members, those who have no organized associations, such as the dealers in slate, for instance, who have three representatives on the board of governors; fourth, the represented members, or members of various employers' associations, such as the manufacturers of metal-covered doors, the Bluestone Dealers' Association, the Iron League, the elevator manufacturers, the electrical contractors, and others. There are some thirty of these associations, each of which has three representatives on the board of governors. Each trio of representatives has but one vote. The board of governors deals with nothing but labor problems. Its power, while apparently absolute, is limited. It has obtained its great influence by ordering general lockouts as a retaliation upon the labor-unions.

Before any cessation or resumption of work can be ordered, however, a quorum of seventy-five per cent. of the associations represented is required, and four-fifths of this quorum must be in favor. This makes a decided contrast with the irresponsible autocracy of the labor-unions, where a walking delegate may order men to and from work on his own initiative and by a mere word.

Owing to the fact that various employers had previously signed agreements with the unions, it was not possible for the association to ignore organized labor. It was proposed, instead, to have a general arbitration board, which should consist of two men from each of the associations and two men from each of the labor-unions connected with the building trades. It was stipulated that no walking delegate should be admitted to this arbitration board.

This plan was submitted to all the labor-unions in the feeling that they would welcome such a plan for insuring peace and equality. But they were so contemptuous of their employers that of all of the unions only two gave any answer at all, and these two announced that the proposal had been consigned to the waste-basket.

Now the power of the new organization showed itself. The unions were amazed to find that they themselves were being boycotted. A lockout was ordered on every building on which they had work, and building materials were refused to any employers who recognized them.

It took from June 3 to July 1 to get ten unions to sign the agreement. The others came in rapidly, and thirty-three unions are now represented on the general arbitration board.

This arbitration board has accomplished marvels. Among its results may be mentioned the settlement of the famous quarrel between the masons and the electrical workers' unions, for the privilege of punching holes through walls for electrical wires. This trivial debate had lasted over ten years, with an incredible number of strikes. The arbitration board settled it quickly and finally by a fair division of the privilege. Other important findings were in the matters of quarrel between the plasterers and their employers, between the interior decorators and their employers, between the United Brotherhood of Carpenters and the Mosaic employers, and the quarrel of fifteen years' duration between the carpenters and the woodwork manufacturers.

It is a rule of the association that the union shall pay half the stenographer's fees, and in this last dispute they amounted to $1000. This puts a decided check on frivolous appeals.

The Building Trades Employers' Association includes practically all employers connected with the construction of buildings, except the stone-cutters, who have a profit-sharing agreement with their employees, and who, on account of this alliance, have been refused admission.

The George A. Fuller Company attracted much attention during the strikes of the association by its refusal to join the movement to discipline the unions. When the Employers' Association called a general lockout, as a measure of reprisal, against Sam Parks and his school, the Fuller Company made separate agreements with the walking delegates and labor-unions. It saw work going on continuously on its own buildings, while everything else in New York city stood still. But the alliance with the walking delegate was the alliance of the lamb with the lion, and the exactions of the labor men soon made it impossible for the Fuller Company to proceed. In fact, there was a rumor that its very existence was threatened. However, after a period of some hesitation, it has recently applied for admission, and has been received into the fold with as good grace as could be expected and under an increased bond.

David Maclean Parry

President of the Citizen's Industrial Association of America and the National Association of Manufacturers

Meanwhile, the Employers' Association having convinced the unions of its willingness to keep the labor man idle indefinitely, if he did not listen to reason, the building situation in New York has changed from chaos to order and activity.

This form of enforced arbitration has gone far toward solving the labor problem in New York city. But any form of alliance is distasteful to many employers, notably to Charles L. Eidlitz, who believes that it is as contrary to Americanism to ask a man whether he is a union or a non-union man, as it is to inquire whether he is Catholic or Protestant, Democrat or Republican, free-trader or protectionist.

There are some employers who believe in the unions and their recognition. There are others, like Mr. Eidlitz, who believe in treating them without either favor or rancor; there are still others who have been so incensed with the inveterate tyrannies of the labor-unions that they would make a strong discrimination against all organized labor, and give employment only to the non-union workmen. It is from this last class that the spirit of war is most likely to rise.

Among all the holders of this last opinion there is no more prominent a crusader than David M. Parry. Indeed, he is rapidly becoming one of the most important personages of the day, for he is at the fore-front of a movement which has more social significance than any other at the present time. Like many of the other employers whom the labor man regards as devoid of all sympathy with him, Mr. Parry has himself been a laboring-man. He was born on a farm near Pittsburg. At the age of seventeen he became a clerk at a salary of $20 a month. He has seen service in the dry-goods and hardware businesses and as a travelling salesman. Eventually, he organized a carriage-building business, and for four years he and his brother worked in a shop at manual labor all day and did bookkeeping at night. His work gradually increased, until he now has one of the largest plants in the world in Indianapolis. He employs 2000 men. But he still rises at 5 A.M., and is at his desk at seven.

Mr. Parry had long taken a prominent part in general commercial associations in Indianapolis. In 1901 he was elected president of the National Association of Manufacturers, which had been formed in 1895, for the purpose of building up export trade. In 1901, at the Indianapolis convention, the association took up the matter of preventing the passage of two labor laws—the eight-hour and the anti-conspiracy bills. Mr. Parry and his association brought all possible pressure to bear on Congress, and

managed to defeat the bills. This brought him into the fierce white light that beats upon any opponent of organized labor. This also spurred him on to a general organization to resist the encroachments of the unions. His motto has been "Meet organization with organization."

In April, 1903, the National Association of Manufacturers held a convention at New Orleans, and all decided upon immediately launching a general federation of employers and employers' associations. A committee on constitution was appointed, and met in July at Indianapolis.

October 29 and 30, 1903, a general convention of employers was held at Chicago, with nearly 300 delegates from various alliances of citizens and employers. After some discussion it was decided to call the federation "The Citizens' Industrial Association of America." The committee's constitution was adopted with some changes, and a new convention was appointed for February 22, 1904, at Indianapolis. The constitution mentions as the objects of the association:

"First—To assist by all lawful and practical means the properly constituted authorities of the State and nation in maintaining and defending the supremacy of the law and the rights of the citizen. Second—To assist all the people of America in resisting encroachments upon their constitutional rights. Third—To promote and encourage harmonious relations between employers and their employees upon a basis of equal justice to both. Fourth—To assist local, State, and national associations of manufacturers, employers, and employees, in their efforts to establish and maintain industrial peace, and create and direct a public sentiment in opposition to all forms of violence, coercion, and intimidation. Fifth—To foster and encourage, by legitimate means, individual enterprise and freedom in management of industry, under which the people of the United States have made this the most successful and powerful nation of the world. Sixth—To establish a bureau of organization, for the formation of associations favorable to the objects of this organization and federating them with this association. Seventh—To establish a bureau of education for the publication and distribution of literature tending to foster the objects of the association. Eighth—To create and maintain a fund for such purposes, in harmony with and promotive of the objects of this association, as shall approve themselves to the executive committee thereof.

The initiation fees were arranged as follows:

National trade organizations	$100
State organizations	100
Local general organizations	50
Local trade organizations	25

All members pay dues at the rate of fifty cents per annum per employing member, but in no case is the amount less than $10 nor greater than $200 per annum.

Mr. Parry was unanimously elected president, and among the members of the executive board the following prominent opponents of labor-unions were appointed: John Kirby, Jr., Fred. W. Job, secretary of the Chicago Employers' Association, and Berkly R. Mervin, president of the Merchant Tailors' National Protective Association.

Resolutions were adopted urging the organization of all crafts, in their various cities; proffering assistance to all non-union workmen, and to all union men eager to escape from union tyranny; forming a labor information bureau, which "shall keep a carefully tabulated record of all law-breakers and undesirable workmen"; and opposing the eight-hour legislation and the union label.

Realizing the importance of enlisting the sympathy of non-union workmen, the Rev. J. C. Boetcker, of Shelbyville, Indiana, proposed that employees be admitted to membership, saying that ninety per cent. of the workmen are opposed to unionism.

The association hopes to acquire a membership of 500,000, and offices have been established in various places for the propaganda. In New York there is a central bureau, with a large staff, under the direction of Marshall Cushing, who, as secretary, devotes his entire time to strengthening the movement.

To show how broad a field the industrial association finds fallow for its harvest I may mention the number of associations already organized. Of national associations there are fifty-nine, including the advertisers, the publishers, the horseshoers, the tailors, the bakers, the plumbers, the confectioners, the lye manufacturers, the plasterers, the stove founders, and the Typothetæ. Of district and State associations there are sixty-six. Of local organizations, including citizens' alliances, there are 323. All these include many members, have prominent officers, and hold meetings. They are all good material for the industrial association, and they merely outline the possibilities of such organizations. Their number will be vastly increased under the spur of Mr. Parry and his associates.

What are the possibilities of such a national movement, and by what methods does it hope to make war upon the great number of local unions, of district and State and the national labor federation? In the first place, the associations can enlarge their local practice of trade agreements, which regulate prices and competition, as far as they dare in the face of laws against such practices. In the second place, they can influence legislation and bring pressure to bear upon politicians. This phase of their activity is one of the most important, and one of the most dangerous. The demagogue has previously found it necessary to cater only to the masses and to pose as the friend of the people. But now, that the employers are formidably organized and their lack of numbers is counterbalanced by their greater wealth, the demagogue must prate of his devotion to industry and prosperity.

I have already mentioned the success of the Employers' Association in defeating labor candidates and preventing the passage of the eight hour and anti-injunction bills. In Marion, Indiana, this last year, certain firms had a picturesque struggle with the local unions, and every night the union sent a brass band, which accompanied the officers and employees from the factory to their homes through a mob of jeering union laborers. The police permitted this outrage, until the local employer's association took a hand and forced the resignation of two of the police commissioners and the chief of police. Under the new régime the mobs have been dispersed, and the employees allowed the ordinary privileges of citizenship.

The publicity department of this movement is a strong feature. It was formerly the custom for employers to decline interviews. In consequence, many reporters gave all the advantage to the labor men, who furnished the newspaper men with their material.

The new spirit is to give the widest publicity to everything. Charles L. Eidlitz made a special point of this, much to the opposition of his more conservative associates. But he realized the vital necessity of public support, and not only gave interviews lavishly, but prepared elaborate statements day by day for the guidance of reporters. The result was the enlightenment of the public of the facts in the case and the arousing of their interest in the employers' side of it, and, furthermore, the education of the working-men to the actual behavior of their representatives, who had been previously allowed to give their own versions without contradiction.

Education by means of pamphlets is costly but fruitful, and is a proper reply to the tracts published by the unions. The American Federation of Labor spends over $10,000 a year in publishing its official organ, and it behooves the employers to copy this manœuvre as they have so many others.

In the matter of dealing with the labor-union, the employers are divided, as I have said before. Some of them believe heartily in the labor-union, and recognize the numerous improvements in the laboring classes, while bewailing the evil it is doing in its day of power. Many of the employers of this school have made agreements with their unions, and favor a combination with them, such as that of the New York Building Trades' Association. Where these agreements exist, the organized employees can enforce them or can bring great pressure to bear for their enforcement. A prominent mover in the new cause, Ernest du Brul, of the National Metal Trades' Association, said the other day:

"Even if you have an agreement, I would not give a snap of my finger for it if it does not have power enough behind it on the part of the organized employers to enforce it. I do not suppose that the law of contract would amount to anything if we did not have courts to punish men for violations of that law. And as you cannot reach a labor contract in court, you will have to organize some compelling force to keep these men from violating their agreement."

He described an agreement which his association had with the machinists' union, and the total disregard which the union showed. Mr. Du Brul is opposed to agreements and arbitration. He has found arbitration a vanity. None the less, where agreements exist, nothing but an organized power can hope to enforce them. In the National Metal Trades' Association, the individual employer is not permitted to have any talks with walking delegates. If he makes trouble, the commissioner of the association takes care of him.

In this way the employers' association may act as a sort of clearing-house for strikes and as an insurance against them.

In case strikes are declared, after all, the employers, if organized, become almost omnipotent. They are building up a code of legal procedure, and the different associations exchange briefs and court decisions, and such forms of injunctions as have been most readily granted by the courts and most completely sustained. It is one of their cardinal principles that one of the best ways to avoid strikes is to refuse absolutely to discuss any question, unless the men continue to work during discussion. Thus the Merchant Tailors' National Protective Association states, as one of its guiding rules, that it "Will not arbitrate any question with men on strike. Neither will this association countenance a lockout on any arbitrable question, unless arbitration has failed."

Perhaps the most helpful feature of the employers' organizations is the assistance they can afford one another during strikes. Thus, in the war which has been waging between the Journeymen Tailors' Union and certain employers in Denver, Kansas City, Binghamton, and Cleveland, the Tailors' Protective Association has secured non-union workers for shops in trouble, and when these men have been decoyed away, the association has taken care that any contracts on hand should be done in other cities for the tailoring concerns involved. So smoothly has this been arranged that there has not been any violence, and the strike in Cleveland has already failed. Indeed, there has been also a strike against a firm in New York city, which the association has handled so well that the public has not known of its existence.

The secretary's office of an association is in a sense a labor bureau for non-union workmen, and members are encouraged to reward non-union laborers with special consideration. Thus the tailors' association agrees to provide for the interchange of information regarding character, reliability, and competency of employees, and equalization of labor by the distribution of journeymen as circumstances require. It will inaugurate a system of registration of employees and the use of recommendation and identification cards.

After a strike is settled, or during its progress, the average employer often finds expensive or inadvisable the punishment of those who have been most violent. This work, the impersonal association with its permanent officers and large resources can easily and thoroughly accomplish. During the building strikes in New York, the Employers' Association spent nearly $25,000 upon de-

tectives alone. The result was the purging of New York from the Sam Parks idea of ruling both workmen and employers, and the exposure of the appalling conspiracies of the "wrecking crew." When Sam Parks ceased to battle after his second conviction, the meekness with which he reentered the penitentiary amazed many people. His change of heart is less surprising now that we know that evidence was being collected against him which would have proved him guilty not merely of business conspiracy, but of conspiracy to murder a fellow official in the labor-union—Frank Buchanan. When Sam Parks was safely landed in the penitentiary, his old cronies began the dynamiting of buildings and the destruction of derricks. It was through the detectives of the Employers' Association that Buchanan was warned, and that various other plots to murder or to cripple were prevented, and in the five thousand typewritten pages of the report by the detectives there is the strongest indictment of the extent to which labor tyrants can go. In their lust for power at any cost, in their ruthless disregard of the lives, the liberties, and the prosperity, not only of those who oppose them, but of those who obey and support them, it has been only too clearly shown that the unscrupulous leaders of labor are not yet to be trusted with power.

The army which is mustering to oppose the labor-unions is an army equipped with limitless advantages. It has not the numbers of the mob, but it has the advantage of wealth. The united employers can endure a lockout far longer than laboring men can endure a strike. They are a long way from starvation at the worst, while the laboring-man in comparison is very near it at the best.

But, however justified may be the punishment in store for some of the labor-unions, the general public would not congratulate itself upon their destruction. It is to be feared that, in spite of their appeals to "Americanism" and "Constitution," and even in some cases to the divine law, the employers are really most concerned for their profits. No man ever yet got enough profit out of his business, and the employers will not be easily satisfied. In the long run, the trade battle is for the spoils. And the spoils are the public's pocketbook.

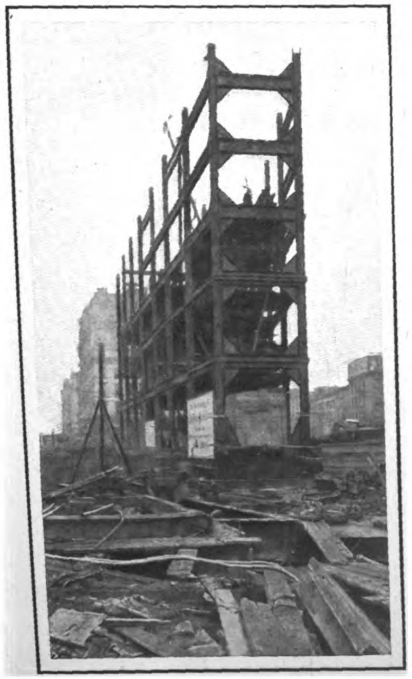
It is within the bounds of possibility that the organization of employers shall be of immediate and lasting benefit by establishing peace in the industrial world. In this case, their union will be a blessing. But, blessing or curse, it was inevitable that it should come some day, and it is inevitable that it shall attain enormous power.

The likelihood of a disastrous war rests chiefly upon the attitude employers will take toward the labor-union. If they recognize its right to exist, and its certainty to exist, we shall have a peaceful contest with benefit as the result.

If the hotheads among the employers who believe in crushing labor-unions out of existence succeed in stampeding the employers' unions as the labor-unions have been often stampeded by impossible promises and bloodthirsty summons to revenge, there will be bitter days of struggle and conflict.

The Growth of a Metropolis

By Frederick Boyd Stevenson



NEW YORK has many wonders, but none are so marvellous as the innumerable transformation scenes that are daily taking place within her borders. At the present time there are great stretches of barrenness and desolation on the west and east side of the island where once stood the finest and the first houses in the land. This part of the city is in a state of commercial siege. Two mighty corporations have within their grasps the withering remains of the old city. Four solid blocks of bewildering disorder between West Thirty-first and West Thirty-third streets and Seventh and Ninth avenues indicate the extent of the enterprise undertaken by one. To the east the other has despoiled twelve blocks of brownstone buildings and other structures, formerly covering the area from East Forty-fifth to East Fiftieth street on Lexington Avenue; from East Forty-fifth to East Forty-eighth street on Park Avenue, and from Lexington to Park Avenue, with a jog over to Madison Avenue on East Forty-eighth Street. On the West Side is one company preparing for the erection of its gigantic passenger station on the line of the great tunnel to be cut across the width of Manhattan from New Jersey to Long Island; and on the East Side is the other corporation making ready for its towering terminal railway station, depress its tracks, and revolutionize the handling of through and suburban transportation.

With the crumpling walls fortunes have melted away at the mere wave of the hand of the wrecking boss. Dwellings costing from $20,000 to $50,000—once the pride of old New York—have been razed to the ground without a thought of sentiment for their passing. Modern apartment-houses, built within the year for sums ranging from $150,000 to $250,000, have been ruthlessly cast into the general ruins. One asylum worth three-quarters of a million; another costing one-quarter of a million, and three churches of historic memory—all these, too, have been levelled to the dust.

Something like $5,000,000 worth of buildings have been torn down in these two districts of the city. One may learn that the value of the land to be occupied by these two projects is about $22,000,000; that the excavations will cost in the neighborhood of $11,000,000, requiring the work of four thousand or more men for fully two years, and that the proposed structures of the railroad companies will probably require an outlay of $14,000,000.

When all the structures on the West Side have been torn down there will be demolished twenty-six buildings at a cost of $4,000,000. The one million square feet of ground acquired by the company is worth fully $10,000,000. The cost of excavation, which will require one year or more to accomplish, will be $3,000,000, and the amount to be expended in erecting the new terminal station is estimated at $8,000,000, making an outlay of $25,000,000. If one looks over the field that has been laid waste in the western part of the city he will realize the enormous amount of money that it has cost to bring about this destruction. A row of fine brownstone houses on West Thirty-second Street, between Seventh and Ninth avenues, costing from $15,000 to $50,000 each, not taking into consideration the land values, has been made a part of the general sacrifice. On the south side of West Thirty-third Street is a similar row of residences being razed to the ground. On the north side of West Thirty-first Street a large apartment-house worth $200,000 has been demolished. A little to the east, on the same side of the street, is St. Elizabeth's Hospital, worth $250,000, which has been marked for the devastating hammer and chisel.

A short time ago the old North Presbyterian Church, which stood on the northeast corner of Ninth Avenue and West Thirty-first Street for more than half a century, was torn down. In its time it was one of the finest church edifices in the city, having been erected at a cost of $175,000. It was the storm centre of the Orange riots on July 12, 1871, and, according to a common story, was saved from utter destruction by the efforts of the late Father Arthur J. Donnelly, of St. Michael's Church, which stands across the way on Ninth Avenue.

A Sky-scraper and Subway Station Building at Broadway and Forty-second Street

In the mean time old landmarks on the East Side are also being rapidly reduced to oblivion. Seventy buildings there, costing from $18,000 to $750,000 each, will soon be utterly demolished. Sixty or more of them have been already torn down. St. Peter's German Lutheran Church, formerly on the southwest corner of Lexington Avenue and East Forty-sixth Street, is among the ruins. Preceding it in the mass of débris now confronting one on every side was the Episcopal Chapel of Heavenly Rest, just west of Lexington Avenue on East Forty-seventh Street. The big building of an express company on Lexington Avenue and East Forty-eighth Street, worth $100,000; the Orphans' Home and Asylum of the Protestant Episcopal Church, on East Forty-ninth Street and Lexington Avenue, worth $750,000, and six or seven minor buildings will be demolished within the next few months. The excavations, which have been already well advanced, will require an outlay of $8,000,000 before a stone is laid for the main building. The land value is estimated at $12,000,000, and the cost of the terminal station will be about $6,000,000, which, with the $1,000,000 or more valuation of the buildings torn down and to be torn down, will make the total expenditure $27,000,000.

Thus we have seen how $52,000,000 must be outlayed in the unmaking of a city. Untold millions will be required in its making. Three hundred and fifty buildings have been jumbled into a promiscuous mass of brick and stone and mortar. On their sites will arise magnificent structures of granite and

steel and marble. Where once the roses bloomed will be broad streets. New people and new life will make the new city. It will be as if Aladdin had rubbed his lamp again.

From the great waste on the West Side will arise a stupendous building, ten, twelve, perhaps fourteen, stories high. It will occupy the space from Seventh to Eighth avenue and from West Thirty-first to West Thirty-second street. The street on West Thirty-second from Seventh to Eighth Avenue will be closed. Below the building will be a subway from forty to fifty feet deep, to be used for trains conveying passengers through the tunnels from Jersey City and Long Island City. Busy throngs of shoppers will fill the streets, and to meet the new demand a new shopping district will have its growth. Suburban dwellers in New Jersey and Long Island towns now living at impossible shopping distances from New York will be put in touch with the great trade centres of the metropolis, and served as easily and as conveniently as the residents within the limits of Manhattan. The department stores to be erected in this new quarter, it is believed, will be the finest in New York. In order to keep pace with the sudden growth, here and there on the side streets will be erected tall and stately apartment-hotels and restaurants. Everywhere there will be new structures. Eighth Avenue will become a great retail centre, and there will be such a change throughout the district that it will regain its lost splendor in a way that was never dreamed of, but it will be a splendor of a far different kind than formerly.

On the East Side of the island there will also be a metamorphosis. There a great terminal station, reaching up twelve stories, will stand out like a monument with all the modern beauties of the architect's creation. All tracks will be depressed, and streets, which are now cut off by unsightly railroad yards, will run directly across the regular grade. Along Park Avenue will be ornamental walls. There will be no smoke, for electricity is to be the motive power in trains. Tall apartment-houses will be erected in the vicinity, and plans are already being made to construct one or more hotels, the cost of which will run high into the millions.

West Thirty-second Street, New York, showing the Demolition of Property to make room for the new Pennsylvania Station

While these changes are progressing there will be a general transformation in all parts of the city so badly torn asunder. Even now the beginning of it is to be seen. There is the invasion by the retail traders of Fifth Avenue to the north. Already they are crowding close upon Central Park. There are promises of the wiping out of the Ghetto with broad boulevards and small parks. There is the beginning of a grand residential district along Riverside Drive, which will be made continuous with the Boulevard Lafayette on the Hudson River to Dyckman Street on the north, and thence joining the Speedway and leading into the proposed grand concourse on the east side of the Harlem. Then, there are the tunnels that are to unite Brooklyn, Long Island, and New Jersey with Manhattan, and make possible in unopened territories new sites for new homes—all adding to the glory and the prosperity of the great American metropolis.

The Science of a Light

By Sir Hiram Maxim, C.E., M.E.

CHEAP commercial acetylene gas was discovered by accident. Willson, a scientific experimenter, believed that nearly all metallic oxides could be reduced to a metallic state by heating them to an extremely high temperature by the voltaic arc in the presence of free carbon. Aluminum had been successfully reduced in this way. Mr. Willson wished to obtain metallic calcium. He therefore mixed a quantity of quicklime with pulverized coke, and brought the mixture to a high température by the action of the voltaic arc. He expected to obtain a white metal, but instead he appeared to produce nothing but slag. This was thrown into the yard, and one day at noon while the boys were having their luncheon they picked up these bits of slag and threw them at each other. One piece fell into a pail of water, and produced a bubbling effect and a strong odor. This attracted Mr. Willson's attention, and upon investigation he found that the strong-smelling gas was extremely inflammable. Further investigation revealed that it was pure acetylene gas.

The reduction that Mr. Willson had expected had really taken place. When the quicklime, which is oxide of calcium, found itself in the presence of carbon at an extremely high temperature, it gave its oxygen up to the carbon, forming carbonic-acid gas, and was reduced to its metallic state, but at that instant the carbon combined with the calcium, forming a carbide of calcium. When carbide of calcium is plunged into water, the water is decomposed, the hydrogen combining with the carbon in the calcium carbide, and the oxygen of the water combining with the calcium. The products of this decomposition are therefore hydrate of lime and acetylene gas. Acetylene gas is a hydro-carbon. There are many forms of hydro-carbon gases. Ordinary marsh-gas contains a very small percentage of carbon, and its flame is not very luminous. Coal-gas, such as is used for lighting purposes, contains sufficient carbon to give a very luminous flame. When coal-gas is ignited, the oxygen of the atmosphere first consumes the hydrogen, converting it into water; the carbon of the gas is thus set free. As Mr. Tyndall observes, "Carbon cannot exist as a bachelor, in a pure state, except as a solid." If there were only sufficient oxygen present to burn out the hydrogen, we should have all the carbon set free in the form of lampblack. But if sufficient oxygen is present, the carbon, which is first set free and then raised to incandescence by the hydrogen flame, takes fire itself, and is converted into carbonic-acid gas (carbon dioxide), and the light is produced by the solid particles of carbon while in a state of ignition. If sufficient atmospheric air were introduced into the gas-pipe for the complete combustion of the gas, then the carbon would not be set free at all. The mixture would burn with a blue flame, both carbon and hydrogen being consumed simultaneously. Such a mixture is explosive, and is employed for driving gas-engines. As a rule, no luminous gas is explosive by itself.

Acetylene gas contains a great deal more carbon than coal-gas. Coal-gas has only two sources of heat, the combustion of the hydrogen and the combustion of the carbon, but in acetylene gas we have three sources of heat—first, the endothermic energy, which is stored up in the gas, and primarily obtained from the electrical energy in the furnace. If pure acetylene gas is compressed and liquefied in a very strong cylinder and ignited, a terrific explosion follows. Upon opening the receptacle it will be found to contain marsh-gas and free carbon in the form of lampblack. There is just as much carbon and just as much hydrogen as there was before the explosion took place. The explosion is due altogether to the heat generated by the disassociation of the carbon and the hydrogen. It might be said that they are locked together in an unwilling embrace, and that under the influence of heat the repulsion becomes so great that they tear themselves asunder, and the friction of being thus torn asunder raises the temperature of the gas to about 5000 degrees Fahrenheit. It therefore follows that when acetylene gas is ignited at the burner, the hydrogen is

the first to burn. This sets free a very large amount of carbon, and at the same time develops the endothermic energy in the gas. We therefore have three sources of heat. The result is that the flame becomes very hot, and as the carbon is very abundant, the light is very intense. The light which is derived from a heated body is said to increase in geometrical progression about as the fifth power of the temperature. It is probably something less than this. However, this enables us to account for the enormous amount of light which may be obtained from the combustion of a very small quantity of acetylene gas.

Acetylene gas is now being extensively used for lighting private dwellings and places of amusement beyond the reach of electricity or coal-gas.

A French chemist has discovered that a small percentage of acetone mixed with liquefied acetylene prevents it from exploding except in the presence of oxygen.

College Men and Money

By Professor C. L. Kitchel

In Charge of the Bureau of Self-help at Yale University

IN the Freshman class entered last year at Yale in the academical department, or Yale College proper, there are forty-eight men, just twelve per cent. of the entire number, who are wholly dependent for their education on the money they make. In the other academical classes the proportion is slightly smaller, about ten per cent., making in all in the academical department say one hundred and forty. It is possible to speak with exactness in respect to this department, because here tuition scholarships are granted to needy and worthy men, whose exact financial condition is revealed in detail with each application. In the other departments of the university, except to some extent in the Divinity and Graduate schools, such aid is not granted, owing to lack of the requisite funds, and so only a rough estimate can be made. Probably five per cent. at least of men in the departments other than the academical support themselves altogether, making the entire number of such students in the whole university something over two hundred. To these must be added at least as many more who have to earn more or less, giving in all a little army, say four hundred strong, who depend either entirely or to some extent on their own exertions.

The Bureau of Self-help has for an important part of its work the assigning of the tuition scholarships referred to. They are given on the basis of need and scholarly standing. A student who is entirely dependent on himself and who is of the first rank as a scholar receives a scholarship in amount equal to the entire annual charge for tuition, which is one hundred and fifty-five dollars; one less needy and less excellent in his studies, a scholarship amounting to one hundred and fifteen dollars, while those less needy still and lower in scholarship, though still above a certain limit, receive at the rate of seventy-five dollars. By means of these scholarships a very important item of expense is gotten out of the way, while such a degree of excellence is required that the opprobrium of a gift does not attach to the acceptance of them.

A week or ten days before the university opens in September the advance-guard of this army of students who must earn their own way begins to appear. It consists in the main of the more prudent and energetic members-to-be of the newly incoming classes. The needy men of the upper classes, having been on the ground before, have, to a large extent, retained the opportunities for work which they held in the year preceding. The new-comers find the Bureau of Self-help ready to aid them. Its office is centrally located in the archway of Phelps Hall, one of the most frequented approaches to the campus. So far as this part of its work is concerned, the bureau is an employment agency, and its methods are determined accordingly. Its function is twofold: to find work for the men and to select men for the work.

To accomplish the first end every sort of advertisement and solicitation is made use of—circulars, cards, postals, personal letters, and personal appeal. It has been realized that this business must be built up, like any other, by letting it be known over and over again that here intelligent and reliable men can be obtained for pretty much every kind of work not requiring more than two or three hours a day,—a limitation imposed by the student's college duties. The good-will of good people for worthy young men struggling for a worthy end has also been counted on, and not in vain. Practically no opposition on the ground that work is thus being taken from the youth of the city has been met with. The employment which the student wants is either so immediately connected with the university or so limited in time that the city boy who has all his time cares little for it. As a result, more and more work and of better kinds is being offered.

The second object of the bureau is to select the right man in each case for the work. To this end when the student applies he is carefully examined as to what experience he has had, and the kind of work he is best fitted for. Any special limitations as to time or circumstance are carefully recorded, and lists are thus prepared from which, when any sort of a demand is made, the right kind of a man is pretty apt to be found. Of course the greater part of the work men do in the business world is not found for them by employment bureaus. They know where the work is and they go for it, and the man who goes for it most quickly and intelligently gets it. The same is true of college men. The initiative ought to remain with the man. But when two or three hundred men are looking for the same thing at pretty much the same time and place, much can be done in the way of advice and direction, as well as actual assistance.

Of the work done in term time, it is remarkable what a very large proportion has to do with the life and activities of the university itself. For example, more money is made by tutoring than in any other one employment. From one to three dollars an hour are the rates of compensation, and the time and the energy thus employed are all in the line of the student's scholastic discipline and endeavor. In 1902 it was reported that $8652 was earned in this way by seventy-one men. Had all reported, the amount would without doubt have exceeded $10,000. Again, the manifold activities and organizations of the university life call for various and considerable expenditure. The preparation for the several athletic contests and the policing of the field; clerical work in the various offices, libraries, and the co-operative store; typewriting in connection with prize papers, theses, and articles for college and other publications; the selling of programmes, class pictures, and books, and violets in vast quantities on the great social occasions; these and many other opportunities which college life and activity afford are eagerly seized and improved. Probably nearly one hundred and fifty men earn their meals—one of the most considerable items of expense—by waiting at table. As little as possible is it a menial service. In the small clubs of ten or a dozen men in a private house, the student who "stands and waits" has the respect and comradeship of those whom he serves, according to the quality of his personality. Here is an exigent service which can be done by no others so well, occupying but a little time and where its loss will be least felt, and in multitudes of cases sufficient in what is thereby saved to determine whether the man shall remain in college at all. The earnings of sixty-five men in this way in 1902 were reported at $8237. Had all reported, the amount would have been increased at least one-half.

The item of room rent or its equivalent is met in many cases by the care of furnace and lawn, often for members of the Faculty. In these and other ways, roughly speaking, four-fifths of what students earn in term time is derived from the university life and activity.

Very important is the part which vacation plays in the finances of the self-supporting student. It gives opportunity to accumulate a little fund which will greatly relieve the pressure when college work begins. It is not too much to say that unless he improves his vacation well in earning money, the student will either not succeed in continuing his academic course, or if he remains will be so overburdened as not to reap the benefit of it. Many find business opportunities in vacation at or near their own homes in banks, stores, factories, or upon farms. Many act as hotel clerks, or canvass for books, etc. The majority of self-supporting students return at the end of vacation with from one to three hundred dollars laid up against the needs of term time, in which their studies must take the first place.

The whole amount reported as earned in 1902, including both vacation and term time, was $38,000. Had reports been secured from all, the amount would probably have been fifty or sixty thousand dollars.

Here it should be said that no young man should enter college any more than he should venture into any strange community without some considerable reserve fund upon which he may draw until he has established himself in his duties as a student and found the opportunities of self-support. To do otherwise is reckless imprudence. It is better to remain out of college a year longer and accumulate a little fund. In competition for work so limited in its range and engaged in by so many at the same time, it is inevitable that temporary failure and delay should occur, and then unhappy is the man who has not provided for that evil day. Particularly is this true in the first year and the first months of the first year.

Toward the end of the college year and in the later years of the course is often the time when a little money judiciously borrowed will save the day. It can be repaid easily after graduation, and a life-insurance policy can meantime protect the lender. In any university a loan fund administered on business principles is a most wise aid. It is one of the great needs at Yale now.

These students from frugal homes and of scanty means are a most desirable element in the university community. Unspoiled by luxury and earnest in purpose, they give character and tone to the whole place. In spite of the great handicaps to which they are subject in having to expend so much time and strength on extraneous work, they get what they come for. They carry off far more than their share of scholastic honors. In the class of 1903 fifteen out of the nineteen highest appointments at graduation fell to men who had received tuition scholarships. In the class of 1902, eighteen out of thirty-three. In every class something like this occurs. They rank high out of all proportion. In debating too they are conspicuous, upon the boards of the college journals, in the management of the athletic associations, in every activity of the university community.

What is more, the fact that a man is working his own way does not debar him from social recognition and success.

"Lohengrin" in English

The photograph shows the scene in the third act of Wagner's opera where "Elsa" implores her mysterious husband to tell her his name. She has been wrought upon by the malicious insinuations of "Ortrud," who is eager to advance the interests of her husband "Telramund," with whose ambitions the Knight of the Swan has interfered. "Elsa's" confidence in her rescuer is shaken, and in violation of her promise not to inquire his name, she asks the forbidden question. "Lohengrin," compelled to reveal his identity, makes known his name and mission

French Comedy at Harvard

The members of the Cercle Français of Harvard University recently presented Beaumarchais's comedy, "Le Barbier de Séville," at the Bijou Theatre, Cambridge. W. M. Shohl, '06, played the lover count, P. G. Henderson, '05, was the "Rosine," J. V. Blanchet, '05, the "Bartholo," and O. L. Mills, '05, the barber "Figaro." The photograph shows Mr. Shohl as "Comte Almaviva." The Cercle Français was founded by Mr. James H. Hyde, of New York city, for the purpose of promoting a knowledge among the university students of the language and literature of France

The Execution Scene in "Tosca"

Puccini's music-drama "Tosca" is based on the drama of Sardou, which tells the story of the love of the Roman singer, "Floria Tosca," for the artist "Cavaradossi." The painter has an unscrupulous rival in "Scarpia," the chief of police. "Scarpia" succeeds in implicating "Cavaradossi" in a political plot, and attempts to gain "Tosca's" favor by promising to save her lover from execution. The singer kills him after accepting his assurance that he has ordered only a mock execution for "Cavaradossi," but discovers too late that she has been deceived. The execution turns out to be real, "Cavaradossi" is killed, and "Tosca" commits suicide

OPERA AND COMEDY ON THE STAGE

Henry W. Savage's Opera Company is giving a season of grand opera in English. A four weeks' engagement at the West End Theatre, New York, has just been concluded, and the company is now playing at the Amphion Theatre, Brooklyn. Mr. Savage's organization has a large repertoire of the principal French, German, and Italian works, all of which are sung in English

MISS LAURA HOPE CREWS IN "MERELY MARY ANN"

Miss Crews plays the part of "Rosie," the daughter of the keeper of "Lancelot's" lodging-house, in "Merely Mary Ann," the play by Israel Zangwill now running at the Garden Theatre, New York. A description of "Merely Mary Ann" was given in the "Weekly" of January 9. Miss Crews was formerly leading woman of the disbanded Murray Hill Stock Company

Correspondence

AS TO PANAMA

SAN FRANCISCO, *November 30, 1903.*

To the Editor of Harper's Weekly:

SIR,—I quote the concluding sentence of editorial captioned, "Latest Aspects of the Panama Affair," in HARPER'S WEEKLY of the 28th inst.

"If we now do what we ought always to have done, when the State of Panama has revolted against Bogota oppression, and prohibit Colombia from committing a breach of the peace on the isthmus, we are but subserving the primary, humane, and honorable purpose for which the Treaty of 1846 was framed."

I now quote the language expressing one of the provisions of the Treaty of 1846.

". . . The United States also guarantees . . . the rights of sovereignty and property which New Granada has and possesses over the said territory"—meaning the Isthmus of Panama.

Now, I beg to propound the following questions:

First.—Has not the United States at all times since the United States of Colombia succeeded to the "rights of sovereignty and property" which New Granada had and possessed in the Isthmus of Panama, recognized the provisions and obligations of said Treaty of 1846, as in full force, effect, and binding as when New Granada was the parent State which had the "rights of sovereignty and property" in the isthmus?

Second.—Does not the guarantee provision of said treaty clearly imply, and has not this always been the construction put upon it by the State Department of our government, assistance to be rendered by the United States to Colombia, to maintain her "rights of sovereignty and property" in the isthmus against assailment by any power at home or abroad?

Bearing upon this question, as likewise upon the question preceding, I beg to quote the following words from a letter written on April 30, 1866, by Secretary of State Seward, to the United States Minister at Bogota:

"The United States desires nothing else, nothing better, and nothing more in regard to the State of Colombia than the enjoyment on their part of complete and absolute sovereignty and independence. If those great interests shall ever be assailed by any power *at home or abroad*, the United States will be ready, co-operating with the government, and their ally, to maintain and defend them."

Finally.—By recognition of the provisional government of the seceded State of Panama, and maintaining a protectorate by armed power over the seceded State, preventing the parent State, Colombia, from reasserting her "rights of sovereignty and property" in that part of her territory by coercing back to their allegiance the revolutionists and secessionists, does not our government stand convicted of wilful disregard and flagrant violation of its solemn treaty obligation expressed by, and involved in, the language above quoted from the Treaty of 1846? I am, sir,

JNO. AUBREY JONES.

[A reply to this letter will be found in this week's Comment.—EDITOR.]

AMERICANS IN THE ISLE OF PINES

CHICAGO, WINDSOR CLIFTON HOTEL, *January 3, 1904.*

To the Editor of Harper's Weekly:

SIR,—As one of between five and six hundred Americans who made an investment in the Isle of Pines, the thought never entered our heads that our government would ever trade it off for two or two thousand coaling-stations, I wish to thank you for your editorial comment on the subject in your issue of December 26. You dispose of all the points justly and fairly, and I regret to say that HARPER'S WEEKLY is the first of any newspaper or magazine I have seen that has asked of our government any consideration for the Americans living and financially interested in the island, who, by the way, own eighty per cent. of the total acreage.

These Isle-of-Pines Americans have been generally referred to by some Senators and newspapers as a set of land-speculators. As a matter of fact they consist, with a few exceptions, of middle-aged or elderly men, doctors, lawyers, dentists, and other professional men from Northern States, who have invested in many cases their all in the isle, with the hope of securing a home and competence in a milder climate. These men, without exception, bought their land, firmly believing it was United States territory forever.

Until General Wood withdrew from Cuba, without setting up a government on the island, as he promised to do at a banquet given him in Havana a few days before he left Cuba (this statement I can prove, and it has been proven by a number of Americans who were present, and whose veracity is unimpeachable) you would not find a Spanish or Cuban business man in Havana who, when the Isle of Pines was mentioned, would not say, "Oh, that is American now." When General Wood, for reasons best known to himself, failed to establish a civil government on the island, when he turned Cuba over to the Cubans, they commenced to lay slight claims to the island, which they expressed their willingness to waive upon the cancellation of their debt to this country of three millions of dollars advanced by President McKinley to pay off their soldiers after the Spanish war. As time rolled on, their confidence rose, and they now claim the island, and set a value of forty millions on it. And it is worth it.

Maps, books, magazines, and leading newspapers for a long while after the war described and referred to the Isle of Pines as United States territory. The Americans down there invested in good faith, never doubting for a moment that the island would continue under the United States flag. These people are entitled to some consideration.

There is no ambiguity about the Treaty of Paris. After disposing of Cuba it reads, "Spain cedes to the United States Porto Rico *and all her other West Indian islands*," etc. The Isle of Pines is separated from Cuba by an open sea voyage of sixty miles, and, geographically, is as separate and distinct from Cuba as France is from England.

The American people, like their English cousins, are a land-loving nation, and if the island is ceded to Cuba, it will be the first time in our history we have ever given away a foot of territory.

If a small percentage of Americans knew—as they will know in time—what a little garden spot the island really is, its untold natural wealth and wonderfully productive soil, a mighty protest would go up against the pending action of the Senate.

The administration says, "Let us be liberal with Cuba." We on the Isle of Pines say to the administration, "Be just to us before you are generous to Cuba." I am, sir,

Santa Fe, Isle of Pines. CLEMENT J. WALL.

THE ENGLISH OF COLLEGE GRADUATES

NEW YORK, *December 5, 1903.*

To the Editor of Harper's Weekly:

SIR,—Perhaps the most significant address made during the recent session of the Association of Colleges and Preparatory Schools at Columbia was that of President Remsen of Johns Hopkins University, and the sentence from it which invites our especial attention is the following:

"So much evidence has been given that shows that our college students are sadly deficient in everything that pertains to the use of their mother tongue that it is perhaps superfluous to furnish any more evidence on this point. I cannot, however, help unburdening my soul."

To many persons, both in and out of college, this statement comes as a revelation, and one likely to be gainsaid by the devotees of higher education. However, so far as my own experience goes as a private tutor during four years of undergraduate life at one of the "big four" universities, I am inclined to think that the distasteful fact is a true one. Men from the Junior and Senior classes, who ought to be ashamed of themselves, compose very badly and spell worse, and from Dr. Remsen's statement are not materially improved in these arts after graduation.

"While my own work for years past has not brought me to any great extent in contact with college students, it has brought me in contact with college graduates."

". . . The first point that has impressed me in my dealings with these students is that there does not seem to be much, if any, difference between one college and another, so far as the proficiency of their graduates in English is concerned."

Now, granting the truth of these assertions, why do young men from some of the best families in the United States persist in exposing themselves to such chastisement? The fault lies partly in themselves, partly in their literary bringing up. If in themselves we must assume the following conditions as responsible factors: 1. That students are ignorant of correct usage; 2. That they are not ignorant, but sloven in such usage; 3. That they are both ignorant and sloven; 4. That they read too little standard literature; 5. That they do not get the benefit of constructive effort in composition; 6. That their interests are athletic rather than intellectual. Of these it seems most likely that the reading and speaking hypotheses are the correct ones. Too little time is spent in general reading, and almost no time at all is given over to copying the best usages. Your average college man is a kind of intellectual miner in an educational junk heap. He is what is termed a "good fellow," whole-souled, large-hearted, wise in his own conceits, and almost crude. He greets you with a "Hullo, Bill," and parts from you with a "So-long" that reminds one of the Western cowboy. He is sloven in his walk, in the manner of wearing his hat, is not inclined to offer too much of the sidewalk to an underclassman, and thoroughly enjoys a "good scrap," even if it be nothing more than a dog-fight. No wonder, then, that you do not find him quoting Shakespeare or Thackeray, or delving into the lily-whiteness of Keats. He dwells in the midst of culture, yet is quite apart from it.

But undoubtedly the methods of teaching English do not appeal to many students, because their literary sense is as yet too uncultivated. Literary drill is drill and nothing more; it is a requirement for the degrees, and is laboriously taken up and eagerly laid aside. Reading tasks are assigned which are entirely out of sympathy with students' mental make-up, hence they are completed in a slipshod fashion, and leave behind very little imprint of the beauty to be found in them by the properly qualified. The professor seldom or never shows his class how to read, but satisfies his conscience by dilating on the eccentricities of Carlyle or the boorishness of Byron in a more or less soporific lecture.

If this arraignment of the college student and his instructor seem a little too severe, I ask their pardon individually, for I am one with them in all things that pertain to a betterment of English speech among educated men. Such betterment, however, will come only with an elevation of our standard above that of the uncouth office boy or the ignorant though well-meaning stableman.

I am, sir,

I. W. V.

Our Increasing Wealth

"THE Progress of the United States in its Material Industries" is the title of a statistical statement presented through an interesting report of the Department of Commerce and Labor. The financial, industrial, and commercial condition of the country are included in the tables, which give opportunity to compare present conditions with those of earlier years. In area, for example, the total in 1903 is 3,025,600 square miles, against 2,980,959 square miles in 1850, and 827,844 square miles in 1800. These figures do not include Alaska or the islands belonging to the United States.

The population in 1903 is stated at 80,372,000, against 23,191,876 in 1850, and 5,308,483 in 1800. The wealth of the country is stated at 94 billions of dollars in 1900, and presumably 100 billions would not be an unreasonable estimate for 1903, while for 1850 the wealth of the country stood at 7 billion dollars, no estimate being given for any year earlier than 1850. The per capita wealth is set down at $1235 in 1900 and $307 in 1850, having thus more than quadrupled meantime.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

IF YOUR PHYSICIAN prescribes a milk diet, for its easy digestibility, it will be well to use BORDEN'S PEERLESS BRAND EVAPORATED CREAM to get a rich, deliciously flavored milk food, perfectly sterilized according to latest sanitary methods. For general household uses. Prepared by Borden's Condensed Milk Co.—[*Adv.*]

RESIDENCE Telephone Service pays for itself in car-fare saved. It saves time, too. Low rates. Efficient service. New York Telephone Company, 15 Dey St., 111 West 38th St.—[*Adv.*]

FORTIFY yourself against sickness by keeping the stomach in good shape with ABBOTT'S, the Original Angostura Bitters. At druggists and grocers.—[*Adv.*]

BANQUETS and all convivial gatherings are made glad when COOK'S IMPERIAL EXTRA DRY CHAMPAGNE is used.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

MANY mothers administer PISO'S CURE when their children have Spasmodic Croup. It is effectual.—[*Adv.*]

ADVERTISEMENTS.

Pears'

"Beauty is but skin-deep" was probably meant to disparage beauty. Instead, it tells how easy that beauty is to attain.

"There is no beauty like the beauty of health" was also meant to disparage. Instead, it encourages beauty.

Pears' Soap is the means of health to the skin, and so to both these sorts of beauty.

Sold all over the world.

This half-tone reproduction of "Winter Winds" only partially conveys the beauty and design of the lithographed plaques.

The four Season Plaques containing no advertising and the Calendar Plaque make beautiful and artistic decorations.

The Anheuser-Busch Art Plaques

With Calendar Plaque for 1904

AT GREAT expense, Anheuser-Busch Brewing Ass'n has secured from the brush of the celebrated color artist, A. Von Beust, a series of magnificent oil paintings, representing the artist's conception of the four seasons. These are reproduced with splendid fidelity as to detail and coloring, in the form of four plaques, "Spring Breezes," "Summer Flowers," "Autumn Riches," "Winter Winds," and an additional plaque containing the twelve monthly calendars for 1904. The five plaques are each 12 inches in diameter, lithographed in the highest style of art, fourteen printings on finest ivory china-finished cardboard, with relief embossing, giving the effect of hammered metal rims.

The five plaques will be mailed to any address on receipt of 25c in money or stamps sent to the Malt-Nutrine Dept., Anheuser-Busch Brewing Ass'n, St. Louis, U. S. A.

Malt-Nutrine A food in liquid form easily assimilated by the weakest stomach. Invaluable to nursing mothers and feeble children, gives appetite, health and vigor to the weak and ailing. Sold by druggists and grocers.

THE WAYSIDE SERIES

This is a series of artistic little books made after designs by Mr. Will Bradley, the well-known designer and artist. The volumes are post octavo in size and especially pleasing in typography and make-up.

RIP VAN WINKLE. Old-style volume, with frontispiece.	$ .75
LEGEND OF SLEEPY HOLLOW. Uniform with "Rip Van Winkle."	.75
RUBAIYAT OF OMAR KHAYYAM. With Oriental ornaments and binding.	1.00
BOOK OF RUTH AND ESTHER. With especially designed initials, etc.	1.00
BRADLEY—HIS BOOK. Bound volumes of this unique, artistic periodical. *Net*	5.00
GILBERT'S BAB BALLADS. With over 100 drawings by the author.	1.25
KINGSLEY'S PERSEUS. A beautiful, well-printed child's book.	$ .75
HAWTHORNE'S PARADISE OF CHILDREN. Uniform with "Perseus."	.75
PRINCE AHMED AND PERI BANOU (from "Arabian Nights"). Uniform with "Perseus."	.75
THE WISDOM OF CONFUCIUS. A light upon Chinese religion and life.	1.00
FLOWERS FROM PERSIAN GARDENS. A choice anthology. Edition de Luxe.	1.25 10.00

THE FOURTH GENERATION

BY OWEN · OLIVER

GRANDFATHER rose slowly, with the aid of his stick, when they heard the carriage in the avenue, and gave grandmother his arm. His lips were restless, and there was a moist smile in her eyes. George Harnley had married abroad twelve years before, and now he was buried abroad, and they had bidden his wife and child home. They were a proud family, and though he had been enthusiastic about his colonial wife, he and they always saw things differently. They glanced at each other uneasily as they moved slowly towards the door. They had come to understand each other without words.

Their faces brightened when they met Margaret Harnley. She looked as the wife of a Harnley should look; she dressed as the wife of a Harnley should dress; and she spoke as the wife of a Harnley gone to rest should speak—clearly and sweetly, and bravely for all the tears in her eyes.

"I had thought that *he* would bring me," she said. "You will love me for his sake."

"We shall love you for your own." Grandfather raised her hand gallantly to his lips.

"My dear," said grandmother, "I have wondered so often what my boy's wife was like. . . . I am happy now, my dear. We will have a cry together some other time."

They held hands without speaking for a few moments. Then Margaret turned to the yellow-haired, blue-eyed child of eleven who stood shyly at the door.

"This is our little Vera," she said, with the mother-light in her eyes. Grandfather started and leaned heavily on his stick, and grandmother clung heavily to his arm. They glanced at each other for the least perceptible moment. Then they drew the child to them and kissed her. Their eyes met again with a question and no answer over her head.

"You are surprised that Vera is so fair?" her mother asked. There was a suspicion of combat in her voice, and the old people looked at each other again.

"A little," grandfather owned. "A little. . . . We—we are a dark brood. . . . We have always mated with the dark. *You* are dark, my dear."

Margaret drew the child towards her. "I would not have my little fairy different," she said.

"Of course not; no, no." He lifted Vera's flushed face with his hand and nodded slowly. "A very pretty little fairy. Of course not; of course not. . . . Good heavens!" He seized her left hand suddenly, and pointed to the middle finger. Grandmother trembled violently and he led her to her chair.

"When was it done, and how?" he asked, wiping his forehead rapidly.

"She caught it in a window-frame when she was seven," Margaret explained. "We feared she would lose the joint, but the finger is only shortened very slightly."

"It doesn't hurt now," Vera protested, cheerfully.

"Not now," said grandfather. "Not now." He stroked her hair and sighed. There was an awkward pause. They were glad when two of Vera's cousins came in to fetch her. There was a pony for her, they whispered, and an immense doll's house, and three shelves full of books. She clapped her hands, and kissed her grandparents, and grandfather called her "a pretty little fairy" again, and sighed; and grandmother kissed her twice, and wiped her eyes.

"Unto the third and fourth generation!" she quavered, when the door had closed upon the children.

Margaret regarded them closely for a few moments. Then she drew her chair a little closer to theirs. "Tell me," she requested, quietly. Grandfather coughed to clear his voice.

"You will understand our surprise," he said, "when you have visited the picture-gallery. You will find Vera's portrait there; Vera as some one else was when she was seven. You will find her again as she is now; again as she will be when she is fourteen—seventeen—nineteen—twenty-one. She was only twenty-one when she died; Vera's great-great-aunt Lilian. . . . There has been no one else like her in the family; no one so beautiful." He paused, and grandmother breathed heavily.

"Yes?" said Margaret, calmly.

"You will notice that the left hand is always partly hidden by a handkerchief or draperies. *She* lost the top of the second finger when she was seven. It was shut in a window in the south corridor. Thompson can show you the window."

"At twenty she married one of our neighbors, the Derings. He was handsome and a gentleman, but poor and wild. He was not faithful. Just before a child was expected she went out of her mind. The child never lived. Afterwards she seemed to recover her reason, but—" He stopped and grandmother gave a muffled cry.

"Yes?" Margaret bent forward a little.

"She killed him; struck him through the heart with a dagger as he slept. She was mad—quite mad. She died soon afterwards."

"Quite mad!" Grandmother wrung her hands. "Fair hair and blue eyes. . . . To the fourth generation."

"I see." Margaret's face and voice were calm; but she clutched the locket that held her husband's portrait. "The sins of the fathers! . . . Since you fear disgrace from my child—his child—I will take her away. I do not fear harm from Vera. If I did—" Her eyes blazed suddenly—"I should love her just the same."

She half-rose, but grandfather laid a shaking hand on her shoulder and grandmother caught at her hand.

"You are a mother, Margaret. You *know* I must love my boy's child," she pleaded.

"It is because we love her that we are so afraid," grandfather explained.

"Afraid?" cried Margaret, scornfully. "Afraid of a fancied likeness to a woman dead a hundred years?"

"The likeness is no fancy," said grandfather. "It may be foolish to fear that harm will follow from it, but those whose family records go back for four hundred years do not laugh at heredity. Anyhow, we shall guard and cherish her all the more carefully for the warning. My daughter"—he laid his hand on Margaret's arm again—"we shall cherish you too."

Then he hobbled out, and Margaret sat down beside grandmother, and they talked of George Harnley. Grandmother cried a little, but Margaret shed no useless tears. She was made of stronger fibre than the Harnleys, though every whit as fine. They learned to lean on her in everything during the next few years, and to love her more even than their own. She was a very sweet woman, as well as a strong one, and ruled others without knowing that she ruled them.

Vera, on the other hand, was a true Harnley in disposition—oversensitive, overthoughtful, and too much inclined to rely upon others. Although she was left in ignorance of great-great-aunt Lilian's history, the portraits always had a peculiar attraction for her. She loved to sit beside them and read, and when her mother was not there she used to talk to them.

"It always seems as if she tried to speak to me," she told Margaret once. "Don't you think she looks as if she wanted help? Perhaps she hadn't a wise mummy like you, Marjy." She had adopted her father's pet name for her mother, when she was a baby, and kept to it since.

"Since you have a wise mummy, take her advice and don't trouble yourself with fancies, darling," Margaret said, and drew her away. Margaret imagined that Lilian had failed for want of some one to guide her, and she realized painfully that Vera's future would depend largely on guidance.

She hoped at first to strengthen Vera's character by strengthening her mind and body. In the latter respect she succeeded. In the former she failed. The child was intelligent and learned quickly, and she improved greatly in bodily health during the first two years at Harnley Hall, but education failed to give her any initiative or self-reliance. She always had leaned on others, and she always would. This was her real similarity to her unfortunate ancestress, and Margaret was constantly being alarmed by parallels in their lives. Grandfather and grandmother would so often start at the mention of some harmless thing that she had done; and when

Margaret questioned them grandfather would bring out an old writing wherein *his* grandfather had set down the history of Lilian; and they would find a fragment of Vera's history there. The coincidences, at which Margaret had laughed at first, began to alarm her; and she found herself trying to make Vera look as different from Lilian as possible by differences in dress, in doing her hair, and in other little ways. She even made her do things because Lilian had not done them.

When Vera was fourteen she took a fever as Lilian had, and they had to cut off her fair hair. The portrait of Lilian at fourteen with short yellow curls might have been her great-great-niece, for all that one could tell. After the fever she grew quieter and brooded, as Lilian had done, and she was always staring at the portrait.

"I feel as if we were two people and yet the same," she said.

At sixteen she began to suffer from fainting fits. Lilian had suffered from them at that age. She grew thinner and quieter than ever, and her eyes were like great lamps in her head. The doctor advised taking her abroad for some months. Margaret hesitated a little because Lilian had gone abroad at the same age; but finally she took her. She brought her back restored to health, but very fragile and thoughtful. She might have stepped from the frame which showed Lilian at seventeen. The writing said that she was depressed after her return from France, and would sit for hours talking to herself. Vera would have done so, if her mother had not roused her.

"Your grandfather and grandmother are growing very old," she used to plead. "No one can brighten them as you can. Let them hear you laugh and sing."

So she laughed and sang and grew more cheerful again. For we do not merely laugh because we are glad, but are glad because we laugh. The great powers that made us have made us so.

When Vera was nineteen she grew brighter for another reason—as Lilian had done—and her eyes laughed like the eyes in the next canvas. She told her dead ancestress the secret first, kneeling before her in the warm June twilight.

"I love him, Lilian," she whispered. "Love him! . . You loved some one, didn't you? Your eyes say so . . . . . It isn't everybody who can love as we do, is it, dear?"

Her mother found her there, and called to her sharply. Then Vera told her the secret, with her face buried in her lap. Margaret sat facing the laughing portrait with her head on her hand. She moistened her lips twice before she spoke.

"Robert Dering," she repeated, huskily. "Robert Dering!" He was the great-great nephew of the Dering who had loved the fair face that laughed from the wall; and the shapely white hand that toyed with the fan had slain him!

"You like him, don't you?" Vera pleaded. "You won't say that I mustn't love him because he is poor. *You* weren't rich once."

"No, dear." Margaret moistened her lips again. "It is not that, but . . . . . I cannot answer you now. I must see what your grandfather and grandmother say."

"They will say what you tell them," the girl asserted. "They lean on you in everything. We all do. *I* do. I always shall till—till—"

"Till you lean on him." There was a frightened sound in Margaret's voice. Vera attributed it to pain at the idea of their severance, and put her arms affectionately round her.

"I shall always come to you, too, dear, dear Marjy," she whispered.

"Yes, dear, yes. It isn't that. I shall be glad for you to have some one who will care for you when I am gone. . . . I—I am not well, I think. I will talk to you presently. Leave me now. No, no. There is nothing the matter. Leave me a little while. . . ."

When she had gone Margaret rocked herself to and fro in the chair. The twilight had grown deep, but the stars were peeping out, and the moon was looking in the endmost window of the gallery. She could distinguish the white dress of aunt Lilian, and the sparkling eyes. She could almost fancy that she felt a presence in the room; a

hand laid pleadingly on her arm. "Some one to lean upon." That was what frail creatures like Vera and Lilian needed. Vera had leaned on her all these years. Now she must lean on some one else; and if the support failed?

The moonlight crept further along the wall till it covered the two last pictures of Lilian. It lit up both faces—the face with the smiling eyes, and the face full of despair. Margaret read her answer in them. Vera's future would depend, not on herself, but on another. Whether the other should be Robert Dering, whose ancestor had died at Lilian's hand, depended on Margaret. She could prevent Vera marrying him; but she could not prevent her loving him. She could not prevent her heart breaking if he failed her. If he would love her and guard her always—that was the only hope. He was a strong man, and he could guard her if he would. Margaret made a sudden resolution. She would speak to him.

He listened very quietly while she told the story. Then he drew a deep breath.

"I do not attach any importance to the coincidence with the past," he said. "I *do* attach importance to your estimate of Vera's character. I shall do my best, Mrs. Harnley." She gave him her hand.

"Yes, Robert. You will do your best. God help you."

So Vera and Robert Dering were married on a bright summer morning of the next year. They decked the church with wild roses and Vera was like a white rosebud flushed with pink. She looked the world squarely in the face, and made her responses with unexpected firmness. Margaret knew that Vera was brave because she trusted her husband so much; and she was hopeful for her; for in her heart of hearts *she* trusted Robert Dering.

Things went well with the young couple at first. Vera came back from the honeymoon brighter and stronger than they had ever known her. She and Robert were devoted to each other. He applied himself vigorously to his profession as a solicitor, and Vera took a pride in his work instead of calling him from it. He was greatly attached to Margaret and she to him. They rivalled each other in trying to spoil Vera, she used to tell them, and she was going to try to spoil them. She became very thoughtful of their comfort and Margaret told herself that at last the child was "finding herself."

When Vera learned that she was to be a mother she had no repinings or forebodings. Indeed, it was she who cheered them. Nature had planned her for the rôle of wife and mother. Margaret realized this, and was easier about her future than she had ever been before. Then the thunderbolt fell!

Vera had driven over to the Hall to see her mother. Margaret happened to be out, and grandmother, with the irresponsible garrulity of age, told her the history of great-great-aunt Lilian. Robert summoned Margaret in the evening. She found Vera huddled up on the sofa, plucking at nothing with her slender hands.

"Mother!" she cried. "Mother! I've got to kill Bob, grandmother says so. It isn't my fault because I have to do what she did. Beside she's come to make me. Stand out in the light, Lilian, where mother can see you. There! . . . . She looks very childish to be my great-great-aunt, but she died young, you see. . . . Mind, Bob! She's coming near you! She's got the dagger! . . . . I don't want to kill you, Bob, really I don't, because you're such a nice boy. . . . And you'll have your good looks when you're killed!" Then she burst into frenzied laughter, and raved, and sang snatches of songs till she fell asleep from sheer exhaustion.

The next day, although very prostrated, she was sensible; and when she was strong enough to get up they reasoned with her upon the absurdity of her delusion. It was ridiculous, they said, to suppose that what some one else did a hundred years before could have any influence over her. It did not follow that, because she was like Lilian in looks she was like her in character; and even if she were, she would act differently because she was differently situated. Lilian had come to distrust and hate her husband. *She* had every reason to trust and love hers. Lilian would never have done wrong if she had been married to Robert. She agreed in a dull unimpressed way with their arguments. "Only if I *should* go mad you *will* lock me up so that I can't hurt Bob, won't you?" she repeated, after each assent.

"You won't go mad, darling," Robert assured her.

"Your little baby will make you different forever from Lilian," her mother whispered; and then, for the first time, she smiled.

"Yes," she said, "I shall be different from Lilian then."

When she fell *into* fits of brooding, as she did frequently, Margaret could always rouse her with this argument. "Lilian couldn't have done it, if her baby had been born," Vera used to say; "and if she could *I* couldn't."

A fortnight later the baby was born—dead!

They despaired of Vera's life for a full week; and for another week she laid *staring* at the wall without speaking, and they feared that her reason was gone. Then she plucked at Margaret's sleeve and whispered to her. . . . . "I *am* like Lilian, you see," she said. "I've got to kill him. . . . And I love him so!"

She wanted Robert in the room, and she could hardly take her eyes from his chair when he was absent; but she could not bear him to come near her.

"Don't let him come and be killed," she would shriek. "Don't let him!"

Once when she had been staring at him for a long time she suddenly burst out laughing "He doesn't know what I have here!" she whispered to Margaret. They found that she had a stiletto hidden under the bedclothes. She must have crawled out of her room at night and taken it from his study desk, where he kept it as a paper-knife.

Drawn by W. E. Mears

She crawled out of her room at night and took it from his study desk

She was rational in other respects, and they hoped that, as she grew stronger, the delusion would pass away. But, soon after she was allowed to sit up, the nurse was called away for a moment. When she returned Vera was gone from the bedroom. They found her in a faint beside the desk where the stiletto had laid. Several of the drawers were turned out, and she had evidently been looking for it.

When she came to from the faint she talked incessantly to an imaginary Lilian. "I *have* to do it," she would sob, "Haven't I, Lilian? *You* had to do it. Oh! My dear, dear Bob."

She grew very weak from incessant crying, and the doctor warned them that she was gradually sinking; and that unless they could get the delusion out of her head they would lose her. So they reasoned with her and pleaded with her, but without the slightest result. Lilian had killed her husband when they had been married eighteen months, she persisted, "And you know I always do what Lilian did." Margaret suggested that he should go away; but Vera grew so depressed at the idea, that he dared not. He grew white and hollow-faced about this time; and Margaret

New-York Life Insurance Co.

JOHN A. McCALL, President

BALANCE SHEET, JANUARY 1, 1904

ASSETS

Government, State, City, County and other Bonds (market value, $250,140,939), cost value, Dec. 31, 1903		$247,994,383
(The Company does not include in its Assets the excess of total market value of Bonds over total cost value.)		
Bonds and Mortgages (455 first liens)		24,531,774
Deposits in Banks, at interest		22,126,134
Loans to Policy-holders on Policies as security (reserve value thereof, $40,000,000)		28,502,073
Real Estate, 24 pieces (including twelve office buildings, valued at $10,990,000)		12,725,000
Loans on Bonds (market value, $6,522,660)		5,280,000
Quarterly and Semi-Annual Premiums not yet due, reserve charged in Liabilities		3,603,777
Premium Notes on Policies in force (Legal Reserve to secure same, $5,000,000)		3,139,284
Premiums in transit, reserve charged in Liabilities		2,563,950
Interest and Rents accrued		2,185,672
Total Assets (No stocks of any kind owned or loaned upon)		**$352,652,047**

LIABILITIES

Policy Reserve (per certificate of New York Insurance Dept.), Dec. 31, 1903		$300,090,347
All other Liabilities on Policies, Annuities, Endowments, &c., awaiting presentation for payment		5,456,654
Reserve on Policies which the Company voluntarily sets aside in excess of the State's requirements	$6,859,193	
Reserve to provide Dividends payable to Policy-holders during 1904, and thereafter, as the periods mature:		
To holders of 20-Year Period Policies	23,539,923	
To holders of 15-Year Period Policies	6,991,284	
To holders of 10-Year Period Policies	477,607	
To holders of 5-Year Period Policies	375,002	
To holders of Annual Dividend Policies	830,915	
Reserve to provide for all other contingencies	8,031,122	
Total		47,105,046
Total Liabilities		**$352,652,047**

Increase in Assets during the year - $29,811,147

INCOME, 1903

New Premiums	$16,235,782	
Renewal Premiums	57,146,392	
TOTAL PREMIUMS		$73,382,174
Interest Receipts from:		
Bonds owned	$9,915,238	
Mortgage loans	1,069,639	
Loans to Policy-holders, secured by Policies	1,578,488	
Bank Deposits and Collateral Loans	806,999	
TOTAL INTEREST RECEIPTS		13,370,364
Rents from Company's properties		930,947
Profits realized on Securities sold during the year		274,454
Deposits on account of Registered Bond Policies, etc.		311,592
Total Cash Income		**$88,269,531**

DISBURSEMENTS, 1903

Paid for Death-Claims ($16,860,082), Endowments ($4,305,941), and Annuities ($1,686,696)	$22,852,719
Paid for Dividends ($5,339,292), Surrender Values ($6,412,236), and other Payments ($65,767) to Policy-holders	11,817,295
Commissions and all other payments to agents $7,164,180 (on New Business of year *$326,658,236); Medical Examiners' Fees $748,418, and Inspection of Risks $164,004	8,076,601
Home and Branch Office Expenses, Taxes, Legal Fees, Advertising, Equipment Account, Telegraph, Postage, Commissions on $1,418,554,663 of Old Business and Miscellaneous Expenditures	10,136,844
TOTAL DISBURSEMENTS	$52,883,459
Balance for Reserves—Excess of Income over Disbursements for year	35,386,072
Total Disbursements and Balance for Reserves	**$88,269,531**

**The New Business of 1903, which was $23,860,007 more than that of 1902, was secured at a lower expense rate.*

New Business Paid for in 1903 (171,118 Policies) **$326,658,236**
GAIN IN 1903 (15,678 Policies) **$23,860,007**

Total Paid-for Insurance in force (812,711 Policies) **$1,745,212,899**
GAIN IN 1903 (108,144 Policies) **$191,584,873**

began to brood with her face on her hand, and came almost to believe the influence that she had scorned.

So Margaret and Robert pleaded with her once more.

"You are killing yourself, sweetheart," he said, "and breaking our hearts; and all for an absurd fancy. Can't you be brave and fight it? How can a woman dead and buried a hundred years ago make you do what you don't want to do?"

"You don't understand," she replied, feebly. "She doesn't *make* me. She is just an index showing what *I shall* do. It's no use shaking your head. You know that I always have done what she did. I have inherited her nature."

"You are not descended from her."

"I am descended from the people that she was descended from. There is some evil fate in them and me: I cannot help it."

"Yes, you can, Ve. Make up your mind that the past has no power over you and its power will cease. Trust yourself to me, and let me fight fate for you." She sighed.

"I can't, dear. . . . You must let me go."

She sank back on her pillows and closed her eyes. Her breath was very faint; and she might almost be dead to look at. Margaret's lips quivered.

"Try to fight it, dear," she entreated. "At least you can try. We will help you. We are strong people, Bob and I. Lean on us." Vera gave a helpless cry.

"I can't, Marjy! I can't! I dare say you are right. You generally are. But *I* believe it, you see." She raised herself on one elbow excitedly. "It is a curse on the blood that is in me—the blood of the Harnleys!"

In the evening she asked for *Bob*. When he went in she sent the nurse out of the room, and told him to hold her close to him.

"I am a foolish weak little thing, Bob," she said, playing restlessly with his jacket; "but you are very strong. You said that you could fight fate. Well, I am going to trust to you, and let you fight it for me. . . . You won't let me hurt you, will you? You're going to fight the bygone Harnleys and their curse for me; and you're going to conquer them, you and she. For I'm not going to think that I'm their child any more, only my brave Marjy's. . . . God bless her!"

"God bless her!" He buried his face in his hands; and the tears trickled through his fingers. He and Margaret who were so strong had fought with their strength and failed, he was thinking, and the weak little creature, who lay so close to his heart, had fought with her love; and won!

Swearing Allegiance to Panama

By Jorge Nelken y Walberg

Correspondent of "Harper's Weekly" in Panama

DECEMBER 20 was a gala-day in Panama, or *dia de fiesta*, as they call it on the isthmus. The army, the police force, and the fire department swore the oath of fidelity to the new flag of Panama. The proceedings were very imposing: at 4.30 A.M. the buglers played a call, and the troops formed at the Place Chirrigui, now called Plaza de Armas, where an altar decorated with American and Panamanian flags had been placed. At six o'clock the two regiments and General Huertas, accompanied by his staff, were awaiting the arrival of the police, fire department, and general staff. Immediately after, Señor Nicanor Obarrio, the Secretary of War, followed by Señor Agustin y Arango, the President of the provisory government, arrived in carriages. At about 8 A.M. the chaplain of the army arrived, and ladies of the highest society crowded the observation stand.

The chaplain, after having read the mass, proceeded to bless the regimental flags. This ceremony over, the troops swore the oath of allegiance. Most of the troops were formerly Colombians, but from to-day on are officially recognized as the Panamanian army, without distinction of birth, and are considered equal to the native Panamanians.

Speeches were made by several of the dignitaries present, and at the close of the ceremony a feast was served at the barracks for the troops.

Progress of Science

Rules for Prolonging Life

THE question of the possible extension of human life has recently had renewed consideration by a British scientist. In a lecture delivered before the Royal College of Physicians, in London, Sir Hermann Weber, M.D., F.R.C.P., propounded certain conclusions which he had arrived at as to the best means for prolonging life. The main points in his advice were comprised in these prescriptions:

"Moderation in eating, drinking, and physical indulgence.

"Pure air out of the house and within.

"The keeping of every organ of the body, as far as possible, in constant working order.

"Regular exercise every day in all weathers; supplemented in many cases by breathing movements, and by walking and climbing tours.

"Going to bed early and rising early, and restricting the hours of sleep to six or seven hours.

"Daily baths or ablutions according to individual conditions, cold or warm, or warm followed by cold.

"Regular work and mental occupation.

"Cultivation of placidity, cheerfulness, and hopefulness of mind.

"Employment of the great power of the mind in controlling passions and nervous fear.

"Strengthening the will in carrying out whatever is useful, and in checking the craving for stimulants, anodynes, and other injurious agencies."

Curiosities of the Senses

That impressions made on one of the senses may produce similar impressions on another sense is a fact whose observation has come within the experience of many. There are persons for whom sounds have their equivalents in colors, and who unconsciously translate aural impressions into those of color. To many, the tones of the different instruments in an orchestra, for instance, have their characteristic color correspondences, the violins being orange or red, the flutes white or pale blue, the trumpets and trombones bright yellow or gold.

An extraordinary instance is described in the *Revue Philosophique*. The subject was a youth of twenty-six, born of a neuropathic family. He developed epilepsy in his thirteenth year, and the attacks seriously impaired his mental faculties, although his color sense, which had been remarkable since birth, remained uncommonly acute. The human voice had always, it appears, represented colors to him,—colors of a prism-like delicacy. Even the cries of animals were colored. In the case of the human voice the most intense color impressions resulted from the sound of the spoken vowels. *A*, for example, gave the impression of light green, and other senses were affected as well. The impressions succeeded and were merged into each other. Other vowel sounds produced these peculiar associates: *e* was yellow, *u* dark green, *y* white, *i* black. The printed vowels produced the same impressions, varying in vividness. Smells also had their correspondences—iodoform was deep red, conveying also a sour and bitter taste, and impressions of taste likewise conveyed their equivalent: thus salt was yellow, sweet carmine. "Synesthesia" is science's name for the abnormal condition responsible for this particular phenomenon.

Cars on Skates

The American Inventor reports a new system of railway operation, described as a device for running cars without wheels. Instead, a series of skates, or slippers, are attached to the bottom of the car: between the skates and the rails a thin stream of water is forced from a jet, creating a slight film, on which the car runs. It is asserted that by this method the track resistance is reduced, so that less running power is needed; a smoother motion is also secured, resulting in less wear and tear both of the car and of the rails. The train is run by electric motors, operating a friction-wheel which moves on a third rail between the two outer rails.

Music

"Tristan" and Mottl

MR. CONRIED, having triumphed with variable success over the difficulties which beset the producer of Wagner's "Walküre," "Tannhäuser," "Lohengrin," and "Parsifal," put his orchestral and vocal departments to the supreme test on January 10 in a performance of the master's most exacting and inspired score, "Tristan und Isolde," with Mr. Mottl in the conductor's chair, and an American singer in the part of the Irish princess.

There are some who have held in the past, despite the preachments of the commentators, that "Tristan" is essentially a symphonic poem with subsidiary text and action. It was said in the WEEKLY a year ago, after a particularly effective reading of the score under Mr. Hertz's direction, that it did not seem possible "to yield oneself to the sway of this magnificent tone-poem—this music which is truly, like the poetry of Shelley, 'a singing and soaring flame'—and not realize, with the utmost conviction, that here is no mere *dramma per musica*, no stage play with an accessory musical accompaniment, but rather a lyric rhapsody with a wholly incidental text."

The performance under Mr. Conried has served, rather unexpectedly, to confirm that opinion. It was, almost from the start, a performance with the statue set firmly in the orchestra, and the pedestal more or less unsteadily upon the stage—the realizing of an accusation which the Wagnerites have always indignantly denied. Some one, hitherto a scrupulous adherent of the precepts of Bayreuth, was heard to wish, in a moment of forgetfulness, that the curtain might be lowered on the proceedings behind the footlights, leaving one to the uninterrupted enjoyment of the orchestral chorus. Few living conductors, save Mr. Mottl, could so have hypnotized the elect. Under his magnetic compulsion the instrumental voices became a surging lava-flood: not even under the great Seidl was the voicing of the orchestra more sustained and puissant in its eloquence: his climaxes are prodigious. It was a singular triumph for him, and he shared it with none. Neither the *Isolde* of Marion Weed nor the *Tristan* of Kraus is adequate, although they both have moments of excellence: nor is Miss Walker's *Brangäne* particularly effective. Klöpfer's *Mark*, though, is admirable, as is, of course, the familiar and touching *Kurwenal* of Van Rooy.

Some Opinions

Professor Felix Borowski, of the Chicago Musical College, contributes to a recent issue of *The World To-day* some remarks on the present condition of music. He is disposed to take a pessimistic view: "At the birth of the nineteenth century Beethoven and Haydn were at the zenith of their powers, and Schubert was commencing a career of artistic glory. . . . There are no giants in these days, and even the most remarkable living composers, such as Grieg or Dvorak, are not Germans."

Curious opinions. Does the professor really consider Grieg and Dvorak "the most remarkable living composers," and Dvorak "perhaps the greatest"? Many have conferred that distinction on Richard Strauss, whom Professor Borowski dismisses as an orchestral writer whose compositions "depend for their effect not so much upon what is said in them as in the manner of saying it"—a threadbare fallacy. France, it appears, "contains but two composers of the first rank," Saint-Saëns and—Massenet! One cannot help wondering where Debussy and Vincent d'Indy belong in the professor's scheme of things. England's chief glory, it appears, is "Richard" Elgar,—whom history will probably recognize as Edward of that surname. American composers are treated with respect. Professor Borowski properly admits the importance of Mr. MacDowell—"the most gifted of American writers." But the professor should scan the map of musical Europe a little more closely. It is too bad of him to ignore so many other geniuses of the eminent rank of Massenet.

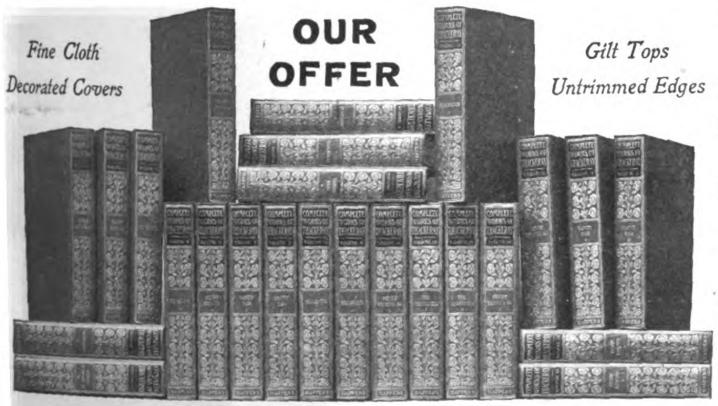
William Makepeace Thackeray

Complete Writings

IN TWENTY-FIVE VOLUMES

A Set of Thackeray is not a Luxury—it is a Necessity



THACKERAY'S creations place him at the head, perhaps, of the English novelists of the nineteenth century. His characters are always human. There are no immaculate heroes, no perfect heroines, no utterly unredeemed persons of either sex to be met with in the pages of his books. He conceived it a duty to describe the world as he saw it, and he drew his characters with admirable realism, and with a marvellous insight into the natures of men and women. We take pleasure in announcing a new edition of Thackeray's complete works, and we feel confident that this edition will meet with the approval of all lovers of good library books.

Beer Keeps One Well

It is a noticeable fact that those who brew beer, and who drink what they want of it, are usually healthy men.

You find no dyspeptics among them, no nervous wrecks, no wasted, fatless men.

And so in those countries where beer is the national beverage.

The reason is that beer is healthful. The malt and the hops are nerve foods. And the habit of drinking it keeps the body supplied with fluid to flush out the waste.

The weak, the nervous and sleepless must have it. Why isn't it better to drink it now, and keep from becoming so?

But drink pure beer—Schlitz Beer. There isn't enough good in impure beer to balance the harm in it. Ask for the brewery bottling.

COMMENT

WASHINGTON, *January 26, 1904.*

ANYBODY who supposes that President Roosevelt is not prepared for a contest with Senator Hanna in the event of the latter declaring himself a candidate makes a mistake. He is booted and spurred and ready for any fray that may come along. He neither underrates nor overrates Senator Hanna's strength. He appreciates the fact that the Senator would have a large majority of the delegates from his own State, possibly a third from Indiana, a fourth from Illinois, a few from New York, all of the purchasable votes from the South, and scattering delegates from various States who feel under obligations to Mr. Hanna for political favors rendered. The minimum of his strength would be one-third and the maximum two-fifths if the convention were held now. Whether a change can be worked before June no man can tell; so Mr. Hanna continues to play his waiting game, holding the reins well in hand and his possible candidacy as a menace over the President. Opinions differ respecting the quality of this attitude. Some regard it as not wholly creditable to a chairman of the National Committee; others see no reason why he should not remain practically in the field up to the very day of the convention, and then, if defeat should stare him in the face, win applause by an emphatic and dramatic withdrawal. Contrary to many published reports, Mr. Roosevelt considers the maintenance of the Senator's position as wholly within his rights, eminently proper, whether wise or not, and in no sense a personal affront to himself. He is what they call out West "a true sport," and quite willing to abide by any result, so long as the game is played fairly.

***

We ourselves think, and suspect that the country is beginning to think, that it would be more becoming in Senator Hanna to "fish or cut bait." The position in which he leaves the President as the target of every cartoonist capable of depicting the effect of a nightmare is surely anything but beneficial to the political party of which he is the official head, and for whose prosperity, so long as he shall hold that position, he is personally responsible. But it is, after all, a matter of taste rather than of honor, and there is this to be said at least in extenuation of conduct which ordinarily would not win the approval of fair minds: Mr. Hanna undoubtedly is subjected to constant and strong pressure from very potent forces closely affiliated with those financial interests to which he owes his success as the manager of two national campaigns. No one not in intimate touch with men standing for those interests can appreciate the bitterness with which Mr. Roosevelt's candidacy is regarded. Anybody to beat him, is the constant expression of a stern determination—a Republican preferably, a Democrat if necessary, but *anybody* will do. It is, we believe, a fact that any conservative Democrat would be backed by a campaign fund ten times as large as could be raised for Mr. Roosevelt. We are not prepared to believe that money alone can elect a President of the United States, but it is undeniably a sufficient factor to make the present situation, from a Republican standpoint, about as serious as could be imagined.

***

We cannot, however, escape the conviction that the financial interests referred to make a mistake in urging Senator Hanna to remain a passive candidate or in conniving at his nomination. What would be the situation in the event of a successful effort? Simply this, in blazing letters from Maine to California: "Roosevelt beaten and Hanna nominated—*by the money power.*" Everybody would know how the trick had been turned, how many delegates had been bought, what they had cost, and all the shameful details. In no way possible could secrecy be maintained. The favorite of millions of people, an admittedly honest man, striving earnestly, whether successfully or not, to do what is right in every contingency, could not be beaten by such means—and that is the only way he *could* be beaten—without producing such an outburst of indignation, from a sense of deepest outrage, as would not only overwhelm the nominee at the polls, but *would dominate the Democratic convention.* We firmly believe that if Mr. Hanna shall defeat Mr. Roosevelt in Chicago, Mr. Bryan will be nominated in St. Louis, and win to a certainty in November. Mr. Roosevelt's nomination, on the contrary, would naturally result in the naming of his antithesis by the Democrats, in which case there need be no destruction of confidence or disturbance of business. It may be a choice of evils, but those who are urging Mr. Hanna's candidacy upon himself and his party may as well be brought to a realization of the danger of playing with fire.

***

Governor Durbin's self-reported talk with the President, whom he told that Indiana sentiment was largely in Mr. Hanna's favor, was no more nor less than an intimation of the desirability of naming an Indiana man for Vice-President. Who the man should be was left delicately to the imagination. The fact is that the Indiana delegation, by a large majority in any event and probably with unanimity, will support Mr. Roosevelt; for Vice-President it will advocate Senator Fairbanks, if he should decide to permit the use of his name; otherwise, Governor Durbin. Senator Beveridge, being assured of reelection, is definitely and finally out of the race for the Vice-Presidency.

***

We shrewdly suspect that the selection of St. Louis in preference to Chicago as the meeting-place of the Democratic convention was due less to apprehension of the effect of Hearst booming than to the fact that Southwestern sentiment has been distinctly pro-Gorman and Northwestern sentiment somewhat anti-Gorman for a good many years.

An authorized statement of the reasons why Mr. Hearst considers himself a suitable and desirable candidate for the Democratic nomination is made by Mr. Arthur Brisbane, the talented young socialist who writes editorials that are more entertaining than convincing for Mr. Hearst's newspapers. Mr. Brisbane's first FACT is that Mr. Hearst is not "an inexperienced youth" because he is forty years old. This we are prepared to admit as self-evident. Then Mr. Brisbane assures us that Mr. Hearst is NOT a "demagogue" and NOT a "violent radical." There are demagogues and demagogues; some are almost desirable in democratic communities having at times monarchical tendencies; others are not; that Mr. Hearst belongs to neither class is encouraging and to some will seem surprising. Respecting the second assertion, we are disposed to think that our earnest young advocate—he is only forty himself—misplaces his capitals. "Not a VIOLENT radical" would have carried conviction, for a milder-mannered gentleman never scuttled a ship. Summarizing Mr. Brisbane's intimately thoughtful conclusions, however, we are told: (1) that Mr. Hearst has proven his executive ability by successfully conducting four newspapers; (2) that he understands agricultural requirements because he owns several wheat-farms and has "discouraged the manufacture of shoddy";

(3) that he has demonstrated his unselfishness by advocating public ownership of properties, although personally a stockholder in many corporations, and by supporting an income tax despite the fact that he would have to pay one himself; (4) that he believes a "worker" should be enabled to earn enough to "keep his wife comfortable"; (5) that he is a vote-getter because he had a larger majority in his Congressional district than Parker or McClellan; (6) that he would not be "an enemy to the business interests of the country" because he himself is in business and a capitalist; and, finally, (7) that he is "a loyal Democrat" because he supported Bryan, although in his heart opposed to free silver. Truly, an all-round candidate. The cause is impregnable. But why should Mr. Hearst limit his ambition to *one* nomination? He is clearly entitled to both; with Prohibition support thrown in because, strangely enough, even Mr. Brisbane's comprehensive tribute fails to note the final and conclusive FACT that Mr. Hearst neither drinks, smokes, nor chews.

In a speech delivered by Mr. William J. Bryan in Lincoln, Nebraska, at a banquet given to commemorate his return from Europe, he made it plain that he will demand a reaffirmation of the Kansas City platform by the Democratic national convention at St. Louis. He repudiates the policy of accepting "accomplished facts." Shall we accept imperialism, he asks, as an accomplished fact, in order to appease those Democrats who are willing to indorse "government without the consent of the governed?" He will not entertain the thought of such a surrender. Shall we, he continues, change our position on the trust question, in order to secure the support of the trust magnates? This question, also, is answered in the negative. Mr. Bryan asserts that Democrats want the trust magnates against them, and not for them. Their support would cast suspicion on the Democracy. Mr. Bryan even insists upon retaining the plank in the Kansas City platform which advocated the free coinage of silver at the ratio of 16 to 1. In fact, the Kansas City platform is pronounced sound in every fibre, and, if Mr. Bryan can have his way, it will be readopted in its entirety, although he admits that new planks covering new questions should be added.

It is just as well that Mr. Bryan should let us know betimes what he would do, if he and his coadjutors could succeed in electing a majority of the delegates to the St. Louis convention. They have not the smallest chance of securing such a majority. It is well known that, even at Kansas City, they only managed to obtain a reinsertion of the free-silver plank by a majority of one in the platform committee; and that vote was given by the delegate from Hawaii. Nobody knows better than Mr. Bryan that he and his friends will have nothing to do with framing the platform at St. Louis. As we have said in another paragraph, the utmost they hope for is to dominate a little more than a third of the delegates, and thus veto the nomination of an objectionable candidate. Would they veto the nomination of Judge Parker? We are told that some of Mr. Bryan's friends are investigating the report that Judge Parker voted for Palmer and Buckner in 1896. The report was current in the autumn of 1897, and was refuted by a letter addressed to Mr. Danforth, chairman of the State Democratic Committee. In that letter Chief-Judge Parker told his correspondent that he voted for the last national nominees of the Democratic party, as he had voted for all of the regular Democratic nominees since he had a vote. Whether or not he approved of the Chicago platform of 1896 Judge Parker did not say, and Mr. Bryan has no more right to put such a question to him than he would have had to put it to Mr. Clarke, whom he, Bryan, did his best last year to make United States Senator from Ohio.

Is it absolutely certain, as Senator Platt asserts, that the New York delegation to the Republican national convention will go instructed to vote as a unit for the nomination of Mr. Roosevelt? The question could be quickly answered if we knew precisely what Governor Odell's wishes are. Does he want to be nominated for a third term of the Governorship? Whatever some of Mr. Roosevelt's optimistic friends may say, nobody knows better than Governor Odell that the Republican candidate for the Presidency will have to carry the State of New York, and that this indispensable result cannot easily be attained if Governor Odell is a candidate for reelection. Would the Governor's ambition be satisfied with the post of chairman of the Republican State Committee? It is hard to believe that such an office would content him, and we are assured on what is said to be good authority that he has never thought of resuming the chairmanship. What is it, then, that he desires? Does he want to succeed Mr. Depew as United States Senator? Why, then, does he allow it to be reported from Albany that he favors, first, ex-Governor Black, next, Mr. Whitelaw Reid, and then Mr. Edward H. Harriman, for the place? He certainly cannot imagine that, even if Mr. Roosevelt's candidacy should fail to meet with the approval of the Republican national convention—an improbable contingency—the choice of the convention might fall on the present Governor of New York, to the exclusion of Senator Hanna, Senator Fairbanks, and many other eminent representatives of the West. There must be some limit to hypothesis, and we cannot bring ourselves to suppose that Mr. Benjamin Odell can have the Presidential bee in his bonnet.

Is it possible that he has entered into a secret combination for the purpose of sending the New York delegation to Chicago uninstructed, and, if opportunity should serve, of uniting with Pennsylvania, Ohio, Indiana, and some other States in opposition to Mr. Roosevelt's candidacy? To our own mind the supposition is incredible, for it would involve an exhibition of unparalleled ingratitude. Was it not after the return of Governor Odell from a visit to the White House that his friends acclaimed him as the recognized successor of Senator Platt in the leadership of the Republican party in the State of New York. Without Mr. Roosevelt's recognition, Mr. Odell could not have pretended to the leadership of his party in his native State, even if it be true that Senator Platt is disabled physically to a limited extent. Would Mr. Odell stab his benefactor?

The Democratic National Committee, which met at Washington on January 12, decided that the Democratic national convention shall be held in St. Louis on July 6—that is to say, fifteen days after the convention of the party now in power. Up to a short time before the vote was taken it was supposed that Chicago would secure the convention, but that city was rejected on the supposed ground that the Hearst boomers had been its most fervent advocates. It is evident that the Bryan-Johnson-Hearst element does not control the Democratic National Committee, and we shall be surprised if it succeeds in dominating a third of the delegates to the national convention. That is, of course, the furthest limit of its hopes. The notion that the Democratic national convention would nominate for the Presidency Mr. Hearst, who cannot get a delegate from the State he lives in, is not entertained, so far as we are aware, by anybody outside of Bedlam. Nevertheless, if Mr. Hearst and Mayor Johnson can get Mr. Bryan's cooperation, and therewith manage to influence a third of the Democratic national convention, they can veto the nomination of any candidate unacceptable to themselves, or prescribe the terms on which their support might be given, which, perhaps, would include the nomination of Mr. Hearst for the Governorship in the State of New York.

Such a concession would, no doubt, be exceedingly repugnant to the friends of Senator Hill on the one hand, and to the leader of Tammany Hall on the other; yet, for the sake of harmony, it might have to be made. For our own part, we have never been disposed to depreciate, otherwise than in a good-humored way, the Hearst boom. Not that we have imagined that its launchers expect to gain the Democratic nomination for their candidate. In our opinion, they are proceeding on the time-honored principle of aiming at the sky in the hope of hitting a tree. Besides, no sensible Democrat wants to drive the Bryanite element into revolt. It is true that Mr. Bryan, if he deemed himself so ill treated by the Democracy as to be forced to accept a Populist nomination, would have scarcely any chance of polling so large a vote as was cast in 1892, when the Populist machinery was in excellent order, and when Mr. Weaver polled more than 800,000 popular votes, and got 22 electoral votes. Nevertheless, Mr. Bryan undoubtedly would display a good deal of strength at the ballot-box—a strength that ought to be employed for the Democratic nominee. There is only one man in the United States who, as his experience in 1892 has shown,

could beat Mr. Roosevelt and Mr. Bryan put together. That man, as we scarcely need remind our readers, resides in Princeton, New Jersey.

The daily newspapers continue to discuss the eligibility of Mayor McClellan to the Presidency, he having been born in Germany while his parents were travelling abroad. It is true that the Federal Constitution provides that no person except a "natural-born" citizen, or a citizen of the United States at the time of the adoption of the Constitution, shall be eligible to the office of President. It is also true that the Constitution does not define the term "natural-born," but the first Congress, within less than a year after the government established by the Constitution went into operation, declared that children of citizens of the United States who should be born beyond sea or without the limits of the United States should be considered as "natural-born" citizens. This definition has been upheld in subsequent Federal statutes and by the United States Supreme Court. There is no doubt that the definition was simply declaratory of the common law of England and of the law of nations, both of which construe the term "natural-born" in the same way. The only plausible objection to Mayor McClellan's eligibility to the Presidency is based upon the theory that the statutory definition of the term "natural-born" employed in the fifth clause of the first section of the second article of the United States Constitution has been superseded by the Fourteenth Amendment, which declares that "all persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside."

It is asserted that the words quoted constitute an exhaustive definition of citizenship, and, consequently, render Mayor McClellan ineligible for the Presidency. Moreover, they would require him, it is said, to be naturalized, in order to become a citizen. This is, evidently, a mistake. The United States Supreme Court, in construing the effect of the words quoted on Mr. McClellan's eligibility, would unquestionably look at the intention of the framers of the amendment. Their intention, obviously, was to expand, and not to contract, the number of American citizens. Their definition, therefore, is inclusive, but not exclusive. Their purpose was to confer citizenship on the colored race, and not, even by implication, to take from the foreign-born children of white American citizens any rights previously conceded them by statute. That is to say, the Fourteenth Amendment has no bearing whatever on the statutory and judicial definition of the words "natural-born," which occur in the fifth clause of the first section of the second article of the Constitution. No doubt, therefore, is tenable concerning Mayor McClellan's eligibility to the Presidency.

As stocks closed pretty strong on December 31 and January 2 on the New York Stock Exchange, several theories have been put forward to account for the non-arrival of the expected "January boom." The "war scare" in the Far East is not an adequate explanation, and the prospect of a temporary accommodation of the conflicting interests of Japan and Russia has been somewhat brighter than it was toward the close of the last month. Moreover, many thoughtful persons have arrived at the conclusion that, should the United States remain neutral—our neutrality may be taken for granted—we have more to gain than lose by a war between Japan and Russia. The announcement that the Mikado's Ministers proposed to take for government use the vessels owned by all the leading Japanese steamship lines plying in the Pacific obviously promised an increase of business to the Pacific Mail Steamship Company, which is virtually owned by the Southern Pacific Railway. The immediate result of the announcement was a jump of 2 5-8 in the price of the stock of Pacific Mail. It is further computed that, in the week ending January 16, not less than $5,000,000 was disbursed in this country on Russian and Japanese account for foodstuffs and other commodities. Our geographical position would enable us to profit more than would any other neutral power by the vastly increased demand which, in the event of war, would certainly be made by both combatants for supplies of every kind. Should France and England be eventually drawn into the contest, our position would be far more advantageous. It is highly probable that, in such a contingency, a considerable proportion of England's merchant navy would be placed under the American flag.

It is scarcely reasonable, therefore, to ascribe the unexpected depression on the New York Stock Exchange to the apprehension of war in the Far East. Is it the anticipated decision of the United States Supreme Court in the Northern Securities cases—there are two of them—which is acting like a wet blanket on speculators and investors? We deem it improbable that the decision in the first of these cases will be rendered before the middle of February; and, even should it be adverse to the merger of the Great Northern and the Northern Pacific railways, it by no means follows that every other merger would be at the mercy of blackmailers. Unquestionably, should the merger named be pronounced invalid by our highest Federal tribunal, every individual who could show that he has personally suffered damage by a similar merger would be at liberty to institute a suit, but his good faith would have to be susceptible of demonstration. As for the relatively meagre earnings of the United States Steel Corporation in the quarter ending December 31, 1903, the effect of the official disclosure was discounted some time ago, and this is true also of the earnings for the quarter ending March 31, which, even in the most prosperous years, are, by comparison with other quarters, small. On the whole, when we consider the remarkable inflow of money to New York during the first weeks of January and the ease with which it may be borrowed in the commercial metropolis, the reluctance of investors and speculators to take advantage of the abnormally low prices for the most approved securities is not easy to account for.

We are surprised to hear that Mr. Moody, Secretary of the Navy, is reluctant to submit any definite programme of navy expansion to the Fifty-eighth Congress, but is inclined to leave the representatives of the people to decide for themselves what types of vessels should be authorized. Unquestionably, the ultimate decision as to how the money shall be spent will come from the House of Representatives and the Senate, since by them the appropriation must be made. It does not follow that the Navy Department should not have the courage of its convictions, and throw the weight of its official authority in the direction of which it approves. If Mr. Moody, like his chief, President Roosevelt, believes that a strong navy operates like a policy of national insurance, he ought to point out to Congress precisely what he means by "strength." His ideas on the subject ought by this time to be clarified. He should not need to be reminded that the General Board, in replying to a resolution asking for information upon which to base consistent and an intelligent programme of naval increase, declared its belief last year that the defence of the United States, of its insular possessions, and of its commercial interests demanded a fleet possessing an effective fighting nucleus of forty-eight first-class battle-ships.

The General Board added that, in its opinion, for every group of four battle-ships there should be two armored cruisers, four "cruising scouts," and four large seagoing torpedo-boat-destroyers. We have now only eleven battle-ships in commission, and as many more building. When the latter are completed, we shall still fall short by twenty-six of the nucleus declared by the General Board to be indispensable. As for armored cruisers, we have but two, the *New York* and *Brooklyn*, although eight are on the stocks. Of cruising scouts—*i.e.*, vessels of moderate size, but able to make twenty-five knots an hour—we have none at all in commission. On the other hand, of torpedo-boat-destroyers, of which, according to the General Board, there should be one for every battle-ship, we have fifteen in commission and six building. It seems to us that if we are to heed the advice which we asked for and got from the General Board, the Fifty-eighth Congress ought to provide at this session, as it did last year, for no fewer than five battle-ships, for at least two armored cruisers, and for half a dozen cruising scouts of from fifteen hundred to three thousand tons displacement. As Admiral Dewey has often pointed out, the battle-ship is the backbone of a fleet.

Unquestionably armored cruisers are also imperatively needed, and must be forthcoming. It does not follow that the building of battle-ships should be discontinued, even for a year.

We discuss at some length elsewhere what might be done for Colombia, notwithstanding the firm refusal of our government to accept any responsibility for the secession of the state of Panama. We should note here that in the correspondence between Secretary Hay and General Reyes, transmitted by Mr. Roosevelt to the Senate, the representative of Colombia allowed himself to make a grave charge against our State Department. On no authority except that of unnamed "reputable American newspapers," he asserted that, before the *coup de main* which proclaimed the independence of the isthmus took place at Panama, there were at Washington agents of the authors of the *coup* "in conference with high personages clothed with official character." Mr. John Hay, Secretary of State, repels with indignation the imputation on the conduct and motives of our government. Any charge, he says, that our government, or any responsible member of it, held intercourse, whether official or unofficial, with agents of the revolution in Colombia, is utterly without justification. Equally unwarranted, he declares, is the insinuation that any *action* of this government, prior to the revolution in Panama, was the result of complicity with the plans of the revolutionists. The Department, adds the Secretary, sees fit to make these denials, and it makes them finally. Mr. John Hay's word has never been doubted by any man who has known him, and, for our part, we accept his statement unreservedly.

German Southwest Africa is threatened with a repetition of the horrors of the Zulu war, when the assegais of the native savages caused the wholesale slaughter of so many of the finest British troops, and brought death, amongst others, to the Prince Imperial of France. The German colony which is the scene of this very serious native uprising lies immediately north of the Orange River and west of the Transvaal, running up to the Zambesi and west to the ocean. It is the region to which the Boers, at one period of the South-African war, were supposed to have planned a general retreat, a new "trek" to the west, to escape from the advance of England. In reality, this region is, for the most part, an inhospitable desert. Equal in area to Texas, Oklahoma, and the Indian Territory combined, it has less than a tenth of their sparse population; in fact, in over three hundred thousand square miles German Southwest Africa has under two hundred thousand inhabitants. Of these, only two thousand five hundred are Germans, with some two thousand other Europeans as their fellow colonists. They are, therefore, outnumbered by the natives by about a hundred to one. These four or five thousand colonists include an armed guard of some seven or eight hundred men, who are now called on to face scores of thousands of armed savages, who threaten to sweep them to entire destruction. No reenforcements can reach the colony from Germany before February 8, and even these, to the number of some five hundred or a thousand men, seem quite inadequate to meet the real and pressing danger. The fierce conflicts which have gone on for many months between picked English troops and the Somali Mullah show what bitter experience may be in store for the German colonists, who are scattered among distant inland stations, the largest of which, Windhoek, is about two hundred miles from the coast, and, though connected with Swakopmund harbor by railroad, may easily be cut off by the destruction of a few miles of track.

The statement commented upon in the WEEKLY last week, that there were unusually few lynchings in the country last year, is not borne out by the statistics gathered by the Chicago *Tribune*. The probabilities, as estimated in the statement which the WEEKLY followed, were that not more than a dozen lynchings took place in the country in the six months following the particularly shocking case of negro-burning in Wilmington, Delaware, in June. The estimate for the whole year was sixty. The *Tribune*, however, reports a total for the year of 104, which is six more than in 1902, but less than in any other recent year. According to the *Tribune's* record, the Wilmington horror in June had no immediate deterrent effect on lynching, for in that month there were twenty cases, and in July nineteen. Of the 104 persons lynched last year, eighty-four were male negroes. Of the crimes which lead to lynching, eleven were criminal assault, and ten were attempted criminal assault. That is, about one lynching in five was due to crime, or attempted crime, against women. For murder forty-seven persons were lynched; for murderous assault, complicity in murder or suspicion of murder, fifteen persons, so that murder was the moving cause in almost two-thirds of the lynching cases recorded.

President Jacob Gould Schurman, of Cornell University, is an expansionist by imagination if not by conviction. On January 14, before the Economic League of Lockport, New York, he said he believed that war was bound to come in Panama, and that once the United States troops enter Colombian territory they will never stop until they raise the flag over Bogota. "And where the flag has been raised," he added, "it will not come down." This prospect does not seem to daunt Dr. Schurman, though he does not consider that we have much law on our side in our dispute with Colombia. "I believe fully," he says, "that this country is bound to expand to the north and to the south—to the south first." He sees danger in the probability that the United States may inaugurate a policy of colonization, and may seek to govern outside the Constitution rather than give Statehood or territorial government, or independence under the protection of the United States. If we expand and neither admit independence nor treat subject nations as political equals, we will go, he thinks, the way that Rome went. These latter forebodings are sufficiently remote not to stir the hair on the average reader's scalp. As for raising our flag over Bogota, there would seem to be two considerable hindrances to that. One is that we don't want it there; the other that the Colombians don't want it there. *Per contra* it is possible to imagine that the Colombian Liberals are in a desperate enough mood to welcome any change that would rid them of the despotism of President Marroquin and the Clericals. And as for ourselves it is of course conceivable that we include an element that would be glad to see our flag go up anywhere where it does not belong, and would bawl lustily to keep it up if once it were raised. But it would be only under exceptional conditions that such an element would get a hearing.

Dr. Parkhurst's recent comments on the Iroquois Theatre fire seem in the main to be theologically sound, though somewhat sensational in form. Yet, in at least one point he lays his orthodoxy open to dispute. Descanting on the invariable quality of fire, which always burns, he said, as reported: "Christ, in the midst of the flames of the Iroquois Theatre, would have perished as readily as any other one of the 600." On this point the Doctor seems somewhat rashly positive. Do we not read in the sacred writings, to wit, in Daniel iii., that when Nebuchadnezzar the king had cast into the particularly hot fiery furnace, the three young Jews who refused to bow down to the king's golden image at the sound of the sackbut, not only were the young men not consumed, but the king himself testified: "Lo, I see four men loose, walking in the midst of the fire, and they have no hurt: and the form of the fourth is like the Son of God"? Here we have interesting documentary evidence of an occurrence which seems adapted to abate in large measure the positivity of the Doctor's assertion. What is the use of asserting things which cannot possibly be proved, and which are as easily questioned as asserted?

According to Mr. Bourke Cockran, the most melancholy sight in the world is a millionaire face to face with his securities. The one place, he says, where sadness always prevails is not the prison, the insane-asylum, the hospital, or the almshouse. It is the safe-deposit vault. There, Mr. Cockran says, happiness never enters. It looks as if he had not locked up the right things at the right time. A safe-deposit vault is not built for joy, but for security. When filled with other people's valuables it is not especially exhilarating, but why it should be so depressing to a man whose own honest winnings or savings it keeps does not appear. What is there in Mr. Cockran's box that makes him so sad?

The Project of an Arbitration Treaty with Great Britain Revived

MR. THOMAS BARCLAY, who may justly claim to have been the principal author of the limited arbitration treaty recently concluded between Great Britain and France, may well feel encouraged at the measure of success which already has attended his efforts to revive in a modified form the defunct Olney-Pauncefote treaty providing for arbitration between Great Britain and the United States. The first gun of his campaign was fired in the January number of the *North American Review*, and it is worth while to note the position taken in the article contributed to that periodical, before marking the results of his subsequent endeavors. Mr. Barclay evinced much discretion in the suggestions made by him in the *Review* to his American coadjutors. He pointed out that, as the first step in the negotiations which culminated in the Olney-Pauncefote treaty of 1897 was taken by Lord Salisbury, the initiatory move, if the project is to be revived, ought, as a matter of diplomatic etiquette, to be made by the United States. That should be obvious. We can hardly expect a great power like the United Kingdom to sue a second time for a boon which we have once refused. Mr. Barclay was also careful to suggest that American advocates of an arbitration treaty with Great Britain should not make the tactical blunder of insisting at the outset upon too sweeping an assent to their wishes. No such blunder was committed in the recent negotiations between the French and British Foreign Offices. In that case the friends of arbitration, asking for but little, and ostensibly obtaining but little, believe that in reality they have secured a great deal. The scope of the Anglo-French Treaty is confined to "judicial questions," or those arising out of the interpretation of existing treaties; and all matters involving the "national honor" or "vital interests" are specifically excepted from its operation. To infer, however, that nothing substantial has been gained by it would be an obvious mistake. In the first place, it is the first general treaty of arbitration ever entered into between two great powers. In the second place, so far as Great Britain and France are concerned, it does all that was contemplated by the Czar when he invited the great powers to confer with him at The Hague; for his proposal to make arbitration compulsory contained the same restrictions as to "national honor" and "vital interests." In the third place, it should be obvious that *any* treaty of arbitration gains time for the governments bound by it, whatever be the real nature of the emergency. Every question is a *judicial* one, till either party disputes its being so.

Now, all that Mr. Thomas Barclay seems to have desired to accomplish by his present visit to the United States is to persuade our Federal Executive and Federal Senate to adopt a treaty of arbitration with Great Britain that shall go no further than the *agreement lately made by England with France*. He evidently does not think it expedient to suggest at this time a revival of the Olney-Pauncefote treaty. That convention, he reminds us, went much further than the Anglo-French Treaty goes. By the first article, for example, the *parties agreed to submit to arbitration*, in accordance with the provisions and subject to the limitations of the treaty, *all questions in difference* between them which they might fail to adjust by diplomatic negotiation. This article gave the executive in either country power to submit matters of the gravest national importance to arbitration of the ordinary kind—*i. e.*, arbitration where the deciding vote is given by an umpire, unless one of the two signatory powers should object to such a reference. In the latter event a question in dispute was to be referred to a tribunal, which would not include an umpire, but would be composed of an equal number of judges from both sides, like the Alaska Boundary Commission. It will be remembered that our Federal Senate declined to ratify the Olney-Pauncefote arbitration treaty unless it should include the following proviso, which, it is needless to say, would *not be accepted* by the British Foreign Office. The proviso ran: "Any agreement to submit, together with its formulations, shall, in every case, before it becomes final, be communicated by the President of the United States to the Senate with his approval, and be concurred in by two-thirds of the Senators present." It does not follow that our Federal Senate would insist upon the insertion of such a proviso in a new treaty of arbitration, which, modelled on its Anglo-French predecessor, should be restricted to judicial questions or those arising out of the interpretation of existing treaties.

An arbitration treaty so circumscribed in scope might be deemed less open to objections based on our Federal Constitution, and it certainly would be less open to objections founded on political expediency. It should be borne in mind, moreover, that the feeling with which Great Britain is now popularly regarded in the United States differs materially from the sentiment which was current among large sections of our population in 1897. At the date last named not only Irish-Americans, but also Americans of Revolutionary ancestry, who, whatever may be their numerical strength, constitute by far the most influential element of our population, were still deeply imbued, or, as some onlookers said, infected, with Anglophobia. The existence of such an antipathy, partly traditional and partly rational, can alone account for the overwhelming approach to unanimous approval which Mr. Cleveland's Venezuela message met with in the United States. We do but chronicle a patent truth when we assert that the forbearance, not to say meekness, with which a mighty and high-spirited nation, like the British, received Mr. Cleveland's rebuff, and, refraining from defiance, suggested accommodation, produced a profound impression upon fair-minded Americans, no matter what might happen to be their race affiliations. For the first time, in the minds of not a few American citizens, there began to germinate a feeling of something like respect and admiration for the self restraint of the British Foreign Office. That feeling was immensely deepened and widened by the sympathetic position assumed by the Salisbury government toward this country during our war with Spain. It will be long before some of us forget that exhibition of magnanimity. It needed a very great man to show in our hour of need that he was capable of grasping in friendship the hand that had humbled him. Lord Salisbury gave that evidence of greatness.

Now let us see what measure of success has attended the campaign of arbitration, which Mr. Barclay began in the *North American Review*. On Tuesday, January 12, was held in Washington a memorable session of the international arbitration conference. Ex-Secretary-of-State John W. Foster presided over the meeting, and the two hundred delegates included Cardinal Gibbons, General Miles, Mr. Andrew Carnegie, President Butler of Columbia University, President Woodrow Wilson, of Princeton University, President Remsen of Johns Hopkins University, Mr. D. S. Jordan, president of Leland-Stanford University, several Governors and members of the Federal or State judiciary, Mr. Charles J. Bonaparte, of Baltimore, Mr. Stuyvesant Fish, of New York, Mr. J. M. Dickinson, senior counsel for the United States before the Alaskan Boundary Commission, Mr. A. C. Harris, former United States minister to Austria, and Mr. Edward Everett Hale. In an introductory address, Mr. John W. Foster pointed out that, in the future, no question can arise between the United States and Great Britain which will involve more seriously the territorial integrity or the honor of the former nation, its vital interests or its independence, than those questions which have already been submitted to specific boards of arbitration without serious injury to our welfare. He added that there never was a time in the history of our republic when the two countries were more closely united by common aims, and by a recognition of a similar duty to mankind. Cardinal Gibbons deemed it particularly fitting that the movement for international arbitration, which Mr. Thomas Barclay personifies, should originate in one great English-speaking nation, and be carried to another. He liked to think, he said, that the English tongue had always stood for civilization and enlightenment in the past, and would continue to do so in the future. He considered the proposal to secure a treaty for the arbitration of questions not susceptible of diplomatic settlement one of the most momentous steps ever taken in the onward march of mankind. Mr. Andrew Carnegie, who was introduced as the "Apostle of Arbitration," said that for eighteen years he had taken part in the effort to secure some form of international arbitrament. He recalled that, when he first became associated with the movement, it was generally considered improbable that the United States and Great Britain would ever have such a treaty as is now projected. At the present time, however, he is convinced that no long time will elapse before new bonds of amity and reason will connect the two English-speaking people who justly may be looked upon as the greatest nations on the earth.

The report of the committee on resolutions, of which Judge George Gray, of Delaware, was chairman, reminded the conference that, by a concurrent resolution of the Congress of the United States, adopted in 1890, the President was requested to invite negotiations with other governments to the end that any differences, which could not be adjusted by diplomacy, might be referred to arbitration, and peaceably adjusted by such means. The report also called to mind the fact that three years later the British House of Commons adopted a resolution expressing cordial sympathy with the plan of arbitration, in the case of the English-speaking peoples, and proclaiming the hope that the British government would lend hearty cooperation to the government of the United States, to the end that the resolution of Congress might be made effective. In view of these facts, and of the further circumstance that a permanent board of arbitration has since been established by international agreement at The Hague, the conference at Washington unanimously resolved that our Federal government should be urged to endeavor to enter into a treaty with Great Britain to submit to arbitration by the permanent court at The Hague, or, in default of such submission, by some tribunal specially constituted for the case, all differences which cannot be adjusted by diplomatic negotiations.

Subsequently, a "group" was formed in the House of Representatives, patterned on similar associations in the British House of Commons and the French Chamber of Deputies, the members of which agree to further the embodiment of the scheme of international arbitration in legislation. On January 14 the House

Committee on Foreign Affairs heard a delegation deputed to recommend the introduction of a resolution in the House, authorizing the President to invite the governments of the world to join in establishing an international arbitration congress. Meanwhile, a committee of the conference had called on President Roosevelt, and laid before him the resolutions above-mentioned. Mr. Roosevelt's attitude was extremely sympathetic, and he assured the committee that he would give the subject of the resolutions most careful consideration. There is at least some ground for hope that the expediency of concluding a more or less restricted form of arbitration treaty with Great Britain may be advocated in the President's next annual message, and that meanwhile our State Department may take the initiative in that direction. A good deal, therefore, has been accomplished in the thirty days that have followed the publication of Mr. Barclay's article in the *North American Review*. He himself discusses in this issue of the WEEKLY the project with which he is so much concerned.

What Might be Done for Colombia

In the last number of this paper we pointed out that, although we ourselves may not be bound in international law, or in the forum of morals, to pay Colombia any compensation for quickly recognizing the republic of Panama, or for entering into an agreement by treaty to protect the last-named commonwealth, certain equities might nevertheless exist between the seceding state and the Bogota government; and that, with an eye to our national reputation for magnanimity and sympathy, we might do well to facilitate, by influence or by material aid, the satisfaction by Panama of any equitable claim put forward by Colombia. Scarcely had that article been penned, when steps were taken in our Federal Senate to promote such generous action on the part of our government. Senator Bacon of Georgia, who, it is understood, intends to vote for the ratification of the canal treaty concluded with Panama, submitted a resolution commending to the President the negotiation of a treaty with Colombia for the settling of all issues in dispute between that country and the United States, in order that full compensation might be made by the United States to the republic of Colombia for the latter's loss of her sovereignty and property rights on the isthmus, "so far as the same may be shown to be due to any act of the United States through the land or naval forces of the same." It is obvious that the Republican majority in the Senate would never adopt a resolution containing the words we have quoted. For the administration cannot be expected to admit that it has been guilty of wronging Colombia; nor, in our judgment, can it be justly taxed with wrongdoing in the matter. For a similar reason the administration would very properly decline to go before The Hague tribunal, as a *party* to any proceedings growing out of the secession of the republic of Panama.

It did not follow that Mr. Bacon's essential purpose was not exemplary, or was necessarily condemned to frustration. Mr. Hale of Maine, who has long been one of the Republican leaders, pointed out a method of harmonizing Mr. Bacon's generous design with the self-respecting position taken by our State Department. He offered on the following day a resolution, which was the outcome of an agreement reached by himself and the Georgia Senator. The resolution recited that, whereas the state of Panama, formerly a part of the republic of Colombia, has seceded from the last-named government, and has set up a government, republican in form, under the name of the republic of Panama; and whereas the independence of said republic of Panama has been recognized by the United States and by many other nations; and, whereas, finally, a treaty is now pending before the Senate between the United States and the republic of Panama, the ratification of which will insure the speedy building of an interoceanic canal by the United States across the territory of said republic of Panama; *therefore*, be it resolved, that in any claim which the republic of Colombia, in any form, may make against the said republic of Panama for indemnification for loss of territory or for increased burden of the debt of said republic of Colombia, the President is requested to tender his *best offices* toward the peaceful adjustment of all controversies that have arisen or may arise between said republic of Colombia and the republic of Panama.

The compromise proposed by Senator Hale seems to us not only ingenious, but laudable and worthy of adoption. As regards ingenuity, it meets the objection to Senator Bacon's resolution that our Federal Executive would not, and should not, acknowledge that, in its dealings with the department of Panama, it has violated any rule of international law or any moral obligation. On the other hand, Senator Hale would render it possible for our State Department to make good the assurances, given by it to General Reyes, Colombia's representative at Washington, that it stood ready to do everything *in its power* to bring about an amicable understanding between Colombia and Panama. If such an understanding can be brought about by diplomatic negotiations, so much the better. If an agreement cannot thus be reached, we know of no reason why Panama should not consent to go with Colombia before The Hague International Court, and allow that tribunal to decide whether or not Panama shall make any concessions to Colombia; and, if so, what concessions, on account of the severance of political ties. It may be that The Hague tribunal would decide that Panama ought not only to assume a share of Colombia's foreign debt proportionate to Panama's share of Colombia's population, but also to pay Colombia a pecuniary indemnity for the loss of territorial rights on the isthmus. To such a proceeding before the international court our government would not, and could not, be a *party;* but it might facilitate materially the resumption of friendly relations between Panama and Colombia by evincing a willingness to go even to the extent of guaranteeing the performance by Panama of any obligation that she may voluntarily assume or that might be imposed upon her by an impartial tribunal. It is at least possible, though not probable, that Panama might assume, or have imposed upon her, the payment to Colombia of a sum of money amounting to a very large fraction of the ten million dollars, due from the United States by way of bonus to Panama on the exchange of ratifications of the canal treaty. Conceivably, it might be well to provide for such a contingency by an amendment to the treaty, providing that, under certain conditions, the bonus payable to Panama might be increased to a designated maximum. There are precedents for our payment of money when none is due. By the Treaty of Guadalupe Hidalgo we agreed to pay to Mexico a large sum of money for territory which was already ours by right of conquest and occupation. By the Treaty of Paris we agreed to pay to Spain twenty million dollars for the Philippines, which already were practically in our hands, and of which, by no possibility, could Spain have retained control. Those precedents reflect high honor on our Federal government. It will do us no harm to follow them.

The War Cloud Lifting

THE Czar's strong words of conciliation and peace to M. Kurino, the minister of Japan, at the diplomatic reception in the Winter Palace on the Russian New-year, have done much to lighten the storm-clouds of war, at least for a time. We are the more prone to give credence to the Czar's words, and to augur well from them, because of the speaker's record in the cause of universal peace, and the detestation of war inherited from his father, Alexander III. It is becoming apparent that the Russian Emperor is determined to reserve the final decision to himself, and has not delegated his judgment to any combination or council of his ministers and advisers.

There are many reasons, in addition to a genuine love of peace, which might well influence the Emperor of Russia. While Russia's navy and army in the Far East are undoubtedly very effective, there can be no question that this force would be tried to the utmost in a conflict with Japan, and were the victory of Russia as complete as could be desired, there is a great likelihood that she would see herself deprived of the spoils of victory by a convention of the powers, as was the case at the Berlin Congress in 1878, when Russia had either to surrender all that she had gained by an immense expenditure of life and effort, or face a new war with England, Austria, and Germany. Therefore, even complete victory would leave Russia much worse off than she is at this moment, while any other result would be even more calamitous, and might very conceivably undo the work of a whole generation of Far-Eastern soldiers and administrators.

Further, leaving the Far East out of the question, there are many reasons to be found in the condition of Russia at home, which would weigh strongly with the Czar in favor of peace. There is the ever-present danger of trouble in the Balkans, where, in spite of the efforts of the now happily united powers, and the acquiescent attitude of the Sultan, the Bulgarian revolutionists are evidently preparing for a new uprising as soon as the snow melts from the Balkan passes. Here Russia must be prepared to act, and act vigorously, on pain of seeing the age-long anarchy of Turkish rule break out once more in its worst form.

Then there is the disturbed condition of the Caucasus, and the great likelihood of trouble with Russia's millions of Mussulman subjects in Turkestan, who have for some time been plotting movements similar to the great mutiny of 1857 in British India, with the threat of a new Central-Asian war. It took Russia a hundred years to conquer the warlike tribes of the Caucasus, and she is at this moment keenly alive to the fact that these tribes are restless, dissatisfied, and on the alert for an opportunity to break out in rebellion.

Russia's domestic life is also disturbed. There is the great and growing agitation for a more formal and legal recognition of the civil rights of the individual—the rights of free speech, a free press, and open and public trial. There is the additional agitation, not to be confused with the claim of civil rights, for a more representative form of government, the advisability or inadvisability of which is a subject of hot dispute between the Czar's minis-

ters, as well as by the public at large. Both these movements are loyalist and imperialist, and have, to a considerable extent, the sympathy of the Emperor, who, in this also, follows in his grandfather's footsteps.

All these reasons weigh continually with the Czar. And for these reasons he has every possible cause to "seek peace and ensue it." His task will be made appreciably easier by the fact that Russia has at no time formally denied the sovereignty of China in Manchuria, but has all along made her evacuation conditional on the safeguarding of her interests and investments; she is, therefore, consistent with her record, in her willingness fully to recognize in Manchuria the treaties entered into by China.

Uncle Sam not a Bully

A CORRESPONDENT who writes from Huntsville, Texas, asks the WEEKLY the following questions: 1. Do you believe that our government would have acted as it did in the Panama affair if Colombia had been a nation equal in strength to England or Germany? 2. If not, then did we not play the part of a bully toward Colombia, even though no other valid objection can be found to our action?

To both inquiries our answer is No. If Colombia were as strong as England or Germany she could take care of herself. In that case if she had carried out her apparent purpose to beat the French shareholders out of their canal property, she could have met the objections of France without outside help.

But, as it was, if she had robbed the French shareholders, on what must she rely to protect her from French reprisals?

On the Monroe Doctrine, with the United States behind it.

Her plan, apparently, was to use the prestige of the United States to support her in an injustice to the French company, and in driving an extortionate bargain with the United States themselves.

It was precisely because she was so weak that it was expedient to seize the opportunity that offered to prevent her getting into a trouble with a strong nation from which we would have been called upon to extricate her. We did not play the part of a bully. We merely took timely precautions not to be used as a catspaw.

Pax Anglo-Americana

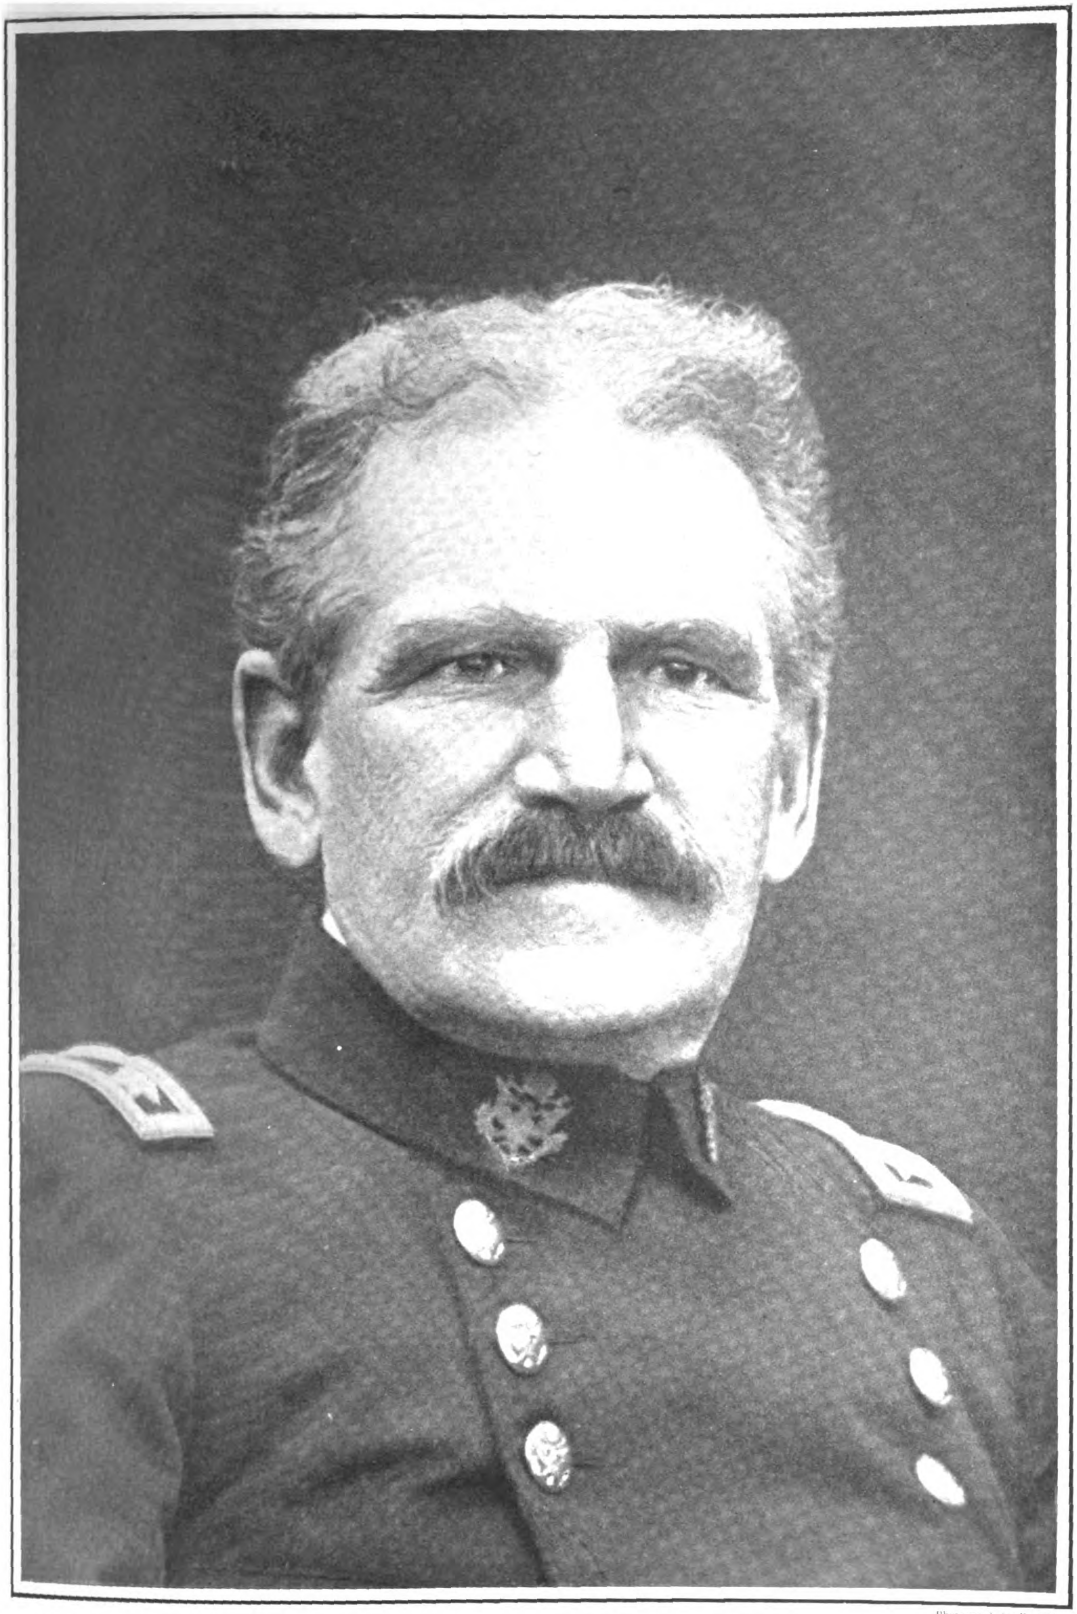
By Thomas Barclay

ON the 12th inst. a very important gathering took place at Washington, called by the National Arbitration Committee, which was formed in 1896 for the purpose of promoting the adoption of a permanent Anglo-American treaty for the settlement of all difficulties which might arise between the two nations by pacific methods. The treaty was signed, but not ratified by the Senate.

This resuscitation of the movement, after a lapse of eight years, is the outcome of two recent events of the greatest importance for the future of arbitration. The one is the signing by the British and French governments of a permanent treaty of arbitration for the purpose of referring all *judicial* questions to the Hague Court as a matter of obligation between the two states. The other is the decision of the Alaskan Boundary Commission.

There has been a good deal of hesitation as to the exact scope and bearing of the new Anglo-French treaty. It specifically excludes "vital interests" and questions affecting "national honor" from its purview, whereas judicial questions are already dealt with by arbitration as a matter of contemporary practice. Disappointment on the part of ardent votaries of peace, however, is not justified. It is a common mistake to view a permanent treaty of arbitration as a gag upon diplomacy. In reality it is a further method in the hands of diplomacy. The Anglo-French treaty itself contains a misleading phrase—a phrase, however, which has found its way into all current treaty forms. I mean the phrase making the treaty operative when diplomacy has failed. Thus under the Anglo-French, says the treaty, differences which "it may not have been possible to settle by diplomacy" are to be submitted to arbitration. This is obviously a misrepresentation of the situation which arises under a permanent treaty—the current phrase ought to be altered to, "which it has not been possible to settle by other diplomatic means," and this is what the new treaty between Great Britain and France amounts to. In other words, when the two parties cannot effect a settlement upon the merits of a case, they will not, as heretofore, break up and go their respective ways, but they will remain where they are, go on negotiating. They will have to decide whether the case falls within the scope of the treaty, whether a "vital" interest or "national honor" is involved, and if not, the terms of the reference to The Hague.

As regards "vital interests," the only typical instance of such an interest is where the independence of a state, the cession or acquisition of territory, or some deliberate breach in the established usage of nations detrimental to the other state is involved. "Vital," of course, means something of exceeding gravity, going beyond the scope of cases which can be settled by an award of damages. "National honor" is very like "a vital interest," but it generally arises out of the overheated discussion of a question which is originally only a judicial one, and therefore would be "nipped in the bud," as it were, by the new treaty. With the exception of questions involving the *independence* of a state, its self-conservation or self-preservation, or where the question is simply "grab," and the offender knows a judicial decision in his favor would be impossible, vital interests have been dealt with by arbitration over and over again. Just boundary questions, involving the cession or acquisition of territory, have been dealt with by arbitration, perhaps more than any others. The most notable among them, the Venezuela boundary question, was habitually spoken of in the correspondence between the British and United States governments as "vital" and as involving the "national honor" of both parties—in principles in the one as in the other case upon which no compromise would ever be admitted. And yet it was decided by arbitration. "National honor" is involved wherever the nation's prestige is at stake, and the object of diplomacy and international courtesy, in which diplomatists are supposed to be trained, is to so approach differences when they arise that ill feeling will be averted so far as forms are concerned. "It is not the things" he said, "but the way he said them," applies still more in the intercourse of nations than it does in that of private persons. And so an ill-mannered, cross-grained ambassador can soon make two nations fly, like bulldogs, at each other's throat. The slightest question, judicial or non-judicial, can be inflamed with unskilled diplomacy into one involving national honor. A permanent treaty of arbitration does not dispense with diplomatic skill, though the unskilled diplomatist may not be so dangerous, as public opinion would always know there was a further stage of negotiation. The greatest case in which national honor is involved is the faithful and punctilious performance and discharge of national engagements and obligations, whether contracted by treaty or as the result of a reference to arbitration.



But I must not mislead the reader. I am not arguing for arbitration at any price, any more than I am in favor of peace at any price. There may be objections to binding down nations, body and soul, to perpetual peace as regards other nations. War is the most terrible calamity conceivable in the mind of man, and it is hard to think of cases sufficiently serious to warrant it, and yet many men have had to face situations in which no amicable settlement seemed possible. Physical force seemed the only solution, cost what it might. It is in the life of nations as in the life of individuals. Yet most of us get through life without exposing ourselves to such situations, and let us hope the time may come when it will be the same with nations.

I said the one great event was the Anglo-French treaty: the other, the Alaskan boundary decision. To understand the importance of the latter we must go back to 1897, when the Anglo-American treaty of arbitration was signed, and thrown out by a minority of 26 against 42 in the Senate.

I have discussed that treaty elsewhere (see *North American Review*, January, 1904), and all I need say of it here is that it provided a special kind of tribunal in which there was to be neither an umpire nor foreign arbitrators, but only members of our respective judicial benches, where "matters of grave national importance" were concerned. This, then, was not arbitration in the ordinary sense. The decision of this, as it has been called, *Judicial Tribunal*, was one to be binding if two of the three judges on either side gave in favor of the other country, or if the defeated party, the decision having been given by a bare majority, did not protest within three months. Since then the Alaskan boundary question has been decided by just such a tribunal, except that the judges were not all professional judges, and that the decision of a bare majority was to be binding, whatever the result. The court drew a new boundary-line, which took something from the American and a good deal more from the Canadian claim. The decision lay with Lord Chief-Justice Alverstone, who has created a priceless precedent in favor of such a system of settling matters of "grave national importance," which are practically the same thing as "vital interests."

These two events have paved the way for a new treaty between this country and Great Britain, and defined, as it were, the boundary-line between arbitration and the other system, which I have called "*conciliation*," to be applied where the judges would have to take in account considerations not entirely of a judicial character—I mean such considerations as national prestige, a legitimate sphere of influence, accomplished facts, and so on. But I do not see why they should not be dealt with at the Hague Court just as arbitration cases are. At present perhaps it is more convenient to deal with some cases elsewhere, but when Mr. Carnegie's court-house and library are installed, it is probable that they will be the most convenient place to meet in. Anyhow, it is desirable to do everything possible to increase the prestige of that court, even at the sacrifice of a little convenience.

GENERAL ADNA R. CHAFFEE, THE NEW HEAD OF THE ARMY

General Adna R. Chaffee has been nominated Chief of Staff of the Army, with the rank of Lieutenant-General, to succeed Lieutenant-General S. B. M. Young, retired. General Chaffee is not a graduate of West Point. He was born in 1842, and served through the War of the Rebellion in the regular army; he was promoted from the ranks to a commission, and was brevetted for gallantry at Gettysburg. Later he earned distinction as an Indian-fighter. He was appointed Brigadier-General, U. S. V., in 1898, and took part in the Santiago campaign. Later in the same year he was appointed Major-General, U. S. V., and was also Chief of Staff of the Division of Cuba. In the joint expedition for the relief of the foreign legations at Peking, in the summer of 1900, he commanded the American contingent. He was made a Major-General in the regular army, February 5, 1901. He was assigned to the command of the Division of the Philippines, and appointed Military Governor of the islands. In September, 1902, he was relieved, and assigned to the command of the Department of the East

Travelling in England

By Sydney Brooks

LONDON, *January 13, 1904.*

"WHATEVER is American is right." One hardly exaggerates in calling that a British axiom nowadays. It has long held the field in commerce and industry, and Mr. Chamberlain is now stretching it to cover the tariff. But the sphere where it absolutely predominates, and up till now has scarcely even been challenged, is the sphere of railroads and railroad administration. Hardly a month goes by without some enthusiastic amateur flinging the big American freight-car, the American automatic signalling system, the American coupler, the lowness of American freight rates, the American Pullman car, the American methods of bookkeeping, and half a dozen other things at the heads of English railroad directors. It is a delightfully easy pastime and delightfully unjust. English and American railroads may be contrasted, but they cannot be compared. They have practically no points in common, and there is really very little that either can teach the other. In the United States, outside of New England, railroads were built to open up what was virtually a virgin country. They preceded the towns, instead of following them. They were subject to no board of trade requirements, no legal restrictions, and instead of having to buy land, it was as often as not given to them. The people wanted them, and wanted them in a hurry.

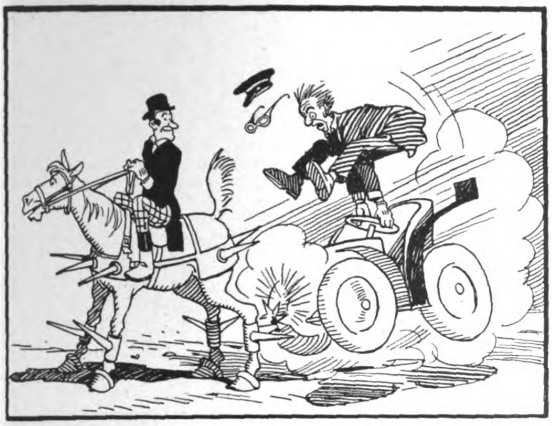
I was spending a week-end last summer in a tiny Sussex village. It is a bare thirty miles from London, and, thanks to Providence, it takes the railway company an hour and a half and necessitates a couple of changes to cover those thirty miles. I say "thanks to Providence," because these drawbacks have served to preserve the village pretty much as it was in the seventeenth century. It boasts a station, and that is the only modern thing about it. The trains that stop there number only four a day, and run at the most inconvenient hours. I suppose a score of passengers would be reckoned a heavy day's traffic. In America the railroad station at such a place would have consisted of a bare collection of boards and a rough shanty. At the village I am speaking of it was made up of two long, solid asphalted platforms and a station-house built of brick and buried in roses and honeysuckle. I thought it typical of the English carefulness of life that even in this out-of-the-way spot there should be an overhead bridge leading from one platform to the other. I tried to take the short cut across the rails, and found myself peremptorily ordered back by the station-master, a smart and determined official, whose uniform was as faultless as his flower-beds. After that one could scarcely wonder that the casualty statistics of England and the United States should show an immense percentage in favor of English management. Every English railroad was a finished undertaking before it began operations, and the amplest precautions for the safety of the travelling public were insisted on from the very beginning. Every American railroad, on the other hand, was built in the most unpretending fashion, and its improvement left to the chance of the future. Again, the American roads have enjoyed practically no fixity of tenure compared with the English; they have been subjected to every sort of wildcat competition and blackmailing legislation; and they are only just beginning, thanks to amalgamation, to feel their feet. Their equipment is far behind that of the English lines. In England there are 98 locomotives for every 100 miles of railroad, and in America, 20; 307 passenger vehicles per 100 miles in England, and 18 in America; 3161 freight-cars per 100 miles in England, and only 719 in America. An English company's receipts from passengers are not far from equalling its receipts from freight; in America the goods traffic brings in three times as much as the passenger. All this helps to emphasize the lack of any common standard by which the systems of the two countries can be compared. Distances and the vast disparity between the resources and relative growth of England and America are the primal cause of their differences. America has 195,886 miles of track to the English 22,078. American railroads depend for their profits mainly on two predominating factors—big loads and long hauls. Theirs is a wholesale, the English a retail, business.

And yet, though comparison is logically impossible, it exists and thrives, in fact, especially so far as concerns the English and American mode of travelling. It is still, to my mind, an open question which mode is the more comfortable. One oscillates between the two systems in a state of painful indecision, with views that vary according to the experience of each journey. At present the English system has my vote. Nothing, at any rate, could have been more smoothly and easily managed than a trip I made a short while ago to Birmingham. My companion and myself took a hansom from our doorstep and drove to Euston Station with the baggage on top. At the station the difficulty was not to get waited on, but to prevent more than one porter from forcing his services upon us. In three minutes after dismissing the hansom we had bought the tickets and had found and were seated in an empty compartment. The baggage was labelled, and put in the van a few yards ahead of us, and the porter pocketed a tip of sixpence not only without grumbling, but with an obvious recognition that his services might have been had for a penny or two less. Nothing so far could have been simpler. We had the carriage to ourselves, and neither at Willesden nor Coventry, the only stopping places, did any one attempt to get in. The train left on schedule time, and arrived in Birmingham punctual to the minute, covering the 113 miles in two hours and twenty minutes. We travelled, as nine-tenths of the people in England travel, third-class. The privileges of a third-class passenger are, first, that he pays for his ticket at the rate of only two cents a mile, and, secondly, that he is placed either near the engine, where the risk of suffering from a collision is greatest, or else at the other end of the train, where the jolting is most felt. At least that is the theory on which an English train is made up, but as a matter of fact, it is invariably disregarded in practice. Third-class compartments can always be found scattered down the whole length of the train.

Although there is very little that English and American railroads can learn from one another, yet American example has had, and is still having, an undoubted influence on the arrangements of English cars. The old style of English car—I speak of it as the old type, though it still prevails over seven-tenths of the English system—was split up into ten or twelve first, second, and third class compartments, or, to give them their common English name, carriages. Each carriage was a self-contained whole, could only be entered from the platform, and had no communication with the carriage in front or behind. The new type of car, which assuredly will in time supersede the old, is an adaptation of the American corridor car. The carriages remain as they were except that a foot or so has been lopped off each of them and given up to a passageway that runs the length of the car, and outside the compartments. A certain amount of movement is thus made possible. A man may leave his compartment and have a smoke and return—a boon that, absurd as it may sound to Americans, really marks a revolution in the conditions of English travelling. Also, and again for the first time, the corridor cars allow of toilet accommodation, a feature in which English trains are still scandalously deficient. The compartment in which we found ourselves chanced to be one of the old type. No egress was possible until the train drew up at its destination. Nevertheless, it was perfectly comfortable, well cushioned, clean, and with plenty of room for one's lighter baggage and belongings. A shilling to the guard, had we cared to make the investment, would have saved us from all chance of invasion. He would have locked the door and bundled would-be intruders elsewhere. As it happened, we had the carriage to ourselves all the way from London to Birmingham by sheer good fortune. When the train reached Birmingham, it was the work of less than three minutes to have a porter pick out our baggage and call up a hansom. Now, had we been travelling in America we should have been obliged (1) to travel by the Pullman car at a greater expense, (2) to send round for an express company to take charge of our baggage, (3) to travel in a car with some fifteen or twenty other people, at least one of whom would be sure to be a squalling infant, (4) to submit to the pestiferous attentions of the car-boy, and to resist as best we might his efforts to sell us the daily papers, boxes of candy, the latest novels, Mexican filigree paper-cutters, and photograph albums, and (5) to have run the risk of not getting our baggage delivered till the day after our arrival. Travelling in England, on the other hand, we had privacy, every reasonable comfort, and full command over our belongings. So that, as I said, for the moment the English system has my vote.

Privileges of the Theatre

By W. D. Howells



ONE of the most interesting chapters of Mr. Brander Matthews's book on *The Development of the Drama* is the closing chapter, where he makes the history of the drama help him out in his prophecy of it. He treats the histrionic legend as a vital unity, in which a continuous purpose has lived from a beginning which is no more searchable than its ending. It is coterminous with the race, which has always loved a fable, and has loved best of all the acted fable, and according to its powers has striven to perfect the means of its presentation, from the earliest consciousness of the Greek tragedy and comedy, down through the medieval mysteries and moralities, the romantic theatre of Spain and England, the classicistic drama of France (transported from Italy), and the plays of the eighteenth and nineteenth centuries, to those of our own time and beyond. Mr. Matthews does not think the stage and the drama are separable; he has no use for the closet play, as drama, though he does not say it may not be literature; and he is inclined to respect the devices and appliances of the theatre as more essential to the aesthetic effect than the finest poetry which has not studied their relation to itself. In every time he believes that the stage has done its best; that is it has been as good as the contemporary taste allowed it or liked it to be. The impressive representation of

Greek tragedy, under the open sky of the plain day, with the scenery of nature was what the Greek public wanted: a full histrionic pomp, which the most abounding actuality of the modern theatre is only now rivalling; and the romantic theatre of London and Madrid was the bare and rather squalid thing it was because the two great peoples it addressed were so lately emerged from the darkness of the middle ages, that they were still taken more with the glories of the subjective world of the mysteries and the moralities than with the joy of life. Action upon action piled, was what their theatre gave them, as their own experience did; but they did not care how little the scene realized the alleged fact. Give them the fact and they would realize it; they would leap from youth to age, and from land to sea, on the same vacant platform which was now a forest and now a palace. But when their robust fancy died and left no heir, the auxiliary art of the stage began to perfect itself, and there was a slow but constant return to the Greek ideal of a ceremonial spectacle; just as there has been a slow but constant return to the Greek ideal of an indivisible action limited in time and space, until now Ibsen or Mr. Bernard Shaw consciously, as Mr. Gillette unconsciously, makes plays obedient to the laws of the long-scouted unities.

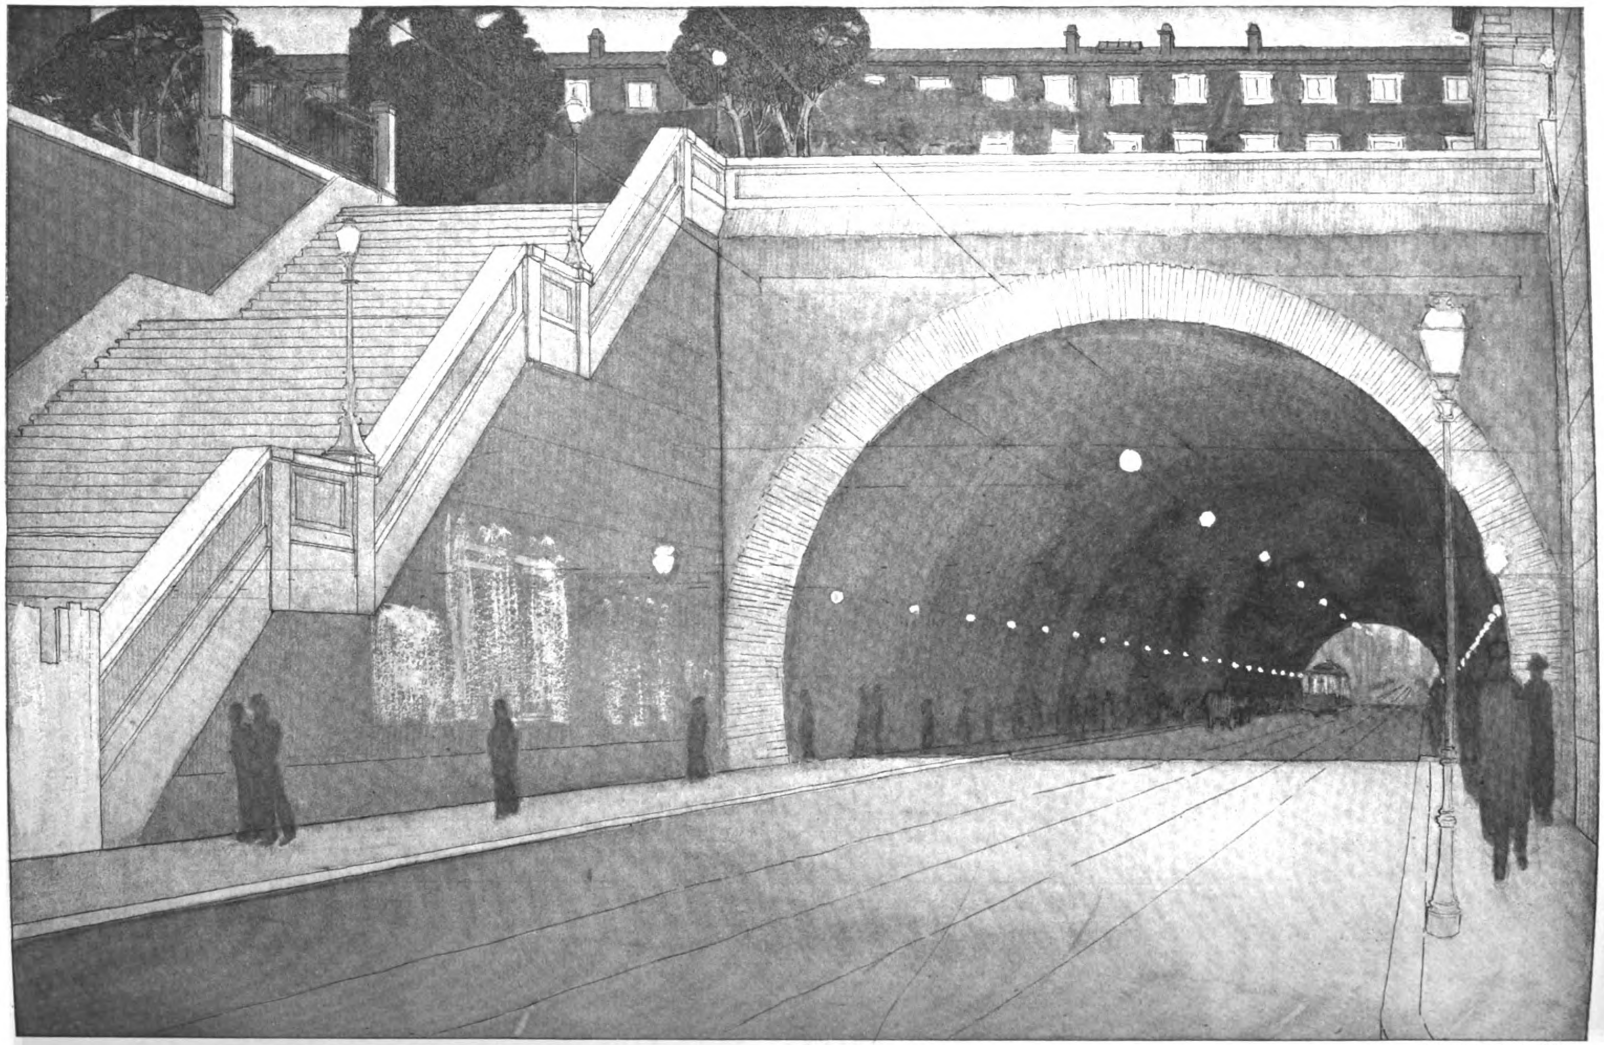
Mr. Matthews, with the sympathetic intelligence which is the characteristic of his attitude toward his subject throughout, notes in that particularly intelligent last chapter of his several of the more obvious advantages of the modern stage which are now so common that we have almost forgotten how recent they are. But above all, he thinks that the employment of light, by means of electricity, is to give the future drama possibilities unknown to the drama since the broad day, open-air performances of the Greek theatre. It will render the drama more subtle, more intimate, more appreciable in its finest intentions. In its full resplendence, nothing that the dramatist wished to show need be lost, and Mr. Matthews is of the mind that a good play is fully as much shown as said. The Greeks had their conventional mask, which opposed a barrier between the spectator and what the actor was thinking and feeling for the dramatist; but now if the dramatist thinks or feels anything, the actor can convey it, in the last shade of its significance, to the spectator. As to the mere scenic effects, the part which light now plays, the artificial light which brings back the sun to our theatre, they are already so satisfyingly beautiful, that we can scarcely envy the future the greater pleasure which we can scarcely fancy. But that this is only the beginning, we may willingly suppose with Mr. Matthews, and I hope he will not mind my supposing some advantages of the future stage which I do not know that he has suggested.

It ought to be within the scope of science so to perfect the theatre that everything on the stage could be as distinctly heard as seen, and that the lightest whisper need not be hoarsely shouted from it in order to reach the audience. It is true that the greatest artists can even now subdue their hearers to such a quiescence that the conversational tone suffices, but the stage has only here and there a very great artist in its employ; a genius is almost as rare behind the footlights as before them. I am encouraged in the hope I have intimated by seeing how eager the theatre is to abet the drama to the limits of its power, in certain ways where I do not think its endeavor has been sufficiently recognized. For instance, I note that in a modern play where a fat man is required, the manager no longer takes a lean actor and builds him up into a fat man; he takes a fat actor and lets him live the part physically as well as psychically on the scene. This was the case in "The Admirable Crichton," where anything less real than the obesity of the comedian who did the noble lord of the piece would have been an insufferable solecism. In Mr. Zangwill's play of "Merely Mary Ann," the panting corpulence of the music-publisher, who comes to corrupt the idealistic young composer, was as essentially a part of his Philistinism as any mental or moral attribute of his. In that latest play of Mr. Barrie's "Little Mary," which was only less delightful than "The Admirable Crichton," the fat-wittedness of the great London physician could not have been conveyed in terms less express than the personal pursiness of the actor who looked the part as perfectly as he played it.

All these pieces were in the region of the ideal so far that if the theatre had not spoiled us by the generosity of its endeavors in our behalf we might have been content with far less genuine obesity; but now we would have been no more satisfied with a make-up to that effect than we would have been satisfied with the archaic stage lighting by gas, or, more primitively still, by oil-lamps. In my two former papers about the new drama I have tried to say what I thought the very great merits of two of these pieces, and I will only say of the third, of "Little Mary," that it has the same charm of a humanity so fantastic, of a satire clothing itself in a gayety so extravagant, that it might well seem, as it certainly did seem to many, a plea for a reformed dietary, rather than a reformed civilization, among the upper classes. It was not only the stomach, euphemised as "Little Mary," which was attacked, but also the heart of aristocracy, and the moral was equally applicable to plutocracy, so that I hope every person in the audience with an income greater than my own went home feeling reformed as well as charmed. In these two plays of his Mr. Barrie has invented a new kind of thing, as creditable to his humanity as his dramaturgy. He can be taken on the surface of them and still be found delightful, but if he is taken below the surface too, the spectator's advantage will be double. But however he is taken, it is an apparent condition of his fantasy that it is to be represented with the greatest possible seriousness, and the closest possible approach to nature. In the case of "Little Mary," the character of an English lord was so inadequately realised to me by the American actor appointed to the task, that I have since found myself wishing that a genuine English earl could have been imported for the purpose; and in recalling my dissatisfaction with the butler in "The Admirable Crichton," I have thought perhaps a real butler would be the solution.

I know this is contrary to the teaching of Mr. Henry James in one of his most subtle and pleasing studies, where a real lady and gentleman are shown failing as models for ladies and gentlemen in illustration; but the presence of real fat people on the stage in the fat character of the drama, has restored my faith in reality. At any rate, I should like to have the theatre try it as suggested, now that the theatre is doing so much. I am very well aware that the theatre cannot do everything, and that it may justly retort upon me with a demand for intelligence and cultivation in the audience which I might not be able to supply. The theatre might contend that there was not yet that entire popular appreciation of its finest effects, which would encourage it to go all lengths in their direction; and if it did, I could only say that there might be an unconscious appreciation which might go farther and deeper in its mute fashion. Perhaps I should not be very ingenuous in this, but perhaps I should be as ingenuous as the theatre used to be; criticism has not altogether caught up, yet. In the mean time the situation is that we have now a drama which merits the best the modern stage can do for it, and that we have a theatre which in enlightened adequacy deserves the most that an audience can do for it. The drama is both American and English, or at least as English as Scotchmen, Irishmen, Welshmen, and Jews can make it, and we can gratify both a national and a racial pride in its excellence. It has at least an equal claim on us. We have by no means discharged our duty to the theatre when we have paid more than enough for a seat, and enjoyed the evening. We owe to it an educated intelligence and an enlightened taste, and if we have any of us not these things presently in stock, we had better make haste and get them.

If the reader asks me how he or she shall get them, I can safely reply that there is no better or pleasanter way than to read Mr. Matthews's excellent and entertaining book. So far as I know it is the only book which treats continuously, comprehensively and non-controversially of "The Development of the Drama," and there is none that will so fully and readily qualify the playgoer to understand what he is seeing and enjoying at the theatre. He must regard himself not merely as a vessel to be filled with pleasure from the stage. He ought to realize that he is part of a great and splendid tradition, that he inherits the place of the Athenian who saw the plays of Euripides and Menander under the blue Attic skies; of the Elizabethan Englishman who stood in the mud at the Globe to witness the first production of "Romeo and Juliet," of the Spaniard who darkled in his own cloak at the *capa y espada* dramas of his Lope de Vega, of the Frenchman who tasted the first modern quality in the comedies of Molière; and try to live up to his responsibilities as well as privileges.



Books and Bookmen

By James MacArthur

LITERARY productiveness has been so swamped and the mind of the reading masses so absorbed in fiction during recent years that the voice of the scholar and critic is scarcely ever heard in the land. One of the still small voices that still remind us of the native tradition of letters is that of Professor George E. Woodberry, and Dr. Hamilton W. Mabie is another. Professor Woodberry is less vocal and frequent, though none the less searching and insistent. Both writers have contributed volumes of literary interpretation during the past year, which serve to redeem the period from the charge of being entirely barren of critical and contemplative thought. Professor Woodberry is represented by *America in Literature*, and Dr. Mabie by *Backgrounds of Literature* and *In Arcady*. The last-named volume does not come within our scope here. It is more spontaneous and purely imaginative than contemplative and thoughtful. It is the idyllic expression in classic allegory of the birth of a soul, and its search after beauty: it is a prose poem, transfused with the glow of lyric rapture that resides in the burning memories of youth, when men were as gods and nature their temple. *Backgrounds of Literature* and *America in Literature*, on the other hand, are comparative studies of literary conditions, and are alike in this respect, that the same idea governs their method, and forms the basis of their critical inquiry, namely, the appraisal of literature in relation to inheritance and environment.

"Mortal genius," says Professor Woodberry, "always roots in the soil, and is influenced and usually shaped by its environment of birth, education, and opportunity." "Every great work of

Drawn by J. H. Phillips

HOW ROME IS BEING MADE INTO A MODERN CITY

The drawing shows the new street tunnel in Rome—one of the improvements by which the capital is being made over into a modern city. The tunnel has recently been opened through one of Rome's "seven hills," almost directly under the palace of the King. It is used by pedestrians, vehicles, and tram-cars. The axis through the tunnel and the Piazza di Spagnia terminates at the Piazza del Popolo, near the north entrance to the city, through which most visitors approached Rome before the construction of the railroad. Old business blocks are being torn down to make way for new and up-to-date office buildings; electric trains are common, and new bridges have been built over the river Tiber

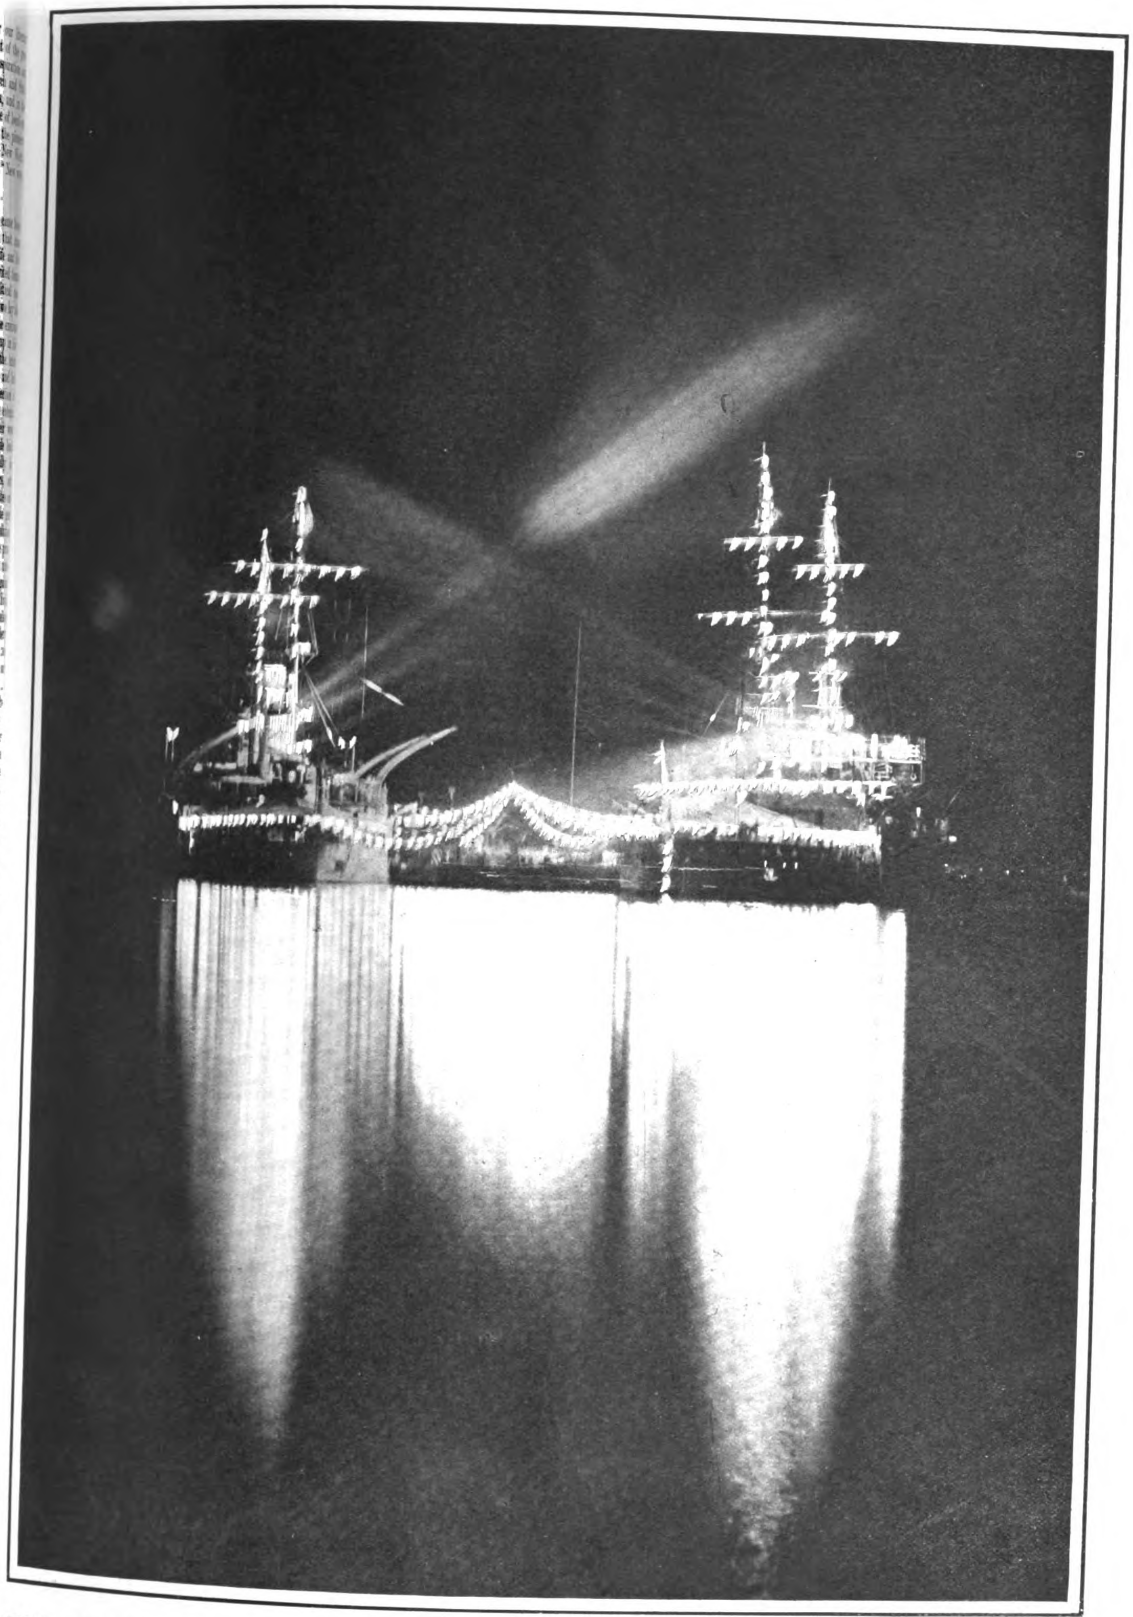
literature," says Dr. Mabie, "has behind it a background of race experience and history." This basic idea gives freshness in the application which these authors have made of it to the treatment of old and familiar themes. The subjects of Dr. Mabie's book are "The Lake Country and Wordsworth," "Emerson and Concord," "The Washington Irving Country," "Weimar and Goethe," "The Land of Lorna Doone," "America in Whitman's Poetry," and "The Land of Scott." Wordsworth's poetry, in its singular unity and consistency, bound together not only by great ideas which continually reappear, but harmonized by a background which remains unchanged from stage to stage, was made possible by the good fortune of a lifelong residence in the Lake Country. "The sources of his poetry were in his own nature, but its scenery, its incidents, its occasions, are, with few exceptions, to be found in the Lake Country." As for Emerson, Dr. Mabie recalls that the future poet and thinker opened his eyes in a Congregational parsonage, "in the silence of retirement, yet in the centre of the territory of the metropolis," where, to continue the words of his father, "we may worship the Lord our God." "That," he adds, "was the lifelong occupation of Ralph Waldo Emerson." The moral fibre of the stock, the vigor of its self-denying ordinances; the influence of star and field and woods; the taste and resources of scholars, and later the quiet beauty of Concord life lying in the tranquil New England landscape, were the forces of ancestral heritage and contemporaneous influence which fed the mind of the Concord sage. "A cosmopolitan in the range of his intelligence, he was a provincial in his habits and personal associations; and this was the prime characteristic of Concord." At first glance, Dr. Mabie says, it would seem as if Irving's work had been done against many backgrounds, but the real Irving was "a true son of the country of which New York is the capital, and his characteristic and abiding work had behind it a city, a river, and a mountain range, which were not simply the stage setting of his life, but which gave color, atmosphere, tone, to his writing." It is by the creation of Diedrich Knickerbocker out of the Knickerbocker tradition, and Rip Van Winkle from the legends of the Hudson, that Irving will be known to the future; and the country that will remain typical to his genius—the background of his art and life—is the old Knickerbocker city, and the witching hills and hollows of the Hudson. In the same manner, Dr. Mabie has visited the little German town, Weimar, which is the custodian of literary traditions and the cherished home of rich memories that cluster about the great poet who for fifty-six years was a dweller there; likewise has he travelled through the land of Lorna Doone, and the land of Scott, gathering impressions of the landscape and of the people, whose characteristic features and human qualities left upon the romances of these writers the stamp of beauty and individuality. So does Dr. Mabie bring home afresh to our minds, the close touch and intimate relation which exists between nature, whether in landscape or mankind, and literature. One more study in Dr. Mabie's book remains to be mentioned, but it would take more space than is at our command to do justice to its thoughtful criticism. Suffice it to say that the chapter on "America in Whitman's Poetry" has seemed to me more enlightening, more clearly interpretative, more penetrating in its insight into the nature of Whitman's place in American thought and life than anything else I have read on the subject. Altogether *Backgrounds of Literature* is a work of spiritual discernment and critical insight on subjects that occupy a permanent place in literature, which deserves to rank as a work of distinctive value among that kind of writing, which Dr. Mabie has elsewhere defined, as secondary and derivative in literary importance, but no less original and creative in achievement.



George E. Woodberry
Author of "America in Literature"

In Professor Woodberry's *America in Literature* there is a unity of plan that is denied to Dr. Mabie's book, on account of the separateness of the great authors considered. Professor Woodberry's book is, in fact, a short review or *précis* of American literature, but instead of treating it on the historical plan, he has measured its periods of literary activity from its geographical centres. Hence we have "The Knickerbocker Era," "The Literary Age of Boston," "The South," and "The West." The chapters correlate themselves as distinctive parts of a comprehensive whole with one aim in view, namely, to trace our native literary productivity to its sources, and to follow its results and conditions in the various sections whence it arose and flourished; to sum up its achievement, and to gauge its comparative place as an indigenous growth and power among national literatures. As I have already indicated, Professor Woodberry, like Dr. Mabie, accounts for our literary forces in the heritage of the past and the endowment of the present; finding in the one, that great sap of thought, aspiration and resolve, which fed literature, first through the Church and State in its early beginnings in New England and Virginia, and in the other, that fresh inspiration, atmosphere, and influence of local environment and patriotic pride and passion which led the pioneers of American literature to breathe the spirit of the New World into the old forms, and to emulate Vergil's aspiration, "New ways I must attempt to wing my flight to fame."

Literature in the first century was mainly one that came home to men's bosoms; following upon that it became one that came home to their business. "The first great contact of life and letters in America was through religious passion in inherited forms of speech; the second great contact was through political passion, and created a new literature for itself; between the two lay the literature, always more or less in evidence, describing the environment of life and its events realistically, or summing it up in history or annals. Such, in few words, is the story of the interaction of American life and letters in their vital connection in the colonial times." The colonial generations completed their work in the life which a people leads through books, principally inherited from the fathers, and partly those which it creates out of itself. It was with the generation born after the Revolution that literature began to be practised as a fine art in an independent and original way. Against the background of old New York, over the reaches of the Hudson northward, Professor Woodberry sets Irving and Cooper, the two writers of the first rank in our literature. "The best that literature achieves," remarks Professor Woodberry finely, "is a new dream; this was the first dream of American life, broad and various, in its great new solitudes of sea and land." The poet Bryant was a New-Englander by birth, but Professor Woodberry links his name with Irving and Cooper in the city's literary fame, because Bryant illustrates as a New-Yorker its assimilation of the sons of all the nation. Harvard College Professor Woodberry regards as the fountain-head of New England literature. The accomplished past whose memory most survives in the literary fame of Boston, had its source in the collegiate spark. It began with Channing, was caught up by Emerson, and spread beyond the academic bounds in Phillips and Garrison. Emerson, Longfellow, and Hawthorne—these are the three men in whom Professor Woodberry holds that the genius of the people, working out in the place and among the things of its New England activity, reached its height, so far as concerns that partial expression which literature can give to the people's life. He calls it the aftermath of Puritanism in literature, and adds sadly that the literary age of Boston closed before the Civil War, and that in forty years we have drifted farther perhaps than any of us have thought from the conditions and influences that gave our country so large a part of its literary distinction. In the solitary figure of Poe, Professor Woodberry hails the one genius of the highest American rank who belongs to the South. Poe certainly is "the lone star of the South; and yet it may eventually prove that the song of Dixie is the most immortal contribution that the South has given to the national literature." In the West he finds the home of our native humor. Out of the picaresque adventure of the West came Lincoln, our greatest practical humorist, and on the free, imaginative side Mark Twain, the climax and capital example of Western humor; also Bret Harte, a visitor from the outer world. Eastern born and Eastern bred, and not, like Mark Twain, born of the stuff in which he worked. Another author who bears the characteristics of the West on his imagination is the poet Joaquin Miller, who, Professor Woodberry observes, goes back to Byron, as Bret Harte does to Dickens. Lew Wallace is also named as an author who felt the influence of the romantic West acting on his historical imagination, directly in *The Fair God*, a story of the Aztecs, and derivatively in *Ben-Hur*. Professor Woodberry concludes his literary retrospect by deploring the inadequacy and inefficiency of our literature during the last forty years. "In this halt of our literary genius, it is plain that our nobler literature, with its little Western afterglow, belonged to an heredity and environment and a spirit of local culture whose place, in the East, was before the great passion of the Civil War, and in the West has also passed away. It all lies a generation and more behind us. The field is open and calls loudly for new champions."

THE CRISIS IN THE FAR EAST

BY HELEN G

WHEN Korea made independent treaties in 1882 with America and European countries, it was naturally assumed that she was a sovereign country, free to do as she pleased.

China, the only power likely to claim suzerainty, by keeping silence at such a time, tacitly admitted Korea's right to enter freely into independent treaties.

Japan, being especially interested, eagerly adopted this very natural view of the matter; and Korea herself, imbibing the idea that she was no longer China's vassal, began to assume independent airs that little suited so haughty and austere a power as China.

But when Japan, a little later, began dealing with Korea as an independent kingdom, China resented it wrathfully, and vigilantly watched for a favorable opportunity to show the land of the Rising Sun and the world at large how mistaken any such assumption was.

More particularly was she jealous of Japan, a country that might be supposed to have more claim to recognition in Korea than any other,

A Body of Korean Soldiers at the Palace Gate

on this account, therefore, China proposed to emphasize the fact that Korea was her vassal in name, deed, and fact.

The opportunity soon came. The dowager Queen of Korea died in 1890, and China determined to send the usual embassy of condolence.

It might be supposed that the occasion was not a very important one, and that a mission of condolence was a trifling courtesy extended to a neighboring country. But this is not the case, for upon all these and other similar ceremonial occasions the exact status of each country—the one offering and the other receiving condolence—is sharply defined.

In all such ceremonies the vassal country is compelled to acknowledge fully the sovereignty of the suzerain and her own inferior position.

The whole ceremony is regulated by constitutional usage, and has been settled by custom and convention ever since the early days of the Ming dynasty.

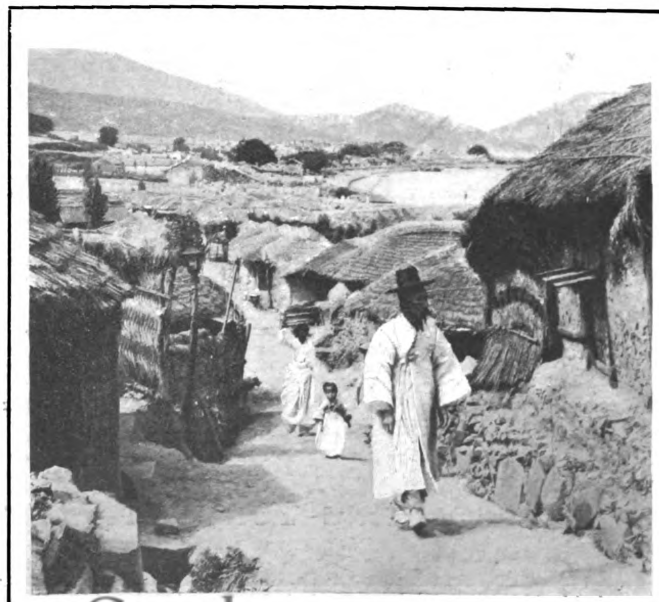
Though the tribute itself was comparatively light, full acknowledgment of the vassalage of Korea was always demanded. In the seventeenth century the King of Korea was fined ten thousand ounces of silver because he failed in some trifling point of etiquette.

So long as he paid tribute faithfully the burden was light, but in act of omission and commission the penalty was heavy and severe.

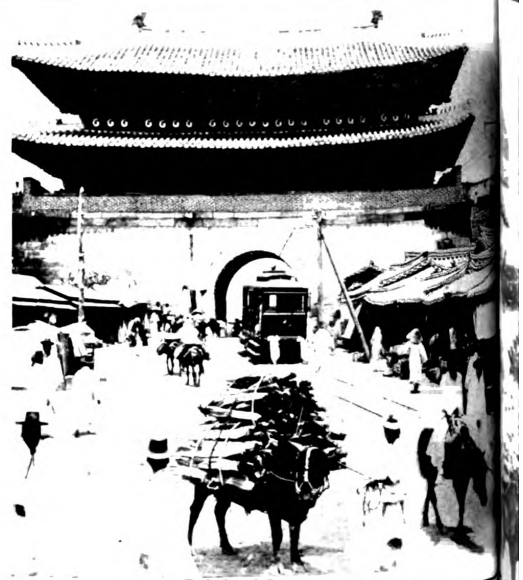
Among the Korean people the Emperor of China receives honor as their own monarch, and there is no doubt that they regard as their lawful suzerain. For example, the name or term by which Korean kings are known is Hap-mun, which equals Mikado, etc., "Grand Ruler." All persons in writing the word "hap" must one stroke of the initial letter out of respect. Should the character with which the name of the ruling Emperor of China is written chance to occur in the designation of some public personage or building, though the pronunciation remain the same, the written appearance must be temporarily altered, thus showing him as much respect as is given their own sovereign.

In all official correspondence between China and Korea the king is styled simply Wang, or prince, never king.

The Korean monarch is not permitted to address the Chinese Emperor directly or upon terms of equality, but only through a memorial, like any ordinary high Chinese official.



All this is very galling to the Koreans; and after the signing of the treaties which gave her a taste of independence, and being so advised by foreign powers, she tried to repudiate China's claims. Both Korea and China saw their opportunity when the dowager Queen died, and the former vainly attempted to refuse the usual mission of condolence. But China had been awaiting some such chance to impress upon Korea that she had no real independence, that it was but a fiction permitted so that favorable treaties could be concluded.



The Korean Minister of W

The reception of the embassy of condolence had always been accompanied by every token of homage and submission, and China insisted upon her rights in the matter, rights established by custom for centuries.

Vainly the Korean king pleaded poverty, for the Chinese charged well for these favors, and the presents must be handsome and When, for example, a new king succeeded to the throne, two noble Peking presided over the investiture, and granted the patent of With them they brought the scarlet silk robes always worn by t mun, which are presented by his suzerain, the Chinese Emperor, sumed as a badge of vassalage.

...VS AND EXPERIENCES IN KOREA

BY H... FLESHER, M.A.

...r this gracious act China charged $10,000 in silver—a heavy bill for ...m, which is never rich and frequently poverty-stricken. So it will be ... that the Hap-mun, whose name was Li-Shi, had a good excuse ... he pleaded poverty.

...t China was too wary to be thus caught, the Emperor calmly an...ncing that he would waive all presents or other expenses incidental ...he mission, demanded the full payment of homage and acknowledg...t of vassalage.

...ill the Hap-mun delayed giving the necessary orders for the reception of the ambassadors as long as possible. One of the most important of the acts of homage is the welcoming of the commissioners outside the gates of Seoul. This is the crucial test of vassalage. Were Korea independent the Chinese ambassadors must seek audience of the ruler, and for that purpose must go to him. But in the case of receiving a message from a suzerain the vassal must seek the presence of, and go out to meet, the commissioners, who, of course, represent the sovereign. But despite all protestations, Li-Shi was compelled to yield, the orders were given, and the king's procession started on its way to meet the embassy.

...*of the Photograph) playing a* ...a

In all Korea no spectacle is so brilliant as this of the king's procession.

All the roads are cleared, swept clean, and closely guarded, while the people are warned against going out. No traffic or passage is allowed upon such occasions. Every window, more particularly upper ones, must be sealed with strips of paper, lest some sacrilegious eye should from a superior height look down upon the Hap-mun. Every door must be closed, whether it be that of a public building or a private dwelling, and each householder kneels before his house door with a dust-pan and broom in his hand as emblems of obeisance.

In the procession itself are many thousands of attendants ... noble personages, horsemen, and banners, making it a gorgeous ...ant well worthy of an Oriental sovereign.

...nlike the ancient Japanese usage, the common people are allowed to ...tion the king directly. If any one thinks he has been unjustly dealt ..., he can appeal to the monarch himself upon this occasion.

...ll along the road-side these petitioners may stand, and as the royal ...n-chair goes by they tap upon a small flat drum only a few inches ...iameter.

...s he passes the king listens to the prayer, or it is given to him held in a split bamboo, lest an ordinary mortal hand should touch him. If at any time, by some unforeseen chance, such a thing occurs, the person who has done so must wear conspicuously a red cord for the rest of his life.

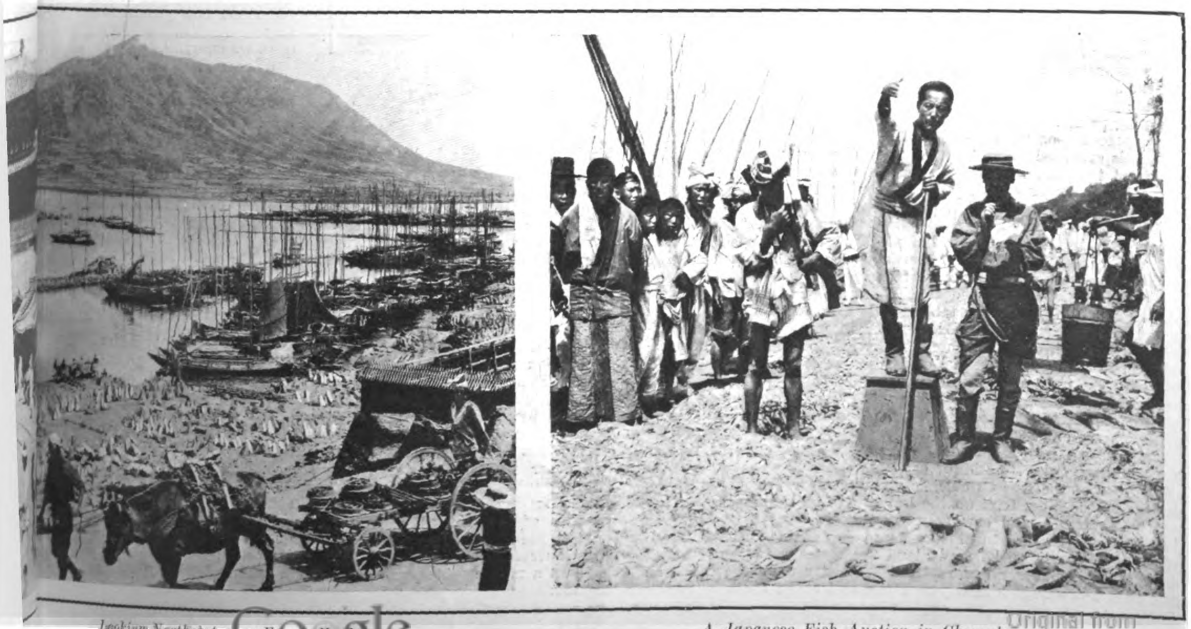
Frequently he investigates the grievance, and woe betide the unhappy petitioner if it is decided that he petitioned without due cause, for he is apt to pay for his temerity with his head. Every precaution is taken lest the vulgar eye should gaze upon the sacred person of the sovereign.

Close together in the procession are carried two magnificent sedan-chairs elaborately ornamented.

In one of these, dressed in his scarlet silk robes, heavily embroidered with dragons, rides the Hap-mun.

But in which?

This question can only be answered by the highest ministers of state; they alone know.



During the march Korean music is played of that noisy kind so grateful to Oriental ears, so distasteful to the uneducated ear of the barbarous Westerner, who learns with surprise that only music of a *quiet* kind is permitted upon such occasions.

A Street Scene in Seoul, Korea

Before the sedan-chairs is carried the red umbrella and enormous purple fan of royalty. A sabre, an axe, and a trident are also borne in the procession, as reminders to the people that the Hap-mun holds the power of life and death over his subjects. Before the royal chairs prance five gayly-caparisoned horses with bright embroidered saddles. But the most striking feature of the whole parade is the great dragon flag glittering with masses of gold embroidery. This splendid banner, which is fourteen feet square, and very heavy, is borne by a strong young horse with a socket in his saddle, while four attendants hold the guy ropes.

Upon the arrival of the Chinese embassy in Korea, Li-Shi's procession, as gay as of yore, wound its way through the city of Seoul and out of the western gates to meet the strange commissioners. In the train of the ambassadors, to mark their equality with the Hap-mun, were borne the

axe, sabre, and trident, and accompanying them was a band of music.

The king had yielded reluctantly; but he was compelled to meet the embassy, as formerly, outside the western gates of Seoul, which are never used except for the reception of the Chinese envoys.

In the public square outside this gate, called "The Gate of the Beneficent Reception," the king received the mission and the letter of condolence, and humbly "kotowed" when bidden, thus acknowledging before his people and the whole foreign community his submission to China. But Li-Shi determined to recede as little as possible from the independent stand he was vainly trying to assume. So when the time came for the banquets which are always held in the palace reserved for these ceremonies, orders were secretly given the attendants to serve the king first, thus giving him precedence over the representatives of His Imperial Chinese Majesty, Suzerain of Korea, who should, of course, receive greater honor than his vassal.

Prompt and stern was the demand of the Chinese for a full and amply apology. Alarmed at the firm tone, and fearful of the consequence, the Hap-mun complied, and yielded absolutely. Humbled and terrified at his former audacity, Li-Shi was now completely cowed. In acknowledgment of his total subjugation he gave up the keys of the gates of Seoul to the Chinese envoys. At their pleasure the gates of the capital city were locked or unlocked, and each night the keys were deposited at their official residence, the western palace.

To the Oriental eye no greater token of submission total and complete could be given.

The ceremonies for the reception of the letter of condolence on this occasion were most curious, not only as an illustration of Oriental usage, but as indicating the most abject and humiliating submission.

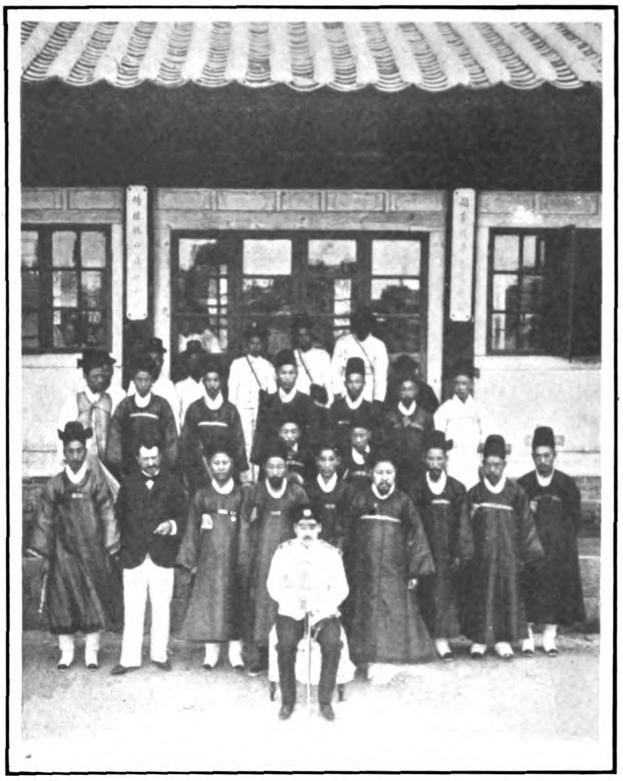
The following account was given by the private secretary of one of the Chinese commissioners, who was himself present:

The Chinese embassy, after they entered the capital, Seoul, occupied a building or palace set apart for their use, and never occupied by any but members of these embassies.

The day set for the ceremony of the reception of the letter, the ushers of ceremonies met the envoys in front of the principal entrance of the Audience Hall, and conducted them to the table upon which lay the letter, which was written on yellow satin, decorated with gold, and enclosed in many silk wrappers.

With haughty, immovable faces the Chinese ambassadors stood to receive from the kneeling Korean officials the message of condolence and the silk presents offered by the suzerain to the mourning prince. These the envoys placed upon the various tables arranged to hold them. Then the masters of ceremonies conducted the envoys to their places east of the memorial tablet of the late dowager queen, placing them so that they faced west towards China.

Li-Shi, led by the senior and junior ushers, next came up from the western terrace, and took his place on the other side of the memorial tablet, but turned towards the east, so that the king and the Chinese ambassador were face to face.



Then the Chinese were led to the incense-table standing below and directly in front of the tablet, and in florid, ceremonious, yet most humble language, invited to offer incense three times. After this had been done, they were requested to offer the silk presents and to pour out a libation of three cups of wine.

During the time that the libations were being poured into the urn and the offerings of silk being made the Chinese stood erect. But the officiating officers, who were, of course, Korean noblemen, knelt to serve and assist the haughty visitors.

The envoys were conducted back to their seats, and the master of ceremonies, going to Li-Shi, bade him kneel.

Then one of the Korean officials standing near the incense-table, and facing the king, took up the letter with an assumption of the greatest reverence, and bowing many times.

In the curious unnatural sing-song adopted by Oriental readers on such occasions, he read aloud the message to the kneeling king. After the reader had replaced the letter upon the table, he bade Li-Shi prostrate himself, then rise and stand erect.

A Group of Korean Government Officials

Then came the strangest, most humiliating scene of the whole ceremony. The master of ceremonies, addressing the king, bade him wail, and at this command Li-Shi broke into the weird Oriental wail given only for a parent, "Ai-ko, ai-ko." (For any other relative the cry would have been "oi, oi.") The Chinese ambassadors were then requested to wail; and, prompted by the proper officials, the members of the king's household and the civil and military officers wailed. The Chinese were first requested to stop wailing, then the king and the rest of the company.

A little south and west of the Yen Hall Terrace stood a heavily inlaid table, upon which was placed a great brass sacrifical urn. After the wailing had ceased, the same official who had read the message and received the silk presents took them to the sacrifical fireplace and burnt them, throwing the ashes into the urn. Then the first and second usher led the king out to the upper terrace, where he stood facing the east, and awaiting the Chinese ambassadors, who were now conducted out to the terrace, and placed so as to confront the vassal monarch. The envoys, clasping their hands together at arm's-length in Oriental style, bowed in salutation to Li-Shi, who returned the courtesy in the same manner. Humbly the king accompanied the envoys to the central entrance, where parting salutations were exchanged once more. The ceremonies ended by the Chinese ambassadors being conducted to their quarters in the Chin Chen Hall.

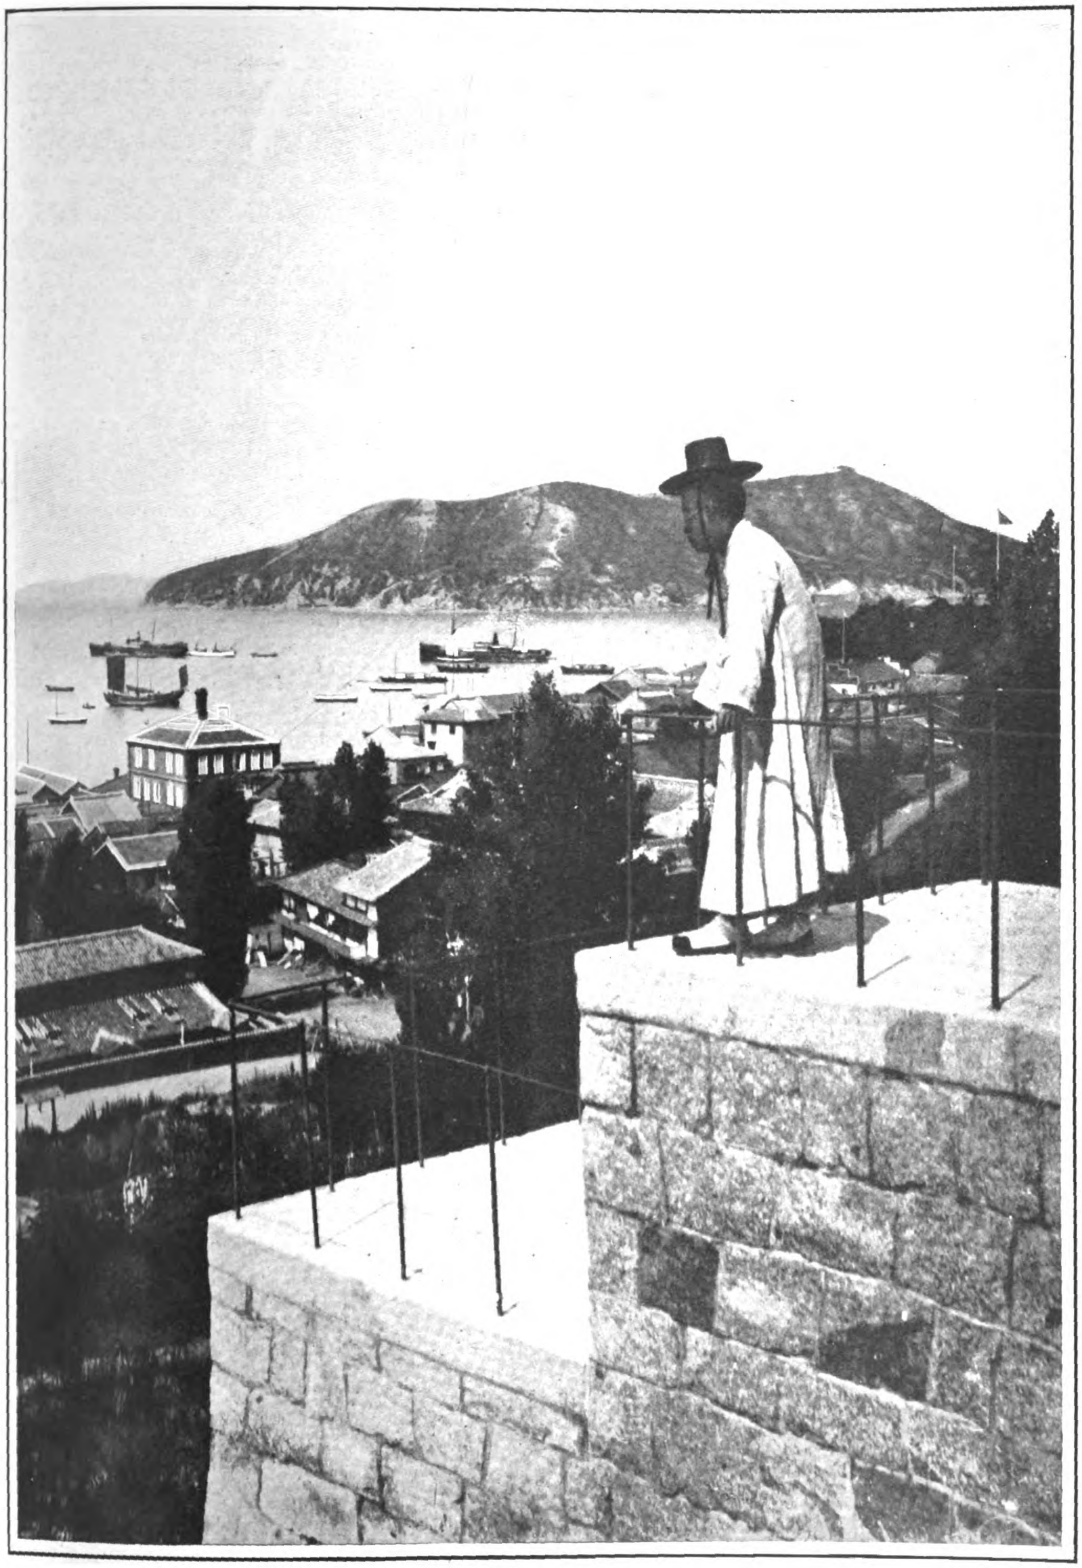
When the Korean king had returned to his palace, he was bidden by the master of ceremonies to assume his mourning staff and appendages. And again Li-Shi and the whole company broke into the conventional wailing cries. Three times a day did they wail until the actual funeral took place.

The mourning garb of the king consisted of a long, grayish, white cotton garment, torn, patched, and purposely soiled and spotted. This was fastened about the waist by a rope of twisted straw and silk about three inches thick. On his head was a drapery of dark-colored soiled-looking linen, fastened by a small rope with long frayed ends falling on either cheek.

His mourning staff was a plain, heavily knotted stick, and on his feet he wore coarse straw sandals of a peculiar make. Pure white being the mourning color of Korea, all the courts wore white for three years.

Even the ambassadors to foreign countries, the envoy at Washington, and the ambassadors at Tokio wore white. In these long white robes and high glazed hats they presented a very quaint appearance.

I remember at Tokio, when members of the diplomatic corps gave balls or receptions, how curious these two strange, ghostly, black-hatted figures looked as they moved silently about, for they spoke to few, if any, of the guests. They resembled nothing so much as two men who had got up in their night-gowns and put on silk hats.



To return briefly, however, to the subject of the reception ceremonies, it would seem ridiculous for Korea to make any pretensions to be other than a vassal state after the performance of an act of homage so full and complete as this.

How Li-Shi can reconcile the fulfilling of the mourning ceremonies held in 1890 with his pretensions to be a free sovereign owing allegiance to none it is difficult to imagine.

The safety of Americans in Korea is being secured by active precautionary measures on the part of the United States government. Reports have been lately received from Horace N. Allen, our minister at Seoul, that Americans there were in danger, Korean newspapers having endeavored to inflame the natives against foreigners, and especially against Americans. A squad of marines is on guard at the United States legation, and there are other marines stationed in the neighborhood. The United States gunboat *Vicksburg* is at Chemulpo.

The feeling against Americans is said to be due to the endeavors of the United States to secure an open port at Wiju, on the Yalu River. The Korean government is disposed to grant the concession, and the people are incensed at what they regard as a movement toward yielding the country too freely to foreigners.

Women in the Lecture-field

By Florence Jackson

IF women in journalism have gone into the profession without special training tor it, it is not surprising that the lecture-field should be recruited with those who are equally unschooled for their calling. That this is true is one of the reasons advanced against admitting women to the lyceum platform, though as men do not often show any greater preliminary preparation for public speaking, the critics of women fall back upon that antiquated and untrue excuse that women of old "kept silence all."

Because many things are new in the world to-day, the revival of very old customs of class or sex are often believed to be unprecedented, and when they introduce that which prejudice can contest, they are the more eagerly called into question. It had so long ceased to be the custom for women to exhort or lecture in public that, when the revival of an ancient practise began half a century ago, and women ventured upon the lyceum platform, there was a hue and cry raised about it, and the daring creatures were contemptuously called,—New Women. Saintly and charitable Scripture followers failed to find precedent in the conduct of the prophetesses and women leaders of the people of Israel; scholars, lifting their eyes from their Greek and Latin books, saw no revival of the teaching spirit of Aspasia or Hypatia or even of Saint Teresa, and pronounced this effort to give to the world what experience in it had profitably taught—the boldness of the New Woman who egotistically sought to be conspicuous.

Fortunately, opinion changed with time, but even yet there is no little prejudice against women as lecturers, and, in parts of the country, in some cities and by some associations, they are not wanted upon any platforms. In these sections, chiefly in the South, the feminine members of a community are largely responsible for the disesteem in which are held any of its sisters who attempt to take part publicly in the world's work. Unconsciously, they are doing what Mrs. Stetson might call "over-sexing their sex." They are giving women chiefly that value which, taken alone, has been the cause of their lack of mental development throughout the ages—the value as sexual mates before they are considered as intellectual, or even intelligent companions. The Southern women of the present day dread to become less attractive to men if they show any inclination to be independent, and especially to think and to speak for themselves. Thus they look coldly upon women lecturers. Because they do so, men are influenced to discourage the public appearance of women, and, what is more, they discredit the ability of a woman to present subjects of sufficient economic or literary value to make them worth listening to. Only in drama is it excusable for a woman to appear before an audience, and then the amusement she furnishes pardons her for assuming a leading part.

Hardly do these narrow thinkers realize what hinderance they are putting in the way of a woman who needs to earn her living and can do it best by giving to audiences information she has gained. But, fortunately, this antagonism does not exist everywhere, and the districts are numerous in which women are welcomed to the lyceum stage.

Admitted and even sought at last in this profession, it becomes necessary for those women who contemplate entering it to first consider seriously their adaptability for the calling. It is not an easy one, but it has appeared so, and unskilled speakers, and especially the thinkers, have been attracted to it. So short a time have women been "trained" to do what they attempt to do that probably not one industry now followed can show all its workers to have been instructed therein before they undertook it. Yet the sort of education given to women in the past led more consistently to their attempting public speaking than any other calling outside the home, for the reason that "recitation," elocutionary work, the reading of essays, and performing of plays were part of the school programme, and one usually well executed at "exhibition" and "commencement" times.

Then, school life over club life began, and the duties in this last demanded continuation or reinitiation into the habit of speaking in public. The *reading* of "papers" was, in fact, but the extension of school habit. I recall vividly how this impressed me when I first attended a club meeting but little more than nine years ago. A long residence out of the United States had prevented my seeing and sharing in the awakening and growth of women's clubs, and I knew them only through newspaper accounts and through the stories of those writers, who pictured the social fancy of the hour. I went prepared to be impressed, but the "papers" *seemed* to me only very poor school compositions, and the elderly women who read them gave the effect one would receive on seeing a game played as though it were a real *thing*. They seemed to be playing at youth and school-time.

If this were so it was, nevertheless, not a fact to be censured, for the effort toward development deserves praise, however crude may be the first attempts to reach the aim. It was club life certainly that gave the impetus to general lecturing. Women orators, gifted speakers who must give their message, there have been from time immemorial, and some had been known in this country before. But they were as rare as the Aspasias and Hypatias of old. Margaret Fuller was a lecturer, and her audiences were decidedly "representative" men and women, yet she could scarcely be a guide in the manner of meeting an audience of to-day. The great speakers on reforms set the best example of fearlessly appearing on the platform, and what they endured of opposition and ridicule, bravely withstood and finally lived down, has made smooth for us who have come after, the none too easy road to public attention—we can hardly say even yet,—to favor.

But now that this much is won it is well to ask, before choosing this profession, or at least before attempting to follow it,—the calling (it is too precarious, too transient in interest and returns to assume the stability of a profession)—"What have I to say that is worth offering to an audience? Why do I wish to appear in public? Is it merely from a love for excitement, to attract attention, or is there really an honest wish to say something helpful? Have I seen or experienced that which is unusual, or will be interesting and amusing for people to hear?

For, be sure, if the subject treated is not a real one, if anything is "faked," the audiences will in the end find it out, and anything that has been gained will be wholly lost. Lecturing is like all other things to the public—the money's worth is required. Indeed, rather more is required of a lecture than of a play. Amusements are so cheaply offered, and most amusements are, in brightness of setting, inspiration of sound, elan, and expectation, so much more alluring, that a lecture needs an immense amount of some quality that these others have not, if it would win listeners from lighter attractions. The lecturer ought, in fact, to have an engaging personality, but if that is not the case, then her theme and the treatment of it should be on the order of the unusual, the intrinsically worth.

There are some communities where lectures are preferred to any other sort of diversion. These are a delight to the lecturer, who knows so well the difficulties she has to meet in keeping up her own enthusiasm, to say nothing of winning any from her audience. To do this she must create the brightness that in a theatre is supplied by the lights, the music, the very fact of a festively dressed audience. The lecturer has no such inspiration to work upon with hearers who accept a discourse generally as they would a sermon—with repressed feeling or stoic silence. True, at times stoicism is needed on such occasions; I have experienced this both as lecturer and hearer. Then must the afflicted exercise charity and know that "'twas not ever thus."

Such communities as particularly favor lectures are pleased with literary subjects, art themes, or music interpretations. The uncultured and unthinking are harder to address. For them the illustrated lecture, where the pictures will aid their understanding of the topic, are most enjoyed. This has been the case in the courses of "Free Lectures to the People" that are given yearly by the New York Board of Education under the able direction of Dr. Leipziger. East Side, down-town, and remote districts are those to which we are sent with our lantern-slides, and weary as the way may be to travel, especially if the night be stormy, and the carrying of an umbrella as well as the box of heavy slides makes progress, in the teeth of a blizzard, somewhat trying, one cannot help feeling rewarded when an audience of uncultured people show gratitude and appreciation for what they hear and see. It seems, indeed, that on stormy nights the listeners are more receptive, and the lecturer's rewards therefore are richer.

The manner of delivery is a thing to which too great attention cannot be paid. Some read their lectures, and if this is done a very direct and pleasing delivery is more necessary than if the address is made without notes. In the latter case the speaker gets nearer to the audience, and the personal manner will excuse rounded phrasing. Those who read the works of others, those who are "interpreters" of known authors, have still a different manner to cultivate. Each speaker must simply choose that subject which she is best adapted to interpret, *and which she knows accurately*. Sufficient familiarity with public speaking should insure fluent delivery with or without notes. Of course it is much better to be without papers of any kind, but if the manuscript is needed, then it should be so thoroughly mastered that the eyes can be lifted from it continually and the place easily found again. Nothing detracts from a theme more than hesitancy; nothing more wearies an audience. This is to be avoided at all costs. But it is not well to memorize the written lecture. This almost invariably renders delivery stilted, and a hesitation for a forgotten phrase becomes ludicrous.

Illustrated lectures are more easily given by beginners, for the pictures are really prompters, and by using them for a time the memory becomes trained to recall the heads of an address.

No public speaker should ever apologize for anything but a cold, and that is so apparent that it cannot be helped by an apology. To apologize for the subject or the way it is treated (as I have heard done) is not only foolish but directly harmful to the effect of the lecture. And should it be necessary to apologize for being late, the briefest explanation only should be offered. Naturally a lecturer must endeavor not to be late, but accidents to cars, etc., cannot always be escaped. Once in Brooklyn a blizzard had stopped the cars so that connections necessary for me to make were impossible. Nor could a cab be found; there was nothing to do but wait, and on a cold corner; the audience in the hall waited three-quarters of an hour. Not long ago, when staging through the Redwoods of California, from the coast to an inland town, where I was due on the platform at eight o'clock, a delay occurred far up the mountain. It seemed impossible to reach the town in season, but furious driving on the down-grade, with gasping passengers holding on for safety, finally landed me at my destination, dust-covered and breathless, at a quarter to eight. That audience had to wait fifteen minutes for me to remove some of the dust and be able to speak, and so great had been the effect

on the eyes of the jolting drive that when the platform was reached I could see nothing straight; it would have been impossible to speak from notes. These accidents prove that one must be prepared for any emergency. Wet or dry though the weather be, an engagement must be kept, and only once have I known a storm to be too severe to prevent the assembling of an audience.

The question of dress is not an easy one for such occasions. A short skirt seems the only sensible thing for getting about comfortably when one's hands are sure to be filled with necessary paraphernalia, but a short skirt makes the wearer look neither graceful nor dignified on a platform, while a long gown is difficult to handle in wet weather. The compromise is the carrying of a long skirt of light weight or wearing a long one that is fastened up under a long coat. In no way, however, can a drenching be escaped occasionally. And even under the most favorable circumstances of weather, lecturing is trying to strength, so that every condition connected with it needs to be thought out before it is chosen as a calling.

Then when chosen it must be remembered that constant changes must be made to invite and hold audiences. New subjects must be brought out, new ways of presenting them be used. Many people consider that lecturers are very much over-paid for the work of an hour or two on a platform. Such people do not consider that what is said with so much seeming ease in a couple of hours required months to prepare, years to experience before it could be prepared. The season, too, is short, and the chances of repeated performances uncertain.

The life of a lecturer is not, therefore, an easy one. Still, it has its compensations. If there is a subject to be treated that will be helpful to people to know, if a great theme needs assistance in its exploiting, and the earnest thinker would become

> A voice, a persuasive voice, to carry the wide world through,

then no amount of hard work is too much to endure that the end may be accomplished, and to such the returns of the profession will be quite satisfying.

The New Secretary of War

By A. Maurice Low

IN 1901 William H. Taft, the Governor of the Philippines, was sore in mind and body. He was slowly recovering from a severe surgical operation; "his people," the little brown men over whom he ruled, who were to him something more than mere "subjects," and to them he was something so great and so good that they called him "Sancto Taft," were dying by the score from cholera, their cattle had fallen under the plague, business was at a standstill because of the confusion over the currency. It was a time to try the soul of a man even so buoyantly optimistic as Governor Taft, to make him feel, as all men at times must feel who are not content with merely the trivialities of life, that the burden was almost too heavy to be borne. When things were blackest there came a long telegram from his former classmates at Yale, who, meeting at their annual dinner, determined to show the "Bill Taft" of their adolesence that, although they were separated by 7000 miles of ocean, he was not forgotten. When he received this telegram he was so affected by it, he was so delighted to know that the friends of his youth were still thinking of him, that he was not ashamed to display his emotion.

A year later Governor Taft was in this country on his way to Rome. He had recovered his health, "his people" were no longer cursed by cholera or the plague among their cattle, the problems which had taxed his utmost endeavors were settling themselves, and he was happy, for he was once more among his college chums, and there was a dinner to celebrate the reunion. Governor Taft told how he had received their telegram of the year before, and how it had affected him to know that they still occasionally thought of him. Then, as if moved by a common impulse, every man present said: "Confound you, Bill Taft, forgotten you! Why, we love you."

Now when men past middle life, strong men at that, men who have done something, tell another man that they love him, they set it down that he is a man out of the ordinary, a man of very remarkable qualities; for how many men are there who can inspire love in their fellows?—a love that stretches from late boyhood into middle manhood. And perhaps this better than anything else is the key-note to Judge Taft's character; it explains why the little brown men of the Philippine islands have endeared him with the name of Saint Taft; why the first American called to be the administrator of an American colony measured up to the standard required of him, and showed that although the American people were new to the business of governing subject nations they could adapt themselves as readily to that as they had adapted themselves to other problems demanding the highest qualities—integrity, self-sacrifice, courage, wisdom, restraint.

A man who makes his mark on the world's page owes it to himself, as well as to his biographer, to be born poor, to contend against adversity, and to rise superior to all circumstances; because it makes the task so much easier for his biographer to be able to tell the story of those early struggles and recount the anecdotes with which apocryphal ingenuity surrounds him. Governor Taft has no poverty to be proud of; unfortunately, he never slept under a counter, or swept out a store, or amassed a fortune on a salary of two dollars a week. His father was a distinguished man, not rich as riches are counted these days, and yet not poverty-stricken; the son was carefully prepared for college, and at the proper time went to Yale.

Mens sana in corpore sano is a motto much in favor at Yale, and the men who were with Taft in college agree that it was made for "Bill Taft." He came to Yale physically perfect, six feet two of him from the ground up, the shoulders and arms of a Hercules, a big head properly formed. He was noted as a wrestler, he was in the front rank when Freshmen rushed Sophs, and when Sophs thought it necessary to lay the heavy hand of discipline upon cubs; he was a lover of all good manly sports; and, strange enough, because the two seldom go together at college and the athlete is not often the student, he ranked high intellectually, so high that out of a class of 120 he graduated second, and was the salutatorian and class orator.

Some men are born to be leaders among men. That was the rôle indicated for Taft even in his youth. Every man who was with him at Yale bears testimony to the affection they all had for him, to the control and ascendency he had over them. And the reason why he was so well beloved and was able to wield so much power is the secret of character, the one thing no man may assume if he has it not. In him was typified the highest expression of a sound mind in a sound body. He was sane, well balanced, temperate in all things. He led his class in a rush; he hazed or was hazed, according to the canons that existed at Yale in his day; he entered into the life there, and was prominent in class and college politics, but all with tempered moderation, just as he took his glass of beer, but no one ever knew him to be anything else but temperate or to idle away his time when there were more important things to be done.

The power to master a subject without working was never Taft's gift, as so often distinguished many superficially brilliant men at college, who flash across the university horizon and sink into obscurity as soon as they go out into the world. He was intellectually a strong man before he reached maturity, but his greatest strength was his power of hard and sustained work; he said frankly when he first went to Yale that he came there to work and to learn, and as he was not a prig, and as he possessed to a superlative degree that subtle, indefinable charm of personal magnetism, and he was physically and mentally big, with a heart that corresponded to his body, he was respected for his declaration, and exerted an authority over his associates which they admit was good. It was the force of his sanity, his balance, his moderation that exercised this influence.

When a man deliberately turns his back on the easy things of life to take up those that are difficult and unpleasant, when he makes a sacrifice, knowing full well the extent of his sacrifice; when he puts behind him his dearest ambition because ambition conflicts with duty, that man has deserved well of his country. Governor Taft has done all of those things. The way in which he came to be Governor of the Philippines is typical of the man's lofty conception of duty.

President McKinley needed a chairman of the Philippines commission. He consulted with Secretary Root, and after canvassing many names Mr. Root decided that the one man of all others for the place was Judge Taft, at that time one of the United States circuit judges, if he could be induced to leave the bench. Mr. Root had known him as a distinguished lawyer and judge; he had a high respect for his legal and intellectual attainments; his personality had impressed him. Judge Taft was asked to come to Washington. In Washington a conversation somewhat like this took place between Secretary Root and Judge Taft: "You are at present on the circuit bench, where you have a life position at a fair salary, a dignified and honorable place, with a pension for life after you reach the retiring age. You can count with a reasonable degree of hope of being appointed to the bench of the Supreme Court of the United States, the ambition of every lawyer. We want you to go to the Philippines. The work is difficult, laborious, perplexing; there is little that can be offered you in the way of reward, there is much that will be unpleasant—which will you take, the easy place or the hard one?"

Judge Taft needed no time for deliberation. He frankly admitted that it had been his ambition to go on the bench of the Supreme Court of the United States, the goal to which every lawyer looks, and yet he felt that he could do more good and be of greater service to his country if he let his ambition sleep and went to the Philippines to help solve a problem new to Americans; to do his share in meeting the responsibilities which were thrown upon the United States as a result of the war with Spain. So he went to the Philippines, and twice while there the temptation came to him to drop the work in which he was engaged and find dignified rest on the Supreme bench. Twice there were vacancies; on both occasions he was told the place was his if he would take it, and twice he refused—perhaps the only man who has twice declined that honor. But there was still work to be done, and he felt it would be as unworthy for him to leave his labors unfinished as it would be for a soldier to drop his rifle in the thick of the fighting. Now he comes to Washington, because as Secretary of War he can carry on in Washington what he began so well in the Philippines, because the time has arrived in the affairs of his wards when he can be of greater service to them in Washington than in the Philippines.

Some Recent Plays in Caricature

IN his interesting discussions of recent and current plays, now appearing in the WEEKLY, Mr. Howells notes a suggestive difference between such English plays as "The Admirable Crichton," "Little Mary," and "Whitewashing Julia," and such American plays as "Her Own Way," "Glad of It," and "The Other Girl." Mr. Howells points out that the English plays have to do with man as a social being—a society man in the narrower and wider sense, and that the American plays have to do with man as a family man: that with us the main human interest is the home, while with the English the main human interest is society. The plays of which some of the leading characters are caricatured in the accompanying drawings, while they are variously English and American, scarcely lend themselves to such a comparison. "Raffles," a dramatization based on Mr. Hornung's "Amateur Cracksman" stories, is melodrama in evening dress; "The Marriage of Kitty" is a modified English version of a French farce, "La Passerelle"; "The Pretty Sister of José" is an adaptation made by Mrs. Frances Hodgson Burnett from her novel of that name, dealing with a Spanish subject; "The Red Feather" is a comic opera of the familiar sort, while "Waffles" is a typical Weber and Field burlesque of the Hornung play. Most of these, in the main, are, as Mr. Howells remarks of "The Marriage of Kitty," "of a dramatic creed outworn," and they lend themselves fitly to caricature rather than to sober critical study. A few notes on the productions which have furnished material for the sketches will suggest the dramatic background of the different figures. In "Raffles," produced at the Princess Theatre, the part of the gentleman burglar of Mr. Hornung's book is played by Kyrle Bellew; that of the detective, *Captain Bedford*, by Mr. E. M. Holland. The action of the play turns on the theft of a diamond necklace at a house where *Raffles* is being entertained as a guest. The identity of the cracksman is discovered by an adventuress, also staying at the house, who is in love with him, and who, piqued by his failure to return her affection, very nearly brings about his capture by the detective. *Raffles's* final escape is a memorable incident. In the Weber-Feld burlesque of the play, made by Edgar Smith as a pendent for "Whoop-Dee-Doo," Peter F. Dailey plays *Waffles*, and makes up as an excellent travesty of Mr. Bellew. Louis Mann, as *Captain Deadwood*, burlesques Mr. Holland; and there is *Creshay*, "an honest, hard-working burglar," who keeps his alarm-clock ringing while he robs a house in order that he may stay awake.

Mr. Holland as "Captain Bedford"

Peter Dailey as "Waffles"

Captain Deadwood can't sleep when there is a burglar to run down, he says.

"That," replies *Waffles*, "is because you are not a regular policeman." The diamonds which *Waffles* is after are kept in the ice-chest.

The Honest Burglar sits on the door-step to knit.

"What are you going to knit?" asks Mr. Weber, as *Marie*, the French maid.

"A jimmy," answers the Honest Burglar.

In "The Marriage of Kitty," which had a profitable run at the Hudson Theatre, Miss Marie Tempest played the part of *Kitty*, an attractive country girl in straitened circumstances. She visits her godfather, a solicitor, to consult him about an occupation, at the same time that *Reginald Belsize*, a young baronet, applies to the lawyer for advice. He is about to inherit a large fortune from a deceased uncle, which is left to him only on condition that he does not marry a certain Peruvian widow, of whom the rich relative disapproved. The lawyer suggests as a solution of the difficulty that he contract a temporary marriage with some one, and, after receiving his fortune, divorce her and marry *Madame de Semiano*, the widow from Peru. *Belsize* likes the idea, and *Kitty*, for a consideration, consents to become the nominal *Lady Belsize*. After the marriage, the baronet and the Peruvian, properly chaperoned, go travelling together, while *Kitty* keeps house alone in her husband's Swiss villa. *Belsize* soon wearies of the widow, and returning to his home, falls head over heels in love with *Kitty*. The Peruvian appears on the scene and finds the baronet making love to his own wife; he refuses to be divorced, and the widow goes into hysterics. Finally, the baronet and *Kitty* elope, while *Madame de Semiano* reverts to a former lover, whom she discovers to be her real affinity.

Maude Adams as "Pepita"

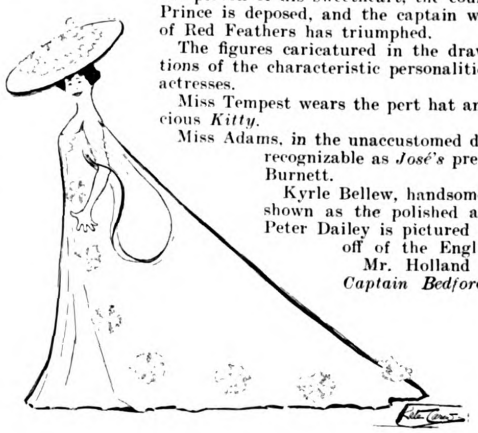
"The Pretty Sister of José," Mrs. Burnett's dramatization of her story, was produced at the New Empire, with Maude Adams, who had been absent from the stage for a season, in the principal part. *Pepita*, the "pretty sister of José," is a Spanish girl with a mind of her own. *Sebastiano*, a bull-fighter, is in love with her, and wants her to marry him. But *Pepita* remembers that her mother was abused by the husband to whom she was devoted; so *Pepita* wants nothing to do with men, and repulses the matador. When he is wounded by a bull, however, her sympathies are touched, and while she nurses him in his illness he succeeds in winning her love.

Mr. Seabrooke in "Red Feather"

"Red Feather" was written jointly by Messrs. De Koven, Klein, and Cook; Mr. De Koven wrote the music, and Messrs. Klein and Cook the libretto. It was played at the Lyric Theatre, with Miss Grace Van Studdiford, formerly of "The Bostonians," as the heroine of the story, and Mr. Seabrooke as the chief comedian. The action of the piece centres about the operations of a band of conspirators who are attempting to overthrow the reigning dynasty in the mythical kingdom of Romancia. *Red Feather*, the chief of the band, is known to the world as the *Countess von Draga*. Her lover, *Captain Travors*, of the Romancian army, is ordered by his rival, the Crown Prince, to find and capture the dangerous *Red Feather*. He succeeds in reaching the council-chamber of the band, and finds the dreaded chief in the person of his sweetheart, the countess. In the end, the Crown Prince is deposed, and the captain wins his lady, after the Order of Red Feathers has triumphed.

Mr. Bellew as "Raffles"

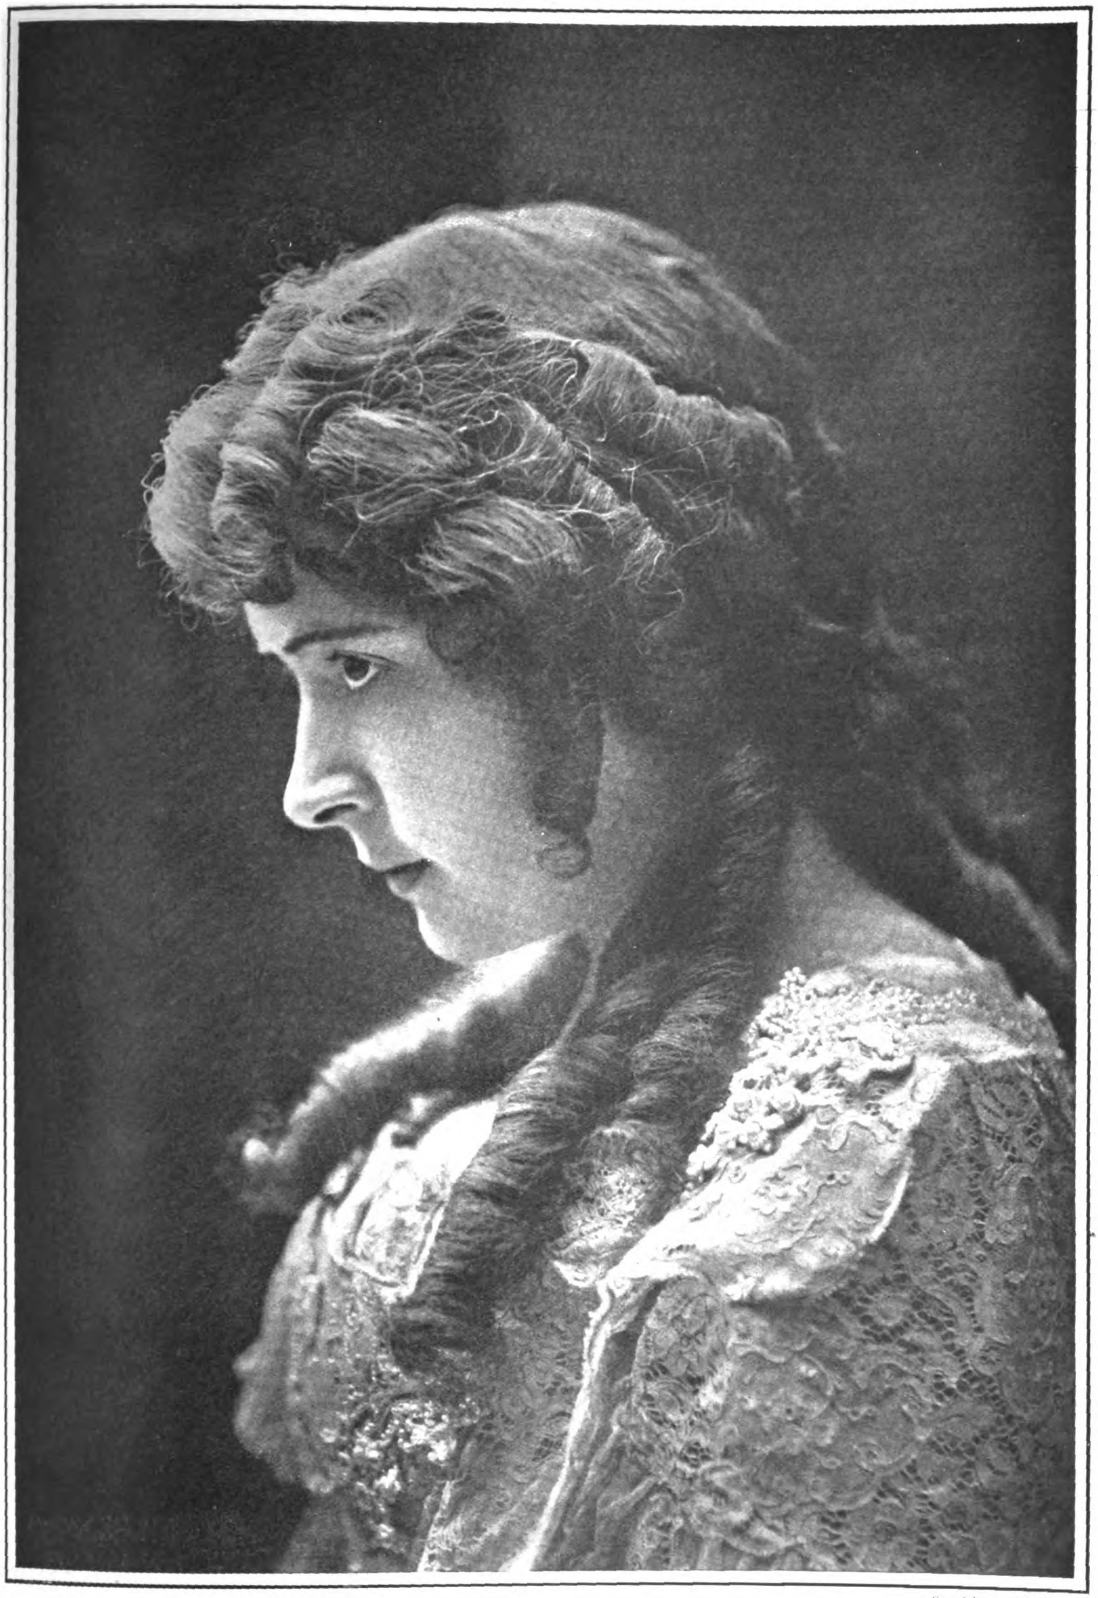
The figures caricatured in the drawings are excellent exaggerations of the characteristic personalities of the different actors and actresses.



Miss Tempest wears the pert hat and sweeping train of the vivacious *Kitty*.

Miss Adams, in the unaccustomed dress of a Castilian maiden, is recognizable as *José's* pretty sister in the play by Mrs. Burnett.

Kyrle Bellew, handsome and of romantic bearing, is shown as the polished and resourceful *Raffles*, while Peter Dailey is pictured in his admirably comic take-off of the English actor.



Mr. Holland appears in the drawing as *Captain Bedford*, who almost brings about the cracksman's undoing. The anxiety and intentness of his expression, and his habit of nervously twisting his mustache, are humorously emphasized.

Mr. Seabrooke is caricatured in one of the antics with which he enlivened "Red Feather."

Marie Tempest in "The Marriage of Kitty"

MISS BERTHA GALLAND AS "DOROTHY VERNON"

Miss Galland has recently appeared in New York in the title part of Paul Kester's dramatization of Charles Major's novel, "Dorothy Vernon of Haddon Hall." "Dorothy," a girl of Elizabeth's time, loves "Sir John Manners," the son of the "Earl of Rutland," hereditary foe of the "Vernon" family, who is forbidden the house. He is discovered visiting her in secret, and is threatened with death. "Queen Elizabeth" offers to save him on condition that "Dorothy" obtain from him the secret of the hiding-place of "Mary, Queen of Scots," which he knows. "Dorothy" gets the information, and then, in regret for her betrayal of "Mary," contrives her escape by means of a change of costume. Her lover, "Manners," is not killed, but is sentenced to exile; and at the end "Dorothy" eludes her family and goes with him

Correspondence

HOUSEHOLD SERVICE ON A BUSINESS FOOTING

BOSTON, *January 5, 1904.*

To the Editor of Harper's Weekly:

SIR,—In a recent HARPER'S WEEKLY a correspondent suggests the solving of the domestic problem by putting every servant and household duty on a strictly business footing.

Of course a man wrote that. Every woman knows as long as young children, illness, and the occasional absence of the housekeeper are facts to be reckoned on, the incidental extra duties of those employed will have to be more or less a favor to the employer.

In the business world the superintendent or manager is present during recognized business hours. There are no universal housekeeping hours, and a well-conducted household runs as smoothly without the mistress as with her.

That result, in my opinion, can *only* be obtained by absolute frankness, honesty, and consideration between the mistress and maids which engender a general good feeling and peace felt in the very atmosphere of the house.

I am, sir,

LISBETH DAVIS OGDEN.

THE NEED OF PUBLICITY

SAN ANTONIO, TEXAS, *December 11, 1903.*

To the Editor of Harper's Weekly:

SIR,—Having read with interest your comments on the race question, which prove your desire to be fair at all times to all concerned, I am moved to offer a suggestion as to a possible method of reaching a solution of the problem. One great bar to solution is the mixing of partisanship and sectional feeling in the consideration of the problem; and another difficulty is the lack of authoritative information as to the conditions existing. In order to solve any problem it is necessary, first, to approach it with a mind clear of prejudice and preconceived ideas of what the solution should be, and, second, it is necessary to have at hand all the facts obtainable bearing upon the question at issue. A majority of persons who take upon themselves the task of offering solutions of the race question either approach the problem with a settled conviction that certain conclusions must be reached, regardless of the premise or logic, or they are ignorant of the most elementary facts. These two classes have succeeded only in beclouding the question.

Now what I propose is this:

Secure the enactment by Congress of a law creating a national commission.

The members of this commission to be chosen by the President of the United States, the Chief Justice of the Supreme Court of the United States, and the Speaker of the House of Representatives.

Fix the number of commissioners at not more than twelve and not less than six, two to be of the negro race, and half the commissioners to be residents for longer than ten years of States in which slavery did not exist, and half of States where slavery did exist at the outbreak of the civil war.

Give the commission abundance of time and the necessary authority to enable it to thoroughly investigate every phase of the question, the testimony to be taken in writing, and to form the basis of a report, embodying whatever conclusions and suggestions the commission may see fit to make.

The high character of the appointing power would preclude the possibility of the commission being swayed by partisan or sectional influences. The evidence and findings of the commission would be *authoritative*. They would throw light upon all dark places and leave no excuse for any man to remain ignorant of the actual conditions. The report would reduce the whole matter to a scientific basis.

By advocating some such scheme as this your paper may lead the way to the solution of a question which is every day becoming more important to the welfare of the whole country.

I am, sir,

SHIRLEY W. JOHNS.

THE BREAD WE EAT

SANTA MARIA DEL ORE, MEXICO, *January 12, 1904.*

To the Editor of Harper's Weekly:

SIR,—I take your paper weekly and enjoy it. I read recently an article therein on "whole meal" and "white flour" (bolted) bread. The article tried to prove that "bolted" bread was as good as, if not better than, "whole meal" bread. I enclose the following from a Pittsburg paper which perfectly agrees with my personal experience. When mining in Norway years ago I found that the people only used "white bread" as we use cakes—*i.e.*, as an indigestible luxury; and soon after landing I was warned by a physician to avoid "white bread," and especially that made from fine white bolted flour, and he added, "If you must eat it cut a similar slice of rye bread and eat the two together to avoid indigestion." I found out he was right by experience.

I am, sir,

WALTER E. KOCH.

P.S.—A miner usually has a good digestion.

BREAD.—Baron Steuben says that the peculiar healthfulness of the Prussian soldiers was in a great measure to be attributed to their ammunition bread, made of grain, triturated or ground, but not bolted, and which was accounted the most wholesome and nutritious part of their rations. The Dutch sailors, in the days of their naval glory, were supplied with the same kind of bread. During the war between England and France, near the close of the last century, wheat became very scarce. William Pitt was the Prime Minister, and at his instance the government recommended to the people generally throughout the country to substitute potatoes and rice as far as possible for bread, in order to save the wheat for the foreign army. The scarcity was alarming, and Parliament passed a law, to take effect for two years, that the army at home should be supplied with bread made of unbolted wheat meal, solely for the purpose of making the wheat go as far as possible, and thus saving as much as they could from the home consumption for the better supply of the army on the Continent. Throughout the whole of Great Britain the soldiers were supplied with this coarse bread. After two or three weeks the men began to be much pleased with it and preferred it to the fine-flour bread. The result was that not only the wheat was made to go much farther, but the health of the soldiers improved so manifestly that it became a matter of common remark among themselves, and of observation and surprise among the officers and physicians of the army. These gentlemen publicly declared that the soldiers were never so healthy nor so robust before, and that disease of every kind had almost disappeared from the army. The public papers were for months filled with commendations for this bread.—*Presbyterian Banner.*

WHERE NEGROES ARE ALLOWED IN THE SOUTH

CLARKSDALE, MISSISSIPPI, *January 4, 1904.*

To the Editor of Harper's Weekly:

SIR,—It was amusing indeed to read the two contradictory articles in your issue of January 2, regarding negroes being allowed to live in Mitchell County, North Carolina, and both coming from Raleigh, North Carolina. Now I am a native Mississippian, also native of Delta portion of Mississippi, where we have easily *twenty* negroes to one Caucasian. Now I will state from my own personal knowledge that Professor Hart is correct when he says negroes are not allowed to reside in some places in South. I know myself of certain localities some two to four miles square, where few, if any, negroes live, and I am positive that 'tis rather uncomfortable for the few who do live either in or on the edge of these localities. These localities are settled with what we term "Red Necks"—low illiterate whites. I don't think there is any place so large as a whole county, but there is no denying the fact that there are such localities. Our negroes have a comical song they sing about these localities, one line of chorus being, "Nigger, don't let the sun set on yo' head," *and* 'tis amusing indeed to have a darky tell his experience with such localities. Just a few days ago I laughed heartily at two negroes relating their experience with such a locality to me. Two counties in this State, Amite and Scott, have portions where the negro is not only not wanted, but was literally driven out.

Now I am distinctly Southern, and don't think I have a single relative north of Mason and Dixon's line, nor ever had. I also supported Vardaman in our Gubernatorial race; however, I think the facts about things should be plainly told.

This low illiterate white is the only enemy the negro has in the South. I knew one negro who worked only two mules, who cleared in cash, after living all year, $1286 40, and numberless others who cleared from three to eight hunded dollars. Do you know of any place on face of globe he can do half so well? The educated white man is friend of negro so long as he remains in his place, and I have never seen him out of his place in Mississippi, and hardly think I ever will. I am and have been for years a constant reader of HARPER'S WEEKLY, rightly called "Journal of Civilization," and you, I think, have most correct idea of exact status of race question and are broad-minded enough to see things as they are. I remember several months since reading article in the *Independent*, stating we of South knew nothing of the negro. If we don't know him, pray who does? Now some resident of Amite or Scott County may read this and take issue with me on ground that the negro there was not compelled to leave by residents, but that shrewd labor agents for planters and contractors in Delta posted notices to leave in a few hours, purporting to come from residents, when really they were posted by the labor agent to frighten negro, so he could take him to Delta. However, the recent whitecap outbreaks against the negro there have proven that this was not so, and that those counties have an element who just "don't like a nigger nohow," and Professor Hart was correct when he so stated.

I am, sir,

"DELTA RESIDENT."

How Europe Trains its Wage-earners

By William Hosea Ballou

EUROPEAN governments, generally, give more or less free instruction to children of the masses to assist them to be self-supporting and to prevent their becoming a charge on the state. The instruction extended is typical of the leading industry of the particular country involved. Thus, Russia, now expanding its railways, has schools for that branch of education; France, Switzerland, and Belgium instruct in agriculture on a vast scale; Sweden turns out the best landscape gardeners in the world, giving especial attention to arboriculture; and Germany teaches agriculture, but more of manufacturing. While it is true that the United States provides instruction only in its naval and military branches, which is not compulsory, we must not forget that the district school is strictly under the supervision of the States, in many of which primary education is compulsory to a monarchical extreme.

Russia's Railway Schools

The railway schools of Russia are among the most interesting of all nations. When the great Siberian Railway is completed it will form a practical westward continuation of the American trunk lines, connected by international ferries in the form of gigantic steamship lines. It was the construction of the wonderful Siberian Railway which largely liberalized all Russia and turned its attention to the education of children. At the latest report, Russia was teaching 6000 children of railway men all branches of modern railway construction and operation. Russia recently sent two eminent ministers of affairs to this country to examine the workings of the railway branches of the Young Men's Christian Association, for the immediate introduction of the service at division points of the railways of all Russia.

France's Educated Farmers

In France, as in the United States, agriculture engages fully one-half of the population. Since 1822, when the Institute of Roville was founded by Dombasle near Nancy, the French free training system has, with many ups and downs, gradually extended until it covers all France and all forms of soil culture.

French children, under government training, are first put in primary schools, thereafter to pass up through all departments to the National Institute. It must be admitted that the term "French peasant" means something vastly more than a farmer of any other nation. When the French boy emerges from the institute he is no yokel, but an educated man who can make the most of the smallest area of soil. He knows familiarly all life on the farm, animate and inanimate, also all objects, organic and inorganic. He is fully equipped to create wealth from the smallest means. Through him we understand the vast combined wealth of the French peasantry. Were such a system in vogue and compulsory in America, forty million farm-workers would be elevated from a homely and commonplace existence to an educated mass, capable of wresting untold riches out of a vast soil which to-day is often worked in the most ignorant and humdrum manner, producing a mere living per family, and generally mortgaged beyond its present worth.

In Other Countries

Belgium closely follows France as a great government educator. There are separate free schools for both sexes scattered throughout the kingdom for children of six years of age of the poorer classes; primary schools for which a small quarterly fee is charged for those who can afford to pay; free housekeeping schools for girls of the age of fourteen; and temporary dairy schools for girls of fifteen.

Sweden has more than 2000 school gardens, in which gardening is the principal feature. Austria has many of these, and Germany but few. In Germany the higher education occupies the whole public mind, the arts, sciences, and music. It also excels the world in higher technical and mercantile education. Land is too high in Germany and too thickly settled to be devoted to very large agricultural uses. Germany prefers to devote its vast energies to manufacturing and commerce and let other nations feed it.

Switzerland has many government schools, but all are similar to the above and modelled after them.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

ALL SEAMEN
know the comforts of having on hand a supply of BORDEN'S EAGLE BRAND CONDENSED MILK. It can be used so agreeably for cooking, in coffee, tea, and chocolate. Lay in a supply for all kinds of expeditions. Avoid unknown brands.—[*Adv.*]

TELEPHONE Service lightens the cares of house-keeping, saves time, and prevents worry. Low rates. New York Telephone Company, 15 Dey Street, 111 West 38th Street. —[*Adv.*]

ON the ocean greyhound, relieve your seasickness with a pint of COOK'S IMPERIAL EXTRA DRY CHAMPAGNE.—[*Adv.*]

STEADY nerves and a clear, active brain come from the use of ABBOTT'S, the Original Angostura Bitters.—[*Adv.*]

FOR a tenacious and persistent cough, PISO'S CURE FOR CONSUMPTION is an effectual remedy. 25 cents.—[*Adv.*]

ADVERTISEMENTS.

QUIT COFFEE

Said the Great German Specialist.

It disappoints some people to be told that coffee causes the disease. But it is best to look squarely at facts and set the face towards health, for that's more fun than anything else, anyhow. A Cincinnati man consulted a Berlin physician on nervous diseases, and says:

"Four years ago I was an habitual coffee-drinker, having used it for 25 years, and being naturally of a nervous temperament, I became almost a nervous wreck, greatly suffering from insomnia, almost constantly constipated, and weighing only 128 pounds.

"I consulted physicians and took medicine all the time, but had no relief. About three years and a half ago I went abroad, and while in Berlin heard frequently of a great physician, Prof. Mendel, an authority on nervous trouble, so I resolved to consult him.

"Prof. Mendel surprised me very much by asking at once if I was a coffee-drinker, and on my telling him I used it two or three times a day, he said, 'It is poison.' After carefully examining me, he told me there was nothing the matter with me whatever but what could be entirely cured in 30 days by letting coffee and other stimulants alone and dieting.

"I had a hard time following his advice. I did not know what to do until I came home and told my wife, who got some Postum. We tried it, but at first did not like it; then we went over the directions on the package together, and found we had not boiled it long enough. That was the beginning of the end of my trouble, for the Postum was delicious after that, and I drank it regularly and it helped from the start.

"In a very short time I began to feel much better, and in the last three years I haven't been absent from business one hour on account of ill-health, for my health is fine now. I have a good appetite, sleep well and weigh 175 pounds." Name given by Postum Co., Battle Creek, Mich.

Any nervous person who drinks coffee will feel better from 10 days use of Postum in place of coffee. Trial easily proves this. There's a reason.

Look in each package for a copy of the famous little book, "The Road to Wellville."

Chicago St. Louis Cleveland Pittsburg

Pennsylvania Railroad Tour to California and New Orleans Mardi Gras.

A personally-conducted tour to Southern California will leave New York, Brooklyn, Philadelphia, and Pittsburg, by special train over the Pennsylvania Railroad, on February 11. The route of the tour will be via New Orleans, stopping at that point three days to witness the Mardi Gras festivities. The special train will be continued through to Los Angeles, from which point tourists will travel independently through California and on the return trip.

The special train in which the party will travel from New York to Los Angeles will be composed of high-grade Pullman equipment, and will be in charge of a Pennsylvania Railroad Tourist Agent.

The round-trip rate, $250, covers transportation and all expenses on the special train to Los Angeles, including a seat for the Mardi Gras Carnival. From Los Angeles tickets will cover transportation only, and will be good to return at any time within nine months, via any authorized trans-continental route, except via Portland, for which an additional charge of $15.00 is made.

For complete details and further information, apply to Ticket Agents; Tourist Agent, 263 Fifth Avenue, New York; 4 Court Street, Brooklyn; 789 Broad Street, Newark, N. J.; or Geo. W. Boyd, General Passenger Agent, Broad Street Station, Philadelphia, Pa.

THE HEART OF HYACINTH

By ONOTO WATANNA

Author of "A JAPANESE NIGHTINGALE," Etc.

Japan—the land of flowers—is the scene of this new love story by the author of "A Japanese Nightingale." It is marked by all the daintiness and naive charm of style of the earlier book. The story is even more original. Bound in lavender cloth, with gold and colored decorations; delicately colored illustrations and quaint Japanese decorations on every page. A marvel of artistic book-making.

THE COWARD

BY A. CONSTANCE SMEDLEY

THERE was nothing at all remarkable about Tilden, nothing to single him out from the shoals of young men one may see any morning on the tram-cars in Peckham. He was in a good position as under-manager in a timber merchant's office, and he was very steady and reliable. His position gave him something of importance in his little world; his income was assured, his tastes wholesome and domestic; and he himself passably good-looking in a somewhat sketchy indetermined fashion; and so it was only natural he should have a not unduly diffident opinion of himself. He liked ladies' society, but he took care to raise no definite hopes in any direction; his parents were as careful of him as he was himself, and if any man seemed likely to make a prudent choice, one would have said it had been Tilden.

And then Tilden must fall in love, and with the last girl in the world he would have chosen in calmer moments for his wife! Tilden thought her beautiful, with her innocent brown eyes and curly short hair, fluffy and silky like a baby's, though she was too delicate to be really pretty. She was so slight, one wondered how she kept her feet in a breath of wind, and so soft and pale, one hardly dared to touch her lest she should melt away like a spirit. Yet she was brimful of nervous life and spirit, and was as excitable as a little fowl. She used to chatter away to Tilden, and he was cautiously amused and attracted from the very first.

Then came the night of the performance of his dramatic club. They played "Romeo and Juliet," and the little girl was *Juliet*. She distinguished herself in a way that surprised every one. The tomb scene was her triumph. With the darkness and the limelight, she worked herself up to such a pitch of excitement that she electrified the house, and when it came to the death scene, the scream she gave made people shudder. It was terrible to see her little nervous body, lying on the floor, so pitifully helpless. It gave one a sick feeling, as if one had trodden on a bird.

The audience applauded frantically when the curtain dropped, but she did not appear. She had collapsed into a chair in her dressing-room, and was crying like a child who is afraid of the dark. It was then that Tilden fell in love with her. She held on to his hand when he brought a restorative. "You're so sensible and safe!" she said, and cried and cried, quite heedless of the surprised looks of those around her; and, marvel of marvels, even Tilden the conventional did not seem to heed them either!

Their engagement was announced a few days later, and no one was very much surprised, except Tilden's people. Tilden himself did not improve in his engagement. The way that little girl looked up at him and trusted him would have made a modest man think well of himself, and Tilden had never been lacking in a due estimation of his worth. And the more importance he assumed, the more she admired his manliness. The one ideal that she worshipped in him, besides his wisdom and uprightness, was his bravery. Why, I never knew. Tilden did not look a hero; he was neither tall nor short, and had no particular coloring; his eyes were a pale gray and his hair a mousy brown, and he had a commonplace little mustache and nothing arresting in the way of a chin; and I do not think he had ever given any great proof of courage even in his conversation. But she was never tired of comparing him to great heroes, much, of course, to Tilden's advantage. But with all her romance and imagination, the little girl could not make an ideal of their engagement, even in her most enthusiastic moments, for Tilden's mother, who opposed the marriage, hovered over them like an ominous vulture.

And then the clouds on the horizon showed a sign of lifting. Tilden's firm had lately bought an enormous tract of forest land out West, over which they offered him the post of general manager and overseer. The country was uncleared and wild. He would have to live in a log hut, away from any township, in the midst of the forests. Tilden was not particularly attracted by the prospect; he had little taste for scenery, and none at all for solitude. He was unhappy by himself; he had been born in a suburb, he had grown up in a suburb, and he was made on a small indoor scale.

Still, it was not Tilden, to all outward seeming, that set the ball rolling. It was the little girl who was so anxious for Tilden to accept the offer and go out West.

In vain he pointed out to her how lonely it would be; to her romantic mind that was only an advantage. The more she thought of it, the more ideally romantic and inviting the prospect seemed, and the more determined she was to go, and she did her very best to flatter Tilden into acquiescence.

"If we have to live so simply," she explained, "we can save all your salary; and when the three years are over we can take a heavenly holiday and go to Italy. Oh, and think when we come home again! How proud I shall be of you, when I look at the other men who've lived at Peckham all their lives and have no experience of the world but Brighton!"

With one thing and another she made up such an attractive picture of Tilden's return home that Tilden could not help feeling that he certainly would shine out wonderfully at Peckham when he did return after his foreign experience. He at last decided to go. They were to sail in the early autumn, and the marriage was hurried on accordingly.

One afternoon just before their marriage they planned to take a cycle ride. It was a beautiful July day, and as I had nothing particular to do, and mentioned it, the little girl invited me to go with them, for she was so happy she could not make herself too sweet to any one.

I never saw any one ride so recklessly as that bit of a girl, and yet I felt she had not any real courage. She seemed to be continually rushing into danger through sheer senselessness. A person like that keeps one's heart in one's mouth, especially if one is of a nervous nature. It was dreadful to see the way in which she would go tearing down the hill, and then call out half-way down that she could not stop herself. Tilden, being more used to her, simply shouted to her not to be so silly, and cycled along sensibly with me.

We were pedalling down a rather steep incline, when suddenly the little girl started ahead. She had just attained full speed when, at the bottom of the hill, a herd of bullocks turned into the road from a neighboring meadow, and we did not see a man with them. Then, to my horror, I saw that she had completely lost her head. She had not the sense to take her feet down and back-pedal; she simply gave a scream and flew straight into the midst of them.

Tilden's face was white as death. "Stop, you fool!" he was saying, in a queer strained voice, quite softly. "Stop, you fool!"

His hands were clenched upon his handle-bar. Naturally, I thought he was following. Frightened as I was, it never entered my head to let that little girl ride right into the midst of those bulls by herself, and then turn round and find no one was with her; so I tore down as quickly as I could, shouting out at the bulls to scare them, and, fortunately, the man came up and headed them to one side just as the little girl and I flashed past. We came to a standstill at the foot of the hill, and it was not till then that I discovered that Tilden was not there.

I looked up the hill. I could not believe my eyes. The bulls had turned down a lane and had disappeared, and at the top of the hill Tilden was coming out of the hedge. He was mounting his bicycle. He had got off. The little girl saw him. I shall never forget how she looked. It was as if the whole world had gone away from her and she was left in space. Then we stood and watched him, riding down the hill, and he put up his feet, very brave and dashing, as he did so.

"My bicycle skidded," said he, as he came up panting and rather flushed. "I never had such an awful moment in all my life!"

He said he would like to give the cow-herd a good talking to for his carelessness, which I believed, for this was just the sort of thing Tilden did like to do; but Tilden had mounted his bicycle at the exact place where I had left him, and when a bicycle skids downhill it generally throws you some short distance.

I never had such an uncomfortable ride as that ride home.

Tilden was the only one who talked, and he had plenty to say—about all his sensations when the bicycle skidded, and the folly of the young lady, and what might have happened! He rode by her very carefully down the slightest incline, but she never spoke, and when I left them a frightened look had come into her eyes, and I do not believe it ever left them again. A few days later the little girl came to Tilden and asked him to give up his post abroad. A sudden fear seemed to have come to her. She said she did not want to leave her people; but Tilden knew what it was well enough. He knew she had lost confidence in him. I expect he felt wretched enough. I am sure of one thing, that Tilden was passionately in love with her, and longed with all his heart to take care of her and make her happy, and when she begged him to stay he turned obstinate, and said he was not going to back out now and look like a fool. The wedding was to be in a few weeks now, and they were to go straight off from the reception to Southampton. He would not budge from his determination now, if he had been wavering before; she cried, and pleaded, and even threatened to break it off at this last moment, but in the end she had to give in.

I went to the wedding, and I felt things were not right. I never saw a bride cry as she did. She gasped with sobs, and held her mother, as if they had been tearing her away to take her to her death. I went down to the station to see them off; and she had quieted down a little by then and held on to Tilden's hand as if she had made up her mind to trust him; but there was a look in her eyes—it was not human—the look when the train went out and carried her away. It was just as if she knew she would never come back again. Nothing will ever make me believe that that little girl had not some presentiment of what was going to happen.

The house to which Tilden took his little bride was built of logs and stood by itself upon a stretch of grass, and the mountains rose up all around them, covered by enormous forests. The river ran between the mountains some way from their cabin, and it was larger than any river we have here, and had horrible, savage, foaming rapids, and when there had been rain they could hear the logs booming down the water, with a muffled sound, like drums or thunder; but it was most horrible of all when it flowed on silently. It was miserable in the long spells of rain, but when the sun shone it only made the mountains seem more desolate and lonely; and Tilden hated the place from the first moment that he came into it, and so, in her heart, did the little girl; though she loved Tilden so much that she pretended to herself that she was happy.

Tilden was away all day, riding through the forests, or down at the settlement, five miles away, where there was a tin-mine; the little girl was left by herself all day, and long days they seemed, there in the shadow of the great trees where no birds sang. But she tried every way she knew in which she could occupy herself and keep bright and cheerful till Tilden's return; and when he came home she would sit by him, holding his hand, and they would talk of their people and wonder what they were doing now; and they would remember the bicycle rides they had had in the days of their engagement, and the dances they had been at together, and they would speak of the dramatic club.

And all the while the wind would be moaning outside in those huge forests; and they would hear the river booming sullen and deep, far in the distance, and they would fall silent.

And while she sat there, with her hand clasped tightly in his, and her cheek against his hand, he would feel something like a tear upon it, and somehow he knew she was not crying because of the dulness of the place, nor even because she missed her home people; only she was longing so passionately to feel the busy life of Peckham round her, to see shops and cars, and people, the every-day commonplace people that she knew. She was frightened, but she always tried to hide her tears, and never did a thing without asking his opinion or permission.

Her sweetness and obedience made Tilden

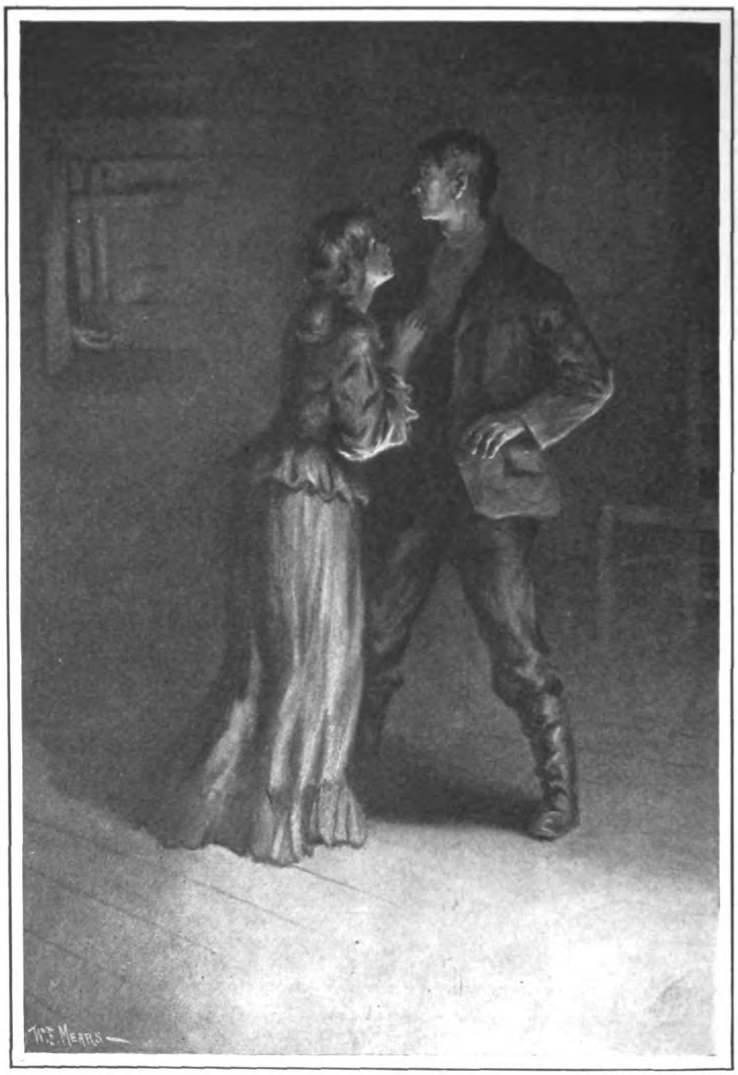
love grow so strong and passionate that he longed more than anything in the world that she should feel safe; and to this end he bought a little pistol, and they would practise shooting at a mark together; and then she grew more cheerful, and carried the pistol with her always, stuck in a natty leather belt, and the color came into her cheeks again. She practised through the lonely days, and grew wonderfully skilled and quick, far surpassing Tilden, who could not overcome his nervousness with firearms. But he overcame it in part, for her sake. He says whatever a man could do to make it easier for her he did; if he had been her mother he could not have thought about her more, or been more tender; and there was not a night he did not pray to God to make him brave for her sake; and all the time he hated the mountains and the forests more and more.



For he heard rustling noises in the branches when he walked beneath them, and dared not look up lest he should see bright eyes shining, silent, in the leaves; and at night, when he sat in the little cabin with his wife's hand in his, he heard soft footsteps coming across the grass, padding round and round the walls, and he dared not look outside for fear of seeing a long black shadow coming over the long stretch of grass out there in the moonlight; and he would wish the hut was underneath in the shelter of the trees. Out there on the grass the moonlight lit up all things so plainly.

Tilden says whatever he is suffering now is nothing to what he suffered then, which I believe; but he also says that this agony of fear was nothing to the agony he felt to think his wife had lost her trust in him. And the thought was always with him that he must convince her he was brave, and see her look up to him confidently, as once she had done.

I have said that Tilden was vain, and I have hinted that he was a fool, but I can hardly expect any one to believe the incredible folly of the idea that came to him. It grew up within him, little by little, in those long, long evenings, when he sat by the fireside and listened to the footsteps thudding across the shining grass. His wife was listening, too—he could tell that by the terror in her eyes; and a passion of longing would rise up in him, and he would yearn to take her in his arms and feel her nestle to him and be comforted. The feeling grew so strong that it made him brave, and there were nights when, if one of the wild creatures he feared so much had crashed in through the door, he would have risen up and caught it by the throat, and felt his fingers dig into the flesh, warm and quivering. It was in one of these nights the plan came to him.

Tilden says he prayed to God to help him show his wife that he was brave, and he thought God was answering his prayer. He thinks he prayed that the danger should be a terrible one that should come to him to prove his manhood.

There were some Chinese at the settlement who worked in the mine; his wife shrunk from them and hated them, and called them thieves, for one day, though she had never told it to Tilden, she had seen one of them peering through the door at the little treasure-chest where she and Tilden kept their earnings. They cringed to Tilden, unlike the Western miners; or the woodsmen, who worked for Tilden, but would not call him "sir," nor yet respect him as their master. But the Chinese hands did as Tilden bade them, when he strutted through the settlement.

The shutter creaked again Drawn by W. E. Mears

So Tilden called two of these humble, cringing Chinese to one side, and said he wished to play a little joke upon his wife, and he wanted the Chinese to break in and pretend to rob the hut that night when it was dark. The Chinese said they were afraid of his wife's pistol, and Tilden promised them he would see it was not loaded. He told them to enter by the window, which he would leave unbarred; then they were to pretend to struggle with Tilden, and let themselves be gradually overpowered. Tilden said the struggle must be a real one. And Tilden was to give them a dollar each next morning.

The Chinese still demurred, and said that his wife might snatch at Tilden's pistol, and Tilden said he would take his and put it away with her own; and the time fixed was when the moon shone round the house and the moonlight entered through the crack within the shutter. And directly he had made this incredible arrangement Tilden felt afraid, but he fought against the feeling, because he longed so for his wife to trust him.

He says directly he came back into the house that night his wife looked up in his face and shrank from him. It made him angry, because he knew what he was suffering for her sake, and he would not eat the meal she had cooked for him, but pushed his plate away, and said he should be glad to get home again, to have some decent food. The tears came into her eyes, but she only said that she was sorry she had not pleased him; she would do better on the morrow. Then she washed up and put the things away, and then he felt her hand touch his as he sat beside the fire, but he would take no notice of her; he was punishing her for doubting him, and as they sat there she suddenly began to cry and shake and cling to him, and beg him not to hate her, because she was so lonely and so frightened and she had no one else. He nearly took her in his arms and kissed her, but the hurt feeling was still with him, and he told her instead not to make a silly of herself, and that perhaps the time would come when she would see him as he really was, and that he hoped it would, and she would be sorry.

And as they sat there he saw the moonlight steal in slowly through the crack within the shutter. Something in him shouted out to him to bar the shutter, quickly, quickly, but he fought it down, for her sake!

Instead, he rose up from his seat, and asked for her pistol, as he was going to clean his and would clean them both. She said hers did not want cleaning, and her hand went to it, and held it desperately; and he told her never mind, he wished to do it.

So she gave it him, and he thought he saw the shutter move. She asked him why he was taking the pistols into the next room, where there was no light; and he told her never mind; and she suddenly ran to him, with a cry, and held to him, and said he should not go like that, he must just kiss her once and say that he forgave her, and loved her, loved her; and he said he felt as if he could have killed a lion then, and he put her on one side, and said: "You've hurt me ever since our marriage by not believing in me. I want you to feel there's only me between you and some danger. I want you to feel I can protect you against anything. Do you feel that?"

And all she could say was, "I'm afraid—afraid!"

The shutter creaked again, and he turned away without another

word, and went into the next room with the pistols. He laid them on the mantelshelf; the window was shuttered and there was no light. It looked out on the forest. He felt his own heart beating in the darkness. It was so still. As he stood there a great choking feeling came into his throat; and the silence pressed in on him with great soft hands; and a shadow fell across the lintel of the door where the lamplight shone.

His wife was coming, coming to see what he was doing; but the shutter had creaked. He had heard it creaking. And something within him cried out, "Go to her!" and the darkness grew alive with moving shadows, and fear was with him—fear, vague and still. Then he heard a scream, and his wife's voice cried out his name once, again, and yet again. Then a deathblow and all was still.

The window was shuttered—it was so easy to drop the bar; it was but a step thence to the ground. Outside, the fear ran with him across the long, long stretch of grass, so silent in the moonlight. He saw his shadow by him, long and black, and he watched to see it stretch itself out past him, and he waited for the feel of something thin and sharp, that stabbed between his shoulders from behind. He was in the forest now and brushed against the trees; the thorns caught at him like long fingers, and he screamed and tore himself away and ran on screaming.

The dawn came up very cold and gray; he found himself standing by the river, cold and spectral in the mist; and fear went from him and horror came. He tried to throw himself into the water, but he dare not, because the river was so wide and the waters were streaming on so smoothly and so silently. He prayed then that the Chinese might come up and find him; but no one came.

Long hours after, there was blazing sunshine, and some men were carrying him, and he found they were taking him through the forest to his home; but he begged and prayed of them to stop; so some of them went on there and found what had happened. He dared not tell them the truth, for fear that they would lynch him. He only begged to be sent home to England.

He told his people his wife had died. Every one was sorry for him, and made a hero of him, as she had pictured; but he only thought of the long nights, when the little girl and he had sat together by the fireside, and he felt her face against his hand, with the tears wet upon it.

One night his mother spoke of her disparagingly before some friends, and his remorse sprang up and shouted to him to rid himself of the burden which he carried with him night and day, so he told them all the truth; and he felt happier then. His mother begged of him to stop, but he had to go on; it was such a blessed relief to have some one to share his secret. While they talked of it, he felt that they were round him, guarding him. He told every one now he had broken through the barrier; he said it was his punishment.

The Dutch Founding of New York

By THOMAS A. JANVIER
Author of "In Old New York," "The Christmas Kalends of Provence," etc.

A delightful account of events and conditions of the early days of the Dutch settlements in America, with an entertaining picture of their domestic and commercial life. Valuable old documents and plans are reproduced, giving an inner history of events of vast importance to American development. Copiously illustrated with reproductions of rare photographs, etc.

THE MAIDS OF PARADISE

Robert W. Chambers possesses, more than any other American novelist, the feeling and quality of romance. The present tale carries the reader into the heart of the Franco-Prussian war. The Boston *Herald* writes that "Mr. Chambers is a superb master of his art as a story-teller of romantic fiction." Another Boston paper calls this romance "a wide-awake book, with plenty of dash and crash in it and many tender passages." Indeed, this charming story is, to quote the Philadelphia *North American*, "the foremost of modern romances."

Some Anecdotes of Thomas B. Reed

By Edward W. Townsend

THERE seemed to be no character of court proceedings into which ex-Speaker Reed could not infuse some humor. The writer once watched him through a session of a trial whose testimony was as entertaining as a table of steel-rail production to a pieman, yet Mr. Reed often found opportunity for a play of his temperamentally prompted wit. It was during Mr. Reed's career as a New York lawyer, when he returned after so many years to the practice of his profession. The witness, Mr. Reed's client, was being cross-examined as to some tedious details relating to a $14,000,000 pool, out of whose operations arose the cause at trial. The witness had been one of the largest contributors to the pool, and his desirability as a client can be further inferred from the fact that his financial affairs were of a magnitude to warrant his testifying his inability to say, without reference to his books, how much "within a million or two" he had contributed to the pool.

Mr. Reed had objected to one of the cross-examiner's questions as "being possibly a little too leading, your Honor."

"But," said the opposing counsel in excuse, "the witness is 'unfriendly.'"

Mr. Reed turned slowly to the speaker with a puzzled look, and then drawled, in a tone of mild surprise: "Do you find him unfriendly? Why, I have found him most friendly."

The numerous and distinguished counsel on both sides had sudden occasion to hide their faces behind documents, and it was a minute or so before the judge, the folds of whose silk gown were curiously agitated in the mean time, said, "Counsel are delaying the proceedings; we will continue."

Mr. Reed alone appeared not to be in the joke, but rather as if he might, with Warwick, be saying,

> But in these nice, sharp quillets of the law,
> Good faith, I am no wiser than a daw.

Upon another occasion, the cross-examiner had asked Mr. Reed's witness some such question as, "Prior to October 9, had you seen Mr. Blank in reference to the terms of settlement?" This question, in view of preceding evidence, was obviously indefinite, and Mr. Reed objected to it on that ground. Counsel altered its form, but not in the direction of definiteness, and another objection followed. Then the cross-examiner inquired of the witness, smiling blandly at Mr. Reed, "Did you, prior or subsequent to that date, see Mr. Blank in relation to any subject?"

"Ah," exclaimed Mr. Reed, affecting a sigh a relief, "when counsel succeeds in forming a question which is such a model of concise definiteness, I am compelled to withdraw my objection."

Who He Was

SOME of the experiences which fell to the lot of Arnold Daly, the actor, when he first began his endeavors to produce Bernard Shaw's play of "Candida," are entertaining to him now, but they were not so funny a while ago when no one wanted to listen to his propositions.

Mr. Daly reiterated his ambitions, suggestions, and intentions so often and so fruitlessly that there came a time when irritation got the best of him, eventually culminating in an illuminating definition of the witty Irishman.

"Shaw—who is he, anyway?" asked a certain well-known manager of Mr. Daly. "What's he ever written? I never heard of him?"

"Never heard of Shaw?" gasped the disappointed actor, "never heard. . . . Why,—don't you know? You know that common expression used by so many, particularly country people, when they are incredulous: 'Oh, Shaw!' you've heard of that, haven't you?"

"Yes," drawled the manager.

"Well, that's who he is!" cried the indignant Daly; "he was the originator of that expression!"

"Oh, Shaw, was he!" commented the manager, listlessly.

Progress of Science

The Problem of Flight

THAT the solution of the problem of mechanical flight lay in the aeroplane has been the opinion of students of aeronautics for several years, and now that such a machine has been constructed and has actually been in flight under its own power, this feeling is strengthened. In a test near Kitty Hawk, North Carolina, the aeroplane designed by William and Orville Wright rose from the ground with its own power, remained in flight for a period of fifty-seven seconds at a speed of about ten miles an hour, and finally landed safely with its passengers. In previous tests, for example, with the enormous mechanisms constructed by Sir Hiram Maxim and more recently by Professor Langley, there had not been actual flight for any sustained period. If we think of a bird soaring, or a kite, we have the underlying idea of the aeroplane, which consists of a frame so covered as to present one or more surfaces of considerable extent parallel to the earth, so that the upward pressure of the air will tend to support it against the action of gravity. In the case of the Wright aeroplane the power was supplied by a sixteen-horse-power gasolene motor, which was able to drive the aeroplane at a speed of thirty-one miles an hour relative to the wind, which was blowing at a rate of about twenty-one miles an hour. The aeroplane had a surface of 510 square feet, and weighed a little more than 700 pounds. It made four successful ascents. Mr. Wright, who has acquired great experience in manipulating the aeroplane in actual experiments in the air, and has thus learned the best adjustment of rudders, etc., was able to rise and land safely in each instance.

Operating with Radium

The announcement made recently by a New York physician, Dr. W. J. Morten, that he had employed radium in his practice and had effected cures in the case of cancer, has attracted general attention to this much-discussed substance, and especially to its value as a therapeutic agent. During the fall and winter various experiments to determine the effect of radium on various plant and animal organisms have been carried on. Its curative value in such diseases as cancer has also been investigated, and in a report made to the Vienna Academy of Sciences by Dr. Exner, the conclusion is reached that while an operation is preferable, yet the radium treatment is advisable where this is not possible. In nine cases of cancer which had been under radium treatment it was found that there had been considerable abatement in the cancerous swelling and in two of these it had not appeared after five months. In one case there had been considerable improvement, due to the radium treatment, which was the more interesting, as it was impossible to operate on the patient.

Radium and Electricity

Still another clue to the nature of radium has been obtained by the experimental demonstration of the fact that it is able to produce a minute continuous current of electricity. This involves the production of energy from the radium, and as we are able to measure the current we can determine this amount and thus find how much energy is lost. In the experiments this was accomplished by sealing a platinum wire in a tube containing radium and then suspending the tube by a glass thread in a large tube in which a second platinum wire was sealed. A minute current was produced, caused by the disintegration of the radium atoms and the positively and negatively charged electrons or small particles thrown off in this disintegration. The inner tube serves as a sieve to retain the positive or larger electrons, while the negative, which are smaller, pass through readily. This action is explained on Rutherford's disintegration theory, and the experiments are considered of extreme importance, as they enable a calculation to be made of the mass of the particles lost by radiation, an amount so minute that no present methods of weighing can detect it.

Honor, Riches and Long Life!

What Young Man but desires them, and dreams no doubt that great success will attend his efforts and crown his later years with good fortune?

Yet frequently in his haste to become rich the Young Man overlooks entirely the only methods of acquiring a competence which are sure—though to him they may seem slow.

Often he reaches thirty or thirty-five with practically nothing laid by. Then he finds it hard to economize; his expenditures have been gradually increasing and he has not acquired the habit of saving!

The Advantage of Endowment Life Insurance

taken out early in life is that it furnishes a method of saving which is unequalled. In fact, it almost compels you to save money regularly.

You can commence with any amount, from $1,000 up, and increase it as your circumstances permit.

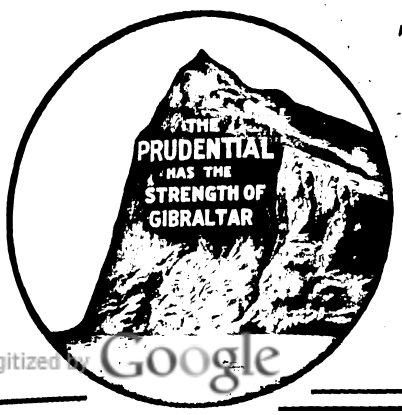
According to statistics, of those who take out Endowment Policies

At Age 30, 80% Survive the Payment Period of 20 Years.

You are, therefore, likely to live to enjoy the results of your own financial foresight, and you can be certain of full returns upon the money invested. There are

Over One Million Endowment Policies in Force in this Country

Representing Ultimate Accumulations of



Over Two Billion Dollars

Wouldn't you like to join this VAST ARMY OF MONEY SAVERS? The most progressive, enterprising, far-sighted and successful young men of America are included in its ranks.

FALL IN LINE!

THE PRUDENTIAL

We have some things to say about Endowment Life Insurance. Fill in the attached Coupon and send it in — it costs nothing and may be the means of starting you on the road to fortune.

COMMENT

WASHINGTON, *January 30, 1904.*

THE Democratic leaders make no secret of their determination to force upon President Roosevelt an issue partly political, but chiefly personal, relative to his appointments in the army. The first and most important will be of a practical nature based upon the promotion of General Leonard Wood. The second will be sentimental, concerning General Miles. In view of this certainty, it is interesting in a political sense and important for public consideration that the exact facts should be made clear.

***

Taking first the case of General Leonard Wood, it may be assumed that the President has never believed and does not now believe that in making this appointment he was influenced by personal considerations. That he has been for many years and still continues to be a warm friend of General Wood is well known. The same might be said with equal truth of his attitude towards many other army officers, with whom he has been brought, from time to time, into personal contact. His sense of responsibility in making such appointments, however, is as keen as his feeling regarding the necessity of maintaining the strictest integrity in all branches of the public service. Whether his judgment be right or wrong, it is only fair and only true to grant that, in the President's mind at least, efficiency was the test which led to General Wood's advancement. He is wholly convinced of the marked superiority of that officer, not only as demonstrated by his work as Military Governor of Santiago and Cuba, but also of his sagacity and intrepidity as a soldier. In view of this firm belief, he felt and still feels that he would have been guilty of gross injustice to General Wood, and would have inflicted a serious injury upon the service, if he had disregarded the regular line of promotion and brought one less capable forward. In other words, he justifies the appointment, not upon proven efficiency alone nor upon regularity alone, but upon both combined.

***

The most unfortunate episode in connection with the affair was, of course, the testimony of General James H. Wilson, to the effect that, in a conversation between himself and Mr. Roosevelt at Oyster Bay, the latter admitted that General Wood was not in the battle at San Juan, and added the phrase "but don't tell anybody." The only possible rebuttal of this evidence was offered by Secretary Root's dignified denial on behalf of the President before the Senate committee. As the result of a careful investigation, we are enabled to state positively upon the highest authority that not only did Mr. Roosevelt never make such an admission or request, but that no such conversation ever took place. Despite the prejudice naturally created by an act not well regarded among gentlemen—*i. e.*, that of repeating in public what he himself designates as a private conversation with his host—we cannot harbor even a suspicion that General Wilson deliberately misrepresented his chief and former friend; but he *was* mistaken. The further assertion of General Wilson that he said to Mr. Roosevelt on this occasion that "in the Spanish war he [General Wood] was in but one battle, and that at Las Guasimas, where, but for his rescue and support by colored troops, he would have been badly handled," also has absolutely no foundation in fact, unless he made it in such a way that it could not reach Mr. Roosevelt's understanding. In any case Mr. Roosevelt never heard it. Moreover, from his own personal knowledge he was and is still aware that it could not be true.

***

The exact facts regarding this engagement are as follows: Mr. Wood was colonel and Mr. Roosevelt was lieutenant-colonel of the First Volunteer Cavalry Regiment. The eight troops of this regiment moved along the hill trail and attacked the Spaniards' right at the same time that the eight troops of regulars, four of the First Regiment (white) and four of the Tenth Regiment (colored) moved along the valley trail and attacked the Spaniards' left. Both the volunteer regiment and the regulars advanced steadily, driving the Spaniards before them, and did not meet until they reached the junction of the road, by which time the Spaniards had been routed. Each supported the other, and neither rescued the other.

***

Before the San Juan fight, Colonel Wood was promoted to command of the brigade, and Lieutenant-Colonel Roosevelt to command of the regiment. On July 1, the morning of the Santiago fight, the latter's regiment had the head of the line, and marched in column immediately after the First Cavalry brigade. Before they started to march they were under shrapnel fire, which killed and wounded several men. General Wood was in personal command of the brigade at this time, and demonstrated both capacity to command and utter indifference to his own personal safety. He went forward at the head of the brigade, with Mr. Roosevelt, as colonel of the leading regiment, riding beside him until he came to the ford of the San Juan River. Colonel Roosevelt led the larger part of his regiment across this ford before the firing became serious, and marched to the right, following the first brigade. General Wood remained at the ford, directing the crossing of the other regiments, and was there during the heavy Spanish firing which gave to the spot the name of "Bloody Ford." At this time this was the most dangerous place in the field of the fight. General Wood remained directing the crossing until the brigade had passed over. Colonel Roosevelt, having gone forward, did not personally witness the crossing of the remainder of the brigade, but he afterwards heard the highest admiration expressed by both volunteers and regulars of the coolness, energy, and disregard of personal injury manifested by General Wood. He did not see him again until evening, when he was the first general to visit the extreme front where the volunteer regiment was stationed.

***

So much for the part played by General Wood in the battle itself. It is plain to see why, when subsequently the question was raised, in connection with General Wood's proposed promotion, as to his capacity as a fighting-man, Mr. Roosevelt felt that he needed no information other than that which he personally possessed. But he never regarded this as more than one of many reasons why Colonel Wood should have been promoted, first to the position of brigadier-general, and, second, to that of major-general. His record as Governor of the province of Santiago and his subsequent conduct as Governor-General of Cuba, which, in the opinion of President McKinley and Secretary Root, entitled him to be made brigadier-general in the regular army, were, in the President's mind, more potent as reasons for continuing his advancement. From personal observation, therefore, in the first place, and from consideration of the results of subsequent work, the President could only deduce the conclusion that his duty was

Digitized by Google

Generated for Nicole Fry (Washington University in St. Louis) on 2017-08-24 19:26 GMT / http://hdl.handle.net/2027/uc1.31158003386835
Public Domain, Google-digitized / http://www.hathitrust.org/access_use#pd-google

plain from every point of view, and he acted accordingly. Personally, as our readers are well aware, we have felt and still feel that General Wood's promotion has been unduly rapid and without adequate justification, but it is only fair to him and just to the President that the conditions resulting in this advancement should be clearly and truthfully stated. This we have endeavored to do.

***

Coming now to the Miles episode: When the time of General Miles's retirement drew near, the President and the Secretary of War unfortunately were obliged to consider whether they could conscientiously cite his services in the civil and Indian wars and ignore his subsequent conduct as lieutenant-general—in other words, whether they could properly and to the advantage of the service commend that which justified commendation without condemning that which equally merited condemnation. They could not ignore the fact that the eyes of the army as well as the public were upon them. They knew that every officer knew that, in their deliberate judgment, General Miles had done everything in his power to harass the department and place obstacles in the way of necessary reforms, without scrupling in the least to injure the service. But this was not all. They had direct and positive information which, to their minds, afforded conclusive evidence that, in endeavoring to gratify his insatiable political ambition, General Miles had been disloyal, not merely to the Secretary of War, President McKinley, and President Roosevelt, but to the army itself.

***

The real question, then, aside from and deeper than that involving an example to the army, was whether they had a moral right to condone offences which would tend to lower the service to the selfish and unpatriotic level of a South-American country. Their eyes were quite open to the fact that the most possible would be made out of a decision against recognition of any sort, that General Miles's ambitions would be served rather than be hampered by their act, and that, from President Roosevelt's own standpoint, it would have to be reckoned a political blunder. The conclusion they reached is well known. The reasons for their reaching it are stated accurately and as succinctly as may be above. It is only fitting to add that, whatever capital may be made out of the episode in the coming campaign, President Roosevelt would sincerely rather be beaten at the polls than, if he had the opportunity, reverse or modify his action. We ourselves cannot even now agree that his course was wise or necessary, but it cannot be successfully denied—and this we frankly admit—that no act of any President has sprung from a keener sense of public duty or personal abnegation.

In the prepared speech which Mr. William J. Bryan delivered at the dinner of the Holland Society on January 21, in New York city, he described the time in which we live as "the era of conscience." The aptness of the description might have been challenged by the members of the Holland Society, who were pro-Boers almost to a man, and who do not regard the treatment of the South-African Republic and the Orange Free State by Great Britain as an edifying example of national conscientiousness. It remains to be seen, moreover, whether Russia's proceedings in the Far East will be reconcilable with the professed intentions of her ruler, who started the movement which culminated in the creation of an international court of arbitration at The Hague. Mr. Bryan omitted to mention what is perhaps the strongest proof that the present age is, relatively at least, an era of conscience, namely, the fact that publicity sufficed in 1875 to frustrate the matured plan of the military party at Berlin, headed by Count Moltke, to reconquer France before that country's military system could be reconstructed. No sooner was the plan made known than the public conscience of the civilized world, personified in the Czar Alexander II., forbade the iniquity.

More attention was paid at the banquet, and afterwards in the daily press, to Mr. Bryan's unpremeditated remarks on the labor question than to his somewhat academic speech on the blessings of peace. Mr. James M. Beck, formerly an Assistant Attorney-General of the United States, had pointed out that Federal and State constitutions will be powerless to preserve the liberties inherited from our forefathers if an organized minority of workmen shall be permitted to prescribe the conditions under which the majority shall work. Mr. Beck reminded his auditors that in the Netherlands, when the Netherlands were both free and great, every Dutchman claimed the right to work for whom he pleased, at whatever rate he pleased, and on whatever conditions pleased him. Mr. Bryan, who followed Mr. Beck, expressed the opinion that we should not promote industrial peace if we kept our eyes fixed exclusively on the wrongs or mistakes that have been at times imputed to labor organizations. We should not forget, he said, to credit union-labor men with the good that they have accomplished. Unquestionably they have decreased the hours of labor and increased wages. It is they, moreover, who have compelled the introduction of the Australian ballot in the United States, a ballot which enables a man to vote according to his conscience, instead of allowing himself to be driven to the polls, to vote according to the wishes of his employer. Mr. Bryan was quite right in saying that more dangerous than any labor organization is the corrupt use of money at elections. If he was correctly reported, he did not hesitate to intimate that money had been used to debauch the voters at the recent municipal election in the city of New York.

Colonel Henry Watterson, of the Louisville *Courier-Journal*, has been provoked by Mr. Bryan's demand for a reaffirmance of the Kansas City platform to describe the Nebraska statesman as "a death's head at the Democratic banquet." A Washington correspondent of the New York *Herald* has made a nearly exhaustive canvass of the 209 Democrats in the Senate and House of Representatives, in order to learn how Mr. Bryan's irreconcilable position is regarded. Of the 104 persons interviewed, only four declared that they were in favor of doing what Mr. Bryan advised. Some 39, who, apparently, feared to alienate the free-silver vote in their respective States or districts, declined to express any opinion. On the other hand, 64 asserted with more or less emphasis that no heed should be paid to Mr. Bryan's assumption of leadership. Especially noteworthy is the stand taken by spokesmen of the Southern States, to which the nominee of the next Democratic national convention must look for the bulk of his electoral votes. For example, Senator Morgan of Alabama said that he had ceased to consider what Mr. Bryan says or does. The Nebraskan "belonged to the past." Senator Pettus of Alabama was convinced that his party's national convention ought to ignore all the quarrels of the nineties, including the money question. Six Representatives of the same State denounced the free coinage of silver at the ratio of 16 to 1 as a dead issue. Senator Clay of Georgia expressed the opinion that Mr. Bryan's views were "all wrong, and would have very little, if any, effect on the convention." He prophesied that either Parker or Gorman on a conservative platform could carry the Democracy to victory. Six Representatives of Georgia concurred in demanding that the Democratic national convention should deal with the live issues of the day. The Senators from Florida and Louisiana were not interviewed, but there is no doubt that they are all four opposed to the reassertion of a demand for free silver at St. Louis.

Senator Culberson of Texas said that there were a great many Democrats who had supported Mr. Bryan loyally in 1896 and 1900, but who did not accept his recent utterances as practicable under existing conditions. Eight Representatives of Texas agreed that Mr. Bryan ought now to stand aside and let the party pass on. The Democracy in 1904, they said, should have an up-to-date platform and up-to-date candidate. Senator Simmons of North Carolina bore witness that his fellow Democrats were opposed to any attempt to revive the silver issue. Senator Overman of the same State believed that the insertion of a free-silver plank in the platform would destroy all chances of victory this year. Senator Tillman of South Carolina, who formerly was one of the Nebraskan's most zealous supporters, is reported to have said at Washington on January 23: "It is about time for Bryan to get out of the way and give somebody else a chance. He ought to be muzzled." Senator Martin of Virginia recognized that Mr. Bryan had a right to his opinions, but submitted that other men, equally interested in the welfare of the Demo-

cratic party, had a right to differ with him. Of four Representatives of Virginia who were interviewed, three were distinctly opposed to a reaffirmance of the demand for free silver. We add that, although Senator Stone of Missouri would not discuss Mr. Bryan's views with the *Herald* correspondent, he is known to have told some of his colleagues that, in his judgment, the silver plank of the Kansas City platform would not be adopted at St. Louis. Even in the States beyond the Rocky Mountains there is no general and hearty approval of Mr. Bryan's position. Thus, Senator Dubois of Idaho regards the free-silver issue as a thing of the past; Senator Gibson of Montana believes that it will do the Democratic party no good to adopt the Kansas City platform; and Senator Newlands of Nevada dismissed the subject with the curt remark that "Mr. Bryan will not be our candidate, and is not going to dictate our programme." If, now, we turn from Senators and Representatives to members of the Democratic National Committee, we learn that an overwhelming majority of them declined to treat Mr. Bryan's notions as of any consequence. By overwhelming majority we mean no fewer than forty, and, possibly, forty-three, of the fifty members of the committee.

Those who have contrasted the quarterly reports issued by the United States Steel Corporation with the reluctance evinced by some other companies to shed an equally copious light, or, for that matter, any light at all, on their transactions, will appreciate the address delivered on January 21 at a meeting of the Hartford Board of Trade by Mr. Charles T. Mellen, president of the New York, New Haven, and Hartford Railroad. Mr. Mellen expressed the conviction that, if American corporations are to continue to do the work which they are fitted to perform, the prejudice that now exists against them, and that must be attributed to the attitude of their representatives, must be dispelled. Experience had taught him, he said, that corporations must take the public into their confidence, and ask for what they need, and no more. Moreover, they must be prepared to explain satisfactorily what advantage will accrue to the public if the privileges desired by them are secured. He reminded his auditors that corporations are permitted to exist in this country, not solely in order that money may be made for their stockholders and bondholders, but in order that they may serve effectively the communities from which their power is derived. It was the lesson of the times, he thought, that publicity, and not secrecy, would have to be the rule hereafter; otherwise States and municipalities will be forced to perform the work now done by private corporations, even though the service might be less efficient and the result less satisfactory from a business standpoint.

Mr. Mellen believes that the prejudice exhibited to-day toward corporate capital and activity is founded in apprehension rather than in reason, and in large measure is due to the unpleasant personal traits of arrogant and arbitrary men who have been placed in positions of authority. To his mind, the day has gone by when a corporation can be handled successfully in defiance of the public will, even though that will be unreasonable. The public may be led, but not driven, and Mr. Mellen, for his part, prefers to go with it, and to try to shape or modify its opinion, rather than be swept from his bearings by an overwhelming tide of adverse sentiment, with disastrous consequences to himself and to the interests in his charge. Evidently the new president of the New York, New Haven, and Hartford Railroad is a man of experience and common sense.

It seems to be settled that there will be no fight in Ohio on the question whether the delegates from that State to the Republican national convention shall be instructed to advocate Mr. Roosevelt's nomination to the Presidency. There is, apparently, no doubt that Mr. Foraker would have entered upon a contest with his colleague in the Senate for the control of the Ohio delegation if he could have obtained from Mr. Roosevelt an assurance that he would be backed by all the patronage and influence of the administration. The President has declined to give Mr. Foraker any such assurance, and, on the contrary, has expressed a wish that Senator Hanna shall be permitted to do what he pleases in Ohio. The wisdom of this decision on Mr. Roosevelt's part is manifest. Had he pursued the opposite course, the fight for delegates that would have taken place in Ohio might have strengthened Senator Foraker in that State, but it would have driven Senator Hanna into opposition to the President. As it is, Mr. Roosevelt has appealed to Mr. Hanna's generosity and magnanimity, and there is good reason to believe that the appeal will not be in vain. Evidently the mistake made by President Harrison in alienating Mr. Blaine at the last moment, and virtually forcing his Secretary of State into violent opposition, is not to be repeated. Our own opinion is that, when he said, "Hands off in Ohio; let Hanna do as he pleases," Mr. Roosevelt spiked the guns of the only formidable enemies he has within the ranks of his own party.

Whatever may be thought of Mr. Bryan's remarks on the labor question and the blessings of international peace, his views of the duty of the next Democratic national convention seem unlikely to be adopted. He informed a reporter that, in his opinion, the Kansas City platform not only ought to be, but would be, reaffirmed at St. Louis. To the question what he and his friends would do in the event of the Kansas City platform being discarded wholly or partially, he declined to give a categorical answer. He said that those professed Democrats who had refused to support the nominee of their party in 1896 and 1900 had no business to make the inquiry. About this we are not quite sure. Of course, those Democrats who voted for Palmer and Buckner in 1896, or who voted for McKinley and Hobart, would acknowledge that Mr. Bryan has as good a right as they had to repudiate the platform and nominee of their party. They have never denied the existence of a right to bolt. Mr. Bryan, on the other hand, has asserted that it is the duty of every man who pretends to be a Democrat to support the platform and nominee of his party, no matter how objectionable they may seem to him personally. It is not unreasonable that Palmer and Buckner men should wish to know whether Mr. Bryan intends to shape his own conduct in 1904 by the standard which he applied to them eight years ago.

Then, again, Mr. Bryan is clearly wrong in saying that those Democrats who voted for him in 1896 and 1900 would not ask whether, under certain circumstances, he would accept the decision of the St. Louis convention. Those are the very men that are now putting the question, and that have a right to put it. A large majority of the 6,358,000 citizens who voted for Mr. Bryan in 1900 did so, not because they thoroughly approved of him or of the Kansas City platform, but because they were Democrats by conviction and unbroken habit, and because they thought that, on the whole, a change of administration would be beneficial to the country. Mr. Bryan can hardly have forgotten that in 1896 at Chicago, after the platform had been adopted, the seventy-two delegates from New York declined to present a candidate, and also refused to cast their votes on either the first or fifth ballot. The delegates from Maryland, also, declined to name a candidate, and the representatives of New Jersey refused in so many words to nominate any man upon the platform of that convention. Yet neither in New York, Maryland, nor New Jersey was Mr. Bryan's nomination officially repudiated by the State convention of the Democratic party.

Seldom does our Federal Senate evince so close an approach to unanimity as it has exhibited in support of Mr. Tillman's assertion that there is no such thing as a "constructive recess," which, according to Secretary Shaw, existed at twelve o'clock noon on December 7, and during which the nominations of Dr. Crum to be Collector of the Port of Charleston, and of Leonard Wood to be a major-general in the regular army, were made. It is, of course, understood that, if the nominations were made during a recess, the appointees would, by law, be permitted to hold office and receive pay until the termination of the ensuing session of the Senate. If, on the other hand, the nominations were made while the Senate was in session, the appointees could not hold office or receive pay until the Senate confirmed them. Mr. Hale, Mr. Spooner, and Mr. Mitchell, all three Republicans, concurred with Mr. Tillman in denouncing the theory that there could be a constructive recess between the adjournment of the extra session

of the Senate at twelve o'clock noon and the reassembling of that body in regular session at the same moment. On Monday, January 25, Mr. Hale produced in the Senate the nominations of Leonard Wood and William D. Crum, and it turned out that, on their face, these were original, and not recess appointments. Nevertheless, it appears that Leonard Wood is signing official telegrams as "major-general," and that Dr. Crum is discharging the functions of Collector at Charleston. At Mr. Hale's suggestion, Mr. Tillman offered a resolution, which was adopted, calling upon the Secretary of the Treasury to furnish specific information regarding the circumstances under which Crum is holding office. The purpose of a second resolution offered by Mr. Tillman is to learn from the Secretary of War whether any officers who failed of confirmation during the extra session ending December 7 have been reappointed. In the event that commissions have been issued to any such officers, the Secretary of War is requested to state what is the character of the commissions and by what authority of law they have been issued. It is evident that the Senate is determined that no officer, civil or military, who failed to secure confirmation during the extra session, and who has been renominated, shall either hold office or receive pay during the present regular session.

It seems to us that in the question of precedence which has arisen in Washington the justices of the Supreme Court are right. At the reception given at the White House on Thursday, January 21, in honor of the justices of the United States Supreme Court—the reception had been thus described officially—the justices were compelled by Major McCawley, who acted as master of ceremonies, to wait until all the members of the diplomatic corps who were present had been received by the President. It is argued on behalf of Major McCawley that ambassadors represent the persons of their sovereigns, and, therefore, have a right to be received first at all state receptions which they attend. The correctness of this position has never been acknowledged by the justices, who point out that the Federal judiciary constitutes a branch of the government not subordinate to the executive, but coordinate with it. Moreover, even if it were admitted that on ordinary occasions ambassadors would be entitled to precedence over the justices, this cannot be true of a reception specially given in honor of the Supreme Court, and to which the diplomats were invited, not as a body, but as individuals. Moreover, while there is ground for the assertion that, in Europe, ambassadors are regarded as representing the persons of their sovereigns, this is not true of ministers plenipotentiary; much less is it true of secretaries of legation and of *attachés*. Yet, on the evening of January 21, Major McCawley gave precedence over the justices not only to ambassadors, but to ministers, secretaries of legation, and *attachés*. Under the circumstances, it is not surprising that Chief-Justice Fuller and Justice Harlan should have resented the indignity to which the most august tribunal in the world had been subjected, or that, on Saturday, January 23, they should have conveyed to the President an intimation of the feeling which the incident has provoked.

There are some interesting talkers among our college presidents, and when they speak a good many persons pay attention. The presidents of Harvard, Yale, Columbia, Princeton, and Cornell are particularly prone to make speeches on subjects not closely related to their calling, and very interesting discourse they make. The newspapers report their sayings, and usually report them inaccurately, and then, usually, a lot of remonstrants write letters to say that what the college president has asserted isn't so. Dr. Hadley has just had an experience of this kind. President Eliot is often in this sort of hot water, as he is a ready speaker with views on many subjects, and with both the ability and the willingness to express them. He made statements in Brooklyn the other day about the building-trades' unions in Boston that were not satisfactory to the said unions, and they have complained. But as he is to address Boston's Central Labor Union on February 7, at Faneuil Hall, the causes of complaint are by way of being threshed out. President Schurman of Cornell has recently prophesied that we would soon see the American flag raised over Bogota. President Harper of Chicago, when he talks in public, usually talks about Chicago University, or about education, but his professors from time to time diffuse opinions of a highly unexpected and exciting quality on all sorts of subjects, which opinions, being communicated in a garbled form by the newspapers to the world, add more than they should to the anxieties of the nations.

The latest college-president deliverance was imparted on January 22, by Dr. Woodrow Wilson, of Princeton, at Montclair, New Jersey. We all know Dr. Wilson as a historian. His neighbor, Mr. Cleveland, is said to consider that there is presidential timber in him. He talked about Americanism, and judging from an incomplete report, must have given his audience excellent entertainment. He said we had spent a century colonizing; a second in getting rid of the French, the Dutch, and the Spanish; a third in getting established and settling pressing difficulties. Now we have come, he thought, to a century of finishings. We have emerged from our formative period, "with ideals, but without sentimentality; with principles, but without bigotry; confident of the validity of liberty, but, since our contact with the complicated problems of the East, no longer confident of the necessary or final forms of liberty or of law." We like to label our neighbors; we are impatient of more than two opinions, and prefer to allot certain principles to each of two parties. Time was when certain definite opinions were Democratic, and certain others Republican, but now each party represents a series of negations rather than opinions. "It has seemed to me," says Dr. Wilson, "that the principle of the Republican party has come to be, 'consult your grandmother about everything,' and above all don't change anything; you might spoil it; sit still and let events take their course." This same opinion about the Republican party has lately been expressed by Mr. John Sharp Williams, the Democratic leader in the House. Dr. Wilson finds that we Americans are sceptical of impossibilities and ready for anything. Foreign statesmen pause to see us confidently walk into unexpected situations and do what occurs to us. "We are a sort of pure air," he says, "blowing in world politics, destroying illusions and cleansing places of morbid miasmatic gases." That sounds sanitary, at least. We are certainly interesting as Dr. Wilson sees us. Let us hope we are going to be good.

A few years ago, a scientific person in Massachusetts imported some caterpillars that interested him, and kept them in a bottle. But one day the bottle tipped over and some of the caterpillars escaped into the scientist's garden, and presently stocked it with gypsy moths. To catch them and their descendants the Bay State has since spent about a million dollars of public money. They have cost it many million dollars besides in damages. The old method of fighting them was to find and destroy the cocoons. The State finally gave that up, much to the regret of many of its citizens. The bugs have since increased very much and carried destruction into the woods. It is now proposed to fight these pests in the latest fashion by breeding parasites which will attack them. That method is recommended by Mr. Koebele of Alameda, California, who tried it successfully in that State for white scale. The Massachusetts Forestry Association favors the experiment, which will not cost much, and Mr. Koebele will doubtless be invited to bring his parasites to Massachusetts and sick them on. The whole country is concerned in this experiment because a Massachusetts Congressman has invited Congress to declare the gypsy moth a national enemy and to appropriate $250,000 to fight him. The parasite cure is a modern wonder and has been effective in cases of great moment. Mr. Koebele says it will not wipe out the gypsy moths, but will keep them down. The boll-weevil may presently be restrained by the same methods, and it is possible that a political parasite may be discovered which will deal effectively with Bryanism. It is the opinion of experts, however, that Bryanism is itself parasitic; that a morbid condition of the tissues of Democratic brain induced the incursion of the silver-bug, which fattened on the morbid growth, gradually destroyed the affected tissues, and having done its work and restored normal conditions, must now inevitably perish for lack of sustenance.

We understand that certain Roosevelt campaign buttons ordered for distribution at Chicago in June are to have a bromide lozenge as a pendant. Who is paying for those buttons?

What Is the Democracy to Do?

As we have elsewhere shown, the outcome of the canvass made by the New York *Herald* of the views of Democratic Senators and Representatives is an overwhelming repudiation of Mr. Bryan's assertion that the national convention of their party, to be held at St. Louis on July 6, must begin by reaffirming the Kansas City platform, no matter what new issues may be added. A canvass of the Democratic National Committee reveals an equally enormous majority opposed to Mr. Bryan's programme. Now, Representatives, if not also Senators and national committeemen, are in touch with the Democratic rank and file, and the inference is, therefore, justified that Mr. Bryan and Bryanism will be thrust aside at St. Louis. On the negative side, therefore, the position to be taken by the Democratic party in the approaching campaign may be looked upon as settled. For our own part, we have never doubted that the national Democracy assembled in convention would regard the free-silver plank and the anti-imperialist plank of the Kansas City platform as issues, the vitality of which has been extinguished by events. A political party cannot afford, in its appeal to the electorate, to revive, even in a formal way, issues notoriously defunct. If it means business, it must let the dead past bury its dead. Whatever might once have been said for bimetallism—and, for that matter, was said by the Republican national convention that nominated Mr. McKinley in 1896—it is a fact that, at the present time, the single gold standard is accepted by all of the great powers, including Japan, and that the adoption of it is contemplated even in Mexico. As for the Philippines, it is now recognized almost universally that they are ours, and will remain ours. Not one Democrat in ten would dream of renouncing them. Here, then, are two planks of the Kansas City platform—one of which was adopted, it must be remembered, by the vote of the delegate from Hawaii, a Territory that could not vote for President—which, obviously, cannot be permitted to figure in the programme to be formulated at St. Louis, unless the Democracy is deliberately riding for a fall. There are those who suspect Mr. Bryan of desiring just this result. There are those who think that, having been himself twice beaten, he does not desire the success of a Democratic nominee in 1904. He wishes, therefore, to compel the Democratic nominee to stand this year upon a platform which would insure his defeat, but the adoption of which would necessarily imply the continued ascendency of the Bryanite element in the Democratic party. Such a state of things would leave him the most conspicuous candidate for the nomination in 1908, when he might see a great light, and discover that new issues were indispensable. We would not deny that, from the view-point of Mr. Bryan and his personal friends, the position that he has taken since his return from Europe is well planned. They assume that, if the Democratic party should be reorganized, and should reoccupy the position which it took in 1892, and from which it marched in triumph to the White House, Mr. Bryan, considered as a political factor, would be annihilated. To avert such reorganization is, therefore, regarded by them as an act of self-preservation.

In their fundamental assumption, however, we believe them to be profoundly mistaken. It has been from the outset our conviction that Mr. Bryan's sole means of remaining a great personage in the public eye was the demonstration of a grateful and self-effacing willingness to serve in the rank and file of a party which had twice bestowed on him the supreme honor of a nomination for the Presidency. Had he stood aside, and, remembering what his virtual dictatorship had cost the Democracy, refrained from any attempt to dictate during the present campaign, it is certain that a great deal of deference would have been paid to him, and a share in the glory of victory might have been his. The formal and decisive repudiation of a man who has twice been its standard-bearer is not a pleasant duty for any party to fulfil; but it is a duty which Mr. Bryan has himself imposed upon the Democracy.

The time has come for the Democratic leaders to tell Mr. Bryan and his henchmen—as, according to the *Herald* canvass, they have been distinctly told at Washington—that at St. Louis they will be reduced to the impotence that they deserve. It is no longer probable that they will even be strong enough to veto a candidate for the nomination, and it is certain that they will exercise no influence on the framing of the platform. Instead of any effort being made to avert their secession, they will now be defied to bolt the nomination of the convention. Nothing, indeed, would be better calculated to wipe out Bryanism than to compel his followers to stand up and be counted at the next general election. Nobody knows better than Mr. Bryan himself that the test would be fatal to him. He is well aware that the Populist machinery, being extinct in almost all the States, he could, by no possibility, obtain, as an independent nominee, the 1,041,000 votes secured by Mr. James B. Weaver in 1892. He is also aware that in the year just named Grover Cleveland had a majority of 110 electoral votes over Harrison and Weaver combined. That is precisely the kind of victory which the national Democracy might achieve this year, should the party be reorganized on its traditional conservative principles.

No careful student of the situation doubts that Mr. Cleveland, were he appealed to, could indicate a programme as likely to prove successful as was that devised twelve years ago. Nor is he, of course, the only Democrat capable of framing a triumphant programme. As we have pointed out, the platform is already framed on its negative side. Mr. Bryan and Bryanism have been repudiated in advance. On the positive side, there is scarcely any doubt that Mr. Cleveland would recommend a constitutional amendment establishing the lawfulness of an income tax. We also take for granted that he would approve of the position taken by Mr. John Sharp Williams, the leader of the Democratic minority in the House, with respect to the tariff, the trusts, and official corruption.

Speaking in the House on January 21, and defining the attitude of Democrats on the fiscal question, Mr. Williams said that he had no desire to demolish the tariff at one stroke, to blow it up with dynamite, or to pull down its pillars and allow the structure to collapse with a crash. He recognized that it would take a good deal of time to reconstruct a tariff on Democratic principles. The ultimate aim, however, of the Democracy was, in his opinion, clear. From a Democratic view-point, a tariff represents essentially taxation on the consumer; and, therefore, a Democratic tariff should be one which, as nearly as should be practicable, would provide for equal taxation upon consumers, or, in other words, upon all things consumed. Touching the "stand-pat" or do-nothing policy avowed by the Republicans with reference to the tariff, Mr. Williams asked whether they were going to "stand pat" also on the trust issue. Referring to the notorious scandals in the Post-office Department, the Land Office, and other departments, Mr. Williams wanted to know whether the Republicans intended to leave the matter of reform in the public service, and of turning the rascals out, to the friends of the rascals; as they proposed to leave the matter of reforming the tariff to its friends. If such was not their intention, why, queried Mr. Williams, had the Republicans in the House of Representatives voted down the resolution to appoint a committee of five to investigate the Bristow charges against members of Congress? There is no doubt that Mr. Williams put his finger on the raw place when he charged the Republicans with being a party of negation, a party of obstruction, standing in the way of purgative and invigorative legislation—in a word, ultra "stand pat." Addressing his Republican colleagues, he said, "If you are not going to ride the horse, why don't you get out of the saddle; we can ride it and do something." That is precisely the point. The country is sick of a "stand-pat" policy.

Senator Hanna on the Labor Question

SPECIAL attention may well be paid to an article by Senator Hanna on "Socialism and the Labor-Unions," which has appeared in the *National Magazine* for February. Will it be said in any quarter that the Senator is not qualified to discuss the subject? His friends may justly reply, first, that, although Mr. Hanna has been for many years an employer of labor on a large scale, he has yet to encounter a strike; and, secondly, that, as a member of the Civic Federation, he has, in spite of the calumnies of yellow newspapers, gained the confidence of union working-men throughout the country. Such are Mr. Hanna's specific credentials for discussing the relation of socialism to labor-unions. We add that, during the recent heated campaign in Ohio, he had many opportunities of observing the effect of socialistic influences.

Mr. Hanna began by saying that, although he came upon the political field rather late in life—having spent most of his adult years in business—he was, from the outset of his political career, deeply impressed by the quickness with which the people of this country can be made to understand a logical proposition. He is certain that to him, and he thinks also that to them, the campaign of 1896 was an education. At all events, the Senator's personal experience in that campaign convinced him that the basis of success in a country enjoying free institutions is a demonstration of fairness and justice, and that the simpler a proposal is, the more effective it is likely to be with the people at large. Those readers, whose memories go back a dozen years, will recall that in 1892 the result in Ohio was so close that Mr. Cleveland obtained one of the twenty-three electoral votes. Neither is there any doubt that, from the beginning of August to the end of September, 1896, the opinion of impartial observers was that the Democrats would carry Ohio. For the tremendous revulsion that occurred in the next few weeks, and that resulted in a plurality of more than 47,000 for Mr. McKinley, no well-informed person doubts that Mr. Hanna deserves most of the credit. This victory, and the unprecedented majority which he obtained last November, are facts which have to be explained. They can be explained only in one way, namely, on the theory that the mass of hard-working and intelligent voters in Ohio regard Marcus A. Hanna as their friend.

In the article published in the *National Magazine*, the Senator

points out, what is often overlooked, that organized labor is an older institution than organized capital. The instinct of self-protection showed itself earlier on the former side than it did on the latter. Is the one organization necessarily antagonistic to the other? Mr. Hanna replies in the negative; and, so far as his personal experience with organized labor goes, his response is justified. His plan is, he says, to have organized union labor "Americanized" in the best sense, and thoroughly educated to an understanding of its responsibilities, the effect of which education, so far as his personal experience goes, will be to make it the ally of the capitalist rather than an enemy. Some of our daily newspapers profess to misunderstand the term "Americanization," and the phrase "education up to an understanding of labor's responsibilities." To our mind, Mr. Hanna's meaning is clear. By "Americanization" the Senator means that organized labor must recognize that unorganized labor has equal rights with itself. In other words, *persuasion*—not *coercion*—must be used to array the whole body of working-men in an organization. Such an aim is not at all impracticable. A close approximation to its fulfilment has been attained in many trades, in many countries.

Now let us glance at the equally plain meaning of Mr. Hanna's demand of an education of labor to an understanding of its responsibilities. The workmen that have been employed for many years by Mr. Hanna thoroughly understand their responsibilities. In conferences with their spokesmen, he has always caused them to comprehend precisely what their products cost, and what they could be sold for. He has also pointed out what would be a reasonable return on the capital invested. From the data furnished by these three factors, the just amount of wages could be easily computed. That the computation has been always satisfactory is evident from the fact that there never has been a strike on the part of the workmen in Mr. Hanna's employ.

To the question, What would become of the non-organized worker if an amicable alliance should be made between labor and capital, Mr. Hanna replies that no such middle group would exist if all workmen were like *his* workmen. If union laborers were "Americanized" in the sense of recognizing the equal rights of all American citizens, and if they were educated to a sense of their responsibilities to the community at large, as the Senator's employees are, there would exist no such thing as a body of men belonging neither to organized labor nor to organized capital. Every adult male would belong either to the one or to the other body. All this should be perfectly true; and no well-meaning and intelligent man has any excuse for misunderstanding it. Senator Hanna does not profess to be a rhetorician, but his ideas are clear to all that wish to comprehend them.

But how are working-men to be educated to a sense of their responsibilities toward non-organized labor and toward the community at large? Mr. Hanna is convinced that much has been done, and that a great deal more can be done by the Civic Federation. He says that, after reflecting on the systematic work performed during the last five years by that body, he has made up his mind that its purpose is preeminently useful, and he has resolved to consecrate to it the remaining years of his life. The aim of the Civic Federation, as he understands it, is to eliminate the passionate prejudices that have existed between capital and labor, and to combine both forces in a movement impelled by the highest moral and social impulses.

Unequivocal is his opposition to socialism. He believes that the only hope of labor is to be found in a system based upon the root-idea of individualism. That is to say, he would give, as nearly as is practicable, equal opportunities to all, and let the best man win. This, we need not say, is the opposite of the aim put before it by the system whose expounder is Karl Marx. Not only does Senator Hanna regard socialism theoretically as fatal to the progressive principle of civilization, but he holds that, practically, it has no chance of securing a firm foothold in the United States. He thinks that this conclusion is justified by the outcome of the last campaign in Ohio, where the ultimate intentions of socialism were disclosed to the people. No sooner were they clearly understood by the voters than they were repelled by immense majorities. The citizens of Ohio declared at the ballot-box that they would accept no "ism" that would take from any individual the just reward of his labor.

Mr. Hanna does not expect to bring about all at once an accommodation between the interests, apparently conflicting, of capital and labor. He knows that great social questions are not solved in a summary way. What he aims at—and the admirable management of his private business attests his sincerity—is to lay down no hard and fast rule by legislation, but to take up the disagreements of labor and capital, case by case, and situation after situation, as they arise, and to try to adjust them in a manner not only pacific, but permanent. It is plain enough to Senator Hanna that thus the inherent rights of the individual will be better served than by an attempt to demolish a system of government which, as experience has shown, is well suited to the needs of the American people, and which has withstood the attacks of agitators for more than a hundred years.

The Opening of Parliament

Not since the stormy days of the Reform bill has the British Parliament opened under such interesting and dramatic conditions. England is face to face with proposals which may mean a reversal of her whole commercial history, affecting the greatest body of commerce, and the most widely distributed, that was ever handled by any nation. A radical change in Britain's fiscal system will not only affect England, Ireland, Canada, South Africa, and the other British colonies, but the Indian Empire, the most wonderful administrative undertaking in history, will also be touched in a dozen different directions.

Nor will the results of a great fiscal change in England stop here. Belgium, which is a free-trade country, might build a tariff wall without any very great results beyond the comparatively limited area of Belgian trade. A self-contained and practically self-supporting empire like Russia might become converted to free trade, and the rest of the world would remain untouched: the countries which export goods to Russia would still export them; they would not even make a much greater profit, because competition would immediately cut down prices practically to the extent of the abolished duties. But England cannot change her commercial principles without affecting the whole world, since England's trade is world-wide in a sense which is true to the same extent of no other nation.

England is equally facing an international problem of tremendous significance, even though the nation itself does not fully realize all that this problem means. Her alliance with Japan will not limit itself in effect to a check upon the ambitions of Russia in Manchuria, it will infallibly alter the balance of power throughout the whole of Asia, and it is far from certain that the alteration will, in every case, be necessarily in favor of England. It has more than once been pointed out that Russia has prepared an invasion of India, to retaliate for England's alliance with Japan, should that alliance go beyond moral support, and lead England into actual war. What the result of an invasion of India, through Persia and Afghanistan, might be, it is impossible to foretell; but the lessons of the Boer war have shown that it would be an almost intolerable burden on the British treasury, even if victory were as complete as in South Africa; and it must be admitted that the Turkestan army of Russia would probably be a more formidable foe than the forces of the two little South-African republics. While Russia is palpably at a disadvantage in Manchuria, owing to the immense distance of this secondary base from her chief supplies, the tables would be turned if it came to an invasion of India, which is only a few miles from Russian territory at the nearest point, while almost as far from England as South Africa. Nor is it by any means certain, in spite of the imperial regiments of native troops, that the natives of India would side loyally with their conquerors against the invader. The Rajas might, because they are upheld in their privileges and power by English armies; but there are elements of grave unrest amongst the people, especially elements of religious fanaticism, which might easily break out into flame; and there are many gifted and influential natives of India who have for years been looking to Russia as their destined deliverer. It is evident, therefore, that a conflagration in the Far East would mean an upheaval of the whole of Asia; and no one can be so optimistic as to say that such an upheaval would certainly turn to England's profit. There seems to be little realization of these manifold possibilities among the English people, who appear to believe that war must turn to the detriment of Russia, while leaving the rest of Asia untouched.

Thus the British Parliament is called on to face two mighty and momentous problems, literally of world-wide significance, whose solution in either sense will affect hundreds of millions of men for generations to come. And the gravity of the situation is augmented by the fact that in both the historic parties, which are called on to decide these great issues, there reigns confusion, and such a dislocation of alliances and former relations as is unparalleled in the whole of the constitutional history. The premier is in a position more than ambiguous. While formally opposing the programme of Mr. Chamberlain to such a degree as to lead to the latter's resignation, Mr. Balfour admittedly sympathizes with that programme and even prophesies its success. Though nominally leader of his party, he is really little more than a figure-head, while the right wing follows the Duke of Devonshire, and the left swears by Mr. Chamberlain. If ever a man was in danger of falling between two stools, that man is the present English Premier. Moreover, Mr. Balfour is confronted with a secession of many of his gifted and most influential colleagues: the Duke of Devonshire, Mr. Chamberlain himself, Lord Goschen, Sir Michael Hicks-Beach, Mr. Ritchie, Lord Hugh Cecil, as representatives of the powerful family influence of the late premier, Winston Churchill, who embodies the ideas and ambitions of his gifted father, Lord Randolph, are all arrayed against him in different degrees, while the new members of his cabinet have little experience and less weight, the War Office especially being a wilderness of confusions, abortive schemes, and conflicting ambi-

tions. No premier in so weak a position was ever called on to face such grave issues.

Nor will a general election, should this be deemed best, simplify the problems before the English Parliament. Mr. Balfour, if he goes to the constituencies, will take with him a scheme of protection which Mr. Chamberlain will be almost as hostile to as will the Duke of Devonshire. It is conceivable that each will put forward a candidate. The result, no one can foretell. Nor is the prospect lightened by the spectacle of a strong and united Liberal party, ready to assume the reins of power, should the Unionist party be finally disrupted. There, also, everything is confusion. All these considerations only heighten the gravity of a situation without parallel in the Parliamentary life of the British nation.

Wise Through Compassion

THE half of a phrase of a man of reflection often contains the germ of a whole system of philosophy or the foundation for a theory of conduct. The vital difference between truly great books and the average run of books lies just in this difference of depth of suggestion. Great books are unfathomably suggestive. No one will ever reach to the end of interpretation of the Gospels, the Upanishads, the Dhammapada, of Epictetus, Plato, Plotinus.

One phrase of endless content is Wagner's description of *Parsifal*, "The guileless fool, wise through compassion." Experience is the common teacher. Man, as a rule, learns by blows. The superiority of man over woman is partly a matter of man's being thrown earlier upon the world and thus learning his place and obligation in it sooner. He starts out at a big public school, or at college, and by dint of frequent mishaps, by cutting himself off from what he wants by negligence or mistake, and by catching up again by extra exertion, he learns what is worth while. A woman is too often sheltered and petted, and so perhaps goes through life without ever growing up at all. "I learned at school before I was ten years old," said an effective public man to a woman once, "that if I were not keen and on the watch I should be made some other fellow's catspaw," and the woman commented, "I was never so shocked in my life: I thought every one would love and help me if I only explained myself enough." Alas! no man desires another's advancement quite so much as his own. Life is still a struggle for spoils, and if we stand comfortably it is apt to be because we have elbowed the rest of humanity a little bit out of the way.

There is a school of literature and of art which urgently advocates experience as a means to consciousness. We are all brought face to face very often with a meagre humanity fed on and upheld by obedience to minor rules, and it is so easy to see the poverty of the merely conventional and orderly that we find it difficult to answer the fallacy so speciously presented that urges experience, any and every experience, rather than an anæmic consciousness of life. It is to just this question that Wagner replies when he puts the power of healing into the hands of that man alone who is a guileless fool, wise through compassion. There is just one kind of man in the world who can dare to be unsophisticated, and that is the man who wants nothing for himself.

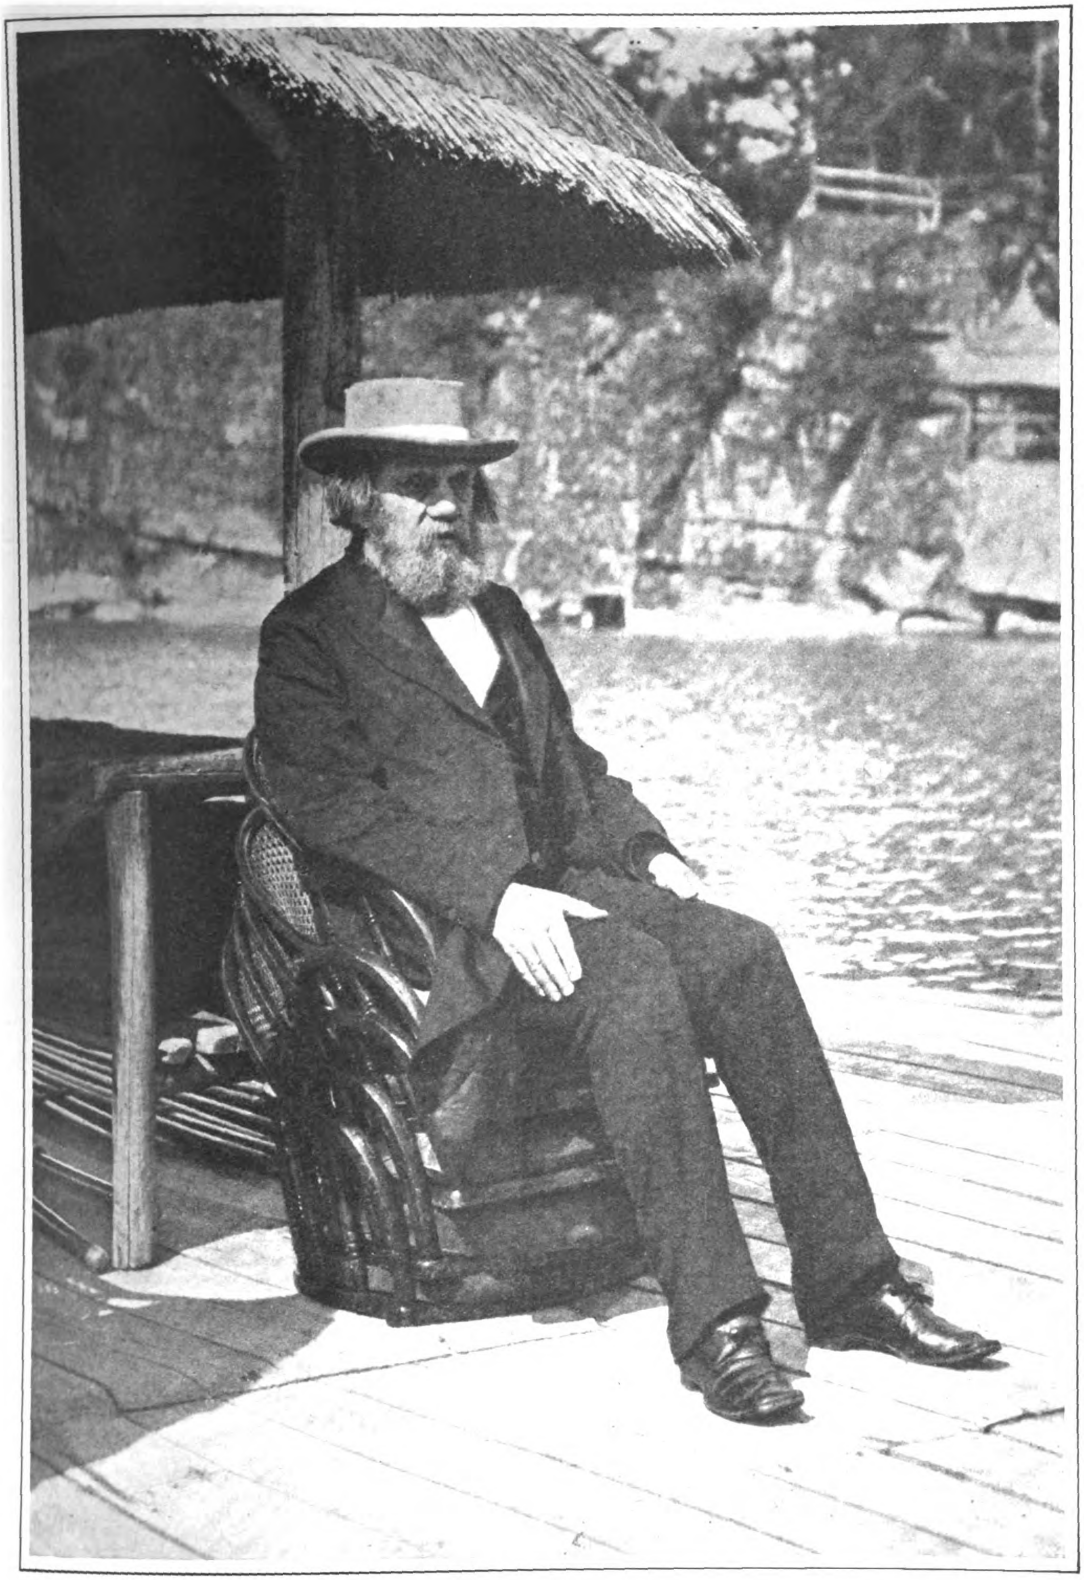
His is not a narrow experience of life. With eyes unblinded by desire he foresees the goal of the race. Looking away from himself, he knows all the struggles and the sufferings of humanity, not by trying them, by falling down and rising up worn and weakened, but by insight and sympathy, and he still has the reserve strength to give and to heal. These men have a single aim. They try no by-paths. They move straight upward, simple-minded, guileless, and of single purpose. It is the power of genius and of sanctity alike to know by intuition. Christ never experienced sin that He might understand and forgive. Buddha never practised cruelty that he might teach men forbearance. St. Francis did not exhaust his forces in pride and harshness that he might show the worth of gentleness and humility. *Parsifal* had never succumbed to the fascination of women that he might know the worthlessness of *Kundry's* allurements.

A certain writer has said of *Parsifal* that his "only achievements were the shooting of a swan and the refusal of a kiss." But the mind sees what the mind brings with it to see. There are those who never reach beyond the gestures of the body, and who might see the whole opera a dozen times and never find out that *Parsifal* destroyed a whole world of false and lying enticements, that he recovered and liberated a sinning soul, that he healed a life-long agony, and himself attained to the ecstatic vision. It is possible to reduce the highest spiritual victories to the paltriest of concrete acts, so closely is all life interwoven: but the magnitude of the spiritual victories is in no wise lessened.

Our danger of a meagre humanity lies not in a lack of experience, but in a lack of feeling. A recent reviewer of Pater's biography complains quite bitterly of the lack of events in the man's life: he seems to feel that it must somehow detract from his genius to have so quiet an external history. When the life-story of one of the greatest geniuses of this era is written, it will probably be found that he lived and grew in the suburbs of a Flemish town, diligently digging in his garden or sitting in his room writing his books. The lives of Charlotte and Emily Brontë seem to have been a round of lowly household tasks, diversified by lonely wanderings over the Yorkshire moors. But shall any one dream that the consciousness of these people is meagre? Rather they clasp the whole world to themselves in understanding and compassion.

Dr. Hadley's Advice

THE report that President Hadley of Yale had advised sundry Harvard students to keep out of politics unless they were rich has been criticised widely and with hearty enthusiasm. No one, indeed, suggested that the president of Yale was perfidiously sowing tares in the Harvard students' minds, but many remonstrants held that he was culpably wrong, and others argued against his supposed conclusion. One citizen, Mr. B. Macmanon, stirred to his marrow, sent to the *Sun* and *Times* a letter which both printed, expressing his concern that "the cowardly and abominable advice given on Thursday night by President Hadley has been allowed to pass without editorial comment and condemnation." He went on to go for Dr. Hadley at some length and with great heartiness, using many hard words and quoting poetry, and reduced Yale's president to mere remnants. So many newspapers spoke that it seemed fit to Dr. Hadley to print his speech in the *Yale Alumni Weekly*. He said, it seems: "I should advise a man not to go into politics until he had some independent means of support, sufficient to keep him and his family from starvation, upon which he could fall back if he were defeated for office, or felt that he could not honorably accept office under the conditions imposed." That is not startling advice. It urges nothing more than common prudence. Dr. Hadley suggests that if a man has neglected to inherit some money it is well for him to get a sufficient start as a lawyer or journalist or business man to give this necessary minimum of self-support before being a candidate for office.



That is good counsel. A very common practice here in New York, and in many other cities, is for political aspirants to open liquor saloons and get as well started as possible in that business. The saloon business is exceptionally harmonious with political life. The opportunities of saloon life help the aspirant in his politics, and his politics help on trade in his saloon. Dr. Hadley did not commend saloon-keeping to Harvard students, but the advice he did give them was entirely sound.

If he had recommended celibacy as a suitable condition for beginning politicians, he would probably have been criticised. Yet freedom from domestic ties has obvious advantages for the adventurer in politics. A man without family responsibilities can take chances that a family man must avoid. He can always make shift to support himself, no matter how the votes go or who gets the appointment. He can spend his evenings with voters and counsellors instead of at home, and can sit up as late as is necessary, and dine and sup wherever and whenever it may be convenient without neglect of duties that lie, or should lie, near his heart. What use a working politician can be to his wife is a question that has often mystified observers, and if he has children the problem is still more tangled. Politics is a mistress even more exacting than art. It is half a century since the Democrats have elected a married man President, except Mr. Cleveland, who married after he had settled down in the White House. Buchanan and Tilden were bachelors.

The law and the newspaper business, like the saloon business, work in very well with politics. Very many men occupied with other business concerns are successful politicians and holders of office, but ordinarily office-holding is bad for the business of a business man. Mr. Clark manages to be a miner and a Senator without apparent conflict of interests. Mr. Hanna seems to succeed in delegating his business cares, as far as necessary, to competent lieutenants. Many other rich Senators get along, but they are men, as a rule, who have got to a point where they can afford to leave their business to trained subordinates. Mayor Strong, on the other hand, suffered grievous losses from neglect of his own concerns while he served the city of New York, and there have been many like cases.

There is danger, too, that a business man who holds office may be tempted to make politics and trade work together for good. Except in law, journalism, and saloon-keeping, it is hard to do that without prejudice to reputation. The political cemeteries are full of the reputations of persons who have tried it. We have lately seen Governor Odell accused of this sort of indiscretion: we have seen Mr. Littauer's record clouded by kindred imputations. It does not do. Trade and politics do not mix well. President Hadley might properly have warned the Harvard young men to whom he gave good advice that, though a profitable business is an excellent thing for a politician to fall back on in off years, public duty and private gain are liable to conflict, and when they do it is well to choose one or the other, but not both.

EDWARD EVERETT HALE, NEW CHAPLAIN OF THE SENATE

Dr. Edward Everett Hale, the veteran Unitarian minister and author, has been chosen Chaplain of the Senate to succeed William H. Milburn, who died last year. The new chaplain assumed his office on January 1. Dr. Hale is in his eighty-second year, and has been pastor of the South Congregational Church in Boston for almost half a century. He is best known as the author of "The Man Without a Country," one of the most widely discussed of modern books. In addition to his activity in ministerial and literary work, Dr. Hale has been prominent in such enterprises as the "Chautauqua" circles and "Lend-a-Hand" clubs

An English Provincial Town

By Sydney Brooks

LONDON, *January 30, 1903.*

BIRMINGHAM is British provincialism carried to the nth. Only one hundred miles from London, it is from two to four years behind it in fashions, and seems in its instinctive ways of looking at things to belong to another world. Here, if one had the time and inclination, one might sit down and study all that makes England so peculiarly English. The capital of a country is rarely a good guide to the country itself. New York hardly ever looks beyond the Palisades, and London is superbly unconscious that such a thing as provincial opinion exists. Every metropolis looks upon its hinterland with something of the "monocular insolence" that a clever American pro-Boer discovered, or affected to discover, in Mr. Chamberlain's diplomacy. London is too big, too cosmopolitan, too experienced, the blend of too many elements, too unmoral to be wholly representative of England. One has to get away from its air of concentrated self-sufficiency, that every capital engenders, before one really begins to feel oneself in England. But here in Birmingham "the great heart of the British public" beats with unmistakable genuineness. Here, as one comes across the merchants and manufacturers of the English Pittsburg and catches glimpses of their home life and surroundings, the veritable unmitigated England unfolds itself in detail—all its Puritanism, its narrowness, its quiet undemonstrative comfort, its rough hard-headedness and independence.

Narrowness is a word which the average Englishman would be surprised to find applied to Birmingham, for Birmingham has been and still is the home of political liberalism and religious nonconformity. From this hive of busy workers and hard thinkers a score of progressive movements have taken their source. It is to Birmingham that England owes whatever is sound in her educational system, and it is Birmingham again that has just founded the first up-to-date commercial and technical university that the country has known. In national, as well as civic politics, in matters of religion, as well as of education, the people of Birmingham have always shown themselves thorough radicals and most formidable foes of privilege and monopoly. John Bright and Joseph Chamberlain are their deities, the one a Quaker, the other a Unitarian, and both emphatically "men of the people," and the champions of "popular" rights and movements.

It is in the social and not the public and political sense that I use the word narrowness. Birmingham is narrow as Chicago is narrow. The hall-mark of an honest and unforced provincialism is stamped broadly upon it. It is hard to define precisely wherein this provincialism consists, but of its presence and pervasiveness one is made immediately conscious. That mellow something in the social air of London, that broad, equable, worldly outlook are here entirely lacking. Birmingham, you feel at *once*, is "out of it." The city itself is an affair of two streets and one view. The two streets are New Street and Corporation Street, and in them are to be found all the stores in which it is possible to buy anything worth having. Corporation Street is a broad, *not* unimposing, avenue, cut through the heart of what was once a foul network of slums. Like *most* other things in Birmingham, it owes its being to Mr. Chamberlain, whose three years of office in the Mayoralty were the apothesis of public-spirited bossism. Mr. Chamberlain prevailed upon the Council to tear down the slums and lay out the new street with public money. The experiment, denounced at the time as the rankest kind of socialism, has justified itself abundantly. Thirty or forty years from now, when the leases fall in, Birmingham will be, for its size, the richest municipality in the world. Its companion street, New Street, is a narrow, dingy thoroughfare, with the sole merit of leading up to the one handsome prospect that the city contains. In a space of half a dozen acres or so are the Town Hall, a massive dignified building in the Corinthian style, the municipal offices and council chamber, a large and admirably appointed art gallery, the post-office and the city library, and Chamberlain Square—a tribute from the people to their great ex-Mayor. Thetewith picturesque Birmingham comes abruptly to an end. The rest of the city is given over to manufactures and smoke.

But if the city is, on the whole, a squalid, depressing affair, its chief suburb is a counterbalancing delight. Nature in England seems to have made a point of tacking on the most beautiful suburbs to the most hideous towns. Few cities are uglier or dirtier than Bristol, yet nothing could be more charming than its annex, Clifton. Birmingham, being a city of over 600,000 people, has, of course, several suburbs, but the pick of them all is Edgbaston. Edgbaston is practically owned by Lord Calthorpe. This sort of exclusive proprietorship has its uses. Lord Calthorpe has preserved Edgbaston to purely residential purposes. Beyond a certain limit, no stores are allowed, and saloons are ruled out altogether. The place is laid out like a park. Every house seems to have its garden, and the smallest lawn looks big enough for croquet or lawn-tennis. As everywhere in England, thick hedges and walls grown over with ivy preserve an inviolate privacy. The majority of the houses stand well back from the faultless roads, and are approached by drives that wind through the perfectly kept gardens and grounds that are the joy of English life. The rents to a Londoner, still more to a New-Yorker, appear ridiculous. Edgbaston is the paradise of the poor man. I was taken to a house with over thirty rooms and about an acre of ground and kitchen garden around it, one of the lawns being given up to flowers and ornamental uses, the other to a full-sized tennis-court, that rented for $550 a year. Living, too, is equally cheap, perhaps thirty per cent. less than in London. Altogether I should take Edgbaston to be the best possible setting for that excellent middle class whose numbers, placidity, prosperity, and instinct for the solid comforts of life used to rejoice M. Taine.

The people live out of doors. Tennis and golf and archery and hockey and croquet clubs are innumerable, and an Edgbaston girl not a member of one or the other is hard to come across. The charming Warwickshire Avon is within three-quarters of an hour's journey by railroad, and wealthy Edgbastonians pitch their summer cottages in the heart of Shakespeare's country. Sport and philanthropy are the main occupations of the place. The "season" is in winter, when dances and latterly card parties on the *internal* Brooklyn "progressive-euchre" model, alternate with football, golf, hockey, and lacrosse as diversions. So entirely healthy and normal are the life and atmosphere of the people that Edgbastonians are often hard put to it to find material for gossip. It was assured that the latest scandal of any real magnitude is now *nearly* fifteen years old. Could anything show more clearly than this how irredeemable is its provincialism?

There is no aristocracy in Edgbaston either of birth or wealth. The Chamberlains and the numerous branches of their family are, of *course*, at the top of the social ladder, and in some respects form a set of their own. But, like everybody *else* here, they are all connected with trade. If one could discover any dividing-line it would probably be that between manufacturers and retail dealers: but the instances where the *line* had been crossed would be at least as numerous as those in which it had been kept. Practically everybody is on an equality in Edgbaston. No one puts on "side," there is no *jeunesse dorée*, and, except at lunch-time, the purely social clubs are almost deserted. Everybody dresses in the same abominable style, takes part in the same pursuits, and is happy and contented in the same way. Everybody, too, seems to have a real pride in their city. There is *more* local patriotism to the square acre in Birmingham than you will *find* in the whole of London. They glory in being the "best-governed municipality in the world," and they do not forget that they owe the *title*, as they owe much else, to Mr. Chamberlain. The self-esteem of Athens and Chicago is also the self-esteem of Birmingham.

State Manslaughter

By W. D. Howells

WHEN the axe was laid at the root of the good old gallows-tree, whose fruit had nourished Anglo-Saxon civilization in so many climes for so many ages, I had my misgivings whether the electric chair would serve all the philanthropic ends expected of it by its friends. I do not say that I had any prevision of the horrors which have resulted from it in many of the State killings since it was set up in the State shambles, but I could not believe that it would be of such a benign operation as almost to take away the mortal effect of the death penalty. Something like this was what its partisans promised us, with a tender regard equally for the sensibilities of those who wished to have criminals killed painlessly, and for the scruples of those others who believed that the law had no right to the life even of a murderer. What the advocates of the chair, which has so sadly betrayed their confidence, implied if they did not express, was that killing by electricity was almost the same as not killing at all. It would remove with dignity and decorum the offender who had forfeited his life, and not be attended by the depraving incidents inseparable from guillotining, garroting, or even hanging, and of course not by the cruel accidents to which the art of the headsman was subject. They did not forebode and they could not foresee that the mystical element whose agency they had invoked to do the work of the archaic instrumentalities of justice could bungle its sacred mission. The culprit would be carefully seated, somewhat as the subject of photography is, and assuming as cheerful or as submissive an expression as possible, would be thrilled into the other world with the touch of a button, or the turn of a key, by the hand of a scientific gentleman, or at least an educated electrician, on the other side of a wall or screen. No black mask of the headsman here; no show of the halter, or sound of the drop: no binding of the victim on a board like a planked shad: not even the twist of a crank by which the garroter despatched the malefactor from behind.

It was not imagined that electricity could fail to kill instantly, much less that the criminal, who had become the State's

peculiar care, could be so ineffectually tortured as to froth at the mouth, and strain at his bonds with writhings of agony which almost burst them, or give out the smell of his burning flesh so that the invited guest was often made sick at his stomach by the loathsome and atrocious fact. Yet all this has happened again and again in the execution of the death sentences since the consecration of the electric chair to the hallowed office of the axe, the noose, the screw. It has happened so often that I, at least, had become used to reading of it, and had tranquilly accepted it as of the same necessity as the honored death penalty itself, which our civilization could not get on without, though the civilization of Italy and of Scandinavia seems to do so, not to mention that of our sister republic Switzerland. I generally managed to reconcile myself to the record of the frothing, and burning, and writhing, by learning further that the scientific gentleman, or the educated electrician, on the other side of the wall, had made it all right by discharging another thousand or two thousand volts into the body of his erring brother, and so putting him finally out of his misery.

What was my dismay, then, to read the other morning in the *Sun*, which daily rises over my coffee-cup at breakfast, a letter from so eminent an authority as Dr. Allen McLane Hamilton, which informed me that killing does not kill when done by electricity in the hands of the official homicides. He declared that in the case of a murderer whose life was lately attempted by the appointed agency, six "shocks" so failed of their due effect, that the examining doctor "collapsed from sheer horror when he found that his stethescope still carried the heart beats of the victim to his ear." He alleged three other recent executions as equally "disgraceful," and named one of them in which the electrized man revived, and perished subsequently from the "large quantities of morphine and chloroform" given him. He holds that the "present law provides a method full of all sorts of uncertainties which are recognized by scientific men generally," and he suggests that something like "poisoning with carbonic dioxide" would be "an effective and painless" method, which might be properly substituted for the very fallible means of happy despatch that electricity has been shown to be.

I am afraid that many kind souls who, like myself, had rested in peaceful acceptance of killing by electricity as next to no killing at all, will reconcile themselves with difficulty the substitution of "poisoning by carbonic dioxide," though it sounds like something nearly as merciful as conservative surgery. The question of its employment brings up again the whole question of State homicide, which seemed so gracefully settled by the use of electricity. We have to face again the fact that on humanitarian grounds State homicide seems more barbarous and abominable than any but the most exceptional private murder, since it adds the anguish of foreknowledge to the victim's doom. If one dies by the hand of a private murderer, one mercifully perishes without expectation, as one does in most other circumstances of accident or disease; but if one is to be put to death by the civic authorities, one is warned of it months beforehand, with the date precisely or approximately fixed; or if, as in the more æsthetic conditions of France, the very hour is withheld from one till one is waked to go to the guillotine some morning, still one cannot well lie down to peaceful slumbers with that fate hanging over one. To be sure, it might be said of State homicide that it seems no more excessive than most other criminal sentences, which no one who hears them pronounced in what we so amusingly call our courts of justice, can fail to feel wholly out of proportion to the offences punished by them. For a theft so small that it could only be recognized by the most rigid moralist, a man loses his liberty, and his family loses his labor for two or three months: for a theft a little larger, he loses his liberty and his family loses his labor for as many years. The State, which ought to pay the highest trades-union wages for his work, and daily turn his wages over to his innocent family, pays him nothing, and robs his guiltless wife and hapless children of the living he might have earned for them. But even justice so Asiatic as this does not seem quite so barbarous as the death penalty, whether inflicted by electricity, as now, or by carbonic-dioxide poisoning as possibly hereafter, for in Asia we read that the capital offender is often taken from the judge's presence and at once beheaded, or even beheaded in the judge's presence as soon as sentence is pronounced.

He suffers, but he does not suffer long.

But under our system he must suffer ages of fear in view of the death that awaits him in such a week, or on such a day and hour.

All this, I hope, is not saying that the death penalty is not a righteous and necessary thing. It is true that several civilized countries, and many of our own States, seem to get on without it, and not to have more murderers in them than the countries and States which cannot get on without it, and which seem equally civilized. In the countries and States which find it essential to the salvation of society, many disciples of One whose teaching superseded the old law of an eye for an eye, and a life for a life, hold it little less than of divine ordinance. It is not, then, for a lay brother to question its inspired origin, and I do not question it. I accept it with all its possible aberrations from justice, in the case of some who perish innocently by it, and in the case of the others who merely die a thousand deaths in view of the death they are doomed to; I accept it because, although other countries and States get on without it, we apparently cannot get on without it. If electricity must go, let not the dear and honored death penalty go with it. If we must have carbonic dioxide, then better carbonic dioxide than the sickly sentimentality which would substitute for State homicide, with its inalienable mental tortures, the imprisonment in which justice can revise its verdicts, if they have erred, or if they are righteous can still keep the guilty soul alive for the penitence and the reform which we cannot refuse to believe possible without denying the faith.

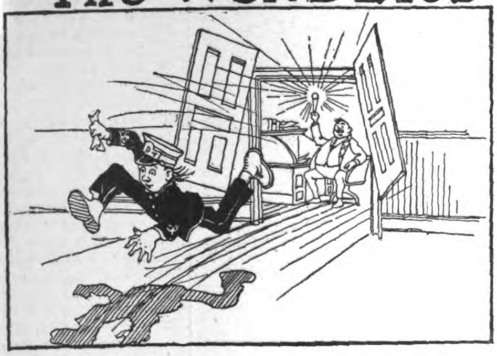
Innumerable affecting memories and associations, summing in themselves a vast share of the poetry and humor of the race, cling about the venerable punishment which we could not deprive ourselves of, without losing a precious part of our heritage from the past. Almost any reader can recall proverbs, verses, jokes, in which its idea is embalmed, and can verify the instances in which these have made him a wiser and a better man. "A thousand names has the Arab for the horse," says Heine, "the Frenchman a thousand for love, the German a thousand for drinking, and the Englishman a thousand for hanging." This saying touches the heart of the fact, and lights it up as by the introduction of a radioactive flame, so that we see clearly how impossible, how all but impious, it would be for us to disuse hanging, or its semi-scientific substitutes. It is true that its beneficent office has been greatly limited with the lapse of time. People used to be hanged for a shilling's worth; a woman went to the gallows for stealing a loaf of bread to keep her children from starving; for imitating too accurately the signature of a noble lord a doctor of divinity was hanged in the eighteenth century so righteously that the noble lord could not bring himself to save the forger by his intercession; rape, arson, treason itself sometimes, which used to bring a man to the scaffold, no longer do so. But through all these changes the great, vital, saving principle of the death penalty has remained the same. If electricity has proved not merely appalling and disgusting, but ineffective, by all means let us have carbonic dioxide, and if that fails, too, let us keep on trying till we get the perfect agency of painless homicide. But let the State never corrupt the potential private murderer by ceasing to kill with accumulated terrors such as he never dreamt of.

Books and Bookmen

By James MacArthur

WITH two plays running in New York and four in London in one season, Mr. Barrie as a dramatist is distinctly in the foreground. In addition to "The Admirable Crichton" and "Little Mary," London is still enjoying "Quality Street," which had its first run in this country, and has recently welcomed "The Professor's Love Story," in which Mr. E. S. Willard has frequently delighted American audiences during his visits here since he first produced the play, with Miss Marie Burroughs as *Lucy White*, at the Garden Theatre, some ten years ago. To the present generation of theatregoers Mr. Barrie's career as a dramatist dates from "The Little Minister," yet his earliest dramatic efforts were made shortly after his advent in London as a journalist. It is a far cry from the Auld Lichts to the footlights, from *A Window in Thrums* to "Little Mary," and yet, to the footlights he owes his charming wife and his wide popularity. Still one cannot help grudging the stage the rare flowers it has plucked from the garden of his mind, which finds a more enduring form in literature, and provides a greater source of delight.

It was early in the nineties, before *The Little Minister* was published, that Mr. Barrie's name first appeared on a playbill as joint author of a highly romantic drama called "Richard Savage." It had but one performance. Mr. Barrie's collaborator was the well-known novelist, Mr. H. B. Marriott-Watson, who from that day to this has eschewed the theatre and stuck to fiction. The late W. E. Henley wrote a prologue for the occasion, and evidently anticipated objections on the score of historical verity on the part of the audacious and inexperienced young dramatists by the ingenuous admission that herein Richard Savage



> "stands or falls,
> Not as dead Nature, but as living Art."

Except for a glimpse of that alert faculty of invention which is so fertile and surprising a resource in Mr. Barrie's later plays, there can scarcely be said to have been any traces of the successful dramatist of to-day in this long-defunct play. As if eager to throw the weight of this heavy drama off his mind, Mr. Barrie launched out on his own account a few weeks after his doleful experience at the Criterion Theatre, London, with a jocular skit called "Ibsen's Ghost," in which the author of *A Doll's House* and *Hedda Gabler* was caricatured by the famous comedian, Mr. J. L. Toole. Later came a one-act piece, "Becky Sharp," from *Vanity Fair*, which showed skill and fidelity in reproducing Thackeray, but very little original talent for the stage. With "Walker, London," which was produced in London in 1892, Mr. Barrie began to attract serious attention as a coming dramatist. It was a comedy-farce, with a houseboat on the Thames as its sole scene of action throughout the play. As I dimly recollect the scene, it showed a section of the cabin, as well as the roof

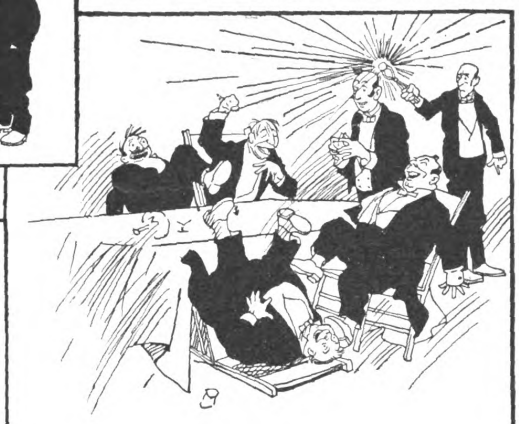
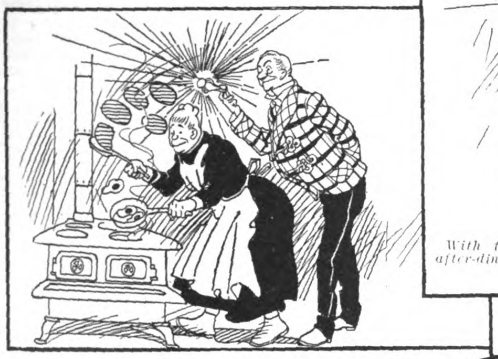
The WONDERS Of RADIUM
PRACTICALLY APPLIED

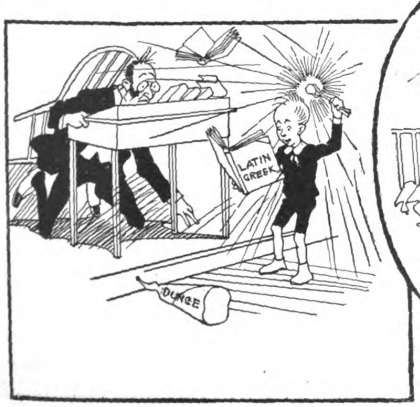
BY ALBERT LEVERING



What a touch of it will accomplish with the tired messenger.



Your "young hopeful" will stand by you at the critical moment with a really bright remark.

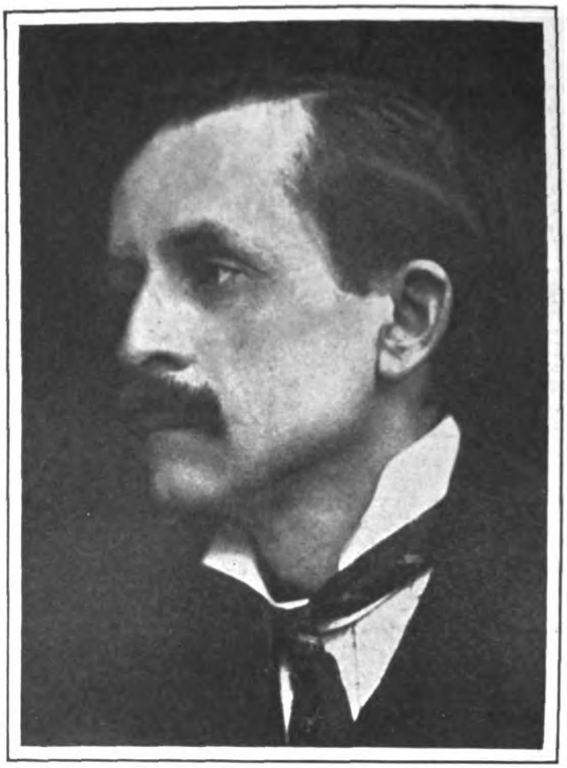


A boon for street-car conductors—"Move up forward!"

With the assistance of the waiter and a little radium the after-dinner speaker may become a success.

To accelerate cooking.

Its value in education will be inestimable.



An instant solution of the problems of the day.

And it will preserve a creditor forever.

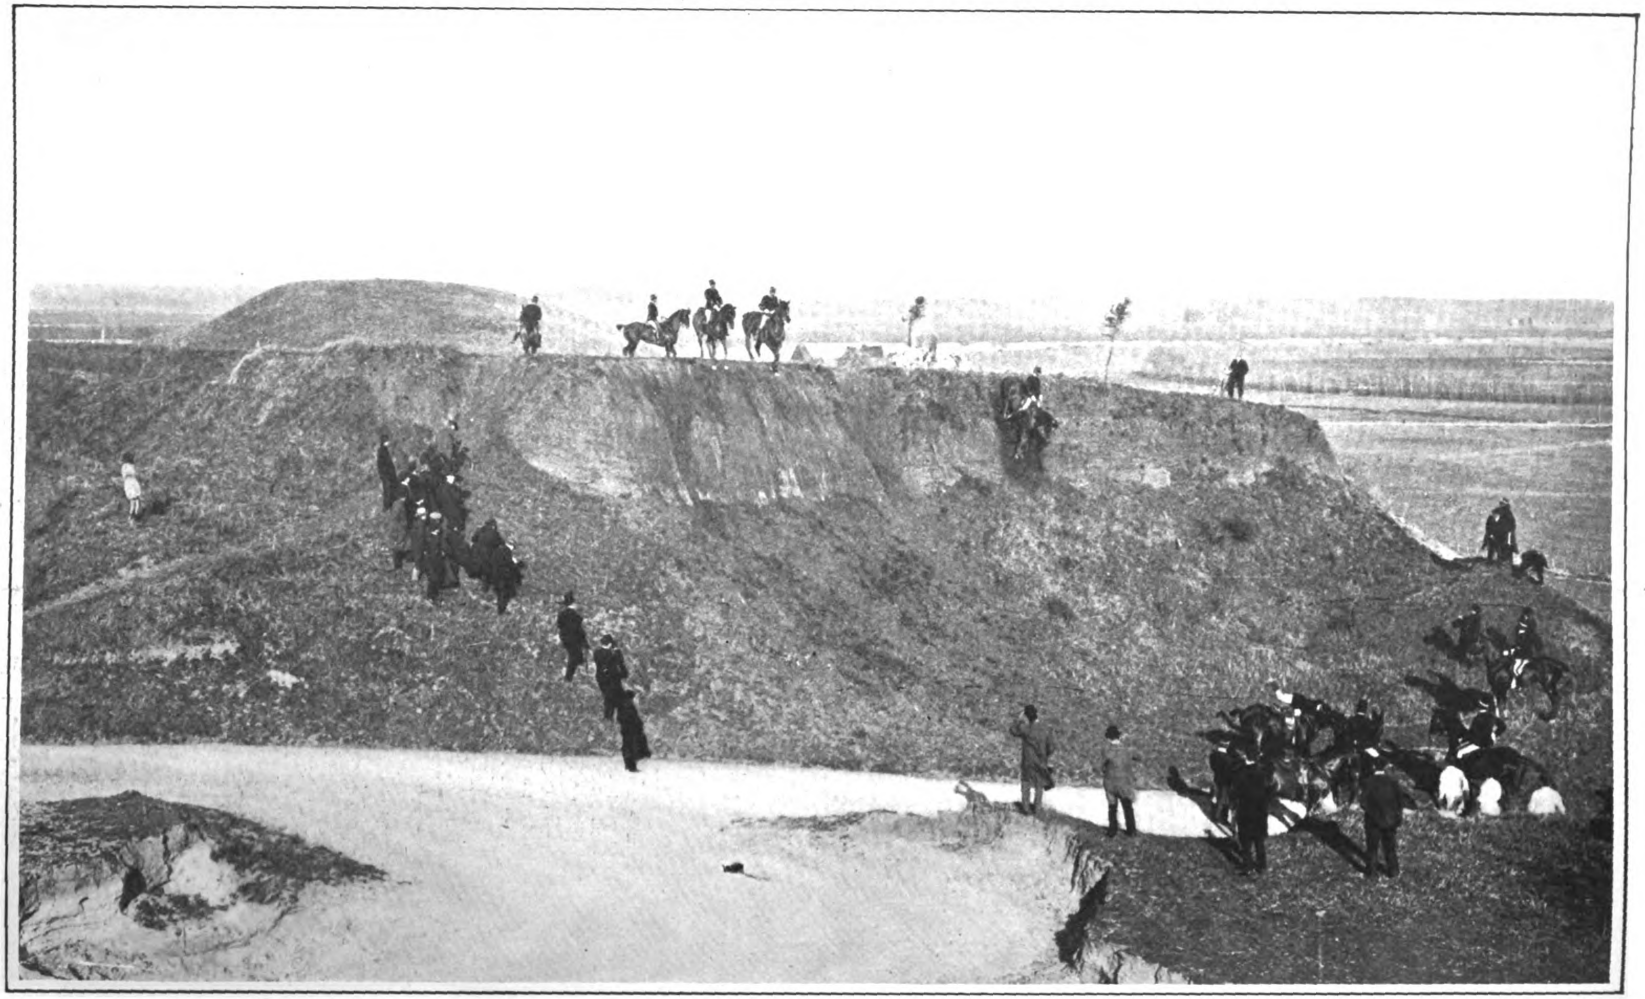
of the boat, and the characters were manœuvred on and off pretty much as in a similar scene adopted by Mr. Augustus Thomas in "On the Quiet." In this play, Mr. Barrie, for the first time, set himself a difficult problem to solve, but in the dramatic solution of it he also showed a sudden talent for extricating his characters from an extraordinary situation, and a mastery of stage technique which have since then rarely deserted him. Curiously enough, I find that the title of this play aroused the same criticism which has assailed "Little Mary" in certain quarters. "It is, as a rule," wrote one critic of "Walker, London," "a mistake for a dramatist to keep a secret from his audience, who can always enjoy the mystification of the people on the stage, but are only irritated when they are not themselves in the mystery. Now the significance of the title, 'Walker, London,' was, till the very end of the play, a puzzle to the audience. Just as *Jasper Phipps*, who has been passing himself off as a distinguished African traveller, leaves the houseboat, the artful rascal gives his telegraphic address—'Walker, London.' That is the first and the last reference to the title; but it explains everything." The play had a successful run in London, and established Mr. Barrie in the theatre. Its success there was attempted here by Mr. James T. Powers, now a favorite comic-opera star, but it ended with, I think, an abortive run of a week at the Herald Square Theatre. "Walker, London," it was, that introduced Mr. Barrie to Miss Mary Ansell, who subsequently became his wife. Mr. Jerome K. Jerome, I believe, was sponsor for the meeting, which was brought about in response to Mr. Barrie's inquiry as to whether he knew of any one who could play the leading woman's part in "Walker, London." Shortly afterward Mr. Barrie was seized with a serious attack of pneumonia, and it fell to his *fiancée* to play the rôle of nurse; so that the union had quite a romantic development.

A new Portrait of Mr. Barrie
Author of "The Admirable Crichton" and "Little Mary," now running in New York

Between "Walker, London," and "The Professor's Love Story"—the latter play having dragged with Mr. Willard, and been tied up with Sir Henry Irving, before the former eventually produced it on one of his American tours—Mr. Barrie again made his second and last public appearance as a collaborator in a "Savoy Opera." His collaborator was Conan Doyle, and the title of the piece was "Jane Annie; or, the Good Conduct Prize." There was one quaint and original creation in the page-boy at the seminary which bore unmistakably the marks of Mr. Barrie's inimitable and almost elfish humor when it plays around the small boy. Caddie was the page-boy "for the little things that grow into women." How characteristic that is of the author of *The Little White Bird!* You remember how he describes the creation of the fairies: "When the first baby laughed for the first time, his laugh broke into a million pieces and they all went skipping about. That was the beginning of fairies." What a delight Caddie must have been—lording it over the girls, defying the lancers, kissing the shoes of the young lady he adored! "He was a reg'lar wee deevil was Tommy!" I heard Mr. Barrie remark in an absent way of his sentimental hero once. Caddie, like all Mr. Barrie's small boys, must have been a "reg'lar wee deevil," too. In "The Professor's Love Story," which followed in order of time, Mr. Barrie first put "Thrums" on the stage. At that time there were many who made their first acquaintance with "Thrums" and its quaintly humorous characters over the footlights. In spite of its pretty and original love story, and the sympathetic, untheatrical portrait of the old professor, rejuvenated by the tender passion, the play lingers kindlier in my memory, because of the "Thrums" characters—the canny, dour rivals in love, *Henders* and *Pete*—though their part in the action was merely incidental. It was like a page from the *Auld Licht Idylls* or *A Window in Thrums*. And in "The Little Minister" on the stage, the magic touch of "Thrums" humor was again most effectively felt in the scene with the elders. "I can neither hear nor see. I am wearing my best alpaca," came like a flash of insight into the character of *Jean*, the minister's servant, on her way to church when the elders would have stopped her to gossip about the manse. And later, in the last act, when she knows that the minister has married the *Lady Babbie*, with a natural rising of pride she lets fling a question and an answer which tell a hitherto unguessed passage of love between her and the swain, to whom she calls, with head high in air, "Are you there?" As the unfortunate lover steps out of the crowd, the heartless jade replies: "Then there's my answer now. It's hopeless." Truly, one hopes that, whether on the stage or in fiction, Mr. Barrie has not turned his back on "Thrums" for good.



There was no one to compare with Hans Andersen as a fantastic, it has been said, until Mr. Barrie wrote *The Little White Bird* and "The Admirable Crichton." Like the Danish magician, Mr. Barrie binds his fantasy to us by a hundred little gossamer moral threads: like him, also, he is a connoisseur in sentiment. Is fantasy, therefore, indigenous to the misty North? Certainly the most distinguished fantastics of modern days have been a Dane and a Scot. That was an exuberant but admirable fancy which pictured Hans Andersen enjoying a pirated edition of *The Little White Bird* in Hades!

Remember

By E. H. Sothern

THE time may come in that far-fabled land
Which we are taught Death opens to our view,
When I, with tearful eyes, shall vainly sue
For the dear touch of a familiar hand,
The look of eyes that ever understand,
The kiss from lips whose kiss and word are true.
O grant me this—when I shall call to you,
In loneliness, from that so distant strand;
If you should hear me in the hush of eve,
Breathe something tender for me to the night,
E'en if your heart has now forgot me quite;
For I, so far away, must needs believe.
Then, in my darkness, I shall see a light,
Your love for me—and I shall cease to grieve.

ROUGH-RIDING IN ITALY—A CAVALRY DRILL NEAR ROME

Photographs illustrating the difficult feats by which the Italian cavalry officers develop their skill in horsemanship have been published recently in the "Weekly." The snap-shot on this page gives an idea of the perilous tests to which the riders are put. They are required to ride over an almost perpendicular cliff and down a steep decline at the bottom

VARIATION in normal habit among the lower animals usually occurs from necessity, but sometimes, apparently, from deliberate choice. Variation in outward form is usually attributable to accident when not caused through the instinct of self-preservation by the assumption of disguise for the purpose of approaching prey or of escaping foes.

Recently the writer asked Mr. Ernest Thompson-Seton several questions concerning the drinking habits of the ruffed grouse. The writer's own convictions upon the subject were hazy and purely hypothetical. Mr. Seton's observations, however, confirmed these opinions,—that the grouse slaked their thirst from the evening and morning dew, and that also they did sometimes drink from running water, squatting on the brink, and swallowing something after the manner of domestic fowl.

A variation of this habit was once observed by the writer in New Hampshire. Standing on a foot-bridge which crossed Mad River, a rapid trout stream, the writer saw a ruffed grouse sail down and alight on a stone in the middle of the stream. The time was the end of August, about one o'clock in the afternoon; the day a broiling and cloudless scorcher. That grouse began running around the stone, craning its neck, settling and stretching much like the pumping motion one observes in some snipe. Presently it began to go through the motions of drinking. Whether or not it *was* drinking I leave to an enlightened public and Mr. Seton, for I don't know, being at the time too far away for absolute certainty. But, if the bird *was* drinking, it is, so far, the one and only instance that I personally have observed.

Another variation from the normal occurred last summer in Fulton County, New York. While attempting to cross a stone wall, along which a weasel was running, the writer became actually intimidated, giving the weasel right of way. Twice the writer attempted to cross; twice the weasel, instead of halting, advanced in fury, teeth bared; and the writer backed down, permitting his weaselship to pass before him.

And yet again the abnormal manifested itself when, on expecting a covey of ruffed grouse to rise, three red-tailed hawks flushed in a bunch from the ground, leaving the remains of a frog as probable explanation of their extraordinary position and behavior.

Perhaps among trout the unusual and unexpected occurs more often than among any of the more familiar creatures.

I shall never forget an extraordinary affair that I had the fortune to witness in a stream which empties into the Neversink River in Sullivan County.

The time was toward the middle of June, the place was a long stretch of clear brown water, two feet in depth on an average, and so limpid that every grain of sand was visible.

A fly lightly dropped on the surface brought no responsive flop of fish, yet I had seen shadowy forms from afar shooting over the sand bottom as though stirred to more than passing interest by the fly.

However, it was no use, so I walked up to the pool. And this is what was going on under the water:

Two male trout, weighing perhaps a scant quarter-pound apiece, were racing up and down the pool, darting at each other with jaws agape, snapping, dodging, turning like lightning to nip when an opening came.

They paid no attention to me as I walked up in full view; and, a moment later, they seized one another, locking jaws.

Jaw fastened to jaw, head on, they struggled, shaking, jerking, wrestling for mastery, crimson fins rigid, tails spread flat for resistance.

For more than ten minutes the tense quivering deadlock lasted; then exhaustion showed in drooping fins, in spasmodic efforts to right tired bodies which began to turn belly up.

One trout showed a strip of white along the nose where the skin was gone; the tendency to turn over apparently became more difficult to overcome; they began to drift with the current, slowly floating toward the surface. Then the writer waded in, and without difficulty picked up the combatants and separated them, placing one at the head of the pool, the other at the foot.

The two fish lay quietly on the sand, slowly recovering from exhaustion; then, as one turned to head up stream, the other darted at him in ungovernable fury; the chase was resumed, the lightning-like tactics of offence and defence; and, at length, the writer left them once more locked jaw to jaw, shaking each other like bull-terriers.

Never before, never since, have I seen such a battle between trout. I have seen trout seize smaller trout and bolt them, head first: I have seen a female trout on the spawning-beds, guarding her spawn from two or three greedy male trout; I have seen a voracious bull-trout rush at a female and tear the exuding roe from her. But another such combat as I have described I have neither seen nor heard of; and to-day I know nothing more concerning such encounters than has been written here.

An interesting exception to the normal conduct of self-respecting trout I witnessed on a tributary to Swift River in what was then a New Hampshire wilderness.

The trout were small, exceedingly brilliant in color, although the month was early July, and exhibited such indecent haste in chasing a yellow fly that, had fish not been necessary for our food, I should have taken no pains to bother them.

The incident was this: I had cynically shortened my line, abandoned all pretence of self-concealment and noiseless approach, and was boldly examining a pool, when, just below the ripples, I saw a trout lying.

No doubt that he saw me, either; but I shortened my line until about two feet of leader hung from the tip, and then lowered it, dangling the fly some six inches above the surface of the water.

Twice that trout jumped clean out of water, the second time seizing the fly. For a moment he hung suspended, then relaxed his grip, and fell plump on to a flat rock which shelved off into the water.

A flop or two restored him to his element, and I expected to see him dart off in terror. Not at all; he lay in his old lurking-place in mid-pool, and as soon as I lowered the fly he simply hurled himself at it.

The weasel advanced in fury

Again I let him hang; again he wriggled free; again he fell thump! on the flat rock; again he resumed his position in mid-pool.

Amazed, I tossed the fly once more on the water; and that unspeakable fish darted at it, chasing it round and round the pool, until, tiring, I drew the fly up along the shelving flat rock out of the water.

Then occurred what is known in the vernacular as "the limit." For the trout rushed at the fly, wriggled across the shelf of slate clean out of water, and seized the fly on dry land, hooking himself fast.

Of course I couldn't keep such a fish; disgust mingled with my admiration; I restored him to the water. As I remember, the fish was very small, not over eight inches, anyway.

Variations from the normal that are not very uncommon in the experiences of anglers are the instances of unnecessary piggishness among trout. Within my own experience, at least on a dozen occasions I have taken trout on a fly when they already had the tails and half the bodies of small fish hanging from their mouths.

In some of these instances the trout have been large, and the fish which was half swallowed freshly caught; in some, the trout have been small, the half-gorged fish choking the gullet and distending the jaws so that it seemed impossible that the gormandizing trout could have seized even a small fly.

Again, the half-bolted fish was partly digested, so that, on removing the fly, the exposed half of the fish fell from the trout's jaws. In every instance but one, the fish protruding from the trouts' mouths were small trout, the single exception being a red-fin shiner.

I remember once taking a plump pound trout whose backbone in infancy had evidently been fractured and twisted. Never since have I seen such a misshapen fish, crooked as an S, gashed, with two deep dorsal indentations, and with a head so much askew that I cannot understand how the hapless fish could have found it possible to swim in anything but a circle. Yet that trout was firm, plump, and was already putting on the gorgeous colors which male trout wear on the spawning-beds,—a crippled dandy, a hump-backed beau!—ugh! I could not have eaten that specimen of malformation. Dissecting him, his interior appeared to be fairly normal; his food had been what the other trout in the stream had eaten. He was apparently perfectly able to take care of himself, though Heaven alone knows how he managed to open his jaws without falling into his own mouth.

Curiously enough, a few days later, I took a trout from the same pool that might have weighed half a pound more than the cripple, and, at first sight, this fish appeared to be all out of shape, bulging in every direction, and bent askew.

But on investigation, we discovered that the fish had managed to swallow a frog so enormous that the entire outward appearance of the fish had been affected. And still this trout had had the infernal impudence to seize the fly I cast!

One of the most interesting and unexpected performances of birds the writer had the fortune to witness was on Stomach Lake while point-shooting over decoys.

The ducks were mostly blue-bills, with an occasional canvas-back; the lake was but a tidal lagoon, and the tide carried the dead ducks some distance before the boatman could pick them up.

Hawks annoyed us: twice splay-footed duck-hawks dropped on our floating game and bore them off; other hawks wheeled up and followed their bad example. But the surprise came when one of the numerous ospreys that had been plunging after mullet dropped like a bolt of lightning and struck a wounded duck skulking among the decoys.

I had never before seen or heard of such a performance; I never again expect to.

Does Civilization Shorten Life?

By Charlton T. Lewis

THE interest of the civilized world in the questions, how long men live on the average, and how long human life can last, is unfailing. Students of statistics are perpetually engaged in the study of these questions, but the results they reach are very slowly apprehended by the popular mind. Many fallacies prevail in this exceedingly difficult subject, and no wonder, since the handling of the statistics of mortality is recognized by experts as the most complicated and slippery topic in the range of statistical inquiry.

To look intelligently at the matter it is necessary to discharge the mind entirely of regard for what is called the crude death-rate—that is to say, the annual number of deaths per thousand in any population. This is commonly set forth as the test and measure of the healthfulness of cities and countries, and comparisons are instituted between different cities, founded upon it. But it is of no value for this purpose. Before any significance is attached to the annual death-rate per thousand, we must know the distribution of the population, particularly with reference to age. In a community which is recruited wholly by births the number of infants is enormously greater than in a community which receives constant accessions by immigration, but the average death-rate of infants under one year of age is often fifty to sixty times as great, and rarely less than forty times as great, as in the prime of life. A very moderate difference in the distribution of the population at different ages will make a great difference in the death-rate per thousand of the whole community. This is the chief reason why the crude death-rates of different places cannot be instructively compared; but there are others. For example, it has been found that the death-rate per thousand of some of the most healthful country districts in the neighborhood of the most unhealthful of great cities is very much larger than in the cities themselves. The explanation is that a very large part of the population of these districts go in the prime of life into the cities for labor or service, and return to their homes when sick or old.

How long will the choicest human life last if its nature and circumstances are the most favorable in all the respects named? This question is very difficult to answer. In the popular mind it has generally been answered erroneously. There are books, of wide circulation, which purport to give lists of men and women who in modern times have attained great ages, and in almost every community there are a few who, on insufficient evidence, are believed by their neighbors, and often by themselves, to have attained fabulous ages. But ever since the light of scientific inquiry was turned upon the question, myths of this kind have been rapidly vanishing. Nothing is now better established than the extreme rarity of centenarians.

As a means of ascertaining the actual frequency of extreme longevity there is as yet no satisfactory body of statistics outside of the records of the life-insurance companies. Of all the millions who have held policies of life-insurance in Europe and in America, careful inquiry has failed to learn of more than four who have attained the age of 100 while insured. The first three were members of British companies, and two of them died soon after completing the hundredth year. The fourth is a gentleman of Englewood, New Jersey, who completed his hundredth year on September 13, 1903, having been insured for something more than sixty years in a well-known life-insurance company of New York. There seems to be no doubt that Mr. Booth, whose age is well attested by documentary proof, is the oldest holder of a life policy in the world, and the only one of that vast class of select lives, amounting now to many millions in all countries, who has completed a century of life. While almost every day some report of a centenarian hitherto unheard of finds its way into the daily press, it is safe to disregard such reports when unaccompanied by conclusive documentary proof. Centenarians are among the rarest phenomena of humanity. Yet the few instances which have been established of such longevity are quite sufficient to disprove the confident assertions of such sceptics as the late Sir George Cornwell Lewis and others, that no instance of centenarianism has ever been established, and that presumption must be regarded as conclusive against their possibility.

One of the most interesting questions in the whole range of social science is this: Does civilization, on the whole, increase the average duration of life? Every thinker on such subjects is familiar with the considerations which show that the average length of life must be accepted as the best measure of the prosperity and progress of mankind. Accordingly, no more gratifying evidence has been found for the improvement of civilized nations since the Middle Ages than the conclusive proofs which historians give us that the expectation of life has been largely increased. It is an assured fact that a few centuries ago old age came very much sooner than it does now, and that the mortality at all ages was vastly greater; but no attempt to measure the improvement was possible until the accumulation of trustworthy statistics through the agency of governments. The methods of taking the census have been gradually improved, so that its figures are much more valuable now than a generation ago, but there are several countries in which the statistics already collected are sufficient to support some definite conclusions which are of the highest interest. It is established beyond doubt that during the nineteenth century there was in all the civilized nations of the world an important lengthening of the average life, and that this improvement is especially characteristic of the last half of the century. It is also clear that the improvement is limited almost wholly to the earlier half of life—that is to say, there has been an immense diminution of infant mortality, a large decrease of the rate of mortality among children and youth, and, on the whole and in general, an increase in the mortality of advanced life, most particularly among males older than fifty-five.

The great factors in the improvement have been—first, the better care of infants, the improvement in nutrition at early ages, growing out of the general improvement in the standard of living, the successful check to the great epidemic diseases which a few generations ago swept away multitudes, and, finally, the triumphs of medical and sanitary science in protecting the community at large against unhealthful influences, and in the more successful treatment of the sick and infirm. It is noteworthy that all these elements of improvement tend in one direction. When infants were treated with less wisdom the weaker perished and the stronger survived. When epidemics ravaged a community the mass of those destroyed by them were, of course, feebler than those who resisted their attack. When the sick are cared for so that a larger number recover from disease, it is inevitable that on the average those who are thus rescued must be weaker than the community to which they are restored. Thus all these influences, while saving life, tend especially to save lives which are feeble in a greater proportion than those which are strong, and thus in the end must lower the vitality of the great mass of the population.

Proposed Solutions of the Labor Problem

In the series of articles recently published in "Harper's Weekly," Mr. John Keith considered the tremendous influence of organized labor upon the cost of living and of every-day necessities. In the present article the author discusses some of the plans proposed for a solution of the present difficulties in the world of labor

By John Keith

IT is easy enough to realize or to describe the perilous state of the industrial world to-day. It is easy enough to suggest solutions, and the remedies for this cancer of the body politic are as numerous as those proposed and advertised for the cancer in the individual system. But they suffer from the same objection—they are cures that do not cure.

Their range is wide. At one extreme is the suggestion that the wealth of the world should be managed by "the laborers, who produce it all, and who have honest hearts and willing hands." This proposal, curiously enough, always comes from laboring men. There is an antipodal proposal that comes from the other side of the social world; it declares that wealth must be managed by "the brains that produce it all and the capital that exploits it all." This latter proposal comes from capitalists or their retainers, who demand that labor should trust its welfare to the fatherly interest of the rich, who resent the interference of the working-man as a proof of ignorance and viciousness.

As to entrusting the industrial solution to labor's own evolution by means of the union we have had far more proof than we needed that the toiler is too close to the ground to see over the hill. Frequently when the laborer has been given rope enough he has not only hanged himself, but has tripped or strangled everybody within reach. His remedies have been so violent sometimes that the only antidote has been the militia.

And yet, on the other hand, the history of human suffering contains no darker chapters than those of unprotected labor: of little children working in the mines, and flogged when they fell, or shocked with buckets of cold water when they grew drowsy after fourteen hours of toil; of the poisonous air of the sweatshop; of the dangerous trades which cut the lives of the laborers in two, though the slaughter could have been prevented by a little expenditure for screens and other devices; of the instant discharge of laborers who begged for a little mercy; of the compulsion of the laborer to live in company hovels at exorbitant rents, and to buy supplies at company stores and pay enormous prices. These and other things too numerous and too pitiful to mention, lead one to feel that almost any industrial war is better than the absolute power of the employer.

None the less, though it is not possible to cure, it is possible to find palliatives. Of these, there have been a multitude proposed in recent years. Some of them have been as insane as their inventors; in others the cure would be worse than the disease. But a few have been devised by men of experience and intelligence, and supported by others of the same class. As I have seen no catalogue of these in any sense up to date, it is my object to supply a select list, with such comments as space will allow.

All employers protest their willingness to talk things over with their employees. All employers recognize the right of the individual to quit work if he does not like his job. They admit the right of an entire labor-union to walk out of any shop or mine where it is discontented. But employers object to the prevention of any other man or men from taking the vacant places. To this the labor-unions have a disconcertingly logical answer: that if they do not prevent other people from taking their places, "walking out" simply means stepping from the frying-pan of hardship to the fire of destruction. And I, for one, doubt whether a union man can be pounded or starved into giving up his conviction that a forcible strike is the one real weapon that has ever been put into his hands for his own protection and his own importance. You will find many venerable unions, such as the much-praised Brotherhood of Locomotive Engineers, which have passed through their period of storm and stress, and are fairly well satisfied with their present condition. But these very unions were once the fiercest strikers, and they still carry behind their backs the shillalah of revolt. If it serves no other purpose, it has the moral effect of a threat well supported.

Legislation is the first remedy thought of by every member of our race, because, from the time of the blue-laws, it has always seemed to a large majority of Americans that virtue and prosperity could always be guaranteed, if they could only be properly worded in a bill and passed by the legislature or the board of aldermen.

As early as 1398 employers were seeking protection against the wage-raising efforts of a club of London saddlers, and laws against combination have been on the books ever since. Did these laws prevent trades-unionism from reaching its present height of power in England?

In this country laws have been enacted against all the usual weapons of the labor-unions, from combination to picketing. But *here* are scores of strikes going on this very day throughout the country.

Furthermore, law-making is a game at which both parties can play, and the labor-union, with its large political influence, is as busy proposing laws as are the capitalists. A paid lobby is kept at Washington and various State capitals by the laborers for this very purpose. Late in 1903 the Executive Committee of the New York State Working-men's Federation was in session at Albany, considering seventy-two bills which it was their intention to force through. As fast as employers put through legislation to restrict the power of labor unions, the unions have managed, as a rule, to repeal it or to gain ground in some other direction.

There has been, indeed, a constant effort to organize an effective political party with labor-unionism as its chief doctrine. In New Orleans last November the Union Labor League nominated four candidates for the Legislature, namely, the presidents of the car men's, the carpenters', the plumbers', and the retail clerks' unions. The division of parties along labor lines is an increasing factor, and it is said that in the case of the eight-hour bill, which was proposed at Washington last winter, the employers and the laborers worked up such a crusade that "perhaps no proposed act of legislation ever occasioned a greater outpouring of personal appeals to Congress." The capitalists gained the day, and on this point Mr. David M. Parry says, "This conflict deserves to go down in history as the first decisive defeat of the socialistic forces which have had of late years such surprising growth."

Socialism is to rid the world of all its evils—according to Socialists. According to anti Socialists it is to bring back the horrors of slavery, with this exception, that there will be no masters and every one a slave. I shall not attempt to argue either side of the question, though there has been an undoubted drift toward socialism in certain forms of State ownership, as in the postal service of America and the railroad service abroad.

During the Chicago car strike of last November thousands of petitioners thronged the City Hall, demanding municipal ownership for the street-car lines. But it is needless to say that nothing came of the agitation, and the strike was settled by arbitration.

The cooperative plan of work is an ancient nostrum, which has had many failures; likewise, in a few cases, some successes. But even the laboring-men are not agreed on the cooperative plan. Last December the box-makers' union started a cooperative shop, but the Central Federation opposed the move as a "corporative and capitalistic enterprise."

Similarly, the profit-sharing scheme is favored by few capitalists, and opposed by practically every union. In the first place, the lazy workman gets as much profit as the earnest; in the second place, bad luck or bad management on the part of the employer will frequently wipe out a whole year's profit. Some years ago there was a strike at the Brewster carriage-factory in New York, in spite of its profit sharing arrangement. Indeed, the laboring-man is always quite as suspicious of the employer's alleged generosity as he is of his other traits.

Another form of profit-sharing is the selling of stock to laboring-men. The 1st of January of this year, Frank S. Betz & Co., of Chicago, distributed some $50,000 worth of stock among its employees, according to their scale of wages, the lowest sum being a single $100 share. Dozens of other concerns had previously done the same. But, to the average workman, the income from the few shares of stock he can hope to acquire is so small as to be rather irritating than pacifying, and he is not deceived by the ludicrous unimportance of the place he holds in the government of the company. The Illinois Central has been selling stock to employees for many years, but in 1899 employees owned $11,000 more stock than in 1902. Not much progress here! At Rockford, Illinois, there were several great cooperative furniture-factories, in which the cooperation really meant the distribution of a small number of shares to the employees. These, like other cooperative schemes, tend to fail, either because of the meddlesomeness of the inexperienced workmen, or because they fall quickly into the hands of a few owners.

The velvet-fingered and tender-hearted methods of certain industrial theorists may be likened to treatment by prayer, or the application of the faith cure. Seeming miracles are occasionally performed, but after a while the disease comes back.

There is a more strenuous school, which believes in vigorous drugs, in the breaking of bones that they may be reset, in the wrenching and binding methods of a Dr. Lorenz, or in the surgeon's appeal to the knife. In my last article I described the local and other associations of employers uniting into a faculty for the application of just such heroic measures. They have much to justify their organizations, and the evil deeds of labor-unionism will bring them sympathy in their most violent reprisals. But the belief of some employers that they can and should crush labor-unionism out of existence, is not the belief of all. Furthermore, it is an impossible thing to accomplish. The associations of employers are like a standing army. They tend to keep the peace for a while, but they do not guarantee it, and when war eventually comes it comes on a scale of enlarged horror. The employers' associations intend to keep the peace if they have to do it by fighting. The weapons they intend to employ are various old ones with some modern improvements. Is it necessary to remind the general public that a lockout by employers means the same as a strike by laborers, and that the blacklist differs little from the boycott? Furthermore, the employers are disagreed among themselves as to what methods are best. The organization of independent workmen into non-union unions is as unpromising a device as any other, for it merely lets loose one more band of armed men.

and emphasizes the old problem—"who shall guard the guards," or who shall arrest the police?

Appeals to the courts to restrain the unions and punish their excesses is a method as old as it is ever new. Many suits are under way in different parts of America against unions as corporate bodies; but England preceded us in the famous Taaf Vale decision, by which in 1902 the union of Amalgamated Railway Servants was muleted $115,000 as damages to the Taaf Vale Railroad Company. It was here declared that a union could not evade punishment by merely avoiding incorporation.

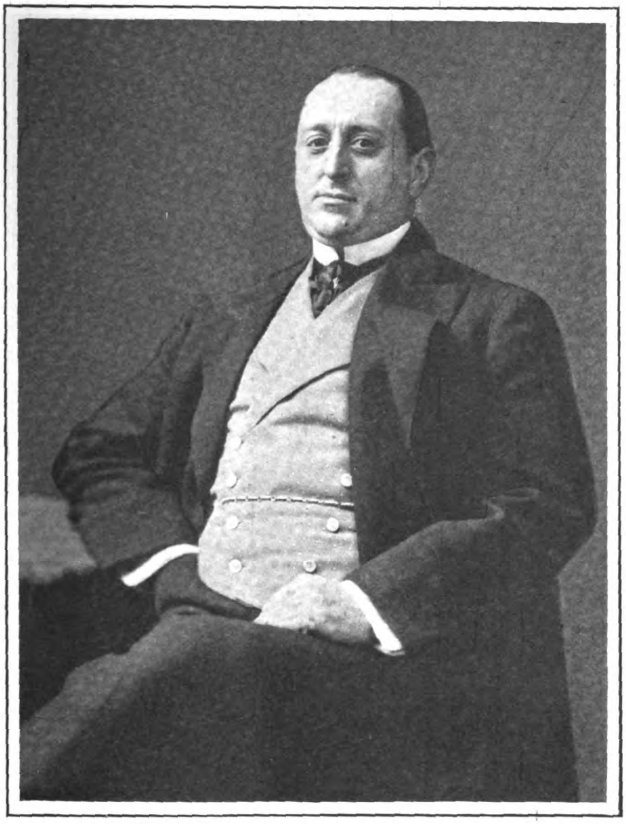
The D. E. Loewe & Co., hat manufacturers of Danbury, Connecticut, recently brought suit through the American Anti-Boycott Association against all the unions and individuals boycotting their wares. They asked for $100,000 damages, and attached property amounting to $175,000. The defendants asked permission to give bonds, in place of the property, and the court demanded $180,000, which the defendants were unable to obtain. Two separate suits are being brought against the same defendants for the same boycott, one in the State court and the other in the United States Circuit Court. The decisions thus far handed down establish the principle that individual members of labor-unions whose boycotts interfere with interstate trade may be sued, and their property attached in both the Federal and State courts.

On the other hand, the Supreme Court of Minnesota decided, on December 24, in the case of W. J. Gray & Co. *versus* The Building Trades Council, that laborers have a right to strike and to entice others to strike, and to use all means to further their case, which are compatible with law and order. Judge Gray of Minneapolis had granted an injunction forbidding strikers to visit the premises of buildings struck. The Supreme Court decided that this injunction had been too sweeping.

In the month of October, 1903, a builder in Indianapolis was boycotted for employing non-union men. He sued for damages, and a judge in the Circuit Court ruled that the union was liable as an organization, because it had ordered the boycott as an organization. Damages were assessed by a jury, and fixed at only $40, but the important principle was established. Its substance is summed up in the following sentences:

"The fact that the labor-union is not incorporated does not necessarily prevent a jury from holding it responsible for injuries to a third party, when the injuries complained of are the result of an act for which the union as an association of individuals is responsible; for the law will assume that an injurious act, coming as a direct result of a resolution, rule, or settled policy of an organization, must be compensated for by the body from whose resolution, rule, or settled policy it results."

The instances of punishment of individual strikers are too numerous to make any citation desirable.



I have spoken in previous articles of a peculiar form of combination by which an association of employers combined with a union to drive out all competition of rival employers and workmen. Chicago developed such a combination of teamsters and their employers. Its iniquities I have previously recounted.

The individual contract has been proposed as an ideal way to deal with the laboring-man, and it offers numberless advantages. But it is so destructive of the whole principle of labor-unionism that it cannot be put in force in any industry where the union has become a power. In a period of hard times, when the unions tend to go to pieces, because their boasted ability to raise wages is shown to be limited to good times, when wages rise anyway—in such critical periods it may be possible to force working-men to individual contracts in spite of the union. But these contracts would be of no avail under union pressure or against irresponsible workmen, with no property to attach for damages in case they break their contract. And it is manifestly impossible to force a man to keep on working just because he is under contract to work.

Conciliation is recommended by some experienced men. It differs from arbitration in that the parties in dispute do not select outsiders, but come together and try to arrive at an agreement through conferences or committees. But it is plain, on the face of it, that conciliation can succeed only where both parties are in a conciliatory mood, in which case serious trouble is hardly to be expected anyway. Otherwise, conciliation may mean that one party is helpless and the other ruthless, and public policy will be violated by the result.

Mr. David M. Parry declares conciliation to be "akin to the attitude that might be assumed by the victim of a highwayman. Such a victim might agree, in consideration of a return of part of the booty taken from him, that he will hold no grudge against the road-agent and will not seek to have him prosecuted. This transaction could probably be termed a bargain made in pursuance of a conciliatory policy, but, from the standpoint of the victim, it would be more like a bargain enforced by expediency. The policy of conciliation in regard to organized labor is a policy of expediency toward a power which enforces its demands at the point of a gun.

"In my opinion, neither is it the time to talk arbitration or 'joint agreements.' To arbitrate questions of wages and hours is to introduce artificial methods of determining what they shall be, and, as we have seen, an equitable arrangement as to either cannot be effected artificially. Unless the natural law is allowed free play, injustice must be done as between classes of labor and classes of employers. Terms effected by arbitration involve the same erroneous principles as those upon which 'joint agreements' are based. To fix arbitrarily the wages or number of hours of work in an industry is to charge the enhanced cost of production up to the consumer, and this, in turn, means a lessening of trade and production."

Charles L. Eidlitz,
President of the Building Trades Employers' Association

In spite of Mr. Parry's arguments, arbitration has the approval of a vast number of experienced men. The National Civic Federation was organized for the express purpose of making the lion and lamb lie down together in the fold of arbitrament. The result, however, has been pretty much what would be expected from such bedfellowship.

A dinner was given in New York on December 19. In the first place, two waiters' unions nearly prevented the service of the food; in the second place, a quarrel between two speakers, one a prominent employer, the other a prominent labor agitator, became the principal feature of the affair. Something has been accomplished, however, by the Civic Federation, whose vice-president made the following claim:

"We have participated in more than one hundred bloodless battles. We have entered into many other contests, and in more than 80 per cent. our efforts have been crowned with eminent success. We have prevented a number of ruptures that threatened misery on all sides. Many of them have not reached the public ear, as our work in some cases has to be done under cover, and we have had to elude the vigilance of the ever-watchful press."

The federation believes in voluntary arbitration, and there is no doubt that it has saved some industrial warfare. Many States have regular boards of conciliation and arbitration. That of Massachusetts acted in 323 cases between 1894 and 1900. Most of them were unimportant. But of these, only 72 of the mediations were successful. During the same period the New York board had success in 72 cases and failure in 50. An Illinois board arbitrated eleven times, but on three occasions the workmen refused to accept its decision, and on one an employer followed suit.

But the chief objection to voluntary arbitration is that it is voluntary. An employer will refuse it when he feels that he is being asked to arbitrate some inalienable right. On the other hand, a strong labor-union prefers the more lively method of a strike to the uncongenial task of drawing up arguments.

There is another form of arbitration—the compulsory. New Zealand is pointed to as a country which has put to practice compulsory arbitration with best results. Those in favor of this procedure declare it "a country without strikes." Those who oppose it, bring statements to prove it also "a country without indus-

tries." New South Wales tried the same method, but the manufacturers find that court interference is so constant that the existence of their business is threatened. Furthermore, because of its strong recognition of the unions, it is said that the non-union workman has no chance, and that the unions consequently create a monopoly. Australasia can hardly be accepted as conclusive proof for either side.

In America there have been various efforts toward compulsory arbitration, Texas taking the lead in 1895 with a law by which the decision of a board of arbitration, properly chosen, can be enforced by the courts. But compulsion has not been grateful either to workmen or employers. New Zealand is an agricultural country, in the first place, and, in the second place, the most harrowing stories are told of the effects upon its society and its trade of compulsory settlement.

A national labor tribunal is the panacea suggested by Wolney W. Foster, of Chicago, who has drawn up his claim in a bill which is to be presented to Congress. The bill provides for a commission of six members at a salary of $8000 a year, with the Secretary of Commerce and Labor as an ex officio member and chairman. The members are not to accept perquisites aside from their salaries, under a penalty of a fine of $5000, or two years' imprisonment, or both. The headquarters of the tribunal are to be in Washington.

The proposed bill provides that the tribunal shall determine all cases, either in the affirmative or negative, on the claims of both parties. It also provides that there shall be no strike or lockout pending the investigation, and both parties in the controversy are to resume and continue their former relations. This condition is to remain until a decision has been rendered.

But who can believe that this plan will ever be adopted by Congress, or, once adopted, that it will not go the way of other well-meant schemes and have only a partial effect.

Many students of the times are radically opposed to the whole scheme of arbitration as bad economics. Carroll D. Wright, in a lecture delivered January 5, said:

"Arbitration means simply the interference of the public in the relations of the employer and employee. When these relations, as in the case of great strikes, reach a point where they affect the general welfare, society has a right to say what shall be done in the matter. But law has always failed to adjust wages, and its efforts in that direction have done more harm than good. The methods enumerated are minor remedies, all good as helps, but none amounting to a solution.

"Arbitration is not the true solution of labor difficulties. While I am favorable to this system of adjustment of industrial contentions between the employer and the employee, I cannot see in this method a system that will solve the enormous problem."

Elsewhere Mr. Wright has cast his vote in favor of the trade agreement between employer and employees. I described in a preceding article the methods of the Building Trades Employers' Association of New York, which has trade agreements with the unions. Here disputes that cannot be settled by negotiation or conciliation are brought before the arbitration board, whose decision is enforced by the power of the employers' association, which can fine an employer heavily, or declare a general lockout against any union that resists.

Under this system five cases have been amicably adjusted, "without the loss of a day's work to the men or a dollar to the employers." In some of these cases the difficulties were of ten or fifteen years' standing, and have provoked strike after strike.

But the objections to the trade agreements are many, in spite of certain successes. In the first place, it apparently requires a more or less exclusive recognition of the unions. As organized labor does not constitute one half of the labor world, the majority of American workmen are at a disadvantage. Many of the very employers who are engaged in these trade agreements are bitterly opposed to such close alliances with the unions. One of them said to me, with emphasis:

"Some of the unions are beginning to realize that they are on trial as to the value of their word. We employers have to stick to our agreements, but Heaven help the union that violates its agreement with us."

This sentiment does not promise much for peace. Furthermore, I have already mentioned the evil lengths to which these agreements between employers and unions can go in the direction of corruption, monopoly, and inhuman tyranny.

Compelling the unions to incorporate, and then holding their persons and their funds responsible, is favored by numerous writers. But in the first place, the few that have been incorporated have found incorporation an expensive luxury, and the others would be likely to resist any such movement. Besides, the compulsion itself would doubtless be declared unconstitutional. And, finally, we need not be told that even corporations are not incapable of wrong.

Various other schemes have been suggested and tried from time to time, but I have catalogued the principal ones. I have been able to do little more than indicate the advantages claimed for each and to suggest the manifest limits of each. The total result seems to be a process of cancellation, leaving us pretty well where we started. This is in many ways disheartening, but a situation is always better when the truth is frankly faced, and the only absolute truth here seems to be that there is no certain remedy for labor troubles. They are as old as the industrial arrangements of the slave-driving ants or those close corporations, the beehives.

All the methods of conciliation, legislation, adjudication, arbitration and all the other ations that have been proposed are worthy of trial according to circumstances. Some will succeed, where others will fail; and there will arise many cases where no conceivable scheme will prevent an appeal to brute force. There are many conditions whose permanence would be worse than any strikes could be. There are many strikes against conditions that cannot be improved by disturbance. But who is to know in advance what will be the outcome? and whether it will be good or evil? And, again, who is to prevent the experiment of appeal to force?

Foresight is largely a superstition or an egotism. In spite of all that is said against it, hindsight is, after all, the best security for society.

After the opposing schools have exhausted their arguments and one or the other has appealed to force, the courts can calmly survey the scene and measure purposes by results and reward policies by proportionate damages. The only approach to a solution of the labor problems as they rise in multitude unceasingly lies in the general education of both rich and poor to their common rights and mutual obligations; in the presence of mind that adapts means to ends; in the exhaustion of all quiet and sober arguments; in the rendering of brutality or illiberality unpopular, uncommon, and expensive; and in the surrounding of such appeals to force as cannot be avoided with all possible refinements of humanity; and, finally, in the holding of every man or organization strictly responsible to the public peace, with fines and imprisonment as the punishment of guilt or indiscretion. By these means war will never be entirely avoided, but it will grow more rare, more civil, and more beneficent.

An Invention to Save Life at Sea

By H. C. Gauss

THE terror of the lee shore is, to a large degree, eliminated by the substitution of steam for sail power, and increase in tonnage and the power of engines has minimized the danger of the force of wind and the height of waves, but thick weather has remained almost unattacked, the hindrance and enemy of navigation.

The fogs of three seasons and the snow-storms of late fall, winter, and early spring offer problems in the question of safe navigation that are largely avoided by inactivity during their continuance. For those vessels which are compelled to continue on their way the period is one of momentary danger of collision and of a high proportionate danger of grounding.

Only one way of transmitting signals is available—that of sound; and the surcharged atmosphere has so many capabilities of diverting and distorting the phenomena that experience gained under normal conditions is misleading, while apparently similar conditions of fog or snow give widely differing results in determining direction by sound.

That is to say, that while navigation has relied for safety during thick weather on fog-bells and signals, the apparent direction of the location of the sound is to a degree dependent on the condition of the atmosphere, a condition constantly changing, while phenomena frequently occur which occlude the sound altogether and render the warning useless as a guide, and make it frequently a source of danger.

If a system of navigation could be devised which, used in connection with the compass and speed-log, would guide the navigator from point to point by a system of signals operating through a medium comparatively stable as to its characteristics, such as the water of the sea and great lakes, and similar signals would announce at a sufficient distance the approach of another vessel, travel at sea would assume a condition of safety far superior to that which has been attained at the present time in railroad traffic.

If vessels could run from light-ship to light-ship infallibly by sound as they do by sight in fair weather, the improvement would amount almost to a revolution in coastwise traffic; and it is on a coastwise route that the practical trial of the new system of submarine bell signalling is being carried out.

All four of the steamers of the Metropolitan Line have been using the apparatus for several months. They are equipped with microphone transmitters of new and peculiar construction, which take up from the sea water the vibrations imparted by bells suspended by chains from the respective light-ships, and the impulses forwarded to telephone receivers in the pilot-houses record with accuracy the direction of the location of the bells and an approximation of the distance.

The system, installed by the Submarine Signal Company of Boston, has been considered of enough importance by the Navy Department to warrant a test by an officer of the navy. Lieutenant-commander B. T. Walling, U.S.N., was directed to take passage on one of the Metropolitan Line steamers for that purpose. He sailed on the *James S. Whitney* from New York December 28. At 2.33 A.M. on December 29, while five miles from the Vineyard Sound Light-vessel, the strokes of the 650-pound bell for submarine

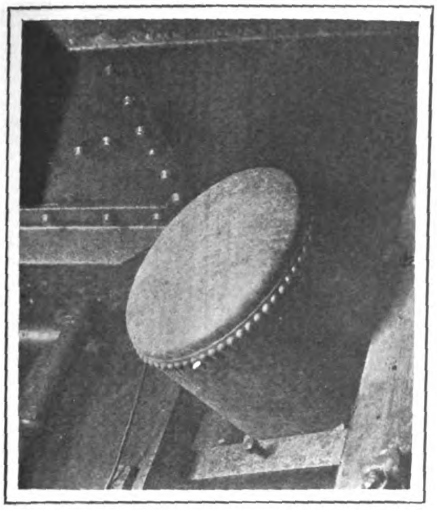
signalling installed in connection with that vessel were distinctly heard. At the same time the steamer *H. M. Whitney*, which left Boston the night before, was sighted, approaching, near the light-vessel, and the strokes of a 140-pound bell installed in her forepeak were made out when she was at an estimated distance of three miles from the *J. S. Whitney*.

Changes of direction in the course of the latter ship caused change in the apparent direction of the bell sounds from the *H. M. Whitney*, and this fact of approximately accurate determination of the direction of the sounds was verified by experiments with the bells installed, respectively, on the Pollock Rip Light-vessel and the Boston Light-vessel. In the former case, the sound of the bell was heard at a distance of four miles. Lieutenant-commander Walling states, in his report to the Secretary of the Navy, that the direction of the submarine bell was ascertained in all cases within one-quarter of a point.

It seems to be definitely determined by the test and by the results of previous experience that the vibrations of a bell rung under water can be collected and transmitted as definite sounds by the apparatus, not only differentiated from the sounds of the ship and of the passage of the water by the ship's side, but that the tones of two bells of differing pitch may be differentiated when the sound of one does not occlude that of the other.

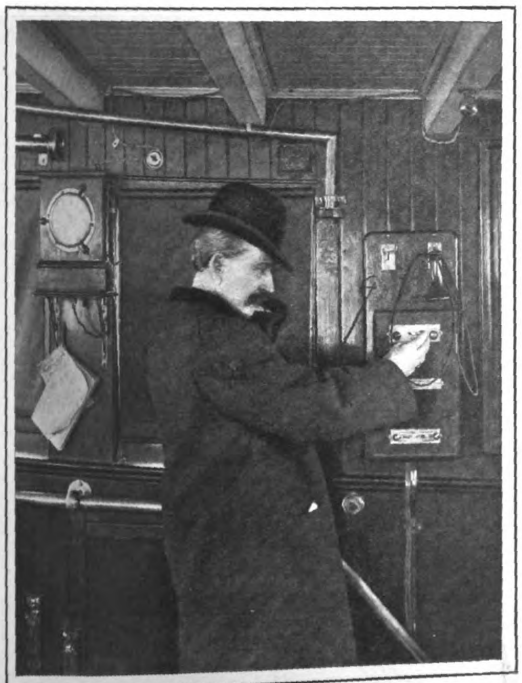


It is also established that the sound of a bell rung at a distance on the starboard side of a ship is more clearly heard from the starboard transmitter and that the gradation in the difference increases as the ship swings to port, so that the direction of sound can be definitely determined by the difference in the strength of the sounds in the starboard and port transmitters, respectively. If, therefore, a vessel were to be pointed directly towards a submarine bell, the sounds received by the port and starboard apparatus would be exactly alike in intensity and quality.

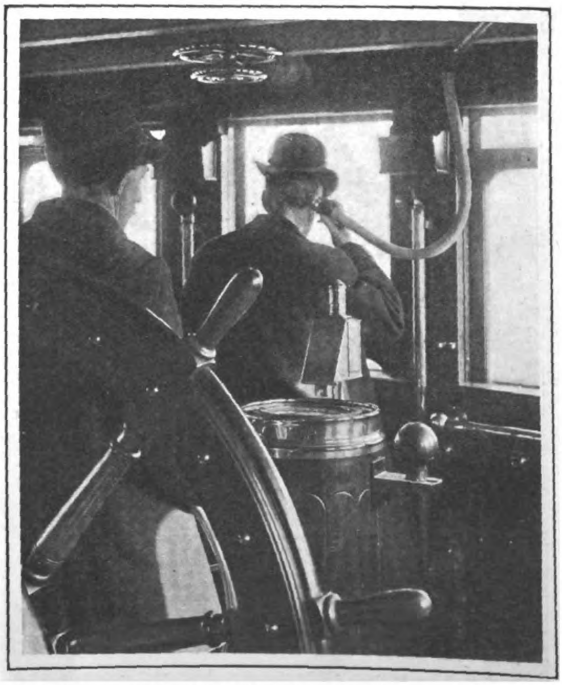
With the apparatus as now installed, it has been impossible to determine distance accurately by instruments, although after a little experience any observer can estimate the distance with considerable exactness. The Submarine Signal Company have, however, worked out a method by which the distance can be instrumentally measured.

The immediate application suggested for the system is that which would be made by the Lighthouse establishment to replace the present unsatisfactory system of fog-signals. The undulatory course of atmospheric sound renders bell and whistle signals uncertain in results — a recognized makeshift for want of something definite. If it can be established that the characteristics of large bodies of water do not contain the uncertainties of the atmosphere as to conditions of sound transmission — that is, if it can be definitely established that a bell of a certain size, struck with a given blow, will unvaryingly transmit vibrations through a certain space of liquid medium, uncertainty as to fog-signals will give place to certainty, and navigation may proceed as assuredly in darkness, fog, or snow as when the various buoys and marks can be seen.

Another immediate application is suggested in the facility with which signals may be exchanged between vessels of war, acting in squadron or fleet, while a future development of the principle involved is suggested of a variation of the apparatus now in use, so that the throbbing of the screw of an approaching vessel might be detected, whether or not the stranger were equipped with signal-giving apparatus.



Still another and most important use to which the apparatus could be put would be for the detection and location of submarine boats. This, it is believed, can be done.



One of the Electrical Transmitters which receive the Signals from the Water

The apparatus may be described briefly as follows: Electrical transmitters peculiarly sensitive to sounds which proceed through the water are placed in iron cases, one on the starboard and one on the port, inside the ship, below the water-line, and some distance back from the bow. They are wired to the wheel-house and connected there with a switchbox having two ordinary telephonic receivers. By a system of switches the observer is enabled instantly to compare the sound received on the starboard with the same sound received on the port side. If a more exact direction is desired, a slight swinging of the bow of the vessel will increase or diminish the sound received in either one of the transmitters to such an extent that the exact location of the submarine bell may be determined when the bow crosses the line.

It is well known that a navigator in straining his eyes in the night for a light is tempted to believe that he sees a light at the point where he expects to see it, and many wrecks have occurred for this reason. The apparatus of the Submarine Signal Company is designed to eliminate the personal factor entirely. The captain at his window need not know whether he is listening to the starboard or the port receiver until he has ascertained which is the louder. Having done so he presses an electric button, which lights up a green or red light, according to whether the bell is on the starboard or port side.

Receiving Signals in the Pilot-house. The Captain, by operating the Switch, determines the Direction from which the Signals come

The Signals transmitted through a Speaking-tube to the Captain on Post at the Binnacle Window of the Pilot-house

"The Girl from Kay's"

"The Girl from Kay's," now running at the Herald Square Theatre, New York, is a musical comedy presenting Miss Hattie Williams and Sam Bernard in the principal parts. "Winnie," an attractive milliner from "Kay's," meets "Hoggenheimer," a blasé millionaire, at the home of a newly married couple, where "Winnie" goes to trim a hat for the bride. Her discovery that the husband is an old flame of hers arouses the jealousy of "Hoggenheimer" and the wife, and leads to the complications of the comedy

Miss Milliken and Mr. Edeson in "Ranson's Folly"

The photograph shows a scene from the first act of Mr. Davis's play. "Ranson" (Mr. Edeson) has come to the post-trader's store to see "Mary Cahill" (Miss Sandol Milliken), the trader's pretty daughter, with whom he is in love. It is in this act that "Ranson," in a spirit of bravado, plans his scheme to rob the stage, disguising himself as a road agent. While he is proposing the plan to his brother officers he is overheard by "Mary's" father, who later accuses "Ranson" of complicity in the real robbery

"Ranson's Folly"—A Scene from Act II.

Mr. Richard Harding Davis's comedy of army life, "Ranson's Folly," was produced on January 18 at the Hudson Theatre, New York, with Robert Edeson and Miss Sandol Milliken in the principal parts. The action of the play centres about the adventure of a rich young officer, who, finding life dull at a Western army post, holds up a stage-coach for a prank. It happens that a real holdup occurs on the same night, in which the paymaster's stage is robbed, and "Ranson," the reckless but innocent officer, is accused. The father of the girl he is in love with is involved in the real robbery, and his efforts to have the soldier convicted furnish some tense situations. The difficulty is solved in the end, and "Ranson" marries "Mary," his enemy's daughter, who has believed in him throughout

MISS ADA REHAN AS "LADY TEAZLE"

Miss Rehan returned to the New York stage on January 18, appearing at the Lyric Theatre in her familiar part of "Katherine," in "The Taming of the Shrew." It is her first appearance in a Shakespearean rôle since the death of Augustin Daly in 1899. Her repertoire during her present engagement in New York has been planned to include—besides "Katherine" in "The Taming of the Shrew"—"Lady Teazle" in "The School for Scandal," and "Portia" in "The Merchant of Venice"

Correspondence

MR. CARNEGIE'S PROPOSAL

CAMBRIDGE, MASS., *January 12, 1904.*

To the Editor of Harper's Weekly:

SIR,—Mr. Carnegie's proposal that Great Britain should exempt the grain of this country from the duties which Mr. Chamberlain proposes to levy on all foreign wheat was, by the charity of man, left unnoticed until endorsed by you in this week's issue.

All good Englishmen will doubtless echo your desire that their country will not change her policy in such a way as to produce ill feeling between empire and republic, and you are certainly correct in your hypothesis that Mr. Chamberlain's policy may produce such a result. The McKinley tariff, whose immediate effect was to throw hundreds of Englishmen out of work, did not, to put it mildly, increase the popularity of Americans among English artisans, and, in like manner, Mr. Chamberlain's very moderate two shillings per quarter (or six cents per bushel) may conceivably cause the American farmer to think that Great Britain is at fault in refusing any longer to turn unto him the other cheek also.

But the American farmer, though he has patiently endured tariffs designed to support certain sturdy infants not all unknown to Mr. Carnegie, is, after all, no fool. The question, therefore, arises whether he will expect the government, by withdrawing, as you suggest, the privilege enjoyed by Canadians of having their wheat hauled over American soil, to offend a great interest, and to create across the Atlantic anger such as could scarcely be quenched without the terrible flames of war. Is it not possible that he will reflect that the worm has been goaded into turning; that England, the classic land of free trade, would not have demanded even a modest six cents had she not been goaded into doing so by severe duties levied on her exports to this country, that to rid himself of his six cents tax he must see that his representatives at Washington treat his English customers in a less unhandsome manner, and that they do so before the establishment of a British Zollverein renders such action too late.

You claim that the United States may become unfriendly to Great Britain because, being the "principal sufferer by the proposed change," this country could fairly feel that Great Britain was really, though not nominally, discriminating against her, whereas she has never discriminated against Great Britain. Let us apply your test to the tariffs at present in force. Have not Great Britain, being the greatest exporting country in Europe, and Canada, being the nearest foreign state to this country, suffered more than France, Germany, or any other nation? Is it not also a fact that, underlying the economic policy of this country towards Canada since 1866, there has been a feeling that this policy would force Canada to join the Union? Mr. Carnegie himself has not hesitated to urge that there should be no reduction of the duties on imports from Canada, because Canada is an awkward neighbor on our flank. At all events, the British Empire has been the "principal sufferer" from American tariffs, and if this is so, in spite of the absence of any intention to discriminate, it is impossible to maintain that Mr. Chamberlain's scheme involves discrimination against this country, or that it offers to the American any greater excuse for ill feeling than this country has long offered to the British.

I have lived long enough in this country and in England to yield to none in my desire to preserve that Anglo-American friendship, a continuance of which you also very properly desire. But fully as important to Great Britain is the necessity of a breach in the great Chinese wall that this country has raised against her. Whether Mr. Chamberlain's policy will effect this breach, and whether it will lead to the great imperial consummation he so ardently desires, it is not my purpose to discuss. My purpose is not to defend his scheme, but rather to criticise Mr. Carnegie's proposed amendment of it. Mr. Carnegie thinks he is asking Great Britain not to discriminate against the United States; he is really asking Great Britain to discriminate *in her favor*. Lest Great Britain should lose the passive friendship of the United States, Mr. Carnegie recommends her, in reality, to court the active hostility of the nations of Europe. These, under the Chamberlain scheme, would have no grievance, for Great Britain would be treating all foreign nations alike. Under the Carnegie scheme they would burst forth into righteous indignation that one country, the one that had done more than any other to injure British industries, had received a preference over them all—that perfidious Albion in a glaringly offensive manner was refusing them "most-favored-nation" treatment. Canada also could fairly complain that a two-shilling duty from which American grain was exempt could not possibly benefit her, and that her fidelity to the empire in face of American tariffs had received no sort of reward. Indeed, this is so plain that I hesitate to inflict it on your readers, nor would I do so but for confidence in their abundant ability to skip.

I am, sir, L. LEG. BURLEY.

OHIO SENTIMENT

DAYTON, OHIO, *January 14, 1904.*

To the Editor of Harper's Weekly:

SIR,—In reading the "Correspondence" page in my HARPER'S to-day I have noticed the communication headed "Western Sentiment." Possibly it may be of some interest to know of an incident which reflects "Ohio sentiment."

A few days ago four gentlemen met at dinner in this city. They are all Republicans, and have always been so, not one of them having been addicted to "scratching his ticket." Three are professional men and the fourth a business man of influence. The question of the possibility of President Roosevelt being defeated for the nomination for President in the approaching Republican convention coming up, one of the gentlemen said, "If Mr. Roosevelt continues to be as acceptable in his administration of his office as he has been so far and is defeated for the nomination by Mr. Hanna, aided by Wall Street and the politicians of the Heath, Payne, Quay sort, I could not conscientiously vote for Mr. Hanna." To this sentiment each man subscribed quietly and earnestly, and I know the four men well enough to know that should such a contingency arise they will do exactly as they have said they would do. There is a deep, strong sentiment for President Roosevelt here in Ohio among the men who "do the voting."

I am, sir, FREDERICK N. MCMILLIN.

THE SMOOT CASE

BAKER CITY, OREGON, *January 19, 1904.*

To the Editor of Harper's Weekly:

SIR,—Referring to "B's" letter on the Smoot case, I beg with courtesy to inquire of "B" where he gets inside information on Mormon Church ritual. I beg further to state that neither Smoot nor any other Mormon Church officer is by oath or otherwise so bound that he is not a legal, lawful, and rightful citizen. "B" has even given us the words of the apostle's oath. I wish to say that he is wrong. No such oath or combination of words obtains in the Mormon Church.

"B" says "Mr. Smoot has less right in the Senate of the United States than a subject of Great Britain or Germany." That is, no right. He proves his assertion with a statement that is false.

This movement against Smoot began with the preachers of various other denominations than Mormon. It has been viciously pushed forward with vicious and false accusations, and all their arguments, when not false, seem utterly beside the point.

Utah is to-day a State of the Union. Utah has selected Smoot to represent her. He is a citizen of Utah, enjoying all the privileges of citizenship. He is indicted for no crime, nor has he been, yet the Gentile minority in Utah and the pious women and *others* outside of Utah want him turned down, as it appears to me, on moral grounds, or rather, I should say, potential moral grounds.

Smoot is an educated, accomplished American gentleman, peer of the best in the United States. His record is clean, and he can honestly swear to support and uphold our Constitution, and do it honestly and well. He can with honor acquit himself in the duty of representing his State and people. If "B" will but give this matter a little more thorough study he will find that he is wrong, and there are about a million others who may wisely study further. Let alone the Mormon religion, let alone the Mormons, they who take prosperity into desert lands, the most prosperous, industrious, and hospitable people of the West to-day.

My only purpose in making this reply is to help set right much that is misstated and misrepresented concerning the attitude of the Mormon people to the United States government.

I am, sir, N. C. TITUS.

WE WOULD OPPOSE IT

LONDON, *January 16, 1904.*

To the Editor of Harper's Weekly:

SIR,—It is a common saying that "the outsider sees most of the game." Now if you were a Briton instead of being an American would you encourage or oppose Mr. Chamberlain's policy of protection? Your candid expression of opinion will be highly valued by the readers of this publication, comprising as they will a large number of the leading commercial men of the United Kingdom. Thanking you in anticipation.

I am, sir, F. E. COE.

ELECTION OF SENATORS

PORT ELIZABETH, SOUTH AFRICA, *December 14, 1903.*

To the Editor of Harper's Weekly:

SIR,—In your edition of October 17 you state that it is impracticable to amend the Federal Constitution so as to allow of the election of Senators by the people, and you suggest as a substitute that each *party* should nominate its candidate before election. This certainly would give an inducement for putting forward good men, but it seems to me there are two other considerations.

A legislature does not necessarily represent the majority of the people.

But the most important point of all is that the present method and the modification you suggest bring national issues into State elections, which is undesirable. It takes no argument to show that a number of voters are obliged to sacrifice their convictions, either in the State or in the national issues, to the detriment of good government.

Would it not give better results if each party would pledge its members to arrange for a plebiscite and elect the person receiving the majority? I am, sir,

AMERICUS SUM.

Where We Lead the World

THE United States again stands, at the beginning of the new year, at the head of the list of the world's exporting nations, so far as relates to the exportation of domestic products. This fact is shown by a series of tables just presented by the Department of Commerce and Labor through its Bureau of Statistics.

There are only three "billion-dollar countries," considered from the standpoint of exportation of domestic products. These are, in the order of the magnitude of their exports, the United States, the United Kingdom, and Germany. In the calendar year 1903 the exports of domestic products were: From the United States, $1,457,565,783 in value; from the United Kingdom, $1,415,617,552; from Germany the figures for the full year have not been received, but an examination of the figures of the year for which statistics are available justifies an estimate of $1,200,000,000. It is only within very recent years that the United States has taken her place at the head of the list of the world's great exporters of domestic products. In 1875 we stood at the bottom of the list of the four great exporting nations of the world, at the end of the next decade we had advanced one place, a decade later still another place, and in 1903 stood at the head of the list.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

MANY APPETIZING DISHES
can be made doubly delightful and nutritious by the use of BORDEN'S PEERLESS BRAND EVAPORATED CREAM, which is not only superior to raw cream, but has the merit of being preserved and sterilized, thus keeping perfectly for an indefinite period. Borden's Condensed Milk Co., proprietors.—[*Adv.*]

TELEPHONE Service at your home will save many small annoyances. Low rates. Efficient service. New York Telephone Company, 15 Dey Street, 111 West 38th Street.—[*Adv.*]

A TROUBLED feeling and the blues can generally be traced to indigestion. Chase it away with ABBOTT'S, the Original Angostura Bitters. At druggists.—[*Adv.*]

IT has been weighed in the balance and not found wanting—COOK'S IMPERIAL EXTRA DRY CHAMPAGNE.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

PISO'S CURE FOR CONSUMPTION is a pleasant and effectual remedy for coughs and colds. 25 cents.—[*Adv.*]

ADVERTISEMENTS.

Pears'

Pretty boxes and odors are used to sell such soaps as no one would touch if he saw them undisguised. Beware of a soap that depends on something outside of it.

Pears,' the finest soap in the world, is scented or not, as you wish, and the money is in the merchandise, not in the box.

Established over 100 years.

This half-tone reproduction of "Summer Flowers" only partially conveys the beauty and design of the lithographed plaques.

The four Season Plaques (containing no advertising) and the Calendar Plaque make beautiful and artistic decorations.

The Anheuser-Busch Art Plaques

With Calendar Plaque for 1904

AT GREAT expense, Anheuser-Busch Brewing Ass'n has secured from the brush of the celebrated color artist, A. Von Beust, a series of magnificent oil paintings, representing the artist's conception of the four seasons. These are reproduced with splendid fidelity as to detail and coloring, in the form of four plaques, "Spring Breezes," "Summer Flowers," "Autumn Riches," "Winter Winds," and an additional plaque containing the twelve monthly calendars for 1904. The five plaques are each 12 inches in diameter, lithographed in the highest style of art, fourteen printings on finest ivory china-finished cardboard, with relief embossing, giving the effect of hammered metal rims.

The five plaques will be mailed to any address on receipt of 25c in money or stamps sent to the Malt-Nutrine Dept., Anheuser-Busch Brewing Ass'n, St. Louis, U. S. A.

Malt-Nutrine A food in liquid form easily assimilated by the weakest stomach. Invaluable to nursing mothers and feeble children, gives appetite, health and vigor to the weak and ailing. Sold by druggists and grocers.

Always mention Harper's Weekly when writing to advertisers

O'TARA

By

VIRGINIA WOODWARD CLOUD

ONE gloomy evening, the familiar signal of O'Tara's rap sounded upon several doors, as he leaped up the lodging-house stairs to his room under the roof. There were times when this signal meant that O'Tara had not inspected his chosen few that day,—for he possessed the genius of fatherhood. Perhaps he was carrying some hot sausages from Aunt Hannah's corner stand, or had waiting in his grate a few more coals than usual. Sometimes he rapped for listeners, but oftener he wished to listen, and would beam delightedly upon his small circle, with the wrinkles gathering at the corners of his eyes, when the inconsequent discourse of the others pleased him. O'Tara was not their senior, counting according to years, but he was protective, and to this they unconsciously deferred.

"'Tis surprising how much a man finds to do when he only minds his own beesinus," remarked O'Tara that evening to the trio before his fire. "Um fairly worn out with ut, so joost to tidy things out a beet, and ease me own caunscience, I rapped ye up as I come past. John Lark, man, d'ye think Mis' Winch has gone out along with the lights below? Or would she lend me a beet uf home-brewed milk to waush down the cheese and crackers waiting by and by in the sthudio?" The studio was an attic and general storeroom adjoining O'Tara's former apartment. Little Pitt offered to go for the milk, but returned to report the house closed and the landlady absent.

"Everything's out except the wind," said Henry Bagg, an art student; "it's warmer up here in the roof. I suppose it's O'Tara's hair."

"Naut a beet!" said O'Tara, walking back and forth restlessly; "it's me genial presence, man. Have a mind, Little Pitt! Naut another coal, uf ye please. I counted particular this even' to leave several for the morn'n."

Now O'Tara had never been guilty of the extravagance of fire in the morning, and startled glances darted toward him, over the pipes that were being lighted. He stood smiling down upon the group with his thumbs in his pockets. "'Tis true that Um grown that extravagant with high-living that Um goin' to practise ecaunomy for a while. It's me risolution, and I'll tell ye about ut,—yes, yes, men, I'll tell ye!" He drew a stool to the centre of the circle, and stretched his feet comfortably to the fire, and was apparently in no haste to commence. Concerned looks were now exchanged over the pipes. Any new economy of O'Tara's could only mean more strenuous self-denial on his part. "Yes, yes, Um an extravagant dog," mused O'Tara, filling his pipe.

"In a way, you are," said John Lark; "your thickest coat is on old Grubb's back this minute."

"'Twas wore out," said O'Tara, apologetically.

"Your blanket's over old Hannah's knees," put in Little Pitt.

"It had holes in ut!"

"You gave one week's valuable sleep to sit up with Pratt's kid, when he fell in the elevator shaft," said Henry Bagg.

"And hasn't a man the right to give the only things belongin' to um? Ye'll naut be bullyin' me to-night. Naut a beet! Nor visiting me sins uf high-living on me, either. Ye know I fall into luxury easylike, comin' by it fraum me Scautch-Irish ancestry,—so let be, let be, for Um full uf exhaltation and a fine supper."

"Jove! I hope he brought some along," interpolated Bagg; "supper,—supper, it has a sound familiar, yet unaccustomed."

"Tut, tut, I mean me imagination's full uf ut. Ye're an onmannerly crew at best; a man can't speak but the flesh is picked fraum his very words." O'Tara smoked hard, with his eyes closed for a moment and the wrinkles appearing at the corners, as though some inward consciousness gave him intense satisfaction. "Now Um goin' to tell ye straight about it," he said, presently. "A man may go for a long time with his mind made up that pauverty's a soul-satisfyin' habit, and that kings an' princes couldn't be happier than he is living off the husks uf life, baut there'll come a day when the real thing breaks through and stares um in the face, men, and then,—well, well, 'twaus that way this mornin', and I had detairmined to turn newsboy and go collectin' pennies in my little charch-shaped baux to get in free to the newsboys' dinner, when uf a sudden that happened which turned the pavements to gold beneath me varry feet! The snow was feathers fall'n fraum angels' wings, each wan with a jool on the tip uf ut, an'—"

"That will do," said Henry Bagg; "done something you're frightened of. It always takes you that way."

"Naut a beet!" said O'Tara, "but there's more uf ut than ye think at the fairst! And if I waus frightened uf ut, how would it take me? whaut would be the signs, d'ye think?" There was an undoubted note of anxiety in his voice.

"By uncustomary airiness and bravado which conceals apprehension," said Lark.

"Naut a beet! Leastwise, naut to speak uf."

"He's got his best spotted tie on!" announced Little Pitt, suddenly, "and it doesn't look like his tying, either! And, I say! He's got his hair cut! Yes, he has! He's gone and spent good money to have his ugly red hair cut, my word!"

O'Tara's face was herewith suffused.

"High temperature," commented John Lark, "and a sold-his-birthright look. He's gone and got a girl, that's what he's done. Some girl's queered him!"

The silence following was more ominous than would have been a chorus of groans. In the three years of their comradeship O'Tara had not been known to look at a girl. Now he coughed, apologetically.

"I've gona and gaut nobody! Maybe, though, ye think wan wouldn't be noticin' me with the rest uf ye around?"

"Couldn't help it with your native flag around your neck," murmured Bagg.

"All right, man, all right! The tie's gaut a vairtue the manny uf us lack,—it's the only wan uf its sort. Yes, yes, the girls over here may be good, baut when a man's known better—" O'Tara came to a full and smoky stop, and silence fell upon them born of the unexpected, personal note in his words. He was usually nothing if not impersonal, and his chief charm lay in an elusiveness which springs from the finest reserves. This was accompanied, in a measure, by an unqualified belief in and loyalty to his chosen associates, therefore when O'Tara did condemn it was with no halfway measures. "Well, now, as ye press me so hard I'll tell ye sure." His eye passed from face to face, and he nodded satisfied. "Ye've bean good to me, an' ut's right. It waus when I waus a boy that I hadn't a varry luxurious time uf ut,—naut the time that spoils a man for work. Um naut caumplaining,—naut a beet! There's manny has worse. I gaut me schooling good and regular between times while I waus working the place to keep a roof to our heads and a bite to our mouths,—for me father bein' the sort that took a drop too much and too often waus naturally joost so much uf a baby on wan's hands. But that waus neither wan nor the other; 'tis a good thing for a boy to have a care uf something, maybe. I waus studying to be a doctor out uf old Doctor O'Connor's books, and in another year waus to go in the office along with um in Doublin, when me father waus accidentally mairried by a widow woman come out uf Doublin with a brace uf small childern ready-made to hand, as it were. Me stepmother bein' the sort that discouraged the enjoyment uf life, me study uf medicine waus laid aside for the study uf how to keep away, and how to be there all at wanst, lendin' an eye to things,—for wan couldn't leave a place and three small childern to such tender maircies, now could he? Little Pitt, man, reach ye boot out and push the two coals together and make wan. So that waus the reason I waus naut with Doctor O'Connor, baut that's neither wan nor the other, for it's amazin' how much uf a man's enjoyment in life he gets out uf the things he can't do! Well, well,—wan day me father died, and there waus naturally no head to the family except joost meself—"

Meetings with George Francis Train

By Will Carleton

YEARS ago, when just out of college, I met George Francis Train for the first time. He was carrying around with him already a national reputation, and was now upon a meteoric lecturing-tour through the country, seeming, meanwhile, to be under the impression that he was running for the Presidency.

Wondering whether I would have any standing with him, as a callow student who had merely written a few poems and prose sketches that had obtained enthusiastic approbation from personal friends who could not withhold it without impoliteness, I timidly intruded upon Mr. Train, in his room at the village hotel. He did not even rise from the bed upon which, with coat and waistcoat discarded, he was resting, but looked me half through and back again, extended a cordial hand, and exclaimed: "Ah! a student; I had heard there was a college here. Sit down and tell me what you have done, and what you want to do, and what you expect to do."

His View of Luck

I replied by handing him a thin volume of thin poetry that I had published at my own expense, and said, as coolly as I could: "What I have done, Mr. Train—merely this, and a few years of study. What I am to do—that, I suppose, depends somewhat upon luck."

"Luck be damned," he replied, with perfect poise and placidity. "It all depends on yourself. As for this book, I will read it tomorrow on the train; there may be some good stuff in it."

Before I had time to join with him enthusiastically in this theory, he continued: "But I'll tell you what I want you to do, and what'll be better than anything you've got in here. I want you to write a good long *Wail;* one that will reach from the Atlantic to the Pacific Ocean. Do you understand? A great big long wail—lamenting the terrible fact, which, of course, you have already learned, that everything in this world is dead wrong. Of course you know that you are talking to the next President." Before I could reply that this was interesting, whether authentic or not, he went on, fluently:

Giving Points to the Great

"I am also the greatest man in the world. I can give Buddha, Confucius, Moses, Mohammed, and all the rest of them, fifty on the string and then discount them."

The next time I saw him he was sitting in Madison Square Park, with children and birds around him. He would not speak to me, for he had taken a notion that he would converse only with youngsters—excepting by means of notes written on the spot, for which he kept a pad and pencil. Sometimes he would save the labor of writing by saying to a child, "Tell him"—so-and-so—in a tone loud enough for his interlocutor to hear. "I have followed you"—he wrote to me as I stood there—" ever since you called on me in my little room in one of the worst hotels I have as yet found on the face of the earth. Have you written the Wail yet?"

A Professional Iconoclast

My next interview with him was in one of the big Chicago hotels during the World's Fair. He had overcome his abhorrence to conversing with grown people, but would not touch them or shake hands with them. I renewed our acquaintance, and saw a great deal of him within the next few days. His egotism was unbounded, but his good nature unfailing. His wit was as sharp as the point of a driver's whip-lash, but he seemed notably lacking in humor. His kindness of heart was unquestionable, but his humanity was never to the fore, if he had any. He was a pessimist first, last, and all the time; a rebel against the established order of things, an avowed pagan in religious matters, and, in fact, what might be called, in general terms, a professional iconoclast.

The last time I saw him he was lying silent and still in the solemn casket.

Columbia AUTOMOBILES

For 1904

comprise the leading vehicles which made the Columbia name famous during 1903 and several entirely new models, including our Mark LX Electric Runabout, the fastest and handsomest auto in its class, as well as the lightest of equal battery power; also our new 12 h.p. Light Gasolene Tonneau, with double opposed cylinder engine in forward bonnet and automatic features of control which make it easier to operate than any other gasolene car.

A catalogue of the Columbias, including our high-powered Gasolene Touring Cars will be sent on request. Also, special Catalogues of our Electric Commercial Vehicles and Town Carriages of the coach class.

(Continued from page 212.)

Twasn't your family," broke in Little Pitt. But O'Tara did not turn his eyes from the curl of smoke before him.

"—And I carried the books back to Doctor O'Connor, and took a night or so to turn it over like,—about the childern's schoolin', and all, and I talked it over with Moira, and we detairmined, Moira and me, to come off to America that spring, where I could make enough easier to keep me stepmother and the childern—baut maybe I haven't told ye about Moira?"

O'Tara looked innocently around the circle. He had never before mentioned Moira, and he knew it.

"Well, Moira waus a young girl I'd always known like. She lived outside the town with a brother and sister, and his wife, and Moira waus that be-autiful the sun stopped shinin' for shame when she come out, and that sweet the May buds 'ud turn red and draw in when she passed them, and that good"—a groan interrupted O'Tara, and Henry Bagg dropped his head in his hands. O'Tara returned to earth fiercely. "Did I hear him say 'twas naut true? Speak up, man!"

"Naut a beet!" said Bagg, "but go easy, go easy."

"He's gaut no manners," said O'Tara to his pipe, "and I've had the trainin' uf um three year come this April. Well, well, Moira waus an orphan, too, and wan evenin' when the spring waus that young-like that the little thorns waus black to bursting, the leaves silver, and the water in the bog like a copper kittle in the sunset," — stifled applause interrupted, but O'Tara sat on the edge of his chair, enthused with the joy of narration—"when the smell uf the air waus like wine to the blood, and the white promise uf a little moon waus like a glimpse uf Moira's face through the branches, we met and detairmined to start for't that day week—"

"For the moon?" interpolated Bagg.

"Amehrica, man, Amehrica! The land ouf the free, et cetera. I had airned the money for two passages, and a varry little over, and waus for startin' alone, baut, ye see, every man's gaut his weak spaut, an' 'twill get the better uf um, and Moira waus naut anny too easy to leave. So when she detairmined that I'd be the better man over here with her than she'd be over there without me, she had her way. God bless her! She'd a waunderful head for a girl, had Moira. So we were to be mairried that day week in Doublin, and, 'tis true, I waus that ready to work I could have picked up this little America and run off with ut on my shoulder,—'twaus before I'd seen ut. For, uf course, I knew I could keep me stepmother and the childern in their share when I waus settled like over here,"—those who listened, glanced at each other, enlightened for the first time as to the secret of O'Tara's persistent and rigorous economy. He continued, thoughtfully: "There's naut been a sunset or twilight like ut since. The little birds waus abed or they'd bean in ut, too. Betime the fairst stars come out we'd gaut it all fixed over here, with a house and a beet uf a garden to ut." O'Tara stopped again. Presently he said: "Twaus that varry week me stepmother took ill and died uf double pneumonia, and when the buryin' and all waus settled, I'd varry little over wan passage-money left, and with the varry little I fixed the childern tidylike with Mis' Phinn, a good woman who waus housekeeper in the time of old Lady Rourke."

"And Moira?" said John Lark.

"Why, man, Moira waus goin' to lend an eyelike to um for me. There waus naut the money then for her to come along, and had there been I couldn't fetch the three childern here to nothing at all!" O'Tara's hands rested on his knees and his blue eyes were bright. "Whaut a man's gaut to do is mostly bloomin' low at hus feet. Maybe he stoops to pluck ut, but he rises with the flower uf ut in his hand.

"The evenin' before the *Queen uf Connaught* sailed, Moira come along with me nigh to town, and she says:

"'Look over your left shoulder, Teddy, at the moon.'

"D'ye believe in ut, Moira?" said I.

"'Me grandmother saw ut so the fairst night she met me grandfather, and we'll see ut so wan night soon in America, Teddy, man!' she said."

O'Tara leaned back and drew at his pipe. His eyes were fixed upon the fire, and each one of the others looked at his own curl of smoke. Presently he said:

"'Twaus five year ago come April. A man's that small in a new cauntry that there's times he can't find humself,—I've known ut. And the varry fairst thing he's gaut to do is to let go uf whaut he wants and to take whaut he can get, and be glad uf ut. Annyhow, the childern's bean kept, thanks to the salary paid the collector uf the Consaulidated Ice Caumpany!"

They glanced quickly at each other. They had seen O'Tara's dogged efforts to secure this very small position and its smaller salary, and the unquenchable fire of the heart which had borne him over poverty and failure. Now, his face was flushed and his eyes were bright with the love of life.

"Yes, five year ago come April, men, d'ye mind that?" His voice shook. "And all the time ye've stood by me, askin' no questions about ut, and all the time me girl's stayed over there seein' to the childern for me, and waitin' for the day when I'd be sendin' for them wan by wan, and it's come!" O'Tara suddenly sprang upright, with all which trembled back of his words finding voice. "I gaut me promotion this day to office clark and me salary raised, and the waitin's past and the hardness uf ut's past."—his voice broke, but the others were on their feet with a shout,—"and there's more uf ut, men! There's a baux from home to-day with things fit to eat in ut, spread out yaunder in the sthudio,—a feast

for a king!" but the cheer was a roar. Little Pitt was sawing O'Tara's arm up and down, while Henry Bagg made a rush for the studio door, and flung it open, setting free alien odors mingled with that of lamp smoke. Then Henry Bagg leaped back as though struck, for there came a clear cry, and a rush of drapery through the door, flying past them as they fell away.

"Teddy, Teddy, man! Tell ut! Tell ut!" cried the voice. "I'll naut be waitin' anny longer alone!" A girl in a scarlet jacket clung to O'Tara's arm, her curly black hair pressed against his sleeve, her flushed face and tearful Irish-blue eyes smiling dazzlingly upon the thunder-struck trio.

"I told ye there waus more to ut!" said O'Tara, a sob striving with his words. "Look at her, men! Look at her! She come this varry mornin' on the *Queen o' Connaught*,—Moira, Moira, girl!" The tears left O'Tara's eyes and lay on O'Tara's face, and his arm went around her. "She airned the money for the double passage joost to come and fetch the baux herself and take a look at me,—at *me*, men! think uf ut!" O'Tara struck his breast with his free hand. "And then to go back with the boat. Baut she doesn't go back at all, now, because—"

"Say ut, Teddy, say ut!" Moira's shining eyes were on his face.

"For that me salary bein' raised we joost naturally gaut mairried this varry mornin'!" shouted O'Tara. The echo was a tumult of sounds.

"She's to stay and we are to have the beet uf a garden yet, and the childern to be sent for wan by wan." Presently the uproar lulled, and each one gave his hand and his heart to Moira. Then they made a rush for the attic, where the supper was spread.

There was not much talking done, for words shrank abashed before that which even the smoking lamp could not hide—the pathetic light of joy in O'Tara's face, as he stood holding Moira's hand, while she poured coffee with the other. Then the silence was broken by Little Pitt.

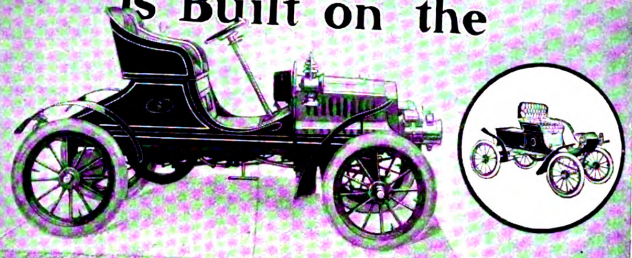
"It's a wedding-supper, and he said he hadn't gone and got a girl!"

"Naut a beet!" said O'Tara, beaming, "she come and gaut *me*, God bless her!"

"Surely He Hath Borne Our Griefs"

(Chicago, December 30, 1903)

The world-wide impression created by the fire disaster at the Iroquois Theatre is shown by the following verses by Hugh Macnaghten, written for the London "Spectator":



We might have spared Him this,
The worst of all the sorrows of the year,
The many children whom He held so dear,
The women and the men
Who shared His creed,
So wonderfully fashioned in the womb,
So wisely loved, and then
Through human thoughtlessness or greed
Condemned to this unutterable doom—
We might have spared Him this.

He has so much to bear:
In every pang of every stricken heart
Throughout His universe He claims a part,
And wanders up and down
By street and square,
And sees the travail of the souls of all
In every pitiless town
Or in the fields and makes it His:
He feels a wound when fluttering sparrows fall:
We might have spared Him this.

Think what it must have been
To love the children as He loves alone,
And this, through every day, to have foreknown,
And this, through every hour,
To have foreseen.
Is any other sorrow like to His,
Who, having boundless power,
Beheld our agony of need
And died again with all (O! hearts that bleed),
Yet could not spare us this?

HUGH MACNAGHTEN.

Progress of Science

The Radiation of Nerves and Muscles

THE N-rays, whose discovery during the past year has already been recorded in HARPER'S WEEKLY, continue to interest scientists by the remarkable characteristics which they exhibit. It has recently been shown by M. Charpentier, who has also repeated the original experiments of M. Blondlot, the discoverer of this form of radiation, that the N-rays are emitted by the nerves and muscles of the human body when in a state of activity. This discovery is of importance, as no external effects of nervous activity have been found by physiologists. In M. Charpentier's experiments he allowed the N-rays to fall on a barium platinocyanide screen such as is employed in investigations of X-rays and radium. This screen was made faintly luminous by the radiation received from a piece of radium surrounded by black paper. When the N-rays fell upon the screen its luminosity was increased. M. Charpentier found, as did M. Blondlot, that the rays penetrated aluminum and other substances, but that they were stopped by lead and moistened paper. They were, however, not heat effects, since they could be transmitted through several layers of aluminum where air spaces intervened. Likewise they were not due to stored sunlight, as they would remain the same after the body emitting them had been nine hours in complete darkness. M. Charpentier's attention was attracted to the physiological aspect of the question by his noticing that a phosphorescent or fluorescent body became more luminous when brought near the body. This increase in luminosity was more marked if the screen was brought near a muscle and was greater if the muscle was contracted. Likewise the same effect was noticed in the neighborhood of a nerve or a nerve centre where an increase in its activity led to a corresponding increase in the luminosity produced.

Soap from Trees

A tree known to botanists as *Sapindus utilis* is noteworthy in that its fruit possesses saponaceous properties, and from it a natural soap can be obtained. This tree flourishes in Japan, China, and India, and also in Algeria, where the fruit is now to be produced for commercial purposes and the cultivation of the trees is to be undertaken. The tree reaches maturity about its sixth year, and in the autumn from fifty to over two hundred pounds of fruit are available for picking. The fruit is yellowish-green to brown in color, and has an oily kernel. It is treated in several ways to obtain the saponaceous materials, but water or alcohol is usually employed, and the expense involved is said not to be large. There is an absence of alkali, and the soap produced is in many respects superior to the ordinary commercial product.

A Plan for Heating Trains

Considerable difficulty has been experienced in heating long trains of railway-cars in Europe owing to the condensation of the steam and to the presence of water in the pipes. By a system devised by M. Lancrenon and about to be installed on the Eastern Railway of France this is obviated by employing compressed air, which is mixed with the steam, and carries along any condensed water to suitable traps. The condensed air also enables smaller pipes to be used, and where ten or twelve cars were formerly the limit, now twenty or more can be heated satisfactorily. The air used amounts to about ten per cent. of the steam-supply, and when a slight amount is used to raise the pressure at the portion of the train near the engine, the effect is felt through the line of pipes. In one instance, where steam was admitted to the heating system at a pressure of fifty-seven pounds per square inch, the pressure at the end of the train was but ten pounds. Using sufficient air to make the pressure sixty pounds per square inch, twenty-eight and a half pounds at the end of the train were obtained, which fell to twenty-one and a third pounds after the steam was admitted to the traps. With trains of unusual length, the results were equally satisfactory.

Music

Ternina's "Isolde"

"HER *Isolde* was a hurricane, a sort of avalanche; and the woman was lost in the storm. She had missed the magic of the woman who, personal to our flesh and dream, breaks upon our life like the spring; and this was just what Evelyn wanted to put on the stage." That is the suggestion of the ideal *Isolde* whose realization was sought by Mr. George Moore's fictional opera-singer, *Evelyn Innes*, based on a contrast with the tempestuous *Isolde* of Rosa Sucher; it is the actual *Isolde* of a lyric actress of to-day—Milka Ternina.

It was said four years ago by the present writer, after Ternina's American début as *Isolde*, that the impersonation marked an epoch in the interpretation of Wagner. We had never, before Ternina's time, known an adequate assumption of the rôle of the protagonist of Wagner's masterwork. There had been *Isoldes* who were merely Celtic *Brünnhildes:* demi-goddesses of heroic and torrential temperament who were well enough as demi-goddesses, but imperfect as vehicles for the embodiment of the appealing and lovely woman of Wagner's play. Or we had known *Isoldes* of more than mature proportions and the disposition of viragos, in observing whom one recalled Mr. Philip Hale's happy definition of the conventional *Isolde* as the sort of woman the British matron would call a "person"; or *Isoldes* whose sense of appropriate dramatic effectiveness crystallized in what Mr. Moore has indicated as "the conventional, statuesque attitudes designed for the decoration of beer-gardens." The distinguished artists who have in the past impersonated Wagner's heroine seemed quite to forget that *Isolde*—again to revert to the perceptive *Evelyn*—"has to be a woman a man could be in love with, and that is not the shriek of a gale from the northwest."

Now Ternina's *Isolde* is eminently "a woman a man could be in love with," and therein lies its great and peculiar eloquence. She played the part, for the first time this season in New York, on January 22, in the second performance of the work under Mr. Conried's direction; and never before has it seemed so subtly and truly conceived, so potent, so commandingly beautiful. This *Isolde* never for a moment relinquishes her femininity: she is, throughout, the variable, impulsive, magnetic woman, whether raging superbly as in the first act, rapturously expansive as in the second, or deeply pathetic as in the last. The scorn and bitterness, the furious resentment of the early scenes, are in no wise slighted: she is still the outraged princess; but a princess who never, for all her imperial anguish, permits you to forget her essential womanliness. And that is Wagner's *Isolde*—a woman infinite in passion, mercurial in mood, essentially and supremely lovable.

Songs by Dr. Damrosch

The Schirmers have recently issued, in a handsome edition, a collection of the songs of Dr. Leopold Damrosch, whose activity a score of years ago in concert-hall and opera-house did so much for the advancement of musical culture in America. The songs have been edited by Mr. Frank Damrosch, and excellent English translations of the German text are provided by Mrs. Mary Lawrence Webster. There are some sixty songs in the volume,—settings of the verse of Goethe, Heine, Lenau, Uhland, and others, together with ten Spanish songs from the *Spanisches Liederbuch* of Emanuel Giebel and Paul Heyse. The collection was well worth making. Dr. Damrosch, who worked energetically in the larger musical forms, was also a song-writer of admirable attainments. His dramatic sense, which was keen, was allied with a fine and penetrating sense of poetic atmosphere, and a definite feeling for lyric effect. There are not lacking pages which, for the sake of Dr. Damrosch's reputation, one could wish omitted; for he was at times, as it seems, too easily satisfied with the obvious effect, the facile convention. But more often one is impressed with the sincerity, the enthusiasm, the sound musicianship, of the composer; and there are frequent passages which charm by the freshness and felicity of their inspiration.

William Makepeace Thackeray
Complete Writings

IN TWENTY-FIVE VOLUMES

A Set of Thackeray is not a Luxury—it is a Necessity

THACKERAY'S creations place him at the head, perhaps, of the English novelists of the nineteenth century. His characters are always human. There are no immaculate heroes, no perfect heroines, no utterly unredeemed persons of either sex to be met with in the pages of his books. He conceived it a duty to describe the world as he saw it, and he drew his characters with admirable realism, and with a marvellous insight into the natures of men and women. We take pleasure in announcing a new edition of Thackeray's complete works, and we feel confident that this edition will meet with the approval of all lovers of good library books.

Many Beautiful Illustrations by Great Artists

For nearly a century this trade-mark has been famous in Havana and has always represented the finest quality of cigars ever made in Cuba

Registered Trade Mark

A DE VILLAR Y VILLAR

GENERALS—50 CENTS
COLONELS—3 FOR $1.00
MAJORS—25 CENTS
ADJUTANTS—20 CENTS
CAPTAINS—3 FOR 50 CENTS
LIEUTENANTS—15 CENTS

These cigars are the best cigars that are now made in Cuba. They have been sold almost exclusively in Spain and England on account of their extremely fine quality and straight shape.

They are now offered to American smokers and have been given these new grading names to identify them in size and price.

No better cigars can be made, as only the choicest tobacco, the ripest, most mature and sweetest leaf is used in making them.

The straight shape is the original and best shape, as it burns better, draws more evenly and gives you more tobacco to smoke than the pointed shape. *"Smoke them slowly, as you would sip old wine."*

The darker colors are the most to be desired, as they smoke sweeter and mellower. *"A light wrapper does not make a mild cigar!"*

These statements are responsibly made and can be verified—and all discriminating smokers of Havana cigars will be gratified to know that cigars of this highest quality, finest workmanship and choicest leaf can now be obtained from the leading dealers in the United States.

COMMENT

A WEEK before he died, William C. Whitney, speaking to a friend, said: "This is my happy time. I worked hard and succeeded. Now that is over, and my life has become only an adjunct of others." There was no regret in his voice—only satisfaction that circumstances enabled him to give all of his time and himself to those he loved. Much might be written of the things he did, but the pen falters. It suffices to say that he was the best friend we ever had, ever expect to have, ever want to have.

It is fortunate for the members of the House of Representatives that when the ayes and noes were ordered, every one of them went on record against the proposed mileage grab. Evidently the retribution that befell those Representatives who voted for the salary grab more than a quarter of a century ago is still freshly remembered. A good deal could be said at the time, and might be said now, for increasing the pay of members of Congress from $5000 to $7500 a year. It is perfectly true that the present salary is inadequate to the maintenance of a house in Washington; and that a Senator or Representative who depends exclusively on his pay for his support must resign himself to a room or two in a boarding-house or second-rate hotel. Even then he would scarcely find it possible to save a penny. We have but little doubt that, since the President's salary has been doubled, and the salaries of justices of the United States Supreme Court considerably augmented, the people would recognize the justice of increasing the pay of Senators and Representatives. That would be, at all events, a proposal which would be discussed on its merits. The attempt, on the other hand, to obtain mileage a second time during what has been practically a single session of Congress was a barefaced attempt to rob the Federal Treasury, and had it proved successful, would have brought political ruin to every participant. Every Senator and Representative has had credited to him the mileage provided by law for his attendance at the special session of the Fifty-eighth Congress, called by the President in November. There was no cognizable interval of time between the close of that special session at noon on December 7 and the beginning of the first regular session at the same moment. Men of common sense and common honesty will pay no attention to the technical ground on which Mr. Tawney—who was chairman of the House sitting in Committee of the Whole—overruled the point of order raised by Mr. Littlefield—the point, namely, that the Fifty-eighth Congress was still in session under the President's call, and that there had been no recess. It is doubtless true that there have been two sessions of the Fifty-eighth Congress, the first ending at twelve o'clock noon on December 7, and the second beginning at that moment. It is plain, however, that in the imaginary interval no Senator or Representative could have incurred any travelling expenses for which he would be entitled to reimbursement by way of mileage.

A great deal of interest attaches to the report made the other day to the Massachusetts Legislature by the State Board of Commissioners of Savings-banks. It seems that the 187 savings-banks of that State now have assets amounting to about $650,000,000, and deposits aggregating more than $608,000,000, the property of 1,723,000 depositors. In order to appreciate the significance of these figures we must make some comparisons, premising that Massachusetts has an area of only 8315 square miles, a population, according to the last census, of 2,805,346. The deposits last year in Massachusetts savings-banks exceeded those of 1902 from the following States combined: New Jersey, Pennsylvania, Delaware, Maryland, West Virginia, North Carolina, South Carolina, Florida, Louisiana, Texas, Tennessee, Ohio, Indiana, Illinois, Wisconsin, Minnesota, and Iowa. This is an astonishing exhibit, but there are comparisons even more instructive. The dual monarchy of Austria-Hungary, which, at the last census, had a population of 47,102,000, had deposited in its savings-banks only $650,000,000. The United Kingdom of Great Britain and Ireland had, at the last date named in the report of the Comptroller of the Currency, $916,836,845 deposited in its savings-banks, as against the $1,051,689,186 of similar deposits in the savings-banks of the State of New York in 1902. Massachusetts is not the only exemplar of New England thrift. In 1902 the little State of Rhode Island had deposited in its savings-banks $71,900,541, or almost exactly as much as Ohio, Indiana, West Virginia, North Carolina, South Carolina, Florida, Louisiana, Texas, and Tennessee had, put together. Connecticut, which in 1900 had only 908,412 inhabitants, had in 1902 deposited in its savings-banks $193,249,909, or more than Pennsylvania, Maryland, Delaware, and the District of Columbia combined. The total deposits in the savings-banks of the United States are now computed at more than $3,000,000,000, as against $5,000,000,000 in the savings-banks of all the rest of the world. Should the present rate of increase go on, there will be more money deposited in the savings-banks of the United States twenty-five or thirty years hence than in the corresponding institutions of all other countries on the globe.

There are indications of a concerted movement in the States that can be relied upon to give their electoral votes to the Democracy to abolish the "two-thirds rule" that for seventy-two years has been observed in Democratic national conventions—the rule, namely, that a candidate must receive two-thirds of the votes of the delegates present and voting in order to become the nominee of his party. We understand that many State conventions will instruct their delegates to the St. Louis convention to demand the abolition of the rule, on the ground that it is no longer needed under existing political conditions. Instead of being helpful, it is now harmful to the South. When the rule was adopted, it was felt by Southern Democrats that as they had more at stake than their Northern brethren, owing to the growing disapproval of their peculiar institution in the North, they ought to have the right to veto a nomination for the Presidency that seemed to them objectionable. The right was conceded. We suppose that most Southern Democrats would now acknowledge the adoption of the two-thirds rule was a mistake. But for that rule Martin Van Buren would have been nominated and elected President in 1844, and in that event he would not have accepted the nomination for the Presidency on the Barnburner ticket in 1848, and Lewis Cass, the Democratic nominee, would have been elected President in that year. What is far more important, it is certain that but for the two-thirds rule Stephen Arnold Douglas would have been nominated for the Presidency by the Democratic national convention held at Charleston in 1860, and, as the returns show, he would have beaten Abraham Lincoln. There might then have been no civil war.

When these facts are weighed, Southern Democrats are justified in regarding their former demand for the two-thirds rule as a deplorable blunder. At the present time, however, we have no desire to debate a question which is academic. Whatever might have been said for the two-thirds rule before the

civil war, nothing can be said for it to-day. There is absolutely no reason why a nomination for the Presidency should not now be made in a Democratic national convention, as it is made in a Republican national convention, by a majority of the delegates. Nor is this all. The operation of the rule is positively detrimental to the interests of the South, and deprives that section of the influence which it ought to exert in the national councils of the Democracy. At no time since the close of the Reconstruction period has there been any doubt that the Southern and Eastern and Middle States together could control a majority of a Democratic national convention, and it has almost always happened that the delegates from those sections have voted together. It is mathematically obvious that a coalition of the Southern and New England States, assisted by New York, New Jersey, and Pennsylvania, can muster a majority of the St. Louis convention, and name the next Democratic nominee. It is of the utmost moment not only to the Democratic party, but to the public welfare, that the sane and far-sighted purposes of those sections of the Union should not be thwarted by delegates numerically constituting a little more than a third of the convention, but representing States which, under no conceivable circumstances, could be relied upon to give more than a score of votes to the Democratic nominee. Forewarned is forearmed. The two-thirds rule can be abolished in exactly the same way in which it was prescribed, to wit, by a majority of one.

The provision of the Alabama State Constitution which was intended to disfranchise the negro has had an unexpected effect upon the white vote. The provision made the payment of a poll-tax a prerequisite to voting. Moreover, the poll-tax must have been paid every year. That is to say, it will not suffice to pay a poll-tax this year, if last year's tax remains unpaid. At the election of a Governor in 1892, more than 242,000 votes were cast. In 1902 the whole number of votes cast did not reach 92,000. It is evident from the returns of the election held in the year last named that not only were the black voters eliminated, but at least 47,000 whites had been disfranchised by their failure to pay the poll-tax. It is estimated that this year the number of whites not entitled to vote will fall but little short of a hundred thousand. That is to say, the practical outcome of the State's constitutional provision relating to the franchise has been to create an aristocratic electorate. It seems that nothing can be done to relieve the political disabilities of the "poor whites" until 1907, when the first regular session of the next Legislature begins. Moreover, it is by no means certain that the present narrow electorate will assent to an extension of the franchise. In Mississippi in 1900 the total vote for President was less than 60,000. In 1876 the total vote for President in Mississippi exceeded 164,000. In Louisiana the total vote for President in 1900 was less than 68,000. In 1896 the total vote for Governor was more than 206,000. These figures prove that the shrinkage of the white electorate is not confined to Alabama, but is observable in other States which have modified their constitutional provisions relating to the franchise.

Mr. Jacob Gould Schurman, President of Cornell University, opposed, it will be remembered, the demand of the anti-imperialists that the Philippines should be handed over to Aguinaldo. He is still convinced that had that project been carried out the islands would have lapsed into anarchy and chaos. He nevertheless believes that so soon as the Tagals of Luzon and the Visayas of Cebu and other civilized islands show themselves qualified for self-government, it will be our duty to treat them precisely as we have treated the Cubans. That is to say, in his opinion, we ought to give them independence, while at the same time agreeing to protect them from foreign aggression. The Philippine Legislature, which is to convene this year, should throw light on the extent to which the Filipinos are qualified for self-government. There is ground for Mr. Schurman's assumption that the Philippines will never be admitted as a State or States into the Union. The wisdom of enfranchising the negro is now questioned by many Republicans, and the sweeping enfranchisement of the brown men of Malay stock would be regarded with approval by very few American citizens. It follows that we must either continue to govern the Philippines as a colony, or treat them as we treated Cuba. Porto Rico, on the other hand, where the whites greatly outnumber the blacks, seems destined to become, first, a Territory in the technical sense, and, ultimately, a State, although it may have to wait for Statehood as long as has New Mexico.

Has General Leonard Wood any right to hold the rank and draw the pay of a major-general in the regular army during the present session of Congress? Secretary Root replies in the affirmative. If, he says, the special session was merged into the regular session, and there was no interval between them, then the two sessions must have formed a single, continuous session, and General Wood's original commission, issued in the recess preceding the special session, will run until the end of the present session. If, on the other hand, continues Mr. Root, the two sessions did not merge, but the present session is a new one, then there must have been an interval, however small, between them, and in that infinitesimal tract of time the President may be considered to have issued a new commission to General Wood, which is still in force. The Secretary's logic is not convincing. There is no interval at midnight between one day and the next, yet the two days are none the less distinct. The special session and the first regular session of the Fifty-eighth Congress do not constitute a single continuous session; nevertheless, there was no recess, actual or constructive. We do not believe that General Wood will receive the pay of a major-general during the present session of Congress. If he should, measures will no doubt be taken to secure from the United States Supreme Court an opinion touching the possibility of a "constructive" recess.

Prince Ching has formally announced that China will preserve the strictest neutrality in case of war between Japan and Russia. This important news has come to us from two different sources, and with two mutually contradictory contexts. First, we are told, in a message from Peking, that M. Uchida, the Mikado's minister to China, had approached Prince Ching on the subject of China's alliance with Japan, and that Prince Ching had replied that he had been warned by Russia that such an alliance would mean the prompt occupation of Peking by Russian troops, and consequent ruin and confusion to the Manchu court. Hence China had decided that from motives of self-preservation she must stand aside in case of war. Then came a despatch from Tokio, announcing that China had really initiated the proposal to join Japan, and had with the utmost difficulty been dissuaded by the moderating counsels of M. Uchida, who had pointed out how much China had to lose, and had finally convinced Prince Ching and the Grand Council of the Empire that their one salvation lay in neutrality. It is clear that both these messages cannot be true. They may both be, let us say, wholly imaginary, and have only a subjective value as showing what was in the minds of two heated special correspondents. But we may draw a timely warning from this somewhat flagrant discrepancy, that the art of fiction is still flourishing in the East, and that much of what has passed as fact concerning the negotiations between the rival powers on the Pacific is the fruit of a lively fancy. The one grain of truth in this budget of stories seems to be that China will remain neutral in case Japan and Russia go to war.

The Republican opponents of Mr. Roosevelt, finding Mr. Hanna intractable, are occasionally heard to mutter that Mr. Root or Judge Taft may be mentioned in the convention. No man conversant with practical politics pays any heed to such suggestions. Could ex-Secretary Root get the delegation from the State of New York as against President Roosevelt? The question answers itself. Would the delegation from Ohio pay Judge Taft a compliment which it withheld from Senator Hanna? A reply is needless. The truth is, as we have often pointed out, that so far as the Republican nomination for the Presidency is concerned, Mr. Roosevelt is the only man in sight. Unless some unforeseen and extraordinary incident should occur, practical politicians will consider it too late even to talk about organizing opposition to Mr. Roosevelt's candidacy. Assuming, then, that the President will get the Republican nomination, the question for nonpartisan citizens to consider is, Would it be well for the country to keep Mr. Roosevelt in office, or to displace him by a

Democratic nominee? Manifestly the answer to this question will depend entirely upon the reputation of the man selected by the Democratic national convention.

The decision of the British government to do something real about army reform will gain some votes and even more moral support for Mr. Balfour. Lord Esher's commission has reported, and a series of their suggestions are to be adopted. It is specially interesting to find that they will bring the British army closer to that of the United States, in all matters of organization, in the formation of what we may call the "brain" of an army. To begin with, the office of commander-in-chief is to be abolished. This removes one great source of weakness, the endless friction and rivalry between the War Office and the Horse Guards, each of which had certain sovereign functions, so to speak. The new inspector-general is to "report upon facts, without expressing opinions on policies," thus leaving the decision wholly in the hands of the Secretary for War. Our own success, under the penetrating régime of Secretary Root, must have interested British observers. A new army council is to be formed in England, which will be the real brain of the army, and over its deliberations the Secretary for War will preside. It will practically be a general staff, on the Continental plan; and we may presently see England following the example of her neighbor France, which made ministers of two soldiers so eminent as the Marquis de Gallifet and General André. The general staff will be divided into separate departments, with a responsible head to each, who will be asked to do one thing, and to do it well. The commission strongly advises that new blood should be infused into this army council, its members being chosen from among those "not hitherto closely connected with existing methods." Lastly, the commission recommends a "complete breach with the past," and in view of the bitter experiences of the South-African war, the recommendation seems justified. All this should work admirably if only the right men be found to make it work.

German Southwest Africa is in imminent danger of a general massacre by the armed hordes subject to the native chiefs. Help is still remote, while the danger is terribly near. The country is a vast desolation, with a few farms and settlements scattered at great distances across the trackless velt. Little agriculture is practised, and almost all the food of the settlers has still to be imported, while the German government has to pay an imperial contribution of over a million dollars yearly to keep the colony from ever-impending bankruptcy. The natives are of several different races, some of which are familiar to us through their presence in Cape Colony. This is the case with the Hottentots and Bushmen, who are among the lowest and most savage of African races—indeed, among the lowest in the world. The Batus and Damaras are of a somewhat higher class, more like the Kaffirs or Zulus—a yellowish race rather than black, like the negroes of the equatorial regions more to the north. The chief settlements are Windhoek, Gobabis, Otjimbingue, Swakopmund, Keetmanshoop, and Gibeon—a curious assemblage of names, part Dutch, part African. Germany has two fair harbors on the coast, at Angra Pequena and Sandwich, but the real doorway of the colony is at Walfisch Bay—a colony of over four hundred square miles belonging to England. It is an open secret that Kaiser Wilhelm has long coveted this British Naboth's vineyard, but so far without any prospect of securing it. So far as the land is tilled, its products resemble those of our Southern States, cotton, vines, and tobacco having been at least tried. Ostrich feathers and guano are, so far, the only exports of any importance; and it looks as if the whole colony were threatened with collapse—a melancholy monument of German colonial ambitions which failed.

Mr. Davidson, our consul at Formosa, has done a timely service in cataloguing the results of Russia's occupation of Manchuria and forecasting further activities in the future. Mr. Davidson made a complete tour of the three provinces through which the Manchurian railroad runs, visiting every town which boasts of as many as a thousand inhabitants. Special facilities were given him by the Russian government, and he not only visited all points on the railroad, but went by road, often so called by courtesy only, to many out-of-the-way places remote equally from the railroad and the harbors. Mr. Davidson praises the great work done by the Russians in cleaning and improving the cities, comparable to the work we accomplished in Havana and Santiago; and he is much impressed by the great future which awaits Manchuria. A side of his report which will be less welcome to American readers brings out clearly the fact that, out of the large number of possible exports to Manchuria, our merchants seem to have chosen precisely those in which competition will be keenest, a competition in which Russian merchants have great and probably decisive natural advantages. The lumber concerns along the Yalu River, where Russians hold important concessions, will presently undersell the exports from Portland and Seattle. Central and western Manchuria will grow wheat in competition to our consignments from eastern Washington, and even more, from Minnesota, and the Dakotas. Mills are already being erected at Harbin, which will handle the local grain-crops and probably get the greater part of the flour trade of Manchuria, at the expense of American flour. Russian cottons are displacing American piece goods, although the latter are said to be of better quality. Even Standard Oil is suffering from the competition of the Baku product, and Moscow is making machinery which competes successfully with the products of Pittsburg. Mr. Davidson tells us in conclusion that in Manchuria there are only three American firms, and that American goods are, with this exception, sold through Chinese, Russian, and German agents. Only one of our products outstrips all rivals. The Manchurian has a thirst which will yield to nothing but American beer.

The clatter of cavalry troops is becoming more frequent in Washington than has heretofore been usual in peaceful times. Eager critics of the administration reported with something like glee that a troop of cavalry was waiting the other day for Judge Taft on his arrival in Washington from the Philippines, and again appeared a few days later to escort the retiring Secretary of War to the railroad station on his departure for New York. The nation cannot do too much honor to such public servants as Judge Taft and Secretary Root. To see a troop of cavalry clattering after their carriages must have been in itself a sight grateful to the emotions of onlookers. But once tributes of that sort begin to be paid in Washington, where are they to end? It is now reported that the diplomatic corps is of opinion that military compliments suitable to be paid to cabinet officers are also properly receivable by the representatives of foreign governments, and that it has been represented to the President that ambassadors and ministers should have military escorts when they first come to Washington or leave it. Well, the Republic gladly honors the representatives of its sisters in the great family of nations. Why not escort the ministers and ambassadors! Uncle Sam can stand the cost of horseshoes. But what of the governors? When the chief executive of a sovereign American State comes to the seat of national government, shall he ride to his hotel unescorted, in a mere cab? It is so much easier to turn on the stream of flubdub than to turn it off! There are those no doubt who would be glad to see Washington assume more of the trappings of imperial state, but the more general inclination is probably towards simplicity and avoidance so far as is seemly, of the sort of display which in foreign capitals is so common, and, of which, once it has become a custom, the significance rapidly abates and the inconvenience increases.

Scattering discussion continues in some newspapers of the ability of Mayor McClellan to meet the constitutional requirement that the President shall be a "natural-born citizen" of the United States. There is no real doubt that Colonel McClellan is eligible for election to the Presidency. Persons who are on the lookout for a good American who might, perhaps, some time be President but for the disqualification of foreign birth are invited to let their minds dwell on John G. Milburn, until recently a citizen of Buffalo, but now of New York. We believe Mr. Milburn is a Democrat. Men of his size and quality are not very common in either party. He was President (as will be remembered) of the Buffalo Fair. If it is the desire of his heart to practise law the rest of his days, he may as well think it lucky that he was born of British parents in England.

How Should We Act toward Canada?

It will not have escaped the notice of any close student of current events that not a few of our States on or near our northern border, including Michigan, Wisconsin, Minnesota, North Dakota, and Iowa, have lately given emphatic expression to their wishes for a reciprocity treaty with the Dominion of Canada. The recent exhibition of such a state of public opinion on this side of the boundary renders peculiarly timely the article contributed to the February number of the *North American Review* by Mr. John Charlton, M.P. It is an interesting fact that the author of this striking paper was not only born, but educated, in the United States. He was forty-three years old when, in 1872, he was chosen a member of the Ottawa House of Commons, and he has retained a seat in that body ever since. It is evident from his article that Mr. Charlton has never forgotten his native land, and that his dearest hope is to take a long step toward healing the schism of the English-speaking folk in North America by assuring to both sections the blessing of intercontinental free trade. It is plain enough that Mr. Charlton wants not to create an artificial tie between the Dominion and Great Britain, but to tighten the natural bonds that connect Canada with the United States. Whatever may be the preconceptions with which the question of commercial union, or of reciprocity, with Canada is approached, it is certain that the facts and figures brought forward by Mr. Charlton deserve careful attention.

In this country it is generally taken for granted that our former reciprocity treaty with Canada was one-sided, or, in other words, was much more favorable to Canada than to the United States. The statistics brought forward by Mr. Charlton show that the assumption is unfounded. The total imports into Canada from the United States from 1854 to 1866, the terminal years being included, were $332,927,000. The total exports to the United States from Canada during the same period were $259,875,000. Evidently there was a balance of trade amounting to $73,052,000 in favor of the United States. These figures, which are taken from Canadian sources, leave out of the reckoning Prince Edward Island, Newfoundland, and British Columbia. The total exports from the United States to the whole of British America during the years named were $343,326,000, and the total imports into the United States from British America during the life of the reciprocity treaty were $318,716,000. Thus it appears that there was a balance of $24,566,000 in favor of the United States, notwithstanding the fact that during our civil war there was an abnormal demand for horses and certain agricultural and animal products of Canada. It is further pointed out by Mr. Charlton that the balance of trade in favor of the United States was really much larger than the figures cited indicate, because a considerable part of the exports from Canada to the United States consisted of products destined to be transmitted to Europe, the direct export trade of Canada with Great Britain by the St. Lawrence route being at that time very small.

Few people now remember that in Grant's second administration our State Department negotiated with the British minister and a Canadian commissioner a second reciprocity treaty, which, from our point of view, was a decided improvement upon its predecessor, because it opened the Canadian market to many of our manufactures. The treaty of 1874 put upon the free list not only all kinds of agricultural implements, but locomotives, railroad-cars, wrought or cast steel, iron bars, nails, spikes, engines, printing-presses and types, printing-paper, carriages, wagons, leather and leather goods, gray cottons, denims, tickings, tweeds, and satins. Had not our Senate refused to ratify the treaty, most, if not all, of the Canadian demand for the articles just mentioned would have been supplied by the United States.

It is a remarkable fact that the exports from Canada to the United States, if we deduct precious metals and articles not the produce of Canada, were only about $49,000,000 in 1902, or about five million more than the value of the exports from Canada to the United States in 1866, the last year during which the reciprocity treaty was operative. On the other hand, there has been a tremendous expansion of imports from the United States into Canada, *for consumption*, during the last thirty-eight years. The value of such imports, which in 1866 was $28,794,000, had risen in 1903 to $137,600,000. Strange to say, the Canadians purchase more farm products from us than we buy from them. The export of farm products from the Dominion to the United States in the fiscal year 1902-3 was valued at only $9,200,000, whereas the imports of such products from the United States into the Dominion attained a valuation of $21,581,000.

No less noteworthy is the fact that, in spite of the tariff preference given by Canada to Great Britain—a preference which, at first, 12½ per cent., and then 25 per cent., is now 33 1-3 per cent.—the American manufacturer has a stronger hold on the Canadian market than has his British competitor. The imports of manufactures from Great Britain into Canada rose from $26,243,000 in 1898 to $50,473,000 in 1903. During the same six years the imports of manufactures from the United States into Canada increased from $41,510,000 to $76,291,000. Few persons realize that in 1902 the exports from the United States into Canada exceeded by $36,814,000 our total exports to Mexico, the Central-American states, and all of South America, from Panama to Cape Horn. The truth is that, among the nations of the world, the Dominion of Canada is the third largest customer of the United States. For our manufactures she is the *largest* customer.

There is no doubt that American farmers and lumbermen have hitherto opposed the free importation of Canadian lumber and farm products. They have feared that Canadian competition might bring about a reduction of prices. Mr. Charlton undertakes to prove that there is no ground for the apprehension. He asserts that if the whole wheat surplus which Canada had for export last year had been sent to the United States free of duty, the price of that grain would not have been depressed in the slightest degree. The Canadian wheat so imported would either have been itself exported to Europe, or would have set free for export a corresponding amount of American wheat. As regards other Canadian products, the quantity available for export seems insignificant compared with the volume of American production. For example, the total export of Canadian lumber to the United States, including what went through in bond for export to foreign countries, was equivalent to only two per cent. of the sawn lumber produced in the United States during the same year. The total export of eggs in 1903 from Canada to all the world did not amount to one per cent. of the number of eggs produced in the United States. The proportion of the value of the horses exported from Canada last year to the value of the horses in the United States was as one to three thousand. The proportion of the value of the cattle exported from Canada in 1903 to the value of the cattle in the United States was as one to five thousand. How, then, could an appreciable effect be produced upon American prices by the importation of such products from Canada?

Mr. Charlton evidently believes that if we would give the Dominion a reciprocity treaty, Canadians would take very little interest in Mr. Chamberlain's proposal to give the products of the colonies a preference in the British market. As he puts it: The proposed British preference is sentiment; American reciprocity in natural products would be business.

What Will be the Effect of a Far-Eastern War on the United States?

It is possible that, before this number of the Weekly meets the reader's eye, a war will have been begun between Japan and Russia. In that event, it will become a matter of obvious importance to calculate the bearing of the contest on our national interests. It may help to clarify our ideas on the subject if we divide the question, and ask, first, To what extent, if any, would the United States be affected if the war should be localized, or, in other words, confined to a duel between the two original combatants; and, secondly, how would the situation be modified, from an American view-point, if France and England should be drawn into the conflict? It is plain enough that, within the region which should become the actual theatre of hostilities, the distribution of imports from the United States might be temporarily interrupted. That is to say, at certain points the commercial privileges conceded to us by treaty with Corea, on the one hand, and with China on the other, might be suspended until the field of military operations should be moved. Such transient obstruction to traffic is, of course, inseparable to the prosecution of a war. So long, however, as fighting should be restricted to the Corean peninsula, which is likely to witness the first collision, our trade with the treaty ports of Newchwang and Mukden in Manchuria would be unimpeded, provided, of course, the Japanese should not undertake to institute a blockade of the first-named *entrepôt*. That is a measure which Japan, desirous as she is of securing our friendly neutrality, may be relied upon not to adopt, so long as no opposition is offered by Russia to the exercise of authority by Chinese officials in that place. Only in the event of an expulsion of the Russians from Corea, and a subsequent march westward of a triumphant Japanese force, might it become, from a strategic view-point, needful for the invaders to occupy Newchwang as well as Mukden. Even then the commercial privileges granted to us by treaty with China would be respected by Japan, so far as such respect would be compatible with military necessities.

We see, then, that our ordinary commerce with Corea and Manchuria might be exposed to some interference in the event of a war. It is probable, however, that any loss arising from this source will be much more than offset by the extraordinary demands for ammunition and food-supplies that would be forth-coming from both combatants. Even during the last few weeks, the purchases made on account of the Japanese and Russian governments are valued at many millions of dollars. Such purchases, however, have been merely precautionary, and are insignificant, compared with those which would have to be made after war broke out. Our geographical position would assure to us the profits accruing to

the principal purveyor. We need not point out that our centres of industry and commerce on the Pacific coast are much nearer to Manchuria and Corea than is any European seaport. To the United States must both Japan and Russia look for quick and cheap supplies of breadstuffs, meats, and military stores. It is also to be borne in mind that a war between Russia and Japan would be likely to be a long one. In the case of each combatant, the need for the commodities, that we could furnish more easily than any other neutral, would, with every month, become more urgent.

If France and England should be drawn into the war, the former as an ally of Russia, and the latter as a friend of Japan, the tremendous advantage derivable from our neutral position should be evident. The navy of France is second in strength to that of England alone, and, whatever might be the outcome of a battle between French and English battle-ships, there is no doubt that the swift-sailing cruisers of France would quickly drive a large proportion of England's commerce from the seas. For the vast ocean traffic thus renounced by England, we should have no competitor but Germany. It would be strange if, with such an opportunity, we failed to regain a considerable part of the carrying trade which we possessed before the civil war. It is also manifest that our sales of food products to France and England, were those powers drawn into the contest on the Asiatic mainland, would be immensely multiplied.

All that our government need do in order to avoid any impairment of our national interests through the threatened war in the Far East is to adhere unswervingly to the policy of strict neutrality which is commended to us by the traditions of a hundred years.

Abraham Lincoln

LOOKING back, how strange seem the judgments of men like Wendell Phillips in 1862, that Lincoln was a man "of no mind whatever," having "neither insight nor prevision nor decision," "a first-rate second-grade man," to be sure, and "as honest as the measure of his intellect and the circumstances of his life allow"; and of Sir George Cornwall Lewis—spokesman for the English upper classes—that Lincoln "was but a village lawyer."

In due time Wendell Phillips came to see the intellectual greatness and moral majesty of the man he had contemned, and *Punch's* noble retraction, just after Lincoln's death, was prophetic of the tenor of intelligent British comment since that time, whether based on study of the words and acts of the Great Emancipator, or on personal observation, as in the case of Sir Edward Malet, who was a member of the British embassy in Washington, and in whose autobiography we find this testimony, after a long diplomatic career: "Of all the great men I have known, he is the one who has left upon me the impression of a sterling son of God. Straightforward, unflinching, not loving the work he had to do, but facing it with a bold, true heart; mild whenever he had a chance; stern as iron when the public weal required it; following a bee-line to the goal which duty set before him."

If there were any criticism to pass upon this striking tribute of the English diplomat it would be his choice of figure to express Lincoln's method in statecraft. "A bee-line to duty" implies radicalism, the Puritan temper, a ruthless driving ahead irrespective of conditions and times. Now Lincoln was the farthest removed from this, and in the best sense of the word opportunism he was the greatest opportunist among statesman that ever lived—and just because he was this he brought down on his head the suspicion of men like Greeley, Phillips, and Garrison. Both Lowell, in his striking essay on Lincoln, written as early as 1862, and Mrs. Harriet Beecher Stowe, in the same year, were acute enough to detect the method of Lincoln's policy. "He seems to me like a ship's cable that always swings easily with the tide, but holds fast at both ends," said Mrs. Stowe. And she was right. Had the cable been taut all the time during the critical period of the civil war both Lincoln's health of body and mind, and the ideals of state which he was endeavoring to bring to pass, would have been wrecked. Just because, after his death, the Ship of State fell into the hands of men who kept the cable taut and the ship bound to a doctrinaire ideal we are forced now to look back upon the legislation of the reconstruction period as very largely that of failure.

Lincoln had nothing but his own superlative good sense and knowledge of human nature to guide him in this opportunist policy. He knew nothing of the modern doctrine of the relativity of truth which is undermining the whole structure of radicalism and dogmatism, whether in theology, politics, or ethics. The magic word evolution had not come to discredit revolution. All that he knew was that "We must fetch the pump with dirty water—if clean cannot be had," to quote Emerson, and that "The first essential to success is to recognize facts as they are." It never could be said of him, as Mr. Gladstone once said of Mr. Chamberlain, that he "displayed infinite ingenuity in finding circuitous reasons for shrinking from his former principles." There was a regular development of ideals in Lincoln's mind with respect to slavery and its abolition, and a constancy that nothing could alter to his conception of a Union indissoluble and never to be rent in twain. But he had infinite tact and wisdom in bringing things to pass, in taking advantage of events, in waiting until public sentiment had come up somewhere near his own point of view, and a discernment amounting to genius for uttering his great messages to the people at the proper psychological moment. Burke said that he "pitched his Whiggism low, that he might keep by it." So Lincoln. His democracy was like that of Jefferson, who wrote to John Adams in 1818 that it would be well for the South Americans "to obtain freedom by degrees only; because that would bring on light and information," and that "laws and institutions must go hand in hand with the progress of the human mind," "forty years of experience in government being worth a century of book reading."

It is precisely this wise opportunism of Lincoln which strikes the thoughtful student of history and philosophy, a man, say, like Professor Edward Caird, now master of Balliol College, Oxford, who, in a recent address on Lincoln, delivered to artisans and settlement workers at Toynbee Hall, London, pointed out the fundamental difference between Cromwell and Lincoln in this respect. Professor Caird argued that Lincoln was in several respects a new ethical phenomenon, and this just because his "slow, humorous, and tolerant spirit" and "his character and his wisdom, rather than his will," made him the exponent of a great movement resting on the popular mind, heart, and will. Cromwell, he said, relied on insight and force of will to authenticate his divine mission and to justify imposing his will on the English masses and to overthrow tyranny; whereas Lincoln seemed born to show the one-sidedness of Cromwell's theory and Carlyle's eulogy of it, and to prove that it was possible to be a real ruler of men, and yet to move along only a trifle ahead of the general sentiment of those whom he represented. Cromwell was the mystic and the autocrat, Lincoln the humanist and the democrat.

Speaking in Springfield, Illinois, October 15, 1898, at Lincoln's grave, Mr. McKinley said: "What an encouragement Lincoln's life-work has been to all of his successors in the Presidential office. If any of them at any time has felt that his burden has been heavy he has had but to reflect upon the greater burdens of Abraham Lincoln to make his seem light."

A Forest Reserve for New England

THIS country is just awakening to the possibilities of its water-powers. The nation has lately taken upon itself the enormous and costly task of providing sufficient water for the irrigation of the arid country. That one action alone opened the eyes of many people to the true meaning of the term "water-power." They realized for the first time that the surroundings of the sources of the water which furnishes the power have an immediate influence upon the value of a stream. They will know more of the subject as time goes on, for public interest in it is aroused both in the East and in the West. It is very fully understood nowadays that the constancy of streams, especially of those having their rise in mountainous country, depends upon the nature of the forest cover around the sources. That is one of the chief reasons for the establishment of so many forest reserves on the unpatented mountain lands of the West. It was one of the principal arguments that led the State of New York to create the reservations in the Catskills and Adirondacks. And now come the people of New England, and ask to have the mountain sources of three of their chief streams guarded from the inevitable ruin which is left behind by the logger. For years the cotton manufacturers on the Merrimac River, for example, have complained of the unstable flow of the stream. They show how the freshets have increased, and how the summer volume has been reduced, and they point to the stripping of the steep slopes of the White Mountains as a prominent contributor to this state of affairs.

The streams which take their rise or primary tributaries from the White Mountains of New Hampshire are the Connecticut, the Merrimac, the Androscoggin, and the Saco, their waters furnishing power to important manufacturing plants in every State of the New England group save Rhode Island alone. For this reason the conservation of the forests around those headwaters is an interstate affair, calling for Federal action. Congress has, therefore, been asked to purchase and hold for the nation such lands in the mountain region as seem necessary for this purpose. To determine what lands are important the Federal foresters and hydrographers have made a careful scientific examination of the entire region, the cost of that examination being borne by the State of New Hampshire.

Again, there are strong sentimental reasons for saving portions of those mountain forests from the axe. That region has long been a summer Mecca for thousands of people from the East and from the West, drawn thither by the native unspoiled beauties. Some of the special features of natural attraction have already been ruined as a result of indiscriminate logging, but many yet

remain, and under governmental control they would continue to stand in all their pristine loveliness for all future generations.

As the East contributes willingly to the development of the water-powers and even to the establishment of national parks in the West and elsewhere, so the West may be counted upon to support generously this far less costly plan for affording national relief to the East. We cannot afford to neglect to protect and develop these assets which are destined to be far greater contributors to our national wealth than ever before.

Experiments in Feeding

If reports are true, the soldiers of the diet squad detailed to proceed to New Haven and illustrate the food theories of Mr. Horace Fletcher, under charge of Professor Chittenden, have not fully entered into the spirit of the experiment. Mr. Fletcher considers that almost all of us eat too much, and would have better health, and be able to do better work, if we used more self-restraint and a wiser discrimination as to our diet. He himself subsists and keeps up his strength and vigor on about one-third of the food that ordinary men consume. One of the greatest of war problems is how to feed soldiers. It would be a vast convenience and economy to governments if soldiers did not have to be fed at all. An army traditionally crawls upon its stomach, and the less the stomach demands the easier and more swift may be the army's progress. Mr. Fletcher's sentiment that men don't really need more than a third as much food as they get is very grateful to our War Department, which has been glad to lend a diet squad of twenty soldiers on which to experiment. Professor Chittenden has been busy with these men for some weeks, nourishing them on a spare diet of maple-sugar, breakfast foods, and such things, and giving them hard exercise in the Yale gymnasium to prove that they were as strong as ever. But on January 25 the papers reported that three members of the squad had got too hungry for endurance, and had deserted, that others complained of sharpened appetites, and that some of them had been caught in a saloon drinking beer and cleaning up the free-lunch counter, and that the squad's experimental strength had been reduced to thirteen.

We have not verified these stories, and they may be untrue or exaggerated, as stories from New Haven are apt to be, but they sound likely. If true, they show a lack of scientific devotion, and even of patriotism, that sits ill on soldiers. The diet squad doesn't seem to care to demonstrate how little food a soldier really needs. Possibly its members consider that it is quite as valuable to illustrate the propensity of underfed men to become insubordinate and discontented.

In prescribing diets to ordinary Americans equipped with ordinary stomachs the problem of keeping them happy is more difficult than that of keeping them physically strong. In this country eating has an enormous vogue as an amusement. On the whole, the incident of existence that most of us enjoy most, and which does most to reconcile us to the other incidents, is eating. We contract habits of consuming food which take very strong hold of us, and we tend to keep them up in middle life and later life, in the face of a diminished need of food and weakened powers of digestion. The normal man feels happier, kinder, and more hopeful when his belly is full, and he likes to fill it. The process is agreeable, the result apparently advantageous. Why shouldn't he like both? Mr. Fletcher, who very much enjoys the kind of eating that he affects, admits that preference for a restricted diet does not come all at once, but is gradually attained, as the ordinary habits of eating are overcome. It took him about six weeks to lose his habitual appetite for breakfast, and prefer two small meals a day to three big ones.

But in order to overcome such a habit as that of eating an ordinary amount in the ordinary way, strong inducements must be operative. People diet for religious reasons, or because food is scarce, or because they are too fat. Mr. Fletcher began his course of feeding because his stomach was not working well. We have all heard that Mr. Rockefeller pursued a somewhat similar course for an analogous reason, with great success. But there must be the will to eat less, or an absolute scarcity of food, if the experiment is to be fairly made. If Professor Chittenden's soldiers' hearts are not in their work, the failure of the experiment with them will not be significant, and the possibility that Americans can be kept in good physical and mental condition on less than half the food that they now consume will deserve further investigation.

Mr. Fletcher's methods are very simple. An article in the current *World's Work* on "The Perfect Feeding of the Human Body" tells about them. He is guided in his choice of food by his appetite. He tries to eat exactly what he wants and to stop when he has eaten enough. He is not fussy. He eats griddle-cakes with abundance of maple-syrup on them, hashed brown potatoes, corned-beef hash, beans, cereals, candy, sugar, bread, and often hot milk with a little coffee in it. He avoids meat, because his appetite, which has no longer any bad propensities, does not call for it. But he eats slowly, holding liquids in his mouth for half a minute before he swallows them, and chewing all his solids very long and thoroughly. He makes his teeth and his mouth do their full part of the digestive work.

Gladstone did the same. His dictum about thirty-two bites to every bit of meat is familiar. Pope Leo's diet was about as frugal as Mr. Fletcher's, but he lived long and did a vast amount of work. Report says that Mr. Rockefeller has for years practised an extreme self-restraint in eating, and has recovered his health, which was very gravely impaired. He gives no evidence of feebleness nowadays. He was lately quoted as announcing that he had discovered that cheese was good food.

It is clear that some men, Americans and Europeans, can live long and well on very little food; it is known that Indians, and most Asiatics, can do the same; it is also known that overfeeding is one of the most common causes of disease and premature collapse. The idea that we Americans could cut down our food and our food bills about half and suffer no detriment is highly attractive in these dear times from the economical standpoint. But the truth of that has not been demonstrated yet, and will probably never be demonstrated on a large scale until an absolute scarcity of food compels it. Meanwhile, persons who want to try how far a little food will go are recommended to eat it slowly and chew it long, as Mr. Fletcher does.

Religion at Harvard

The action of the authorities of Harvard College in discontinuing the pew rentals in certain Cambridge churches resulted immediately in a pretty storm of criticism and a revival of the old charge of "infidelity at Harvard!" Undoubtedly the reason for this action was economy, which seems to have become even more than ever necessary. The amount thus saved was small—less than $2000 annually—and yet it is in just such petty expenditures that great college funds are frittered away. But better than a desire for mere economy was probably the purpose to do away with an out of date and superfluous custom on which college funds were practically wasted. This custom had not had in a half-century a valid reason for existence, and its abolition ought to be applauded by all friends of twentieth-century education. It has served to induce many observers to inquire what is Harvard's real attitude toward religion.

It is very easy to charge a great, undenominational university like Harvard with lack of religious sympathy. This charge is especially levelled at Harvard because the general tone of the institution is Unitarian, "which is next to no religion at all," as the gibing phrase has it, and it is certainly true that at Harvard no emphasis is laid upon church attendance or "profession of faith," or even the expression of devout thought. Yet there are many manifestations of righteous living and Christian worship at Harvard and many opportunities given for the cultivation and stimulation of religious feeling and endeavor. Indeed, so distinctive are these aids to the nurturing of righteous sentiments and living and so clear and straightforward are the purposes of the university to that end that the recent British Parliamentary Commission on Education, led by Michael Sadler, incorporated in its report on American colleges the pamphlet issued yearly by Harvard setting forth the opportunities there for religious worship.

Most evidently have these religious activities been augmented in recent years. At the regular religious exercises in Appleton Chapel, the ablest preachers in the United States speak to full congregations each Sunday, and the college yearly expends generous sums to secure their services. Phillips Brooks House is the most recent and conspicuous aid to Harvard religious life. It is a sort of clearing-house for religious organizations, and fairly teems day and night with religious interest. It is questionable whether, in any other great university, coordination and centralization of religious organizations is carried on so effectively.

It is, however, when we come to the most practical phase of religious life—social service—that the facts are most impressive and convincing. The philanthropic workers of Harvard are found in every nook and cranny of Cambridge and Boston. They form an important part of every social settlement in Boston, either as visiting or resident members. Social service includes more students as actual workers than any other undergraduate interest—literary, social, or athletic. Its nearest rival is football, in which 230 men take part, while over 300 regularly participate in philanthropic work. Professor F. G. Peabody has said that the religious spirit at Harvard is one of the strongest features of the college, and that young men who go there and take no part in the various forms of religious and philanthropic activity do not know Harvard. "They have not really come to college." He quoted in a speech to the students two expressions of a certain student; first, when he entered, "This is a godless place"; and, six months later, "I begin to believe it is the most religious place I ever saw." He ascribes to Professor Henry Drummond almost the same expression. Other keen observers of the underlying sentiment of the college have given the same verdict.

William Collins Whitney

WILLIAM COLLINS WHITNEY was born in Conway, Massachusetts, on July 14, 1841. He was of Puritan stock, descended on his mother's side from Governor Bradford of the Plymouth colony. His father, General James Scollay Whitney, was a leading Democrat in Massachusetts, holding office under Presidents Pierce and Buchanan, and actively concerned in railroads and steamship lines. William C. Whitney, the general's oldest son, had all the educational advantages the times afforded, and improved them. He fitted for college at Williston Seminary, Easthampton, entered Yale in 1859, and was graduated with credit in the class of 1863. He was a rival in scholastic honors with his classmate, William G. Sumner, afterwards Professor of Political Economy. They shared between them the prize for English essays, and Whitney beat Sumner in the election for class orator. Another classmate, with whom Whitney was closely associated in after-life, was Oliver Payne, son of Senator Payne of Ohio. Evidently in college Whitney showed the same mental vigor and energy that were characteristic of him in later life. From Yale he went to the Harvard Law School, and graduating there in 1865, entered the law-office of Abraham R. Lawrence in New York.

As a lawyer he was promptly successful, gathering practice quickly and improving the opportunities that came to him to such purpose that other chances quickly followed. One of his close associates at this time was his college friend Oliver Payne. An important result of their intimacy was Mr. Whitney's marriage in 1869 to Miss Flora Payne, his friend's sister. Two years later began his active interest in politics. It was the time of Tweed's ascendency in New York. Mr. Whitney joined the forces that were fighting him, and was the chief organizer of the Young Men's Democratic Club. His work in the campaign of 1871 brought him into relationship and friendship with Samuel J. Tilden, who early recognized and appreciated his remarkable political abilities. Mr. Whitney next organized and worked with the Apollo Hall Democracy, and was its unsuccessful candidate for district attorney in 1872. He then became a leader of the County Democracy, and served as inspector of schools, and was active in the campaign of 1874, which resulted in electing Tilden Governor and Wickham Mayor of New York.

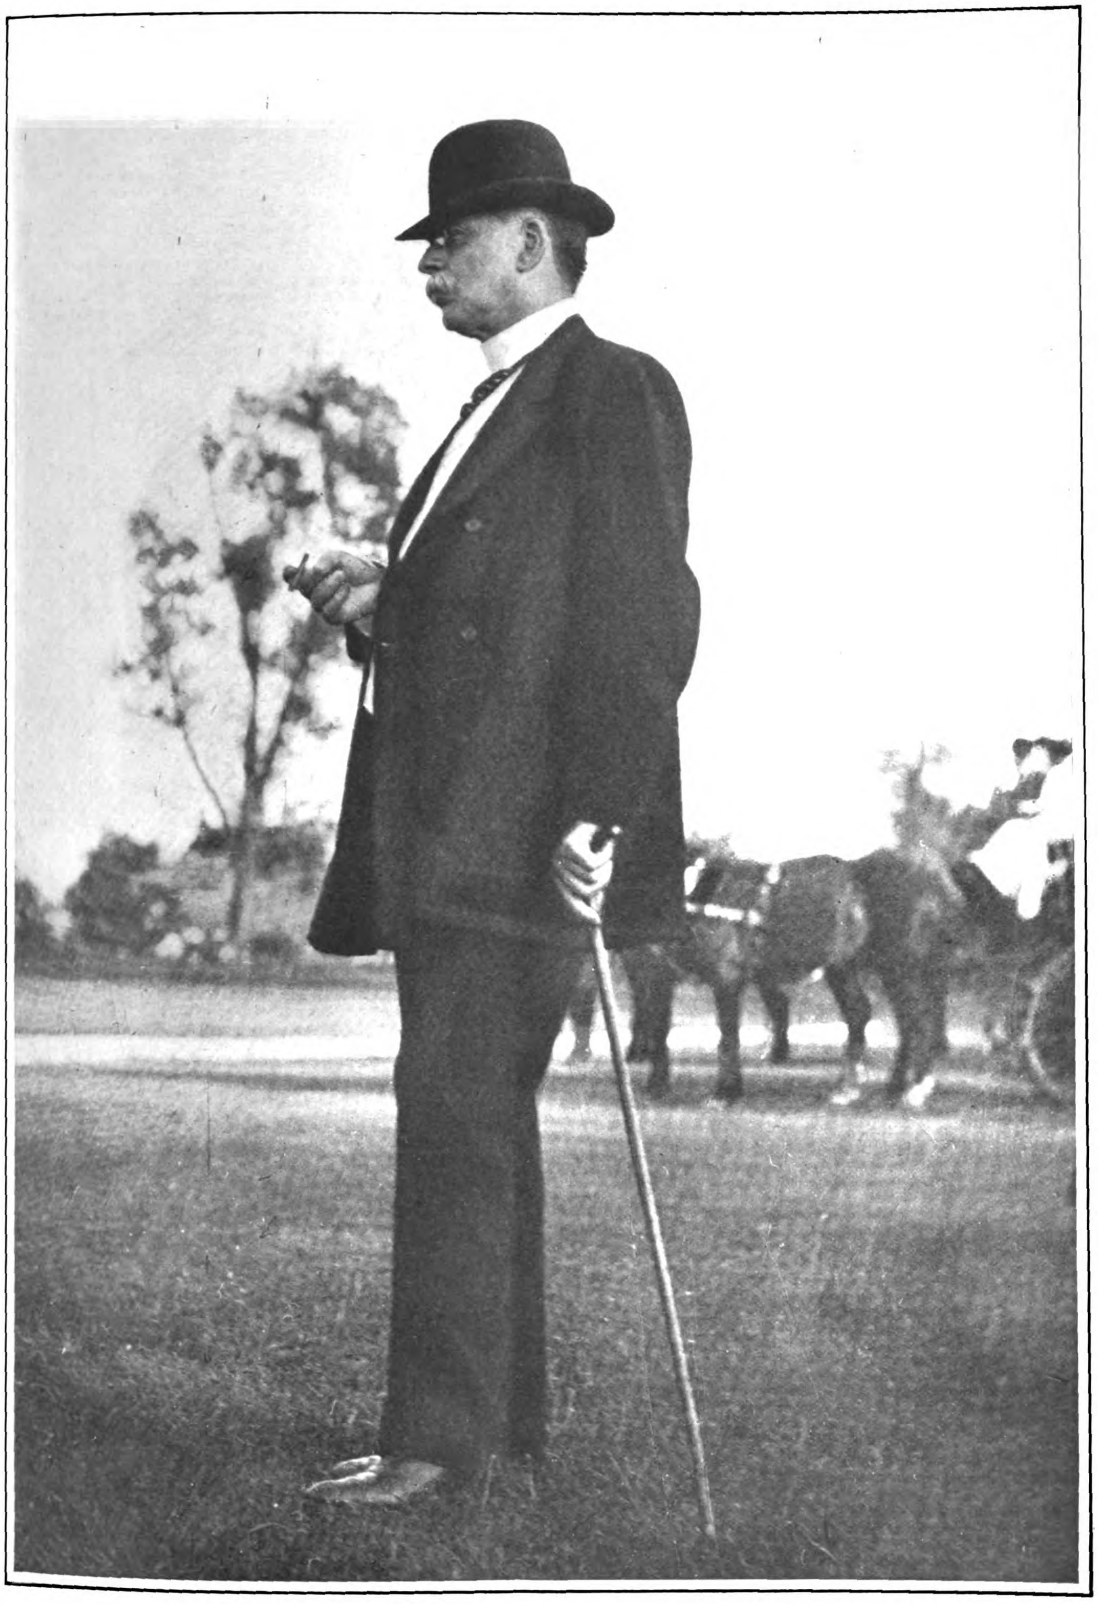
Mayor Wickham appointed Mr. Whitney Corporation Counsel. The Tweed government had left a great mass of suits against the city, involving fifteen or twenty million dollars. Mr. Whitney fought the suits, and administered his office so as to save the city ten or twelve millions of dollars, and to win a distinguished reputation for himself. Returning in 1882 to the private practice of law, he became counsel to a number of corporations, and was in the way of getting all the emoluments and distinction that come to a first-class corporation lawyer, but his interest in politics continued keen. He worked with skill and vigor in the Blaine-Cleveland campaign of 1884, and in the following March became Secretary of the Navy in Mr. Cleveland's first cabinet. Here a great work was before him, and one that appealed to his abilities. The United States had no navy worth talking about; all its ships except three were antiquated, and the three new ones were not very important. He bent himself to the reconstruction of the navy. When he left office in 1889, thirteen *modern* ships-of-war had been built and nine more were under construction. The work then begun has never since stopped. Other good men have carried it on, but to no one was so much of the credit of our new navy due and to no one has so much of the credit for it been given, as to Mr. Whitney.

A Portrait of Mr. Whitney made while he was Secretary of the Navy

Mr. Cleveland went out of office, and Mr. Harrison came in. Mr. Whitney came back to New York and devoted himself to a task he had long had in mind—the consolidation of the surface railroads on Manhattan Island. Acquiring control of many independent roads, he formed, with Thomas F. Ryan and others, the corporation now known as the Metropolitan Street Railway Company. In this work his remarkable capacity as an organizer and his intimate knowledge of conditions in New York brought him brilliant commercial success and made him a rich man.

In 1892 came along another Presidential election. Mr. Whitney was himself the preferred candidate of very many influential Democrats, and there is excellent reason to believe that he might easily himself have been the party's candidate for President if he had been willing. But he had enlisted under Mr. Cleveland, and to Mr. Cleveland's fortunes he was devotedly faithful. All his influence and all his skill were employed in securing Mr. Cleveland's nomination and election. These being successfully achieved, he declined to accept any public office, and returned to New York and to the care of his extremely important business interests. These occupied him intensely during Mr. Cleveland's second term of office.

In 1896 he went to the Democratic convention in Chicago as delegate, as he had done for twenty years, and did what could be done to check the free-silver mania and defeat the nomination of Mr. Bryan, but the tide was too strong for him or for any man. Of the ticket that was nominated, he publicly declared, "There are no possible conditions or circumstances that would induce me to vote for it or assist it." He was never afterward conspicuously prominent in political concerns, and a year or two ago he announced that he had retired from politics for all time. As the prospects of a reorganized Democracy grew brighter, he was still talked of as a possible candidate for President, but a year and a half ago he declared very definitely that he would never run.



During the past three years Mr. Whitney had detached himself as far as possible not only from active politics, but from active business. He had worked as much as he thought fit, his fortune was ample, and his disposition was to get as much enjoyment out of life as he could. His interests were very varied and extensive. He had a genius for friendship, the kindest of hearts, a cultivated mind, and a long purse. No American ever before got together so great an apparatus for enjoyment as he. Perhaps no American has been equipped with a better capacity for enjoying such pleasures as life offers.

His greater qualities can hardly be better summed up than was done by ex-President Cleveland when he heard the news of his death. "Mr. Whitney," he said, "had more calm, forceful efficiency than any man I ever knew. In work that interested him he actually seemed to court difficulties and to find pleasure and exhilaration in overcoming them. His conquest over the obstacles he encountered in undertaking to build up our navy afforded him greater delight than the contemplation of the great results he achieved in his department of the government. His judgment was quick, clear, and astonishingly accurate, and when it was called into action his mental poise was so complete that neither passion nor irritation could lead it astray.

"While I remember all this with admiration and affection, I recall with more tender sentiment Mr. Whitney's devotion to his friends, his extreme consideration for all with whom he came in contact, his thoughtfulness for the ease and comfort of others, and his ready impulse to help those who needed help. I mourn the death of a friend of whom it can be truthfully said that in his character were combined mental traits of a high order and loving qualities of heart that grappled him to his friends with hooks of steel."

Very few Americans have been by nature so bountifully endowed as he. There have been men who have had great qualities of mind, and men who have had great qualities of heart, but very few in whom both have been joined in such a measure as in William C. Whitney.

WILLIAM COLLINS WHITNEY

William Collins Whitney, former Secretary of the Navy, died at his home in New York on February 2, after a brief illness. Some of the events in Mr. Whitney's varied and successful career as a lawyer, as a cabinet member during President Cleveland's first administration, and as a financier, are noted in an article on the opposite page, to which the reader is referred

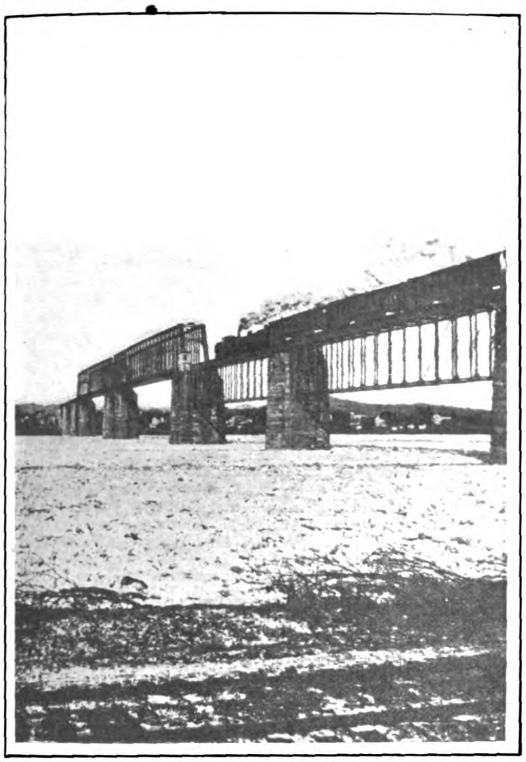
Spoiling the Rod and Sparing the Child

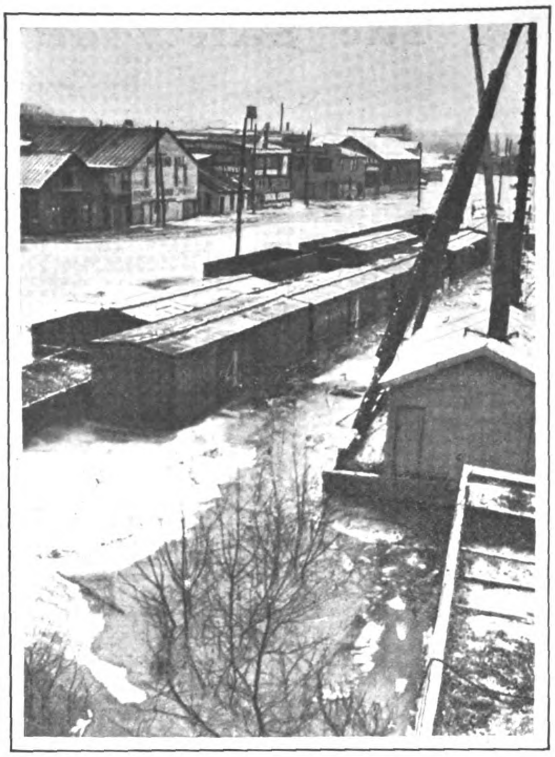
By W. D. Howells

IT must always be a question whether a man with so many wives as Solomon was the best sort of authority on the right way of bringing up children. In his time race suicide was a thing so little known as not to have been noted by the sociologists, and in their silence we are left to suppose that he had at least as many children as wives. His family was so large, probably, that even as a private father, with no public cares to divide his attention, he could not have given each of his children that study which each of their temperaments demanded. When they offended, he could not pause to inquire just why, but lumped them, one with another, as naughty children, and prescribed the rod as the only means of bringing them to reason. He would have been too busy a man to apply the remedy himself, and it seems doubtful whether he would have required their mothers to do it. Imaginably, the office was delegated to such functionaries as could be detached from their state duties, and who would, too imaginably, look into the affair, if at all, only after the punishment had been inflicted. This is often the way it happens in the small families of modern times where the parents are still influenced in the treatment of their children by the advice of a polygamous Oriental despot. Then, if they are just and truthful fathers and mothers, they must own to themselves and each other that in many cases it was they and not the child that deserved the rod. The rod, of course, is now merely a type; they beat their little one with their hands, or shook it, or more formally spanked it, or boxed its ears; but they did so, not because it deserved just that beating, or shaking, or spanking, or boxing, or because the penalty was anywise relative to the misdemeanor, but because they were angry and wanted to hurt it, or absent-minded and did not know what they were doing, or in a hurry and had to do something quickly. At the moment, possibly, they felt the glow of duty fulfilled, but so far as they were worthy to be parents at all, they afterwards felt the shame and grief which the remembrance of any blow dealt a child must leave in the heart of its father and mother.



One is disposed to take this extreme ground in view of some remarks made at a meeting of the Society of Medical Jurisprudence, where not so very long ago a member spoke in favor of whipping children, in punishment of criminal acts, as I understand the printed letter of the president of the society deprecating the member's position. The president declares that this position does not represent his own sentiments or those of the society. On the contrary, he at least thinks the use of the rod for the punishment of civic offences would be a backward step in civilization, and he declares that he has so much sympathy with the sufferings of childhood that he "would do everything to brighten the gloom which pervades especially the lives of the children of the poor, and not add to it by again conjuring up the dark and dreadful apparition of the rod." From these humane words one may take courage to express one's belief, if one has it, that the faults of children originate with the parents, immediately or remotely, and that if ultimate justice is to be done, the punishment must fall upon them and not upon the children. Heredity is at present rather out of favor, as a reason for a great many things which it lately accounted for, but I am willing to allow it some weight in the case of the child that misbehaves. I am willing to conjecture that the child had a grandfather, or possibly a grandmother, of a nature so perverse that it can hardly help misbehaving. Then I grant a good deal to environment, which, I believe, still enjoys as much consideration with the wise as ever. I find a great deal in environment, the poverty of the environment or the luxury of the environment, which explains the wickedness of children. The rich mother, if she does her duty to society, must leave her children largely to her servants; the poor mother, if she would keep her house clean and fit, and get three meals a day on the table, and the family wash done every week, must send her brood into the street, when they are not at school; both the rich father and the poor father are too hard at work to look after their off-spring, and when either is out of work, because he does not like it or cannot get it, he is in no condition to determine the reasons of his children's misconduct. It is therefore largely the social environment which is to blame: the average temper of the servant, the average mood of the street-boy; the average tone of civilization does not greatly rise above that of the lowest person in it. But the social environment is very hard to get at, and is a thing that we should not know how to hold responsible, even in an essay on the subject, much less in a court of law. Environment can no more be brought to book than heredity. But it is here that the father and mother may usefully come in, not merely as scapegoats for the sins of environment and heredity, but as strong, if not sure, defences for the erring child against those very real though very abstract enemies. In order to get the best results they must behave themselves as well as they would have their children behave, or this should at least be their ideal. They may not have the time or opportunity for looking into the causes of a child's misdeeds, but they can try to set it an example of better doing, which will have an effect far beyond anything yet imagined of it, the thing itself being so rare as almost not to be imaginable at all. Before punishing the child, shaking, or beating it, they can pause long enough to ask themselves whether the child really meant to do wrong. If it has done wrong from anger or revenge, the parents can profitably search their own hearts to know if they are not more angry and revengeful still in the punishment they inflict.

There is a probability that in certain instances those poor little people, those hapless boys and girls who are somehow, for some inscrutable motive of the Creator given into the charge of the men and women commonly set in authority over them, are oftener well meaning in their ill doing than otherwise. It is a mistake of their imperfect reasoning, an error of their perspective, an ignorance of the relation between cause and effect that is to blame, rather than their wills or passions. The sins of these come much later in life, as every reader who is honest must own, and so do the much darker sins of spiritual arrogance, of hard self-deceit, of the cruel hypocrisy which wreaks the consciousness of its meanness in a severity towards any offender. The parent who rightly conceives his duty to his child, knows that it is bringing him up, quite as often as he it, and that he cannot too much humble himself to learn of it. We need not suppose that it is in any mystical possession of celestial tradition, as Wordsworth supposes, or that it can carry its parent's education beyond a certain point, but when he has reached this point he will at least realize how very little he has to teach it in matters of conduct.



The paradox must not be pushed too far, for that way madness, or, what is worse, nonsense, lies. It can be useful only in helping enforce the wisdom of the words quoted from the president of the Society of Medical Jurisprudence, who touches upon another point of relevance and pertinence in suggesting that the parents and guardians of mischievous children might not be justly held accountable in damages for the harm the children do. The logic of this is that if public whipping were to be introduced for the punishment of the young offenders their parents and guardians might better be whipped in their places, and the finer sense of justice would be better satisfied if the penalty fell upon the rich, who leave their "children to their own devices, or in the hands of indifferent and incompetent menials," rather than on the poor, "who, as a matter of convenience, consign their children to the street," but have at least "the excuse of their pinching poverty and ceaseless toil." The finer sense of justice, to be sure, would be still better satisfied with the supposition than with the realization of such evenhandedness in the law. After two or three whippings, where the reckless rich suffered with the helpless poor, the post would hardly be kept, outside of Delaware, for the public scourging even of bad boys. The suspicion insinuates itself that the member of the Society of Medical Jurisprudence who spoke in its favor might himself be so revolted by the sight of the rod laid on the bare back of a boy or a girl (for justice is blind to sex as well as some other things) as to plead for its removal.

No remedy of this drastic sort is likely to be administered by medical jurisprudence at the actual stage of our social disease; and the question of whipping for wicked children or their wickeder parents and guardians cannot be discussed as an eventuality, much less an actuality. From time to time a cry of savage virtue goes up from the editorial page for the whipping-post in the case of wife-beaters, but hardly for wife-beaters will it be restored to its old place of honor. The reluctance of civilized communities from its use is not because the punishment does not fit the crime, but because the law, which can be so atrociously unjust in many other things, cannot always be just in the form of the offence. The death penalty, dear and sacred as it is to the heart of civilized man, wherever it has not been abolished, refines itself with us to the use of electricity, no matter how its victim did his victim to death, or with what bloody circumstance. Apparently if we could we would put him out of the world without killing him at all, and it is to be noted that neither the judge who dooms the man nor the jury which convicts him is ever present at the mildest possible execution of his sentence. All show of personal agency is eliminated from the supreme fact, which is now made coldly scientific, but with the whipping-post this cannot be done, and it is so far an anachronism. Besides, there is that subtle question of the ultimate responsibility, hinted by the president of the Society of Medical Jurisprudence, which comes in to darken counsel, or at least to give friends of the whipping-post pause. If it is the parent or guardian who is finally to blame for the bad boy's offence, what of the liquor-seller who has nerved the erring arm of the poor wife-beater? Or if the liquor-seller may plead that he is acting under the law, in what shape shall the community suffer for the common sin? In old times pestilences used to be employed for the purpose, but such is now the state of public sanitation that they can no longer be expected to serve, and tempests and earthquakes are equally obsolete. Apparently, in the case of the wife-beater, we still must observe the spirit of Asiatic justice, and punish his family with the offender; we must imprison him at hard labor for so many months, and leave his wife to suffer for want of the earnings which the State takes from them both as part of his penalty. This seems not very reasonable, but we know that the law is the perfection of reason; and rather than set up the whipping-post for the scourging of criminal boys and girls, or their parents and guardians, we shall continue sending them to houses of correction and reformatories of various types, where they will not be beaten unless they are naughty, and then only by a keeper or warder whom they have perplexed in the extreme, and who beats them informally and almost unofficially. At the best the outlook is not very cheerful; no one pretends that it is; but under the present conditions it can be safely claimed that the imprisonment of criminal children is not so depraving to the public as the dramatic spectacle of the whipping-post, through the illustrated reports, would inevitably be.

The Ice-floe in the Ohio River at Parkersburg, West Virginia

The Baltimore and Ohio Freight-yard under Water during the Flood at Parkersburg

A Rowboat Ferry at the Juliana Street Bridge, Parkersburg

THE RECENT FLOODS IN THE OHIO VALLEY

The heavy rainfall of January 20 and 21 caused disastrous freshets and floods in the Middle West. On many of the streams of the Ohio Valley bridges were swept away, towns and villages inundated, and railroads tied up by washouts. Grave danger threatened the city of Pittsburg by the overflow of the Allegheny and Monongahela rivers, and before the floods subsided damage amounting to more than a million dollars had been done to private and public property. At Parkersburg, West Virginia, the river rose forty-two feet, submerging streets, and flooding dwellings, business houses, and manufactories

The Safety of London Theatres

By Sydney Brooks

LONDON, *January 27, 1904.*

SINCE 1858 not a single life has been lost in a London theatre through fire. That statement is not perhaps quite literally correct, because in 1882 a fireman was killed while on duty during a blaze at the Alhambra Music Hall. Otherwise the facts are as I have stated them. It is forty-six years since any member of an audience at a London theatre has met with his death through fire. It is a wonderful, almost an incredible, record, and it appears hardly less miraculous if we push our inquiries back to the beginning of the nineteenth century and survey the last 104 years. In 1807 twenty-three people were killed in the panic that followed a false alarm at the famous Sadlers Wells Theatre; in 1808 a fire broke out during a performance at the Covent Garden Opera-house; the audience escaped, but fifteen or twenty people who tried to enter the building to put out the fire were killed; in 1858 another false alarm, this time at the Cobourg Theatre, led to the deaths of sixteen people. So that since 1800 less than sixty people have perished through fires at London theatres, and for nearly the last fifty years the record, with the exception noted above, is absolutely clean of any sort of fatality.

It is more amazing still when one remembers how many of the London theatres are inherited from the old and unscientific days of playhouse building, how few of them (comparatively) are isolated or provided with more than three entrances, and how greatly the customs of English theatres militate against sound construction. In America the floor of the auditorium at, I think, all theatres is given up to orchestra stalls, with a gangway down the centre and passages, entrances and exits at each side. But in England the floor of the auditorium is divided into two parts. From the orchestra extend a dozen or so rows of orchestra stalls at half a guinea each. Behind them and separated from them by a partition is the pit, admission to which costs only a shilling or so. The pit is the distinctive and most popular feature of English theatres, but its presence obviously complicates the architectural problem. The half-guinea crowd is not going to mix with the shilling crowd; each, of course, must have its separate entrances and exits. The architect accordingly has to design a series of passages for the pit and another for the stalls; so that instead of walking to one's stall down an inclined gangway straight from the lobby, as in America, one has to wind into the bowels of the earth, down steps, and along corridors and passages, emerging eventually at a side door close to the orchestra. There is no central gangway through the orchestra stalls in an English theatre, and only two exits; so that in the event of a fire, or, what is worse, of a panic, the rush to these exits and up the steps in the passages that skirt the back of the pit and lead finally to the central lobby would be terrible. One always feels entombed in the stalls of an English theatre.

However, feelings are one thing, facts another. And there is no getting away from the fact that London theatres are the safest in the world. Year after year over three hundred places of public entertainment are licensed by the London County Council—twenty-three of them being theatres and the rest music-halls, concert-halls, assembly rooms, dancing saloons, and so on—and in not a single one of them has a death been caused by fire for nearly fifty years. Moreover, this result has been accomplished in spite of a conflict of legal authority such as one only finds in England. The London County Council has the initial licensing of London theatres, but supervision of them belongs to the Lord Chamberlain, who is also the final arbiter of the licenses. In practice the Lord Chamberlain grants no licenses that the London County Council disapproves of and lodges protests against. But when it comes to structional alterations and improvements the London County Council can only make "suggestions"; it cannot enforce them; and it has no way of getting them adopted except by refusing to renew the license—a penalty so extreme that I do not believe it has been once resorted to. True that a "suggestion" from the London County Council is not a thing to be treated lightly. Still a good many theatrical managers, especially those who have taken a theatre for only six months or a year, and have not, therefore, to worry about the renewal of their license, do, as a matter of fact, disregard the "suggestions," knowing well that the London County Council has no means of punishing them.

It is impossible even to summarize the regulations adopted by the London County Council for the construction and appointments of a London theatre. They cover every conceivable point. The theatre must front on a thoroughfare not less than forty feet wide; one-half of the total length of its boundaries must also abut on a public way; it may not be built underneath or on the top of any other building; the floors, tiers, and roof of the auditorium and "all parts used by the public" shall be made of fire-resisting materials; no theatre shall have more than three balconies, and the space between them is rigidly prescribed; for each tier holding 500 people there shall be two separate exits, and an additional one for every 250 or part of 250 people; not more than one of the exits from each part of the house may be used as an entrance; every lobby, corridor, or passage must be at least five feet wide between the handrails; cloak-rooms are prohibited in any corridor; the width of the staircases, the material of which they are to be constructed, the height of the steps, and the number of steps to each flight are all strictly determined; "all landings shall be six inches thick"; exit doors must be in two parts and open outwards; no door shall open immediately on a flight of steps; automatic bolts only are allowed; the seating area for each person shall not be less than two feet deep and one foot six inches wide where no backs or arms are provided to the seats, and not less than two feet four inches deep by one foot eight inches wide where they are provided—a space of at least one foot between the front of one seat and the back of the next being in all cases observed; the proscenium wall must be made of brick, be not less than thirteen inches thick, be carried three feet above the roof, and reach below the stage to a solid foundation; a fire-resisting screen, to be used as a drop-curtain, shall cover the proscenium opening, and be provided with water sprinklers; the space above the stage shall be high enough to allow all the scenery, screens, and curtains to be raised above the proscenium in one piece and without rolling; the roof of the stage shall not be fire-resisting or heavily constructed, and a specified portion of it must be made of glass, which will open like a window; dressing-rooms shall be arranged in a separate block of buildings or divided from such premises by party walls; when gas is used for lighting there shall be three separate and distinct services and meters—one for the stage, another for the auditorium, and the third for the staircases, corridors, and exits; "all scenery, woodwork of stage, hangings, curtains, draperies shall be rendered non-inflammable"; and, finally, there are fifty-eight regulations dealing with electric lighting alone.

These ordinances, of which I have reproduced barely a tithe, show the infinite and microscopic care that is taken for the public safety. What do they amount to? They amount, first of all, to this—that every London theatre is built in two parts. The auditorium section is one building and the stage section another. The two are joined by the proscenium wall which stretches below the stage to the foundations and three feet above the roof. The roof of the auditorium section is just like any other roof; the roof of the stage section is hardly a roof at all, but a number of openings covered with thin glass and joined together by light non-resisting material. A fire breaks out on the stage, the scenery is in a blaze. What happens? The flames rush up and break the glass. The cold air from outside immediately pours in, carrying smoke and flame along with it, and seeks an opening in the wall. That opening is the proscenium, and if it is left free and unguarded a tremendous draught swirls from the roof of the stage right through it and into the auditorium. Here it is reinforced by another draught—the draught of hot air arising from the audience up to the roof of the auditorium. The chain is then perfect, and the flames, instead of feeding on the stage section, are driven as by gigantic bellows through the proscenium and into the audience. But if the proscenium opening is, as it were, shuttered down by a fire-resisting curtain, automatically drenched with water, then the course of events is exactly reversed. The flames that the rush of cold air has swept downwards, baffled in their attempt to find an opening, return upon themselves, and begin again to mount upwards. The stage section, with the openings in the roof, is thus converted into an immense flue, up which the flames rage harmlessly. They cannot, at any rate, reach the audience.

The iron-asbestos curtain covering the proscenium is thus the crux of the situation, and the London County Council never did better work than when it insisted on its universal adoption at all theatres and music-halls. And not only its adoption, but its daily use. Before and during every performance at every London theatre the curtain is lowered, and I have known one instance where, the curtain sticking half-way and refusing to budge, the performance was declared off and the money returned. I expect before long to find the canvas act-drop entirely done away with and its place taken by this iron-asbestos curtain, painted and decorated in the usual way, and used regularly after every scene. One more point in this connection, and a most important one. The curtain should be capable of being worked both from the stage and the auditorium. So much stress is rightly laid on this that insurance companies, I believe, refuse to insure London theatres where the curtain cannot be lowered from the auditorium side. It is also worth remarking that the London County Council insists on a sprinkling apparatus, set in motion by the turn of a lever, being disposed so as to play upon the curtain from the top. I was present in a London theatre about a year ago when the lever was pulled by mistake. Instantly the whole of the proscenium opening became a shower-bath. Next to this, and next to the provision that all woodwork, scenery, drapery, and so on, shall be made, so far as is possible, non-inflammable, the London County Council has done admirable service in multiplying the means of exit, and especially in abolishing the "emergency exit." An exit that is only to be used in time of emergency is an exit that never gets used at all. Under the London County Council regulations not only have more exits been provided, but every one of them is thrown open after each performance. There is much that might still be done, and would be done, if the London County Council had the legal power to do it. The overcrowding in the pit and gallery, the blocking up of gangways and passages by seats and chairs, the obstruction caused by allowing people to stand when all the seats are filled, the impunity with which theatrical managers may defy the Council's authority in small and not infrequently in great things—are all blemishes on the present system. But, taking it as a whole, American architects and managers who place the safety of the public among their first considerations would do far better to come to London rather than Paris or Berlin for their models.

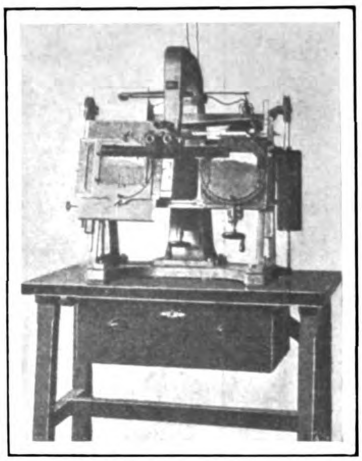
A New Instrument for Sounding Space



By Harold Jacoby, Ph.D.

Professor of Astronomy at Columbia University

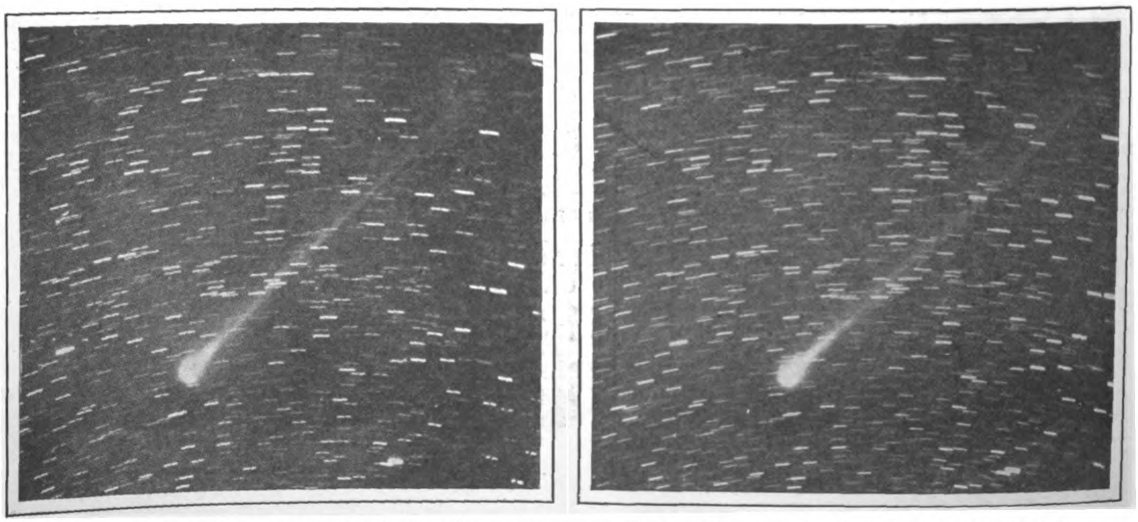
INCREASE of size and power in telescopes, and of minute precision in micrometers and other astronomical measuring machinery, have contributed no small share to the advance of celestial knowledge in the last quarter-century. But, after all, improvements that merely add a further trifle to the minute accuracy already attained, though highly important, are of less general interest than instrumental inventions promising some new kind of knowledge, or some new method of obtaining knowledge. To increase the power of the triple-expansion steam-engine, for instance, so as to drive the largest transatlantic liner a quarter-knot faster than before, would be of far less interest than the practical application of the new form of turbine-engine. For the latter is a new kind of engine, the former but an improvement of the older type.

Yet the turbine steam-engine is not really new—there were applications of the turbine principle, even in antiquity;—it is rather an improved use of the ancient idea. So, too, the stereoscope is not really a new instrument; but its introduction into astronomy during the last few years, in an entirely changed and improved form, has added an effective weapon to the astronomer's armory, one that promises, perhaps, as much as the turbine in marine engineering.

To make plain the principle of all stereoscopic instruments, it is necessary to remind the reader of certain simple phenomena connected with vision in general. According to the accepted undulatory theory, light travels in the form of waves, similar to water-waves; when we say we "see" an object we mean that a light-wave disturbance has been started at that object, and has been propagated through space until the wave-front breaks on our eye like an ocean wave breaking on a sand beach. But these light-waves are extremely small: so minute, in fact, that for practical purposes we may consider light to "travel in a straight line," as the old text-books used to tell us. Ordinarily, in viewing terrestrial objects, it is sufficiently accurate to say that light moves in a straight path directly from the object to the observer's eye.

The Stereo-Comparator, the new Instrument for Sounding Space

So much being premised with regard to ordinary vision, we must now consider for a moment the phenomena of binocular vision, or seeing with two eyes at once. From what has been said above, it is evident that if we look at an object with both eyes, two rays of light may be said to start from the object at the same instant, one travelling directly to the right eye, and the second directly to the left eye. Now since these two rays move straight from a single object to two different eyes, there must be a slight difference between the directions in which they thus move. In other words, there is a small angle between the two rays as they leave the object. If our eyes were quite close together this angle would be very much smaller than it actually is; and even allowing for the normal eye-separation of two and a half inches, the angle is still very minute, except in the case of objects situated within a couple of feet of the observer's nose.



In some way,—either through constant practise, or from some inborn instinctive capacity,—people possess the power of estimating automatically the size of the above-mentioned angle; and the first use to which we put a knowledge of its size is to guess the distance of any object under observation. Evidently, the smaller this angle, the farther the object: so if we can estimate instinctively the size of the angle, we have at once an approximate estimate also as to distance. It must not be supposed, however, that this is the only method we have of guessing at relative distances: if such were the case a one-eyed man would be quite helpless in this matter; yet we know he can do nearly as well as a person with normal vision.

To consider a specific case, for instance, when we look at a man in the distance we can guess how far away he is by considering how big he seems. Experience has taught us the apparent size of an average man, when seen at a distance of one, two, or three hundred yards; so, when we have noted his apparent size, we can guess at his distance. Here the one-eyed man is as well off as his two-eyed brother. Another method of estimating distance automatically depends on the location of the observed object. We guess at the distance of a barrel standing on the opposite side of a street by the aid of our knowledge as to the width of an average street. Here, again, the one-eyed man should do as well as he who has both eyes. So we may conclude that binocular vision aids materially in estimating distance only when the object is near the observer.

But there is another most important use of two-eyed vision, which must now be explained somewhat in detail. It is only by seeing with two eyes at once that we acquire a sense of the *solidity* of objects; that we can decide whether we are looking at a solid body, having length, breadth, and thickness, or a mere flat body, having length and breadth only, like a paper page in a book. A simple experiment will perhaps make this clear.

Lay a pencil on the table, and, closing one eye, look at the end of the pencil with the other, placing the head in such a position that the pencil is seen directly end-on. In other words, so place the eye that the pencil's point will be aimed directly away from you. To the single eye the unsharpened end of the pencil will then appear as a little round disc, and it will not be possible to know anything as to its length. So far as one eye alone can tell, we may be looking at a whole new pencil, or at the end of a stump only an inch long. Now, without moving the head, open the other eye too. At once we obtain a new view from a new view-point. We receive an impression that we are looking upon a solid object, and obtain also a notion as to the pencil's length.

It is this viewing a thing simultaneously from two view-points (the two eyes), or getting two aspects, as it were, at one and the same time, that gives us a realizing sense of solidity. This is called stereoscopic vision. Of course, just as we have already seen that, in estimating distances, binocular vision is aided by experience or knowledge, so also binocular perception of "relief," or

A Comet arranged for Examination in an ordinary Stereoscope. The Comet's motion produces the Stereoscopic effect

Space

solidity, is aided greatly by the imagination. A mountain, for instance, looks solid at any distance, because we know mountains are solid. But careful trials, similar to the pencil experiment just described, place the phenomenon of true stereoscopic binocular vision beyond a doubt.

Stereoscopic photographs of ordinary terrestrial objects are made by mounting a pair of exactly similar cameras, fitted with a pair of lenses just alike, in such a way that the centres of these two lenses are separated by a distance equal to the average distance between a man's two eyes. Exposures having been made with both cameras simultaneously, we obtain a pair of photographs reproducing exactly the stereoscopic effects which would occur if an observer were to examine the photographed object directly. We do not see the peculiar stereoscopic effect of solidity, however, if we look at such a pair of photographs with the naked eye. It is necessary for this purpose to mount them in an ordinary stereoscope, a simple instrument that can be had at any optician's. It contains an arrangement of lenses by means of which we can examine the two photographs of the stereoscopic pair simultaneously. It is our inability to look at two things at once with the unaided eyes that prevents our getting this stereoscopic effect by merely looking at a pair of stereoscopic photographs. But when they are mounted in the stereoscope we see both at once, and all objects in the pictures start into relief as if by magic, and give a realistic impression of the solid objects photographed.

Having now explained the principle of the ordinary stereoscope, we come next to its recent remarkable application in astronomy, something rendered possible only in the last few years, since the Jena glass-factory has been able to furnish certain special kinds of optical glass. With the help of this glass, Zeiss of Jena, has constructed the new instrument, with the cooperation of Dr. C. Pulfrich. It has received the name stereo-comparator, and with it any two celestial photographs can be compared in such a way as to bring out any existing stereoscopic effect at a glance.

It has been known for some years that these stereoscopic results can be simulated without a double camera, either by taking two pictures with a single camera moved between the two exposures, or by photographing a moving object twice with a fixed camera. When we take pictures of the sky with an astronomical telescope we have in effect a moving camera, because the telescope, being attached to the earth, is carried along by that planet as it moves in its orbit. Consequently, successive pictures of the same set of stars should give stereoscopic effects, if only we could compare them in a suitable instrument,—and such an instrument we now at last possess. Quite similar results occur if we use two pictures of some moving celestial object, such as a planet or comet: in such a case, the stereoscope makes the object stand out as it really is; suspended in space, as it were, between the observer and the distant starry vault of heaven.

But this ability to show objects in the solar system thus suspended in space between us and the stars, though highly interesting, is really the least important use of the new instrument. Astronomical science can advance ordinarily only by the detection of changes among the celestial bodies. It is here that the stereo-comparator attains its greatest usefulness. Let two photographs, made at different dates, be compared in the new instrument. If there exists anywhere the slightest difference—if any star has appeared or disappeared, or changed its magnitude or place ever so little—it will stand out conspicuously by a sort of simulated or pseudo-stereoscopic effect. Instead of laboriously measuring our photographs with ordinary microscopes and measuring-machines, and then comparing with each other the measures from successive pictures, we need now only compare the pictures themselves in the new instrument, when a mere glance will show which objects, if any, will repay careful measurement with a promise of important discoveries.

It is never desirable to be oversanguine about the possibilities of any new invention, in astronomy or elsewhere. But it is safe to say, at least, that the new instrument will facilitate, in a very high degree, the discovery of celestial changes; that this will tend to elucidate many vexing problems in the astronomy of to-day may certainly be hoped for confidently, if not definitely expected.

Some Impressions of America

By Henry W. Lucy ("Toby, M.P.")

HARDLY were my feet planted on the Cunard wharf at New York than I was greeted by the question, "What do you think of America?" It is a time-honored inquiry, familiar to many Englishmen. Its analogue certainly goes back to the days of Fanny Burney. "Then they asked me how I liked London," Evelina writes, describing an interview with her cousins on her first visit to the metropolis. I do not doubt, if record were attainable, it would be found that it was put by the aborigines to Columbus when he landed on the continent. It was repeated to me frequently during my stay, and on the eve of my departure two important New York journals severally offered me the hospitality of their columns in order to set forth my views. Personally, I am convinced that it does not matter a cent to America what I think of it. But in view of this polite evidence of interest I propose to jot down a few notes for HARPER'S WEEKLY. They will at least have the recommendation of frankness and sincerity, with underlying admiration for the most virile nation in the world.

I happened to reach New York at a critical time in its history. Tammany, trampled in the dust two years earlier, had, like the proverbial worm, turned. It was not dead, or even sleeping. It was, indeed, vigorously kicking. The forces arrayed against each other seemed hopelessly unequal. Respectability, as represented by the pulpit and the press, was up in arms to bind the dragon in heavier chains. So strong was the feeling that a truce was sounded between the two political parties. The Democratic lion lay down with the Republican lamb—or is the proper distribution of the characters the other way about?—and called upon Seth Low to lead them.

Here is an indictment of Tammany thundered from the pulpit of a New York church: "Considered as an institution, Tammany, capitalizing itself by theft, fortifying itself by perjury, wallowing in uncleanness, maintaining a propagandism of lust, growing fat on the debauched innocence of women, is the devil's own, morally fragrant with the mephitic odors of his sulphurous kingdom."

That is pitching it pretty high even from the serene altitude of the pulpit. It was merely the concentration of things said elsewhere. Individuals of prominent position were accused of most of the crimes catalogued in the Decalogue. The stranger reading or listening wondered whether the law of libel were operative in the United States. One public charge I remember, not only because it was made by the Mayor upon his official responsibility, but by reason of the happy retort flashed by one in the crowd. As illustrating the character of the distribution of patronage by Tammany, Mr. Seth Low stated that a man appointed under its authority as inspector of sewers was blind. "Anyhow," said the voice, "he can use his nose." In England had such charges been bandied about there would have followed, as far as individuals were concerned, a series of actions for libel. As far as public corporations were indicted, there would have been demand for instant and searching inquiry. In New York Tammany won the election, triumphing by an overwhelming majority.

One coming fresh on the scene with unbiassed mind discovers in Tammany, its constitution, its fundamental principle ("graft"), and its practices the blot that underlies, weakens, defames the Constitution of the United States. It is the uncompromising adoption of the battle-cry *Væ Victis;* for the victor the spoils. In English public life, on whatever scale of administration, from the House of Commons through county councils, town councils, down to parish vestries, the mere hint that upon a particular election depended personal aggrandizement would suffice not only to ruin the candidate's chances, but would make him ineligible for any position in public life. In the municipal elections of New York, Tammany, nothing if not truthful, unblushingly makes the matter at issue one of money. To win back the good old times of Boss Tweed and Mr. Croker is, for a certain class of citizen, a consummation worth paying for. Tammany's coffers at election time are, accordingly, overflowing. A polluted cave of Adullam, every one that is in distress, every one that is in debt, every one who is discontented, all who object to the inquisitiveness of civic law, flee to Tammany, bringing cash if they have it, proffering personal service if they are penniless. The very police told off to preserve order in the streets during the turmoil of election are directly interested in the issue. When, in 1901, Tammany was dislodged, the first thing the new Commissioner of Police did was to send the wardmen to do patrol duty in precincts remote from those in which they had served under Tammany. If blackmail were attempted it had to be approached under the disadvantage of novel association.

It has come to pass in the limited area of New York, with a constituency whose thick undergrowth is a tangled mass of Germans, Irish, Italians, Finns, Medes, Persians, and exiles from Mesopotamia, able, unscrupulous men like the late Boss Tweed were able unblushingly to display the banner with its alluring device, *væ victis*. But in degree it governs the operation of the election of the highest officer of the State. I am told that in less measure than was formerly the case does a clean sweep of civil servants of all classes follow on a change in the Presidency. But the principle is authorized. It is, with more or less delicacy, put in practice on every change of tenancy at the White House. Human nature must differ in the United States from what prevails in a more effete country, if a man whose wages and position depend upon the personality of the next President votes among contending candidates with exclusive desire to see the best man elected.

One result of the Tammany election last November upon which, as far as I observed, no comment was made, was the slap in the face administered to the potency of the press. With, I believe, two exceptions, neither carrying great weight on moral or intellectual grounds, the whole press of New York—morning, evening, daily, and weekly—was dead against Tammany. Yet Tammany romped in with majority beyond the dreams of the most avaricious alderman. That is a significant thing, going deep to the root of the relations between the New York press and its multitudinous readers. If two and two continue to make four it means that whilst the latter greedily read the news purveyed in their favorite paper, they don't think much of the judicial mind, the untrammelled judgment, the Spartan simplicity of public spirit, that animate and control the editor. He is undeniably "newsy." But daily acquaintance, based on study of his varying remarks printed in large type through the revolving seasons, does not recommend him as a trusted guide on critical public issues. This is re-

grettable; it is probably unjustifiable. I note it, by the way, as an incident that struck the stranger familiar with the press and its influence in analogous circumstances in another latitude.

Apart from this episode, the newspapers are the most striking embodiment of the buzzing, bubbling life that palpitates in New York and other great cities. An Englishman may have his morning newspaper; an American must. Many New-Yorkers take a course of newspaper throughout the day, beginning with breakfast, and buying the latest edition of the evening paper as they leave the theatre going on to Delmonico's or Sherry's. In the majority of cases no exhaustive call is made upon their capacity for assimilating and digesting meat. An English newspaper, the *Times*, for example, is all sirloin of beef. The typical New York paper is composed of *hors-d'œuvre* and savories, with a cutlet thrown in if there is anything to be said for or against the President on the Panama business or other question of high state policy. There is nothing in common between the press of the two countries, except it be the London *Daily Express*, which successfully tries to make the best of both worlds. The British daily paper, steeped in old traditions, takes itself seriously as a recorder of current events. It reports Parliament at considerable length, supplemented by verbatim record of the platform speeches of eminent statesmen. It devotes, if necessary, a page to law courts, and has foreign telegrams from the ends of the earth.

Some of the New York papers allot so much of their valuable space to Brobdingnagian head-lines that they have little room left for the Lilliput of mere facts. Congress and the Senate, making much talk at Washington, are disposed of on the average of a column. And this does not record the luminous sayings of Parliament men, but is the paraphrase supplied by a staff correspondent. Speeches delivered in the country by peripatetic statesmen are severely treated in brief summary. *Per contra*, if on tour the President kisses a chance baby, or if a Senator of a certain age marries a lady who might be his granddaughter, a column (one-third of the space being head-lines) is vigorously allotted to the subject. By reason of frequent recurrence of late of the marriage of an English peer with the daughter of an American millionaire is beginning to pall on a sensitive public palate. But if the bridegroom be a duke two columns will shoulder into a back page the scanty paragraph about yesterday's debate in Congress. One respect in which American newspapers present an example British contemporaries might well follow is the extreme reticence with which they deal with cases such as come before our divorce court, or in various places crop up in the police courts. They are never exploited, and in such summary report as is given objectionable references are rigorously excluded.

American Sunday papers are unique in the *journalism* of the world. They are marvels of enterprise, organization, and liberality of expenditure. The quantity of matter given away for five cents is equal to many of our six-shilling novels. In point of view of readableness, the New York Sunday paper often exceeds the average novel in interest. Few British twenty-five-cent magazines, prepared for sale with all the leisure of a lunar month, equal it in variety. Nor is this modern growth of journalism confined to the metropolis. I found in all moderate-sized towns through which I travelled Sunday papers based on the model of the New York nineteen-story buildings.

The phenomenon is the more striking to the Britisher, since we have nothing approaching a parallel. Some years ago the New York *Herald*, to whom nothing is sacred, not even the British Sabbath, attempted to introduce a Sunday paper for the benefit of benighted Britishers. Two rival London journals, resolved to have no foreign crowing on their dunghill, followed suit. One, having a non-conformist conscience and the bulk of its circulation among chapel people, shrewdly published its Sunday edition on Saturday at midday. Even that quaint device did not save the situation. After a feeble, fluttering existence, involving the proprietors in heavy loss, the Sunday *Herald*, the Sunday *Telegraph*, and the Sunday *Daily News*, the latter guaranteed to be written and printed on a Saturday, were dropped.

One reason for this state of things is that we have in Great Britain, least of all in London, no means of distributing papers on Sunday. The great monopolist of the railway bookstalls puts up his shutters on a Saturday night, on the Sabbath morning leading his multitudinous staff to the established church. A few tobacconists and small retail news agents open their shops for an hour or so on Sunday mornings for the sale of the old-established two-cent weeklies. But the running newspaper boy, with his shrill "Speshul; All the Winners!" ceases from troubling, and the ordinary newspaper reader is at rest.

Next to the whirl of the newspaper, the rush of street traffic in New York gives pause even to the Londoner long familiar with the crush in Fleet Street and the Strand, the murmur of the midday multitude round the Mansion House, and the recurrent block of illimitable tide of traffic in Piccadilly. Compared with the effort of crossing Sixth Avenue and Thirty-fourth Street, with an Elevated train going up-town, another dashing down-town, streams of surface-cars passing east and west, residence in Mafeking beleaguered by the Boers was a place of safety. When I was in New York, I was informed that the death-rate in the streets consequent on the traffic movement was three a day. That is an infinitesimal proportion of a population of three millions and a half. Still, one mangled body makes a hole in a humble household.

In respect of street traffic, New York is on the verge of revolution. If calculations at headquarters be verified, before the end of the current year the city and its far-reaching suburbs will be in possession of the finest system of underground railway known to the world. The British Royal Commissioners who visited New York last autumn bent on inquiry into its methods of handling street traffic returned enthusiastic about the designs and equipment of the underground line. It will be an enduring example of the perfection of engineering work America can accomplish when untrammelled by red tape, untainted by official corruption.

Apart from the material advantage of being conveyed swiftly, cheaply, and comfortably from homestead to work and back again, the institution of the underground railway will relieve the population of what President Kruger, in his historic bill of charges for the Jameson raid, called "moral and intellectual damages." Men get used to any condition of life—working in a coal-mine, stoking a steamer in the Red Sea, eating blubber-fat on Greenland's icy mountains, or strolling half-dressed on India's coral strand. Thus hard-working men and women count as naught the "rush-time" of the outward or homeward bound surface-cars, the morning and evening battle by Brooklyn Bridge. But it must tell upon temperaments, however stolid. Taken in conjunction with the incessant roar of the Elevated Railway, the manœuvring necessary safely to cross a road between an up and a down car, is, mentally and physically, a wearing process. I suppose the Elevated railways, being there, will remain. When first the underground lines get into full swing their custom will fall away. But in big towns the population inevitably grows up to whatever traffic accommodation may be established. When the Underground Railway was opened in London it was confidently asserted that the omnibus was doomed. To-day there are ten times more omnibuses in the streets of London than there were before the era of underground railways. With a variation that included the old underground railways the cry was reiterated when the Twopenny Tube was inaugurated. The Twopenny Tube carries its millions. But the two underground railways and the rival omnibus lines have an aggregate of traffic exceeding any earlier record. So it will be in New York. All the same, the opening and full working of the underground lines will be an unspeakable boon, especially grateful in an area within which, including Brooklyn, more passengers are carried in a year than crowd the whole railways of the United States put together.

Crossing from Liverpool to New York in the *Lucania*, a patriotic New-Yorker, sniffing the air as we crossed the banks of Newfoundland, enthusiastically said: "Ah, this reminds me of home. It is like drinking champagne." It was a bleak day, and I thought the champagne was perhaps a little over-iced. But that was a detail. It is only the new-comer or the *citizen* returning after long absence who fully appreciates the exhilarating air of New York. I do not specially mean in the neighborhood of the Bowery, being more familiar with the up-town district. I arrived after a laborious London season and session. It is hard to say which is the more exhausting: the combination makes heavy calls on stamina.

I was in the States on a sort of holiday, and with *design* to keep up the dissimulation went on a week's visit to a charming house in New Jersey. Immediate, irresistible was the influence of the atmosphere and surroundings on the wearied Londoner.

Straightway I got to my desk, accomplishing a morning's literary task with ease and swiftness unknown at Westminster. If I were engaged upon an important literary work, involving close attention and sustained effort, I should emigrate to New York State and find a quiet resting-place in New Jersey or Long Island. Mentioning to an eminent English actor playing at a Broadway Theatre the recreative influence of New York air, he said: "Yes, I feel it too. Only at first—only at first," he repeated, with a far-away look, brushing his forehead with his hand, as if *Hamlet* again saw his mother dallying with the usurping *King*, and wanted to sweep away the vision.

It is probably true that the physical and mental effect of the magical atmosphere that environs New York is, like the influence of the champagne to which it has been likened, evanescent, may even, like an overdose of champagne, ultimately lead to headache and feeling of depression. But there it is, day and night, and to its influence I trace the peculiar characteristics of the New-Yorker—his restlessness, his pushfulness, his inventiveness, and his energy. Presumably he sleeps sometimes. But, like the weasel, it is uncommonly hard to happen upon him in that condition. Seen through his city's pure atmosphere all things loom large. His places of business affront the heavens to the height of twenty stories. If he desires a palace for a homestead he buys a block or so in the most highly rented quarter, pulls down the tenements, and builds his soul a lordly dwelling-house that shall be the envy of his friend and neighbor who last embarked on similar enterprise. If he is in business in a particular line of trade he does not rest till he has linked all competing firms in a gigantic trust. If he is director of a railway he rests nor night nor day till he has "amalgamated." If, incidentally, he turns his attention upon hotel property he creates and magnificently furnishes an edifice capable of homing the population of an average hamlet. Having daily to traverse the length of Manhattan Island on business bent he is not satisfied with the ordinary mode of locomotion along street levels. He flies by the Elevated Railway, races by the surface-cars, and, there being no convenient waters under the earth affording means of locomotion, he is building himself an underground railway.

How is this pace kept up? Is the average life of the New-Yorker as long as that of his brother in London, Dundee, Dunfermline, or other comparatively slow-going place? Envious English sisters, whilst admitting the prettiness and style of the American girl or the young matron, hint that it "does not last." American women, they more than whisper, rapidly fade, becoming old, even haggard, before their time. Women will say anything about each other, more especially when there rolls between them the broad barrier of personal safety represented by the Atlantic. I shrink from recording observation on so delicate a subject. But if American women do not prematurely wear themselves out, their

preservation of freshness is marvellous testimony to the durability of material. During the London season we have some *grandes dames*, young and—and otherwise, who slave through twenty-four hours with energy and tirelessness that shame the grumbling navvy with his eight hours' day. But, regarded as separate communities, there is nothing in London society equal to the tremendous efforts an American woman with recognized position puts into a day's work. New York society women—like St. Paul, I speak as a fool—are more in evidence than their London sisters, more self-reliant. They are, save in respect of funds, less dependent upon fathers and husbands. They pitch their voices higher in conversation, they—like Mr. Arthur Balfour in connection with another delicate subject I am a child in these matters—they are not so studious in the effort to obtain quiet effect in dress. They are not the rose, but they live near it—as near as possible. They are not men, but that is no reason they should not wear men's hats, high collars, sailor-knotted neckties, horsy breast-pins, gay waistcoats, and coats cut away so as not to obscure well-rounded hips.

It was written by one of old-time, Good Americans when they die go to Paris. To-day, more especially during the Horse-Show week, fair American women will die if they don't go to the Waldorf Hotel. Living, as I chanced to do through the festive week, in that vast hostelry is wholesome discipline for mere man. What with bazars in the morning, long lunches in a land where it seems always afternoon, five-o'clock tea, dinner, the Horse Show, back to supper, and all the time the endless stream of elaborately apparelled women in morning or evening dress flooding the promenades, men, swept away to the smoke-room, the billiard-room, or draughty corners of the corridors, begin to understand their true position.

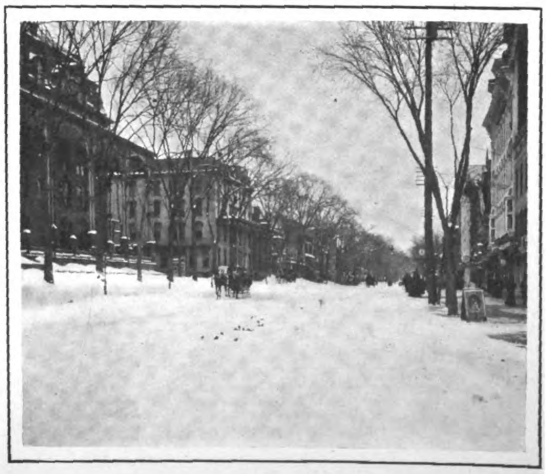
Man wants but little here below. There are epochs in the rush of the New York season when he is to be congratulated upon the habits acquired by constitutional asceticism.

Saratoga as a Winter Resort

By Annie Nathan Meyer

THE word Saratoga summons up to most a picture of wide, heavily shaded avenues; of vast hotel piazzas studded with idle groups watching the throng that endlessly passes; of low, easy-running carriages driven up and down or resting at the curb, ready at a signal to start off on one of the innumerable picturesque drives; of beautiful women in fascinating, airy costumes strolling under filmy parasols before the alluring shops; of gay crowds gathered at the springs sipping the delicious magical waters which a grateful hemisphere owes, among other things, to the great sachem of the Mohawks.

To-day a very different picture greets him who arrives at Saratoga. First to impress him will be the snow, endless snow, sparkling and virginal white, not the poor slate-gray stuff under which guise it masquerades in town, and over its scintillating surface merrily skim sleighs of every description, more sleighs in an hour than the average New-Yorker has seen in a life-time. The whole world—business and pleasure—is on runners—fire department and laundry, milady and the milkman. And how enviable is the condition of that same milkman as, handling the reins from within his enclosed and windowed room on runners, heated by an oil-stove, with perfect sang-froid he braves the iciest blasts!



It is unnecessary at this late date to describe the peculiar charm of Saratoga in summer; it has been done many times, notwithstanding the fact that it is a charm elusive, baffling, impossible to catch fully on the end of a pen. This charm, this exhilaration, this sparkle and glow—what is it? Perhaps some of the virtues of the bubbling waters have passed into the atmosphere, but, whatever it is, it is felt even in winter. Even in winter? More than ever in winter I am tempted to say. Moreover, it is a charm so obviously, purely its own, not borrowed or imported from elsewhere by the railroads. Four months of snow-covered landscape, the mercury doing its best to shrink modestly from sight,—to many the word charm will be sadly misplaced! But one does not suffer from the cold at Saratoga; in its dry air one can as comfortably bear its low temperatures, as in summer one bears the high temperatures, surprised at the actual readings of the thermometer. Ten below zero has in the still, dry cold less terror for the pedestrian than fifteen above zero in the damp cutting winds of New York. The Saratoga winter is practically windless, it is a decorous cold, it wooes softly, almost tenderly,—all sense of struggle, of fight, is absent. One walks erect, one's skirts hang as they should, one's hat remains staidly in place, one need not bend double to resist the onslaught of fierce gales. People who have lived in many corners of the globe tell me that they know of no place that possesses the peculiarly exhilarating, healthful quality of the Saratoga winter; and from even a short experience of my own I am quite ready to believe it. How much more sensible were the New York doctors to send their neurasthenic patients to this bracing air, instead of to the enervating (and often dangerously contrasting) heat of the South! With the thermometer ranging from six below to six above zero, well bundled up, and away from the false standards of winter fashions, one finds not the slightest discomfort in passing as much as five hours of the day out of doors. For those that want to commune with nature there are great pine woods, mysterious, dark, their solemn gloom contrasting vividly with their dazzling white carpet; there are endless drives and walks where one is not likely to be disturbed by the chance passer-by. On the other hand, for those that like gayety and stir, there are many fine avenues alive with brilliantly beplumed sleighs, spirited horses, and beautiful women with the becoming bloom of health on their hooded cheeks; drives ending with a cup of tea at one of the cosy inns at the lake, and, on the way, yielding wonderful vistas of distant peaks.

At Saratoga Lake all kinds of winter sports are indulged in, while at the smaller lake—Lake Lonely—are the headquarters of the just rejuvenated Winter Club—a fascinating scene of skating, tobogganing, skeeing, curling, snow-shoeing, and feasting. This delightful country club, with a membership swelled from the ranks of the neighboring Trojans and Albanians, bids fair to be one of the most attractive centres of the kind in the country.

What Saratoga needs to-day is, not the million-dollar sanitarium of which one hears rumors, but a fine, up-to-date hotel, open winter and summer. It would be certain to be popular in winter, for those who are already devotees of winter sports will prefer to patronize a resort so easy of access, and without the isolation of the far mountain settlements, while those who for the first time taste the honest, wholesome, timely joys of winter, will quickly give up the notion that they must fly to a warmer climate. But—a *sine qua non*—the new hotel must not be built in the old Saratoga, the Saratoga of city streets and make-believe parks, but in the new Saratoga, which has been quietly building itself up on the hill. Here is the ideal spot, alike for winter or summer; here, if I mistake not, will grow up some day a new Saratoga, with, among other things, a really adequate, scientific control of its marvellous springs, and with physicians of world-wide fame, instead of chance piazza acquaintances, to prescribe them.

A Toboggan Slide at Lake Lonely, Saratoga

A View of Broadway, Saratoga, in Winter

"The Secret of Polichinelle"

Pierre Wolff's comedy of family life, "The Secret of Polichinelle," was produced by William H. Thompson and his company on January 19 at the Madison Square Theatre. "The Secret of Polichinelle" is a proverbial phrase for the kind of secret which has become common property. The action of the piece begins at the home of an elderly couple, who, in planning their son's future, reach the conclusion that he should be married. They select a wife for him, but when they inform him of their choice they learn that he is married and is the father of a boy. The old couple denounce their son, and decline to forgive him for his indiscretion; but in the next act the grandfather pays a secret visit to the young wife and the boy. The grandmother does not know of this visit, and, longing to see her grandchild, she, too, calls at the home of the young couple. The grandfather is there when she arrives, and, still unwilling to admit that he has swallowed his pride, hides in an adjoining room. At the end they confess their weakness, and accept the situation

"Sweet Kitty Bellairs"

Mr. Belasco's new play, founded on "The Bath Comedy" of Agnes and Egerton Castle, is playing at the Belasco Theatre, with Miss Henrietta Crosman in the chief part. "Kitty," a popular young widow, has advised "Lady Standish," whose husband neglects her, to revive his interest by flirting with another man. The young wife involves herself in an affair with "Lord Verney," with whom, as it turns out, "Kitty" is in love. A duel between "Lord Verney" and the husband being imminent, "Kitty" and "Lady Standish" go to "Lord Verney's" room late at night to induce him to avoid the meeting. The two women are found in the officer's quarters by some of his drunken comrades, among them "Lady Standish's" husband. "Kitty," by a ruse, succeeds in getting "Lady Standish" out of the room unobserved, and bears the brunt of the scandal alone. "Lord Verney," to save the situation, represents "Kitty" as his affianced wife. This leads to further complications, which, at the end of the play, are finally straightened out

MISS ETHEL BARRYMORE IN "COUSIN KATE"

Miss Barrymore is appearing in the Eastern cities in Hubert Henry Davies's comedy of English life, "Cousin Kate." The heroine is a young novelist, disillusioned by unfortunate experiences in love. She meets an artist, and they fall in love with each other. The artist, however, has engaged himself to a commonplace young cousin of "Kate's," and "Kate," finding out the truth, pretends that she has merely been flirting; but at the end, the cousin decides that she really loves a certain curate, and "Kate" and the artist are free to marry. Mr. Davies's earlier play, "Cynthia," was produced in New York last spring

Correspondence

MORE ABOUT THE NEGRO PROBLEM

CHICAGO, ILLINOIS, *January 17, 1904.*

To the Editor of Harper's Weekly:

SIR,—I spent my first twenty-six years in five Southern States, and have now lived North nearly half as long. I am convinced from personal observation that, considering all the pluses and all the minuses, there is no nearer approach to true democracy between the races in the North than there is in the South. I am also convinced that where there is actual contact the mass of white people, North and South, are becoming steadily less democratic toward negroes, and that this feeling is intensified rather than diminished by culture on the part of the negro.

Mr. Lincoln contributed not a little to his fame by saying that the Union could not endure half free and half slave. At the beginning all the States had slavery. The importation of slaves was prohibited thirty years after. Half a century later, the time of the Lincoln-Douglas debate, more than half the States were free States.

Cotton is a profitable crop at eight cents a pound. In the *Review of Reviews* for September, Mr. Edmonds says: "In the early part of the nineteenth century cotton sold as high as forty-four cents a pound, and from that gradually declined under a rapid increase in production, but until 1839 it had never gone below thirteen cents a pound as the average price in New York for a full year."

The large profits in cotton-raising caused rapid concentration on the cotton lands of the slaves throughout the country. State by State the Northern States abolished slavery peacefully and without hardship to anybody. Not only was slavery abolished, the negro problem in the North was solved by sending the negroes South. The time had *come* when it was clear that slavery was not profitable, or that it was more profitable to sell the slaves and employ free white labor. This economic movement had run its course in the North and was making rapid progress in the South. The slaves in the border States were being sent to the better cotton lands farther south.

My grandfather settled with his family and his slaves near the junction of Georgia, Florida, and Alabama. Most of the slave-owners among his neighbors came with their slaves from other States, chiefly Virginia and North Carolina, when they were young men. The time came when good cotton land was no longer to be had cheap near his home, and he bought a large acreage of wild land in Louisiana. He had fourteen children. As soon as the oldest son grew up, he went to Louisiana with the slaves that could be spared, and became the founder and governor of a small colony called a plantation. As other children grew up and there were more slaves, from increase or from the home lands becoming less productive for cotton, or from free white labor becoming less available for the home lands, there would have been more colonies in Louisiana. But the slaves were—turned loose; of my grandfather's sixteen grandsons now living, only one is a planter; about one-seventh of the area of Louisiana is in cultivation.

Recently I visited one of Mr. Lincoln's contemporaries who owns and lives on a magnificent farm in central Illinois. He told me that part of his land originally cost him less than fifty cents an acre. He bought land-warrants from Mexican war veterans, and with those warrants, or at the government price, $1.25 an acre, he could pick and choose from thousands of acres thereabout. Farther west millions of acres not only were not salable, but settlers were not available for free lands. He recently refused an offer of $125 an acre for his entire farm, because he did not know of any other investment for the money that would yield as good returns. He is an up-to-date farmer, uses the best machinery, and the labor is furnished by skilled white farmers, including his sons.

If Mr. Lincoln and the rest of the honest men of his time had known that many of them would live to see the lands of the West command present prices, it is probable that the negro question would have promptly ceased to be a national question.

There would have been no fear of the extension of slavery, for it was known that slavery was more profitable in the South than anywhere else, and it *would* have been evident that before there could be a supply of slaves for all the cheap lands of the South the lands of the West would have become too valuable for slave labor.

It is probable that the time would have come when all the slaves in the United States would have been raising cotton, cane, and rice on the alluvial lands of Arkansas, Louisiana, and Mississippi, for the simple reason that such labor would have become more profitable there than anywhere else. The slave pioneers would have cleared, drained, and cultivated the alluvial lands, putting them into condition to be used to advantage by free white labor. When the rest of the country had become sufficiently populous to spare a supply of free white labor for the improved alluvial lands, those lands would have become too valuable for slave labor. That is, when the lands became salable at high prices, the slaves would have been transferred to cheaper lands as a plain business proposition.

Gradually, the sons of slave-owners, as they grew up and were ready to branch out for themselves, each with his little band of colonists skilled in the art of converting the wilderness into fields of cotton, cane, and rice, would have sought cheap lands beyond the seas.

A solution of the negro problem has already been successfully demonstrated in the North. State by State the Northern States sent the negroes away. It was Federal action that gave a negro problem to the North again. Figuratively, after having been intelligently concentrated in the South, the color has been allowed to slop over upon the North. For a given quantity of color, small blots afford in the aggregate the longest and most frictional line of contact.

It seems to me that if each State were permitted to follow the example once set by the several Northern States, either at large or by counties, no further Federal legislation would be necessary. The negroes would probably concentrate on the alluvial lands of three Southern States, where they would be welcome, because their services are needed. The time would come when they would again seek cheap lands in a warm climate, something that could then no longer be had in any State in the Union. They would probably go to the Philippines or elsewhere of their own accord. The white people North and South would quit quarrelling with and over the negro. I am, sir, JOHN M. F. ERWIN.

[No doubt it is true that the Southern negroes *now* tend to migrate to the Gulf States, where they are most needed. So far we follow Mr. Erwin. But there never were very many negro slaves in any Northern State, and the disposition of such as there were, whether they went South or not, does not seem a precedent of any present value to any Southern State.—EDITOR.]

AS TO MITCHELL COUNTY, N. C.

GRANT, INDIANA CO., PA., *January 22, 1904.*

To the Editor of Harper's Weekly:

SIR.—In your issue of January 16 you quote a letter of A. B. Hart, in which he states that there are areas in which negroes are not allowed to enter, and names Mitchell County, North Carolina, as one such place. The writer is a native of Pennsylvania, but has lived in West Virginia, near the line of Virginia, and in North Carolina, Tennessee, and Kentucky since 1881; lived in Mitchell County, North Carolina, from January, 1897, until October, 1901. During his residence in Mitchell County he became well acquainted with the whole county, and knows that Professor Hart is mistaken. The negroes, even during that time, living in all parts of the county except in one small territory known as Rock Creek. The men of that section had made a rule to allow no negro to travel through their territory, and in former years they always turned them back. At the time the writer was there the travelling men were going through that district with their negro drivers unmolested. Mitchell County was not a slave-holding county. The negro population of that county is small, and is scattered all over it, with exception of the Rock Creek territory. There are a good many people in Mitchell County—almost entirely of the laboring class—who dislike the negro, and would prefer that he was out of the way; they dislike to compete with him as a laborer. The whites are proud and independent; good workers, but not steady. During my stay there I knew of no instance of abuse of negroes.

My observation leads me to believe that great harm has been done the negro and the South by independent efforts of the North to help him. I do not question the intent of the promoters, only their wisdom. No education or help to the negro can do him any good when that help sets him against his white neighbors and employers. The North should help Southern people to educate, and should get the cooperation of the good people of the South. The active management of all such work should be in the hands of Southerners, who know the negro. It is a mistake to think the South objects to improving the negro; they believe in efforts along the line of Booker Washington's plan. I am, sir,

E. H. CAMP.

MR. ROOSEVELT'S POPULARITY

SAN FRANCISCO, *January 17, 1904.*

To the Editor of Harper's Weekly:

SIR.—C. G. Hampton, in his letter published in HARPER'S of the 16th inst, declared, with oracular emphasis, "President Roosevelt *is* popular with all classes, except Wall Street and some Democrats."

This, Mr. Hampton avers as his opinion formed as a result of 15,000 miles travel in the United States. He did not particularize as to what section of the country he had peregrinated through in compassing this 15,000 miles. This is unfortunate, as it gives us no satisfactory criterion as to how widely extensive is this avowed popularity of the President as an aspirant to succeed himself.

One fact can be asserted, and that is, Mr. Hampton did not, in his 15,000 miles, "take in" the Pacific coast States. Had he done so, and had interested himself to ascertain the sentiment of the masses in this section as to Mr. Roosevelt and his aspiration, he would have learned that there is far from universality of sentiment favorable to the President, even among Republicans.

In this city and State there is no concealment of desire among the politicians, and many who are not politicians, that something may transpire to assure Mr. Roosevelt's defeat for the nomination. This is not ascribable so much to any dislike entertained for the President, as it is to apprehension that he is not the candidate who could with certainty win.

Mr. Hampton to the contrary notwithstanding, there is abundant evidence to show that this feeling is by no means limited to this section; and the action of many State's conventions this year may be looked to to attest this fact.

"A man who can win!" This will be the convention slogan of both parties this year, and every other consideration will be subordinated. I am, sir,

JNO. AUBREY JONES.

A Discovery of America

ONE of the recent "Parsifal" performances at the Metropolitan Opera House was attended by a large delegation of music-lovers from Philadelphia, who had bought up most of the first-floor seats for the occasion. A certain well-known operagoer met a journalistic friend while promenading in the lobby after the first act, and they stopped to discuss the merits of the performance.

"Did you know," said the friend, "that there's a party of 400 Philadelphians in the house to-night?"

"Indeed?" replied the first-nighter. "Why don't you interview them, and get their impressions of America?"

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

MANY BEVERAGES

are so vastly improved by the added richness imparted by the use of BORDEN'S EAGLE BRAND CONDENSED MILK. The Eagle Brand is prepared from the milk of herds of well fed, housed, groomed cows of native breeds. Every can is tested and is therefore reliable.—[*Adv.*]

A WELL-APPOINTED home is scarcely complete without telephone service. Low rates. Efficient service. New York Telephone Company, 15 Dey Street, 111 West 38th Street.—[*Adv.*]

A CROWNING achievement of American industry, COOK'S IMPERIAL EXTRA DRY CHAMPAGNE. It is famous for exquisite bouquet.—[*Adv.*]

A HEALTH GIVER and a health preserver; Abbott's Angostura Bitters. At druggists.—[*Adv.*]

PISO'S CURE is an effectual remedy for Cold on the Lungs. Sold by all druggists. 25c.—[*Adv.*]

GREAT STRIDES OF THE PRUDENTIAL.

THE claim of The Prudential Insurance Company of America that it "Has the Strength of Gibraltar" is amply justified by the figures shown in its annual statement, just published.

From these figures it appears that no less a sum than $293,000,000 of paid-for life insurance was written during the year 1903, bringing the total amount of paid-for life insurance in force up to the astonishing sum of $931,000,000.

The number of policies in force is over five million, or, in other words, it may be stated that more than one million families enjoy the benefits of life insurance protection through The Prudential.

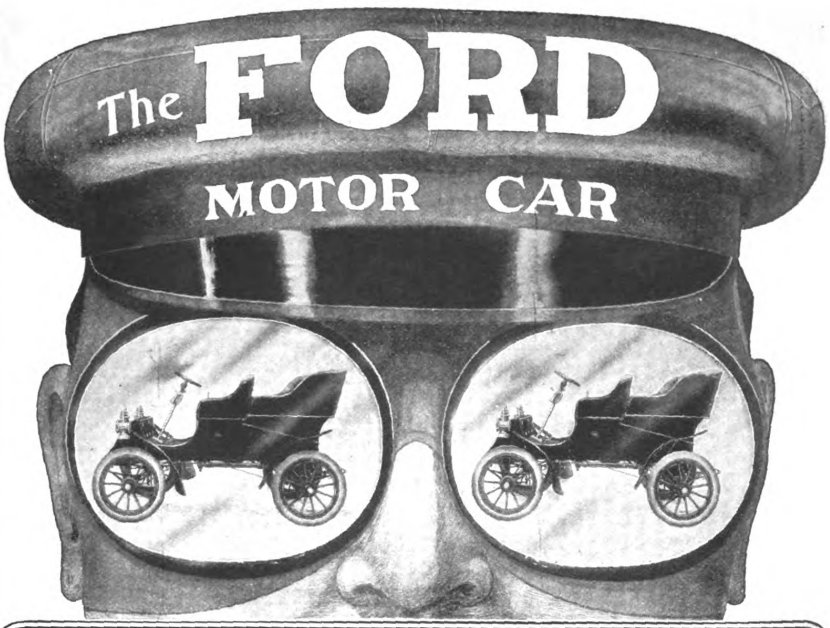
There is a surplus of more than $10,000,000 available, to be drawn upon if necessary, and Prudential policy-holders are to be congratulated upon the strength and prosperity of the institution in which they have invested their savings. Write to the Home Office of the Company, Newark, N. J., for information concerning its policies, which furnish guaranteed protection to the family as well as dividends to the policy-holders.—[*Adv.*]

ADVERTISEMENTS.

DOCTOR EXPLAINS

His Article in the Medical Magazine About Coffee.

One of the most famous medical publications in the United States is the "Alkaloidal Clinic," in a recent number of which an entertaining article on coffee, by a progressive physician and surgeon, is published. In explaining his position in the matter, this physician recently said:



"In the article in question I really touched but lightly upon the merits of Postum Food Coffee. I have had several cases of heart trouble, indigestion and nervousness where a permanent cure was effected by merely using Postum in place of coffee without any other treatment.

"In my own family I have used Postum for three years, and my children actually cry for it and will not be satisfied with any other beverage. Indeed, they refuse to eat until they have had the customary cup of Postum, and as it is a rebuilder, and does nothing but good, I am only too glad to let them have it.

"To get the best results we boil the Postum at least 20 minutes, and it is then settled by adding a little cold water; then the addition of fresh cream makes a beverage I now prefer to the very best coffee." Name given by Postum Co., Battle Creek, Mich.

Authorities are agreed that Postum is a wonderfully quick and sure rebuilder. Ten days' trial in place of coffee proves it.

Look in each package for the famous little book, "The Road to Wellville."

In the eyes of the Chauffeur

is the most satisfactory Automobile made for every-day service. The two cylinder (opposed) motor gives 8 actual horse-power, and eliminates the vibration so noticeable in other machines. The body is luxurious and comfortable and can be removed from the chassis by loosening six bolts.

Price with Tonneau, $900.00
As a Runabout, $800.00

Standard equipment includes 3-inch heavy double tube tires

We agree to assume all responsibility in any action the TRUST may take regarding alleged infringement of the Selden Patent to prevent you from buying the Ford—"*The Car of Satisfaction.*"

We Hold the World's Record

The Ford "999" (the fastest machine in the world), driven by Mr. Ford, made a mile in 39⅘ seconds—equal to 92 miles an hour.

Mr PENNYCOOK'S BOY

BY J·J·BELL

AUTHOR OF "WEE MACGREEGOR"

SMILING genially, Mrs. M'Lardy, Mr. Pennycook's best and stoutest customer, departed from his grocery establishment with nearly three shillings' worth of goods in her hands and with the end of a new ball of twine pinned to the tail of her mantle.

Mr. Pennycook, adjusting his spectacles, saw the twine flowing from the round tin box in which he had placed it less than an hour ago; but for nearly a minute he merely gaped at the mysterious occurrence, while his message-boy, doubled up behind a pile of "dummy" tea-chests, stuffed more and more of his dirty handkerchief into his humorous mouth and quaked with unholy delight.

For a moment the flow of twine stopped. (Mrs. M'Lardy was thinking to cross the street.) Then the flow recommenced. (Mrs. M'Lardy had made up her mind to cross the street.) The flow quickened and suddenly became a rush. (Mrs. M'Lardy had dodged a vehicle which had caught and run away with the twine.)

The twine fairly whirled out, and, coming to a knot, jerked the box off the counter, along the floor, and into the street with a clank and a clatter which roused the grocer from his stupor and caused the half-suffocated boy to remove his cotton gag and indulge in a wild gasping guffaw.

"Ye wee rascal!" cried Mr. Pennycook, toddling round the pile of tea-chests, "is this anither o' yer unseemly—I micht say deevilish—pranks? Ye wis purtendin' ye wis soopin' the flure, an' a' the time ye wis preenin' the string to the leddy! But I've got ye this time! I've catched ye rid-heidit—I mean rid-handit—i' the vera act! Whit ha've ye got to say fur yersel'? Eh?"

"I—I jist dune it fur a bawr," said the boy, trembling under his master's grip.

"A bawr? A bonny kin' o' bawr! Apairt frae losin' me ma best customer, d'ye think that string an' the string-boax furbye, costs naethin'? 'Deed, I've a guid mind to get the polis to ye—ye—ye wee— Na! I'm no' goin' to swear, though Guid kens I've an excuse fur bad—ay, exceedin' bad language! Whit ha'e ye got to say fur yersel', ye wee—I mean, John Robison? Eh?"

John Robertson struggled, but said nothing.

"If it wis the first time," continued Mr. Pennycook, mastering his temper, "I micht gi'e ye chance. But it's aboot the dizzenth—"

"It's no' the dizzenth," cried the boy. "An'—an' I didna mean to dae 't. But—but she wis that fat!"

"That's nae excuse! It's no' her fau't if she's fat. When ye pit hauf a pun o' pease-meal in Mistress Cameron's emburella, ye said ye done it because she wis thin, an'—"

"Naw. It wis because she wis aye sayin' she wis aye lukin' upwards fur a shoor o' blessin's, an'—"

"Dinna be unreverent, ye wee—I mean, John Robison! I can thole stupeedity, but loose conversation I canna permit. Ye'll gang on Thursday nicht—that's the last day of the year, an' I'll pay ye up 'til the—"

"On Hogmanay?"

"Ay, on Hogmanay! Jist that! This is Tuesday, an' I'll no' ha'e ye in the shope a meenit efter Thursday nicht. D'ye hear?"

"Ay, I hear." And John Robertson groaned. "Whit 'll ma auntie say?"

"I'm no' heedin' whit yer auntie says; but if she gi'es ye a guid leatherin' I'll ha'e no objections. I cud never lift my haun to a young yin, but if yer auntie can dae 't, I'll ask a blessin' on her—her operations. 'Deed, ay! An' if ye stairt the New-year in pain, ye'll maybe feenish it in—in pleesure. I sincerely trust an' hope ye will, fur I've nae ill feelin's towards even the warst o' ma fella bein's. But ye've got the kick frae me onyway; an' it serves ye richt, ye wee—I mean, John Robison."

"Can I no' get stoppin' till efter Ne'er-day?" the boy pleaded.

"Na!"

"Aw, Maister Pennycook!"

"Na, na! Ye'll gang on Thursday nicht fur certain."

"But I'll nae dae 't again."

"Dae whit?"

"Ony o' ma—ma tricks."

"Ye'll no' get the chance! An' if ye try ony o' them afore Thursday I'll get the polis to ye! I've had ower lang patience wi' ye! I've peyed ye a guid wage, an', like the serpent in the parable, ye've bit the haun that—"

"I never bit yer haun."

"I wis speakin' feeguratively."

"Whit?"

"I—I wis speakin' in a parable, as it were." He abruptly loosened his grip on the boy's arm, saying: "Noo awa' wi' ye, an' feenish yer soopin', fur I'm gaun to shut the shope. Haste ye."

John drew his sleeve across his eyes. "Will I no' gang oot an' luk fur the string-boax?" he asked, dolefully.

"Tits! I furgot aboot that. Ay; ye can luk fur it, but I doot ye'll no' get it. It 'll be at the ither end of the toon by noo. If ye dinna see it near by, jist come back. Dinna stairt caperin' aboot the street."

"I—I wisna gaun to caper," mumbled John, in aggrieved tones.

"Aweel, it's no' ma fau't if I canna trust ye," returned the grocer, more regretfully than cruelly. "Haste ye, noo, an' try to learn no' to speak back to yer elders."

When the unruly but soft-hearted youngster had gone out into the night, Mr. Pennycook resumed his place behind his counter and opened his ledger. He dipped his pen, but allowed the ink to dry thereon.

"Na, na," he said to himself and sighed; "he's ower muckle fur me. He maun gang this time. I've been saft lang enough, an' he jist thinks he can dae onythin' he likes wi' me. But I'm gettin' fly fur him, an' he'll no cajole me anither time. Guid kens whit garr'd me tak' sic a fancy to the laddie at the beginnin', fur o' al' the impiddent rascals I ever cam' across he's the warst. An' I've pit up wi' his pranks fur near sax month, an' gied him mair chances nor I cud coont. But he's had his last. Ay, he has that!" Mr. Pennycook dipped his pen once more and endeavored to concentrate his mind on his ledger. At the end of ten minutes, however, he became anxious and went round to the door. "I hope he hasna got rin ower," he thought, as he looked up and down the street. "I sudna ha'e let him gang efter the boax. An' he'll be disappintit onywey, fur I doot it's disappeart furever. Aw, is that you, John?"

"Ay," replied the boy, dejectedly. "I didna get it."

"Did ye no'? Awell, ye best gang hame noo. It's time ye had yer supper."

"Am I no' to soop the shope, Maister Pennycook? I'll dae 't if ye like. I'm no' that hungry."

"Ye can dae 't i' the mornin'. See an' no' be late."

"I'll be awfu' early," said John, in a whisper, with an upward glance at the simple, elderly face.

Mr. Pennycook was gazing across the street and affected not to hear.

"I—I'm sayin' I'll be awfu' early," the boy repeated, unsteadily.

"Jist that," said the grocer at last. "Noo haste ye hame." He turned, without looking at the youngster, and passed into the shop.

For an instant John thought to follow, but as he made the first step a sudden hopelessness came upon him, and he fled. He had sinned once too often. He had had his last chance. . . . And what was he to say to the grim woman, his aunt, with whom he had dwelt as long as he could remember, and who, on receiving his weekly wage, was wont to remark that it was high time he was earning money? What was he to say to her?

Mr. Pennycook, after feeling sure that the boy had gone, put up the shutters, locked the door, and proceeded to dust the counter and shelves and to sweep the floor.

"If I had let him catch me e'e," he thought, "I wud ha'e been dune fur; I wud ha'e gied him anither chance, an' been sorry ever efter. I'm gled I wis firm an' gied him the kick. Ay, I'm gled I

The Island Battle

By Will Carleton

This poem was read by the author on February 9 at the 250th anniversary of the founding of the Old Dutch Church, the first church built on Long Island, which stood at the corner of Flatbush Avenue and Church Street, Brooklyn. In the battle of Long Island the church was used as a hospital. During the recent anniversary ceremonies, which were given under the auspices of the Daughters of the Revolution, tablets commemorating the bravery of the soldiers killed in the battle were unveiled.

...rt far from where the ocean rides
Its pale steeds to our country's door,
...t far from where the sullen tides
Keep conflict with the wealth-fringed shore,
...ithin a tiny forest lay
A fair and peaceful village;
...d round it ripened, day by day,
The fruits of thrifty tillage.
...id sultry hours, the farmer pressed
...s weary toil, with home-made zest;
...d, safe beyond the winter gloom,
...t sang the happy wheel and loom.

...t far from where white cloudlets raise
Their peaceful folds on high,
church-spire grew from prayer and praise,
And clambered toward the sky.
...re many a Sabbath-gathered band
The hymns of olden days were singing;
...re memories of a fatherland
Around the homesick heart were clinging.
...re orange-blossoms perfume shed
...ound the newly-wed;
...re funeral crape its shadows threw
...on the vacant pew.

...sylvan shrine! O sacred rill
From fountains that should never cease!
...gate of Heaven! why could not still
Your golden hinges turn in peace?
...hy should the feuds of court or king
Why should the patriot's pleading
...is rustic temple havoc bring,
'Gainst angels' interceding?
...hy should this church-bell, that above
...s voiced the thoughts of peace and love,
...ow fling upon the morn afar,
...e loud alarum-notes of war?

...you who cannot through your tears
See, on some future day,
...e nation of the brighter years
Walk its majestic way,
...is not o'erstrange that you should learn
To join with power instead of braving,
...ough tyranny some rights may spurn,
And tribute wrench from every saving;
...t you who sight the freedom-morn,
...rough clouds of wrath and scorn,
...u who can fight for God's designs,
...ow grand your glory shines!

...ross the trembling vale and hill,
Not asking why or what 'tis for,
...e hosts of Europe, trained to kill,
Commence the day's unequal war.
...ow scythes of death, by England swung,
Their sharpened steel are flashing;
...ow Hessians, from their own homes wrung,
Through others' homes are dashing.
...ow English heroes, who have bought
...ar fame at battles fiercely fought,
...o well what they were sent to do,
...d rend the future city through.

...alf-fed, half-trained, but in their eyes
Shrewd knowledge of events,
...e patriots of the land arise,
Unto the land's defence.
...t-generalled, still they strive at odds,
The lore of future battles learning;
...t-numbered, still their fight is God's,
And they immortal fame are earning.
...ey who emerge from this, henceforth
...e men of grander worth;
...d they who in the carnage die,
...n yet fight from the sky.

...rough mists of night, our soldiers sweep
Across the river's friendly ways,
...t from their muffled oars, there creep
True propheecies of future days.
...ou, Hessians, yet will gild the fame
Of this day's tall defender;
...u, proud Cornwallis, wince at shame
Of world-renowned surrender;
...ou, court and king, will wonder why
...ou fought this battle, by-and-by;
...ou, England, will some day love best
...is new-born nation of the West!"

This half-tone reproduction of "Winter Winds" only partially conveys the beauty and design of the lithographed plaques.

The four Season Plaques (containing no advertising) and the Calendar Plaque make beautiful and artistic decorations.

The Anheuser-Busch Art Plaques

With Calendar Plaque for 1904

AT GREAT expense, Anheuser-Busch Brewing Ass'n has secured from the brush of the celebrated color artist, A. Von Beust, a series of magnificent oil paintings, representing the artist's conception of the four seasons. These are reproduced with splendid fidelity as to detail and coloring, in the form of four plaques, "Spring Breezes," "Summer Flowers," "Autumn Riches," "Winter Winds," and an additional plaque containing the twelve monthly calendars for 1904. The five plaques are each 12 inches in diameter, lithographed in the highest style of art, fourteen printings on finest ivory china-finished cardboard, with relief embossing, giving the effect of hammered metal rims.

The five plaques will be mailed to any address on receipt of 25 cents or the tops of twelve metal caps from Malt Nutrine bottles sent to Malt Nutrine Department, Anheuser-Busch Brewing Association, St. Louis, U. S. A.

Malt-Nutrine A food in liquid form easily assimilated by the weakest stomach. Invaluable to nursing mothers and feeble children, gives appetite, health and vigor to the weak and ailing. Sold by druggists and grocers.

(Continued from page 248.)

done it. . . . A' the same, he'll ha'e plenty to dae the morn wi'oot soopin' oot the shope. An' it might remind him o' his disgrace, puir laddie. It's no' fur me to offend a wee yin; an' when he gangs he'll gang wi'oot ony ill feelin' frae me. . . . I yinst thocht, bein' a single man an' no' sae young, that I micht ha'e trained up John Robison to be mair nor a—a hired servant to me. But that wis a daft thing to think. The laddie's ower steerin' fur an auld-fashioned business like mines. He's got to get his horns oot, an' I canna thole his cairry-ons. But we'll pairt freens, I hope, fur o' a' the laddies that ha'e been wi' me, there wis never yin that cam' sae near—sae near to ma—"

Mr. Pennycook's thoughts were interrupted by a knocking at the door.

"It'll be John back," he muttered. "I maun be vera firm—ay, an' severe, if necessairy."

But when he opened the door he discovered a middle-aged woman, his married sister, and his sole near relative.

"Come in, Janet," he said, holding out his hand.

"I'm no' comin' in, Peter, thenk ye. Keep yer distance," she replied, gently.

"Whit's wrang?" he asked, noticing her worried and wearied face.

"Meg an' Jamie ha'e baith got the measles, Peter, so ye mauna come to oor house on Ne'er-day. I jist cam' to tell ye, fur I didna want ye to—"

"But come inside, Janet, ma dear. Ye're lukin' fair forfochen. I'm no feart fur the measles," he said, kindly. "Come in till I gi'e ye a drap o' ginger wine. It's gey cauld the nicht."

"Na, na, Peter; the measles is gey sair on auld yins, an' I wudna gi'e ye the infection for onythin'. I'll no' *come* ower the doorstep, but if the wine's handy, I cud tak' it."

The grocer brought it in a twinkling. "There ye are, Janet, wumman. An' are the weans bad?"

"No' serious," replied his sister, coughing, "but it's naethin' to lauch at. Rubbert's gey anxious, but he's jist—"

"Ay; it's sair on the fayther," said Mr. Pennycook, sympathetically.

"But he's jist a man," continued his sister. "No' that I'm makin' licht o' the trouble, Peter. Ma bairns is *ma* bairns. But I'm vexed to ha'e to tell ye no' to come to the hoose efter a' the years ye've been comin'."

"Never heed, Janet. I'm vexed ye've trouble. I'll jist think o' the mony happy Ne'er-days I've had wi' you an' ye man an' yer bairns, an' I'll jist luk furrit to the next yin. But I wish ye wud come inside."

"Na! An' I maun gang. They'll be needin' *me* at hame, ye ken; an' it's a lang ride i' the caur frae here. But I'm awfu' vexed, Peter, to ha'e to—"

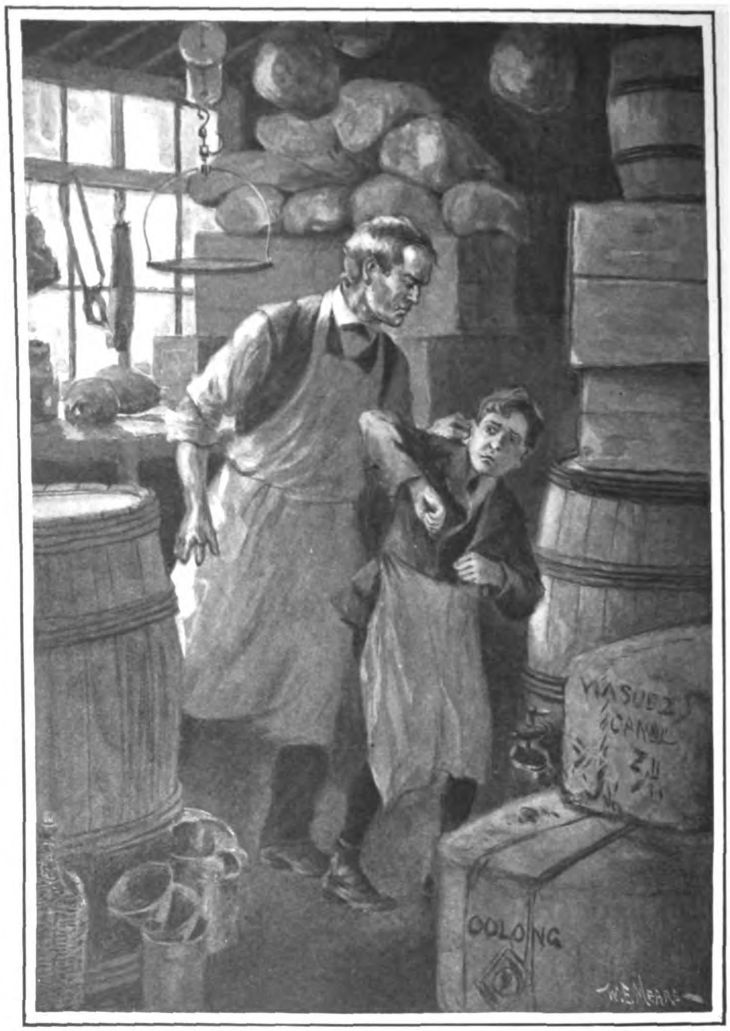
"Toots, Janet! I'll manage fine. Hauld on till I get ye a bottle o' cauf-fut jeely fur yer weans. I hope the measles 'll no catch the aulder yins."

"I hope that tae. But it's jist nonsense aboot the jeely, Peter."

"Havers! Staun' inside oot the draught an' I'll mak' ye up a pairceł in twa ticks."

When his sister had departed with a huge parcel containing all the invalid luxuries the grocer could think of at the moment, the latter locked his door once more, meditated for a minute or two, recollected himself, turned out the lights, and retired to the room at the back of the shop, which he called his home. There he made his evening meal of tea and toast . . . and allowed both to grow cold. He had always been a lonely man, but never had he felt so lonely. His annual joy had failed him.

The boy arrived in good time next morning, and set about sweeping the floor with such energy and diligence that the grocer, who was rearranging the window as attractively as possible, had not the heart to tell him that his labor was unnecessary.



Throughout the day—and it was a busy one—John's conduct was exemplary, though he was obviously depressed, and went his errands sad of face and, to do him justice, sad of heart. His master spoke rarely yet gently, but not once did he allow his glance to rest on the lad, and John realized that there was no hope for him. He had never been in another situation, but he had gathered from many other message-boys that Mr. Pennycook was an employer in a thousand, and one to be esteemed. But it was too late. Mr. Pennycook had obviously hardened.

As he was leaving the shop pretty late in the evening John plucked up courage to say,

"Guid nicht, sir."

"Good nicht, John," returned the grocer, without raising his eyes from his ledger.

If he had only raised his eyes!

Drawn by W. E. Mears

"I'll no' ha'e ye in the shope a meenit. D'ye hear?"

Thursday morning saw the boy at the shop before the door was opened. Mr. Pennycook admitted him with the remark, "Ye're early, laddie," but did not appear to see him. It was the busiest day of the year, and it was nearly midnight when the boy returned to the shop after delivering the last of his messages. He was almost tottering with weariness as he laid down his empty basket and approached the counter where his master was poring over the ledger.

"Is there onythin' else?" John asked.

"Jist yer wages," said the grocer, pushing forward the silver wrapped in paper. "I'm allooin' ye a shullin' extra fur the day, an' anither fur yer Ne'er-day. It's time ye wis hame," he added, without looking up.

"Thenk ye," said John, chokingly. "A—a—a—whit wis the price o' the string an' the boax?" he inquired, with an effort.

"Haud yer tongue," said Mr. Pennycook, still averting his eyes.

John became silent, but he did not depart.

"Awa' hame, laddie," said the grocer, adding up 3*d*, 2*d*, and 7*d*, and putting the total down as 1*s* 4*d*.

Still John did not move.

"Are ye wantin' onythin'?" said Mr. Pennycook, breaking a long uncomfortable silence.

"I'm wantin' a—a character, please."

"A character?" That detail had not occurred to Mr. Pennycook. "Hoo auld are ye?" he asked, merely to gain time to think.

"Fowerteen."

"Mphm. . . . Did ye tell yer mither—"

"Ma auntie."

"Ay; yer auntie, John. Did ye tell her ye—ye wis leavin' me? Eh?"

"No' yet."

"Whit wey?"

"I—I wis feart."

"Feart? . . . Ah, but ye shud ha'e tell't her. But maybe ye thocht

Atlanta Air Is Like Champagne

A visitor walking about the streets of this wonderful town feels as if he were touching the ground only in high laces. So great is the vital energy of the people that Atlanta telephones average twice as many calls as those of ny other city of 100,000 inhabitants. Scenes on Whitehall and Peachtree are hardly equalled except on Broad-ay and Fifth Avenue, New York. The heart of Atlanta resembles the lower part of Manhattan Island.

Atlanta is the capital of a State which produced this year one crop worth one hundred million dollars.

That is the price of the Georgia Cotton Crop, including seed and lint, uplands and long staple. It takes twice s much money to handle cotton at $60 a bale as it did at $30, but the Georgia banks are twice as strong in re-ources as they were ten years ago.

The deposits of Atlanta banks are four times as large as they were ten years ago, and one of them has as much oney on deposit as they all had in December, 1893. All this makes business.

If manufacturers in New England and the Middle States find Atlanta the best gateway through which to ach the Southern territory, the question naturally arises, Why would it not pay to establish plants at Atlanta id save the freight? Raw materials abound in great variety in Georgia and may be had at small cost. Labor's lations with capital are cordial. There is a good understanding between those who wish to work and those who ed to have work done.

A good start has been made in manufacturing already. The product of Atlanta factories is worth over 0,000,000 a year, and about 12,000 hands are employed.

Here's a good combination:

13,500 pupils in public schools.
5,000 students in higher institutions.
12,000 operatives in factories.
40,800 engaged in gainful occupations.

Business growing four times as fast as population and population growing twice as fast as that of the country.
If you want to know the rest, write the Atlanta Chamber of Commerce, or, better, come and see the town.
It is significant that people who have once lived in Atlanta always wish to return.
It is a good place to live and educate your children and a number one place to do business.
The climate is the best on the continent.

t wud be better to tell her the morn. She canna be vexed wi' ye on Ne'er-day. Ye'll e havin' a pairty the morn, dootless?"

"Naw."

"Oh, it'll be jist you and yer auntie beither. That'll be nice. Ye cud tell her hen ye wis leavin' me because ye wis think-n o betterin' yersel', an'—"

"Ma auntie's gaun to a pairty, but I'm o' gaun. I never wis—at a—a—pairty."

Mr. Pennycook put down a horrid blot in-ead of a halfpenny. "Ye—ye never wis at pairty, John?"

John shook his head, and there was a ng pause.

"That's a peety," said the grocer at last, rping his eyes on the ledger. . . . "An' wis wantin' a character?"

"Ay. I canna get anither place wi'oot in"

Mr. Pennycook considered for a minute.

"Ye better come back the morn, an' I'll w what I can dae. But—"

"The morn's Ne'er-day."

"So it is." In an unguarded moment Mr. ennycook looked up. "Laddie!" he cried; laddie, can ye no' be sensible?"

The boy's eyes fell. "I'm sorry," he ispered. "Wull I—wull I soop the flure ere I gang?" he asked, suddenly, in a oarse voice.

"Na; ye needna dae that, but yer micht me the morn and tak' yer dinner wi' me," r. Pennycook blurted out. "An'—an' ye ther stope wi' me fur twa—three weeks I I mak' up ma mind aboot yer char-ter. . . . Awa' hame! Awa' hame!"

"Are ye jokin'?" gasped the boy.

"I'm tellin' ye to gang hame—an' come ro at twa the morn. Gang this meenit!"

The boy could not resist the command, d he went stupidly to the door. But re he halted. There was some small rcement in the street and a bell was ging.

"A guid New-year, maister," he said, with-t being able to help it, as he returned to e counter.

"A guid New-year, laddie," said Mr. Pennycook. "An' guid nicht to ye," he added, abruptly, offering his hand to the message-boy. "I'll see ye the morn."

Mr. Pennycook did not feel quite so lonely that night.

At the end of another year he was still unable to give John Robertson a "character."

Great Britain's Largest Buyer

THE value of South Africa as a market is the subject of some special attention at the present time by reason of a report upon that subject recently presented to the British Parliament. This report shows that the British colonies in South Africa have become of greater importance than any other of the British colonies except India. "Ten years ago," it says, "Great Britain's exports to South Africa were valued at a little under nine million pounds sterling; last year they almost reached twenty-six millions. In 1893 South Africa stood sixth on the list of Great Britain's customers; last year she stood second, and was only beaten by India. It is no rash prediction that this year she will pass India and stand first on the list as the largest buyer in the world of the produce and manufactures of the mother country."

This statement of the great importance and rapidly growing value of South Africa as an importing country lends especial interest to some figures just prepared by the Department of Commerce and Labor through its Bureau of Statistics, showing the growth of exports from the United States to British Africa and to Africa as a whole. These figures show that the exports from the United States to British Africa have grown with even greater rapidity than those from the United Kingdom referred to by the report above quoted. Exports from the United States to British Africa grew from $3,688,999 in 1893 to $33,844,395 in 1903, or, in other words, were nine times as much in 1903 as in 1893, while the exports from the United Kingdom to South Africa grew from $39,896,000 in 1893 to $125,280,000 in 1902, the 1903 figures not being yet available. Thus, while exports from the United States to British Africa are in 1903 nine times those of 1893, those from the United Kingdom were in 1902 but three times as much as those in 1893.

The relative growth of exports from the United States and from the United Kingdom to the territory in question can be more accurately determined by utilizing the figures of the United States for the year 1902, since the figures for the United Kingdom for the year 1903 are not yet available. This shows that the exports from the United States to British Africa grew from $3,688,999 in 1893 to $28,780,105 in 1902, the total for 1902 being nearly eight times as great as that for 1893; while, as already indicated, that of the United Kingdom for 1902 was only three times as great as in 1893.

The Senator's Speech

SENATOR DOLLIVER of Iowa was recently making a notable speech, in which he was constantly interrupted by a Democratic colleague.

"May I ask the gentleman a question?" asked the Democrat.

"No time to spare! Wait till I finish," answered Dolliver.

"It comes in right here. Just a word?"

"I cannot be interrupted. I have but a few minutes—"

"I only want to read a few figures to show—" insisted his challenger.

"Hand up your figures," retorted the Iowa statesman, "and if there's anything in 'em I'll leave them out of my speech!"

Progress of Science

Experiments on the Brain with Electricity

EXPERIMENTS on the brain of a living subject with electric currents have been comparatively rare, as there has prevailed among physicians and physiologists the idea that such a course of experimentation was extremely dangerous. There have recently been published, however, records of some experiments carried on by M. S. Leduc, with the object of using the electric current to produce sleep and of studying its effects on the brain generally. In early experiments it was shown that the brain is the best conductor of electricity in the human body, being about 3000 times more conducting than muscle. It was also observed that when a continuous current was passed through the head from one ear to the other, that the sensation of giddiness was produced, and that objects appeared to revolve in the same direction as the current flowed. However, when the electrodes are placed on the forehead and neck, and the current sent from back to front, the effects are innocuous so long as a mild current is used, and in some cases may be beneficial. According to M. Leduc, the most satisfactory current is one of 4 milliamperes at 30 volts which is broken or interrupted 100 times a second for 9-10ths of the period of the interruption. The first effect noted was the disappearance of the faculty of speech, after which followed the loss of the motor faculties. Under ordinary conditions there is no affection of the respiration or pulse unless the current is increased, and then it may cease. The patient is said to awaken instantaneously from the electric sleep and to experience a feeling of refreshment.

Thorium as a Curative Agent

Among the radioactive substances which have been employed as therapeutic agents is thorium, which, although far less active than radium, is more accessible, and can be used with some success, it is believed, in cases of tuberculosis. Thorium is what is known as a rare earth, and is familiar, as it is employed in the mantle of certain incandescent gaslights. Its radioactivity was first demonstrated by Professor G. Schmidt, and later Professor Ernest Rutherford ascertained that it gave off a radioactive gas which he called an emanation. This emanation has been shown to be antiseptic, antifermentative, and destructive to germ life generally, and it was suggested that thorium inhalations might prove beneficial in cases of tuberculosis. The present method of experimental treatment is either to inhale air that has been passed over a vessel containing water in which nitrate of thorium has been dissolved, or to heat the thorium oxide and allow the patient to inhale the radioactive emanation, which forms a film on the lungs and produces induced radioactivity. This condition is said to endure from one to two days, during which time a beneficial effect on the diseased parts is exerted, and it is necessary for the treatment to be continued at these intervals. Thorium is comparatively inexpensive and within the reach of every one, and the treatment outlined above does not interfere with any other, so that there is nothing to prevent a thorough trial.

A New Explosive

While aluminum has been employed to produce intense heat for welding and similar purposes for some years, it is only recently that it is found as an ingredient of an explosive where this action is also required. In "ammonal," a new explosive invented by an Austrian named Fuhrer, powdered aluminum is combined with carbon and ammonium nitrate. Aluminum has a high affinity for oxygen, and when these elements unite intense heat is generated, which, in the case of the explosive, raises the temperature of the gases produced by the decomposition of ammonium nitrate. Increasing the temperature is equivalent to increasing the explosive effect, and preliminary results indicate the high power of this new explosive. If the addition of aluminum to an explosive compound has the beneficial result claimed in this instance, there is no reason why it should not find wider application.

Club Cocktails

The art of cocktail mixing is to so blend the ingredients that no one is evident, but the delicate flavor of each is apparent. Is this the sort of cocktail the man gives you who does it by guesswork? There's never a mistake in a CLUB COCKTAIL. It smells good, tastes good, is good—always. Just strain through cracked ice. Seven kinds—Manhattan, Martini, Vermouth, Whiskey, Holland Gin, Tom Gin and York.

Music

A Tone-Poem from Russia

ANY one who is disposed to doubt the importance of the neo-Russian as a factor in the creative music of to-day should make haste to examine the score of "The Cliff," an orchestral fantasy by Sergey Vasilyevich Rachmaninoff. Mr. Modest Altschuler and the orchestra of the Russian Symphony Society gave the work on January 28 in Cooper Union Hall, at the second of the Society's series of six concerts devoted to the performance of Russian music. It had never before been played in America, and Mr. Altschuler is deserving of sincere gratitude for letting us hear it.

It would not be easy to exaggerate the significance of this tone-poem of Rachmaninoff's. The composer is one of the most progressive and independent of those ultra-modern Russians whose music has not always quite upheld the popular belief in its epoch-making qualities, and this work of his goes far toward justifying those who have claimed for contemporary Russian music a notable and characteristic excellence. The poetic substance of the score is derived from the first two lines of Lermontoff's poem, "The Cliff":

> Overnight has slept the golden cloudlet,
> On the bosom of the Cliff, the giant. . . .

and, inspired by the conception of the poet, Rachmaninoff has achieved what one may call, without exaggeration, the most impressive piece of orchestral scene-painting since Wagner. It is not merely a picturing of externals: Rachmaninoff has sought rather to embody in music the deeper significance of his theme, and he has succeeded memorably. His music voices, with superb and elemental power, an impression of the natural world in its most majestic aspect. Moreover, it is surprisingly original—as individual in invention as it is high and sustained in imagination, in beauty, in intensity of vision. He has written, as Matthew Arnold would have said, "with his eye on the object": but back of the seeing eye were the brain and the temperament of the poet, the master of moods.

It is to be hoped that Mr. Altschuler will see his way to repeating the work at a future concert of the series.

A Philharmonic Concert

At its fifth concert of the season, on January 30, the Philharmonic Society offered two features of exceptional interest: the appearance of Mr. Alfred Reisenauer, the German pianist and pupil of Liszt, as soloist, and the performance of a tone-poem, "Hero and Leander," by Victor Herbert, who conducted. Of Mr. Herbert's symphonic version of the antique tale of the swimmer and the maid, there is little to be said that was not remarked at the time of its first performance, three years ago, by the Pittsburg orchestra. Mr. Herbert, when he is not producing gay and charming scores of the "Babes in Toyland" order, diverts himself with the writing of serious music of the most ambitious and modern type. His "Hero and Leander" is an admirable work. It has much of original beauty, of finely wrought eloquence; and it is unfailingly significant and poetic.

Of Mr. Reisenauer, let it be said briefly that he proved himself, so far as the Liszt concerto which he played would permit, to be an artist of uncommon temperament and intelligence, and a technician of brilliant powers.

A Recital by Harold Bauer

Mr. Harold Bauer, one of the most satisfying and accomplished of living pianists, has been heard here in public far too seldom of late. He gave a piano recital on the evening of January 30, at the Finch School, under the auspices of Mrs. James Wells Finch, playing a programme which showed to the best his admirable qualities, and comprising a Beethoven sonata, a prelude and fugue by Mendelssohn, Schumann's Papillons, two Chopin pieces, Schubert's Theme and Variations in B flat, and a Liszt Rhapsody, the thirteenth. In whatever he attempts, Mr. Bauer is invariably artistic; his virtuosity never conceals the interpreter—the sensitive musician.

CHERRY

By BOOTH TARKINGTON, Author of "Monsieur Beaucaire," etc.

That the author of "Monsieur Beaucaire" could write "Cherry" argues well for his versatility, and that any one at all could write "Cherry" proves a sense of humor as subtle and restrained as it is delightful. The story is related by one Sudgeberry, a young man of a century ago, who is completing a course of study at "Nassau Hall," in Princeton, and the romance that he tells is that of an unusually pretty girl with a more than nimble wit. She is by far Mr. Tarkington's most attractive heroine. The story of her courtship is clever comedy of a high order.

Illustrated in Color by A. I. Keller. Title-page and End Papers in Colors. Decorated Chapter Heads and Tail Pieces. Ornamented Cherry Cloth, Gilt Top, Uncut Edges, $1.25

BALTIMORE'S GREAT FIRE

An account from our special correspondent, giving some of the impressions of an eye-witness of one of the most disastrous fires our country has ever known

BALTIMORE, *February 8, 1904.*

At ten o'clock Monday night, the entire business section of Baltimore, covering an area of about 140 acres, was a mass of ruins. Of the 2500 buildings which lay in the heart of Baltimore's business section little was left but huge masses of crumbling brick and stone and twisted girders. At that hour, as I saw from the roof of the highest business block left standing in Baltimore, just across the street from the point where the fire started, a fierce fire was raging in the warehouses and along the docks in the southeastern part of the city. Between these two points fires were blazing in the ruins, lighting up the skeleton walls and the piles of crumbling débris. These fires were allowed to burn; the real fighting at this hour was along the docks. Engines were stationed, however, at many points on the edge of the district bounded on the west by Liberty Street, on the north by Lexington Street, and on the east by Jones's Falls.

In many instances the firemen, worn out by more than thirty hours of work without sleep, played the streams of water upon threatened buildings by fastening the hose to dry-goods boxes, while they themselves took shelter in doorways or went to sleep on the icy pavement. One fireman who had fallen asleep in the street was aroused by his captain, and when questioned by him as to how long he had been without sleep, replied: "A long time—three days. I don't remember." In one engine-house which I visited through the courtesy of Mr. Muth of Baltimore, a dozen men came in, some with slight injuries, which were cared for by the doctor who was present, others exhausted by their long fight with the fire. Just after the doctor left an alarm sounded for a fire in another part of the city, and within three minutes these men who had been fighting the big fire since it began were on their way to protect the residential portion of the city.

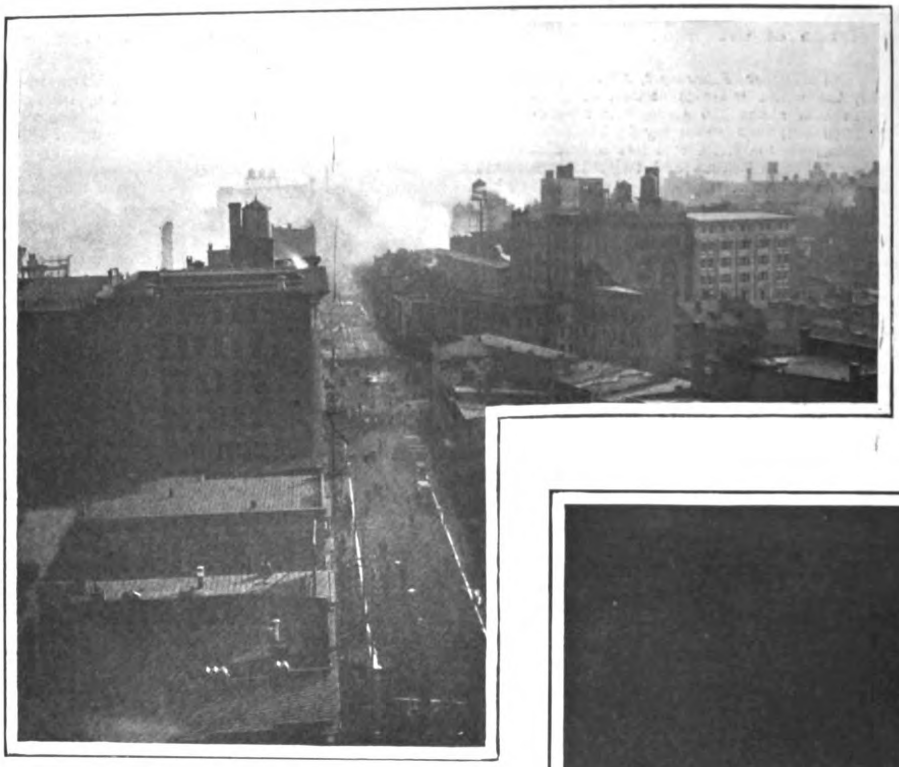
The first engine to reach the scene of the fire, in response to an automatic alarm in the warehouse of Hurst & Co., where the fire started, had only about two blocks to go to the scene of the fire. Captain Jordan of this company said to-night: "My first effort in order to get a line of hose into the burning building was to break open the door. I had hardly put my shoulder against it when I was warned by a cry from the men to run for my life, and at that instant there was a tremendous explosion, and flames burst through the roof of the building and were carried immediately to the buildings adjoining." A high wind was blowing from the southwest, and the fire spread rapidly toward the northeast, in the direction of the Court-House, Post-Office, and City Hall, consuming, one after another, great mercantile houses in its path. When the fire had reached Lexington Street, at the junction of North Calvert Street, the wind suddenly veered in the opposite direction. It was this fortunate circumstance which saved not only the city buildings, the Post-Office, Court-House, and City Hall, but prevented the spread of the fire to the home district north of Lexington Street. As it was, the fire swept back to St. Paul Street and down and across the parallel and intersecting streets toward the southeastern part of the city, until for a distance of more than ten blocks the magnificent buildings in the financial district of the city had either been gutted by the flames or dynamited in the hope of preventing their spread. Some idea of the rapidity with which the fire spread through many of the so-called "fire-proof" buildings may be had from the fact that while the first automatic alarm was received at 10:48, the clock in the Maryland Trust Company, at the northwest corner of Calvert and German streets, four blocks from the point where the fire started, was stopped by the flames at twenty minutes past eleven. This building was one of the few whose walls were left standing, although the interior was as thoroughly destroyed as if it had been of paper. I was told, however, that here, as in many of the trust buildings, the contents of the vaults were not seriously injured. One trust company was out of the fire district. Within two doors of the *Sun* office, which is now in ruins, two watchmen were locked in a trust building during the fire. One of the watchmen was confined in a vault, and could only be released with the time lock. While all the other buildings in this neighborhood were destroyed, this one building happened to escape serious injury.

The Shaded Parts of the Map show the Extent of Territory Destroyed by the Flames

It was the general impression on Monday afternoon that martial law had already been established. Federal troops and militia were patrolling all the streets bordering on the fire district, and no one was allowed to pass without a permit from the Attorney-General or from the president of the Police Commissioners. As a matter of fact, the troops were in control of the city, but it required a special session of the Legislature to authorize the Governor to declare martial law. The same General Assembly at Annapolis passed a bill authorizing Governor Warfield to declare ten successive legal holidays, in order to protect the financial interests of the city by extending credit.

Outside the fire lines tens of thousands of people, held in check by the drawn bayonets of the militia, stood all day and late into the night gazing over the ruins. Within the lines, even as late as Monday afternoon and evening, one had not to go very far in any direction before being stopped by piles of smouldering débris or by blinding, suffocating smoke from the cellars and interiors of those buildings of which a part of the walls still remained standing.

A tangled network of electric wires was held suspended over the streets of the ruined district, sometimes reaching from half the height of a tottering wall to the ground.



Of the Baltimore *Sun* building, the first iron building to be built in America, only four pillars were left standing. Just around the corner, the Merchants Club, and next door to that the Stock Exchange Building were completely ruined. Farther on, at the head of German Street, I saw through a grating a fierce blaze from the coal-bins in the cellar of the First National Bank. Of this bank there was nothing left but the walls.

The fire covered an area which in New York might be included in the district from Wall Street to Park Row and from Broadway east to the river-front; it is a conservative estimate to place the loss at one hundred million dollars.

A View of the Burned District of Baltimore as it looked before the Fire

HARPER'S BAZAR FOR MARCH

Articles of Special Interest

Dr. Henry Van Dyke contributes the third of his "Essays About Girls."

The first of a strong series of Studies of Domestic Relations, entitled "Family Episodes, No. 1," by Marion Foster Washburne, with illustrations by George Wright.

A one-act play, "At the Eleventh Hour," by Edith Brander Matthews, illustrated by Lester Ralph; also, a poetic tragedy, "The Ginger Cookie," by Francis Barine, with drawings by Fanny Y. Cory.

Two special articles: "Sulu and its Sultana," by Florence Kimball Russel, illustrated with photographs; and a brief study of Josephine Dodge Daskam and Fanny Y. Cory, entitled "Two Clever Women," with photographs.

In short-story vein are "An Ill-Regulated Courtship," by Elia W. Peattie, and "Aunt Margaret's Busy Day," by Marion Foster Washburne; Clarence Underwood and F. Y. Cory are the artists.

The newest and most effective SPRING FASHIONS from Paris, London, Vienna, and New York are discussed by the leading authority, A. T. Ashmore, exclusive drawings being furnished by the Roses, of Paris.

"Mme. Blay's Recipes," "The Nursery," by Ada Sterling, and an article by Josephine Grenier on "Men's Dinners," with illustrative photographs, complete the issue, together with the usual Pattern Supplement, and Departments for Girls and Housewives, Questions of Good Form, Household Decoration, Humor, Editorial Comment, etc.

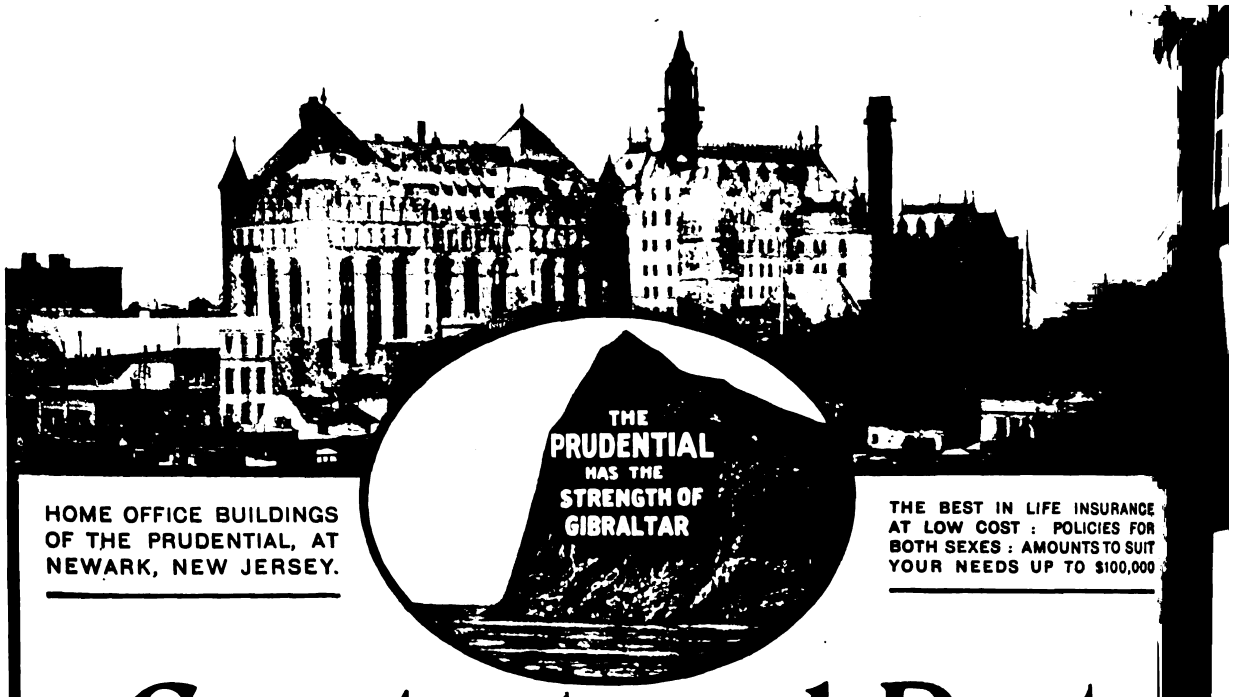
Lux Crucis

A Tale of the Great Apostle



By SAMUEL M. GARDENHIRE

NO figure in religious history stands out so vividly—no historic personality is so magnetic—as that of Paul the Apostle. In the palace at Cæsarea this story opens, when Paul took the stand which called out that famous comment: "This man might have been set free if he had not appealed unto Cæsar."

In and out of the great drama of Rome in her throes of change moves Paul, quietly wielding his titanic power. In "Lux Crucis" we learn to know him as a tender, loving man. We see Nero and the rottenness of his court; we see the Christians going triumphantly to their doom; we see Rome burn and evil flourish; and we see at last the tumbling of the old gods. And all the time we are following the story of a Roman officer's love for a Christian maid—a tale that even without this wonderful setting would stand out as a love story of strangely vital power and charm.

The Equitable

Life Assurance Society

Of the United States.

HENRY B. HYDE, FOUNDER.

Forty-fourth Annual Statement, for the Year Ending December 31, 1903.

ASSETS.

Bonds and Mortgages	$74,345,110.94
Real Estate in New York, including the Equitable Building	21,776,594.13
United States, State, City and Railroad Bonds and other investments (market value over cost, $15,035,296.00)	195,454,966.00
Loans secured by Bonds and Stocks (market value, $25,265,755.00)	20,333,500.00
Policy Loans	18,834,127.74
Real Estate outside of New York, including 12 office buildings	15,439,281.54
Cash in Banks and Trust Companies at interest	25,625,769.16
Balance due from agents	1,521,245.95
Interest and Rents. (Due $110,677.93 Accrued $122,125.14)	232,803.07
Premiums due and in process of collection	5,153,164.00
Deferred Premiums	2,509,473.00
Total Assets	**$381,226,035.53**

INCOME.

Premium Receipts	$58,637,889.63
Interest, Rents, etc.	15,080,461.30
Income	**$73,718,350.93**

DISBURSEMENTS.

Death Claims	$18,318,482.94
Endowments and deferred dividend policies	7,682,083.44
Annuities	883,278.00
Surrender Values	2,383,532.34
Dividends to Policyholders	5,682,295.55
Paid Policyholders	**$34,949,672.27**
Commissions, advertising, postage and exchange	7,734,569.13
All other disbursements	6,808,769.75
Disbursements	**$49,493,011.15**

We hereby certify to the correctness of the above statement.

FRANCIS W. JACKSON, *Auditor.* H. R COURSEN, *Assistant Auditor.* A. W. MAINE, *Associate Auditor.*

LIABILITIES.

Assurance Fund (or Reserve)	$303 457,838.00
All other Liabilities	4,414,059.50
Total Liabilities	**$307,871,897.50**
Surplus	**$73,354,138.03**

ASSURANCE.

INSTALMENT POLICIES STATED AT THEIR COMMUTED VALUES.

Outstanding Assurance	**$1,409,918,742.00**
New Assurance	**$322,047,968.00**

We hereby certify to the correctness of the above statement. The Reserve as per the independent valuation of the N. Y. Insurance Department, is $301,632,153. For Superintendent's certificate see Detailed Statement.

J. G. VAN CISE, *Actuary.* ROB'T HENDERSON, *Assistant Actuary.* R. G. HANN, *Associate Actuary.*

We have examined the accounts and Assets of the Society, and certify to the correctness of the foregoing statement.

WM. A. WHEELOCK, V. P. SNYDER, C. LEDYARD BLAIR, GEO. H. SQUIRE,
Special Committee of the Board of Directors.

JAMES W. ALEXANDER, *President.* JAMES H. HYDE, *Vice-President.*

COMMENT

WAR has come between Russia and Japan. There was no formal declaration of war. Japan learned that Russia was not disposed to grant her "irreducible minimum," diplomatic intercourse ceased, and forty-eight hours afterwards rumors of the clash of arms began to be received. We have learned at this writing of the successful assault upon the Russian battle-ships *Retvizan* and *Czarevitch* and the cruiser *Pallada* by Japanese torpedo-boats on the night of February 8, in the outer harbor of Port Arthur. The three ships were so seriously damaged that it was necessary to run them aground in shallow water at the harbor entrance. Next morning, Tuesday, February 9, at eleven o'clock, sixteen Japanese ships appeared off Port Arthur and bombarded the forts and the fleets, putting holes through the battle-ship *Poltava* and the cruiser *Norik* below the water-line, and retiring them from present use. These prompt and surprising naval successes by the Japanese indicate that the Russians are no match for them on the sea. Russian merchant vessels have also been seized, and both Russians and Japanese have landed troops in Korea. Of course the progress of the war now irretrievably precipitated will be watched with intense interest. The world has seen no such conflict as may now be looked for since the Russo-Turkish war of 1877, and it has never seen a well-contested sea-fight between modern war-ships. Our sea-fights with Spain were one-sided, and so were those in 1894-5 between China and Japan. We have all been curious to see what can be done with *modern* machines of naval warfare when properly manned and matched on something like equal terms. But aside from this inevitable sporting interest, the *regret* of Americans that this war has come is deep and universal. We are sincerely neutral, sincerely the friends of both parties. Neither can do the other a great damage without exciting our deep concern. Our trade interests in Manchuria have not availed to make us hostile in spirit to Russia, though the Russian press seems to have credited us with that inclination. We have nothing but regret that our two friends have not been able to find a peaceful solution of their differences, and the prospect that we may find an opportunity as traders in their necessity avails nothing to reconcile us to the vast injury which they seem certain to do one another.

The feebleness of the works of man when assailed by the great forces of nature has been direfully illustrated again by Baltimore's great fire of February 7 and 8. A good start and a high wind made of what seemed at first an ordinary blaze a vast and calamitous conflagration, such as our country has not seen for thirty years, and has never seen but twice before. There was the great fire of 1871 in Chicago and the great Boston fire of 1872. The Baltimore fire ranks between them. Chicago's loss was over two hundred millions; Boston's loss was eighty millions. Baltimore's direct and immediate loss seems likely, at this writing, to approximate one hundred millions. A large share of this will fall upon the insurance companies, the majority of which are much better able to stand such loss to-day than they were thirty years ago. Most of the business part of Baltimore is a vast low heap of smoking refuse. But happily only three or four lives were lost. The indispensable human element in Baltimore is all there still, and is bestirring itself with courage to resume business and gradually replace what is gone. We look for a lesson in every great calamity. The main lesson in this last one is that it pays every city to spend money liberally to supply itself with water for fire purposes, and to maintain the most efficient fire department possible. New York sent nine engines with their crews to Baltimore's help, and we judge from the comments on our men's performance that they were esteemed to be thoroughly proficient in their business, and that cities that suspect that their methods of fighting fires are not quite all they should be may profit by examining the system here. The Baltimore fire showed what the great modern fires have shown before it, that the best of fire-proof buildings will melt away if there is enough fuel near them to make a sufficiently hot fire.

Mr. Hanna's illness gives concern to the multitude of his friends in all parties and in all walks of life. There is nothing in the news about him so far that forbids the expectation of his recovery.

We still adhere to the belief that Mr. Bryan, ex-Mayor Johnson of Ohio, and Mr. W. R. Hearst, of New York, will be unable, in spite of their evident though unavowed co-operation, to control a third of the delegates to the St. Louis convention. For the sake of argument, however, let us assume that they could muster a third of the delegates, or even a few more. Does it follow that they should be suffered through the operation of the two-thirds rule, to dictate the candidate of the Democratic national convention? The two-thirds rule no longer has any excuse for existence. When it was formulated in 1832, it was intended to safeguard the Democrats of the slave States against the selection of a candidate who, in their judgment, could not be trusted to uphold with unswerving fidelity the interests of their section. They used the two-thirds rule to defeat the nomination of Martin Van Buren in 1844, and that of Stephen A. Douglas in 1860. That the suspicion with which those statesmen were viewed at the South was justified seemed to be proved by their subsequent careers. In 1848, Martin Van Buren, by accepting the Barnburner-Freesoil nomination for the Presidency, brought about the defeat of the Democratic *nominee*, Lewis Cass, for he split almost evenly the Democratic vote in New York, and thus gave that State to Zachary Taylor, the Whig candidate. Douglas, as it is well known, gave a zealous support to the cause of the North after the secession movement began.

But for the two-thirds rule either Martin Van Buren or Henry Clay would have been elected President in 1844, and it is probable that in either event the war with Mexico would not have taken place. Again, but for the two-thirds rule Stephen A. Douglas would have been chosen President in 1860, and it is possible that to-day we might still be living under a slavery régime. At present the two-thirds rule can no longer be regarded by Southern Democrats as a policy of life insurance. Inasmuch as they furnish the bulk of the electoral votes to which a Democratic nominee can look forward, they are bound, under any circumstances, to exert in a Democratic national convention the influence to which they are entitled. As things are now, the two-thirds rule can be used to thwart their interests and wishes by a small minority of delegates representing States which a Democratic nominee has little or no chance of carrying. Let the Southern delegates demand, with a close approach to unanimity, the abolition of the two-thirds rule, and no Democratic national convention would be likely to reject the demand. Then a sane and far-sighted majority would have nothing to dread from the populistic element, which has twice wrecked the Democratic party.

With the exception of the eloquent reference to ex-President Cleveland made by Mr. Olney at a Democratic banquet, we have not read in recent years an abler or more loyal speech than that delivered by Mr. Root at the Union League Club

in defence of Mr. Roosevelt's policy, and in advocacy of his nomination for the Presidency. If any Republican leaders imagined that Mr. Root would countenance any attempt to substitute him for his ex-chief on the Republican ticket, they must now recognize their mistake. Evidently he would not take the nomination if it were offered to him, unless Mr. Roosevelt should retire from the field before the meeting of the national convention. But, however sincere may be his desire to devote himself henceforward to practise at the bar, his fellow citizens will not permit the ex-Secretary of War to renounce permanently a political career. So far as we can judge at this distance, there is no man more likely to receive the Republican nomination for the Presidency in 1908 than is Mr. Root. In the office of Chief Magistrate he would be an honor to his State and to the country. Meanwhile, if the New York State convention is this year controlled by men who really wish and hope to carry the Empire commonwealth for Republican candidates, we will expect to see them nominate Mr. Root for Governor. Whether he would accept a nomination for that post we do not know, but not even his political opponents will dispute his fitness for the office.

We can well believe the report that Mr. Roosevelt desires to see him made a delegate to the national convention at Chicago, in order that he may make the speech nominating his ex-chief for the Presidency. His supreme qualifications for the function were disclosed at the Union League Club. There are, indeed, some indications that the speech which he made on that occasion has had the effect of modifying to some extent the attitude of certain men of weight towards Mr. Roosevelt. We would not go so far as to assert that they are as yet disposed to support the President with much enthusiasm, or to deny that they might prefer a conservative Democrat like Mr. Cleveland. It is by no means sure, however, that the Democratic national convention will have sense enough to nominate the ex-President, and it begins to look as if, should the Democratic candidate be dictated by the Bryanite wing of the Democracy, many representatives of conservative opinion may deem it safer to keep Mr. Roosevelt in office four years longer, on the principle that it is wiser to bear the ills we have than fly to others that we know not of. We still have confidence, however, that before next July the Southern Democrats will have come to recognize the tremendous responsibility that rests upon their shoulders.

It is an interesting bit of news that comes to us from Indianapolis—the news, namely, that United States Senator Fairbanks has reluctantly consented to be the Republican candidate for the Vice-Presidency on a Roosevelt ticket. If this news be confirmed, we may assume that no opposition of any consequence will be offered to Mr. Roosevelt in the national convention of his party, and we should not be surprised to see the President nominated by acclamation. Hitherto Indiana has seemed to be a dangerous nucleus of discontent. There is good ground for believing that Mr. Hanna's friends preponderate among the managers of the Republican machine in that State, and that, had he uttered a word of encouragement, or even given the consent that is conveyed by silence, a majority of the Indiana delegates would have advocated his nomination for the Presidency. It is evident that Mr. Hanna has once more given proof of his good faith. He has clinched the evidence by urging Mr. Fairbanks to accept a nomination for the Vice-Presidency. The assumption is justified by Mr. Fairbanks's notorious unwillingness to exchange his seat in the Senate for the Vice-President's chair. Nothing but the influence of his friend, the Senator from Ohio, could have overcome his resolution.

It was, of course, pointed out to the senior Senator from Indiana that, as it is his own followers who have avowed a preference for Mr. Hanna, his consent to enter the field as a candidate for Vice-President on the Roosevelt ticket would annihilate all substantial opposition in the Republican national convention to the President's nomination. Nor is this all. With Mr. Fairbanks on the Roosevelt ticket, it would be extremely difficult, if not impossible, for any Democrat except Mr. Cleveland to beat the ticket in Indiana. Even Mr. Cleveland, it must be remembered, lost the electoral vote of Indiana in 1888, when one of that State's citizens, General Harrison, was his opponent. It should further be borne in mind that Indiana is one of the States that gave Mr. McKinley a larger plurality in 1900 than it did in 1896, the figures being 26,479 in the later, against 18,181 in the earlier year. Since 1900 the Republican hold upon the State is believed to have been tightened, and it is certain that the nomination of Mr. Fairbanks for the Vice-Presidency would benefit Mr. Roosevelt precisely as did that of Mr. Hendricks for the same office benefit Mr. Cleveland in 1884. If, therefore, the news from Indianapolis shall prove well founded an effective stroke has been delivered for Mr. Roosevelt, a stroke the effect of which will be felt, not only in the Republican national convention, but at the ballot-box.

Those conversant with the intimacy of the relations between Mr. Charles F. Murphy and his Brooklyn lieutenant, State Senator P. H. McCarren, will not attach much importance to the latter's support of the nomination of Chief-Judge Alton B. Parker for the Presidency—a support announced on the evening of Saturday, February 6, at the Manhattan Club in New York city. That Judge Parker himself was not profoundly impressed by Senator McCarren's speech may be inferred from the fact that he uttered not a syllable to indicate a willingness to accept a nomination. The notion that either in a State convention or in the national convention of his party the State Senator from Brooklyn would oppose Mr. C. F. Murphy's wishes is absurd. The only possible motive for Mr. McCarren's demonstration must be a purpose to convince Judge Parker that if the latter by any chance should become the Democratic nominee for the Presidency, he would not be without zealous friends in Tammany Hall. Mr. Murphy himself has never said a word to indicate an intention of supporting Judge Parker in the State or national convention. There is no doubt, however, that he would prefer Judge Parker to Mr. William R. Hearst, if it were conceivable that the latter had a chance of obtaining any considerable number of delegates from the State of New York, or of being considered with an approach to seriousness in the national convention.

So far as Mr. Murphy's personal declarations are concerned, he has repeatedly expressed the belief that Mr. Cleveland, if nominated, could be elected. We may take for granted that if he had to choose between Cleveland and Parker, he would support the former. What he would like best of all, however, would be an uninstructed delegation to St. Louis, which could be trusted to adopt any suggestion made by him at the last moment. Should he secure such a delegation, there is a widespread impression that, after looking over the ground at St. Louis, he would express regret at the unwillingness of Democratic leaders in the Southern States to accept the ex-President, and that, as the next best thing, he would advocate the nomination of Mayor George B. McClellan, who has just demonstrated his ability to carry the city of New York by a large plurality. It is certain that if Mayor McClellan shall continue to give the city of New York an honest, clean, thrifty, and efficient government, he will be far stronger nine months hence than he was last November, and, very likely, would be able to carry the State of New York. He would also be strong in New Jersey, of which State his father was Governor, and which gave its electoral votes to the Democracy at each of the five Presidential elections preceding 1896. It is also possible that he might carry Connecticut, provided there should be a tidal wave in his favor throughout the lower counties of the State of New York. How Mayor McClellan would run in Indiana, and Illinois is, on the other hand, uncertain. He could not hope to make such inroads on the Republican vote as would ex-President Cleveland.

Southern newspapers have of late made some interesting comments on an aspect of the negro problem which the Philadelphia *Public Ledger* was the first to point out. It appears that at the close of the civil war there were scarcely 15,000 colored people in Philadelphia. According to the census of 1900, they numbered 62,613 in a total population of 1,298,697. They are now computed to number about 65,000. They contribute far more than their proportion to the record of crime. Moreover, the proportion is increasing. In 1896, out of 58,072 persons arrested in Philadelphia, 5302 were negroes, or nearly 10 per cent. On January 22, 1904, out of 465 convicts in Holmesburg prison, 166 were negroes, or over 35 per cent. In the convict department of Moyamensing prison at the same

Public Domain, Google-digitized / http://www.hathitrust.org/access_use#pd-google

date there were 91 negro convicts in a total of 257; or, again, over 35 per cent. In the month of January, 1904, 95 per cent. of the persons tried in Philadelphia for burglary and robbery were negroes, and more than two-thirds of the colored people convicted had arrived recently from the South. The New Orleans *Picayune* seems to be justified in drawing from these data the deductions, first, that bad negroes have made up a considerable part of the recent migration from the South to the North; and, secondly, that those negroes who, without being originally bad, were shiftless, and who have tried to live in Northern States as easily as they could in the South, by doing odd jobs, have found fewer facilities in the North, and so have drifted into crime. The Montgomery *Advertiser* thinks that eventually the North will have even more trouble with the negro than is experienced by the South. For several reasons. In the first place, the negroes expect more from Northern whites than they do from white men at the South. They are justified in forming such expectations, owing to the professions made by many Republicans during the Reconstruction period. In the second place, the Northern people are not, as a matter of fact, so kindly disposed toward the negroes as are the Southern whites. In the third place, the colder climate at the North during at least a half of the year makes living more expensive and difficult. On the whole, however, our Southern contemporaries regard with equanimity the awakening of Philadelphia to the seriousness of the race problem. They hold that it is only a question of time when white men in all sections of the country will appreciate the gravity of the situation created by the enfranchisement of the negro.

Sincere and consistent friends of civil service reform think not only that Federal office-holders should not be invited to contribute to the expenses of their party in political contests, but that they ought not to figure as delegates to political conventions. Their time belongs to the nation which pays their salaries, and ought not to be devoted to partisan purposes. It is an interesting fact that in 1900, when President McKinley was a candidate for renomination, he instructed General Dick, secretary of the National Republican Committee, to send out a circular letter on the subject. The letter was to the effect that while, of course, the National Committee did not presume to interfere with the selection of delegates, yet it was deemed advisable that, so far as practicable, delegations to the national convention should be composed of men not holding Federal appointments. It was, of course, acknowledged that there might be justifiable exceptions to the rule. But the conviction was expressed that Federal officials ought not to be prominently identified with the management of political conventions. It would be edifying to learn what view of the matter is taken by Senator Lodge, who recently sent orders to his lieutenants in Massachusetts to put none but Roosevelt men on guard in the delegation to the Chicago convention. Now his chief lieutenants are George A. Hibbard, Postmaster of Boston; George H. Lyman, Collector of the Port; and Jeremiah H. McCarty, Surveyor of the Port. We shall scan with curiosity the list of Massachusetts delegates, in order to see whether it includes the names of these Federal officials.

The President himself seems to take a much more creditable view of the matter than the Senator from Massachusetts. In a letter to Mr. Stranahan, Collector of the Port of New York, Mr. Roosevelt spoke in no ambiguous terms. He explained that he did not wish to dictate to conventions their choice of delegates, but he would suggest, he added, that whenever it was possible to get good men who are not holding Federal office, this should be done. He foresaw, he said, that many office-holders would go to the national convention, because many of them are politicians who have a good deal of influence in their home districts, but they must understand, he said, that no pressure from Washington would be brought to bear upon them to secure their votes.

Mr. Roosevelt is credited with the assertion that he could win without New York. There is no doubt that in 1868 and in 1872 General Grant did not need the support of New York in order to gain a majority of the electoral votes. The same thing may be said of Cleveland in 1892, and of McKinley in 1896 and 1900. On the other hand, the electoral votes of New York would have turned the scale in favor of Tilden in 1876 had not the Electoral Commission counted every doubtful vote for Hayes; and they were unquestionably decisive in 1880, 1884, and 1888. They would have been decisive in 1860 had all the opposition to the Republican candidate been concentrated upon Douglas, and had Lincoln failed, as in that case he doubtless would have failed, to carry the State of New York. It was the State of New York that made Buchanan President in 1856, Zachary Taylor President in 1848, and Polk President in 1844. If, therefore, Mr. Roosevelt asserts that he could win without any of the electoral votes of his native State, we can only reply that such a thing is possible, but not probable.

It may be, however, that he has something else in his mind. Suppose that in August or September the Republican leaders should make up their minds, as they did in 1880, that their candidate for Governor was in danger of losing the Empire State. What is there to prevent Governor Odell from convoking the Legislature in special session for the purpose of carrying a bill more or less similar to the so-called Miner law which was enacted by the Democrats in Michigan in 1892. That law provided that each Congressional district in the State should choose one Presidential elector, and that the State should be divided into two large districts, each of which should return one elector at large. The result is well known. Out of its fourteen electoral votes, Michigan contributed five to Cleveland and Stevenson. There is no doubt that such a law would be perfectly constitutional. The second clause of the first section of the second article of the Constitution provides that each State shall appoint, *in such manner as the Legislature thereof may direct*, a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress. State legislatures have often used the powers thus delegated to them. For many years after our present Federal Constitution became operative the Presidential electors of New York were chosen by the Legislature. The Presidential electors of South Carolina were chosen by her Legislature up to the civil war. This obviously is a card which the Republican party has up its sleeve. It controls the Executive as well as both branches of the Legislature in the State of New York. If, therefore, the Republican leaders should deem such a course expedient, they could neutralize the importance of the Empire State by a law the practical outcome of which would give each of the great political parties about one-half of the Presidential electors. *Verbum sapienti.*

It is becoming evident that the disturbance due to the Russo-Japanese war will not be confined to the Far East, nor even to Asia. The Balkans are already showing the first symptoms of trouble, and it is likely that spring will see an insurrection in no wise visibly different from war in Macedonia and Adrianople. Bulgaria has only been kept from intervening by force of arms to help the Bulgarian-speaking Slavs of the four eastern vilayets of European Turkey by the strong pressure of Russia and the repeated representations of the Russian government. Russia, having failed to secure peace in the Far East, is not destined to succeed better by the Dardanelles, and all signs indicate that Bulgaria will profit by the Far-Eastern conflict to break away from Russian leading-strings, and at least make the attempt to unite to her territory the northern part of the four non-Albanian vilayets of Monastir, Kossovo, Salonica, and Adrianople. It is difficult to see what Austria could do under the circumstances. The Emperor Franz Josef is pledged to the peaceful reform of Slavonic Turkey equally with the Tsar, yet Austria has for generations had very strong and defined ambitions concerning the Balkan lands, and she undoubtedly wishes to add Macedonia to Bosnia and Herzegovina, which she has so successfully administered since 1878. This would be a solution of the Near-Eastern question in a sense decidedly opposed to Russia's interests, and is therefore the more likely to be brought about now that Russia's hands are tied. Russia has one strong card to play in her Black Sea fleet, which was built especially for the purpose of attacking the Turkish forts on the Dardanelles. This fact is in itself sufficient reason why Russia has not sought to take her Black Sea fleet through the Dardanelles and Bosporus with a view to using it against Japan. It is too likely to be needed nearer home. We may remind ourselves that the Black Sea fleet of

Russia consists primarily of seven battle-ships, averaging ten thousand tons each, four of them being powerful modern vessels.

The opening days of Parliament have made it evident that a dissolution cannot long be delayed. Not only are there signs that the powerful group of Liberal-Unionists who follow the Duke of Devonshire are inclined to reenter the Liberal fold, but it further appears that, so far, Mr. Balfour and Mr. Wyndham have not succeeded in making satisfactory terms with Mr. John Redmond and the Irish party. The action of Mr. Chamberlain in seizing the Liberal-Unionist Association, and using the old fear of home rule as a weapon in doing so, will make it much more difficult for Mr. Chamberlain's former chief to win the confidence of Ireland, while it will at the same time widen the breach between the Premier and the Duke of Devonshire. Mr. Redmond will certainly take no action likely to bring Mr. Chamberlain back to power, now that the former Colonial Secretary has made it clear that the policy of home rule seems to him as dangerous to the empire as it did in the memorable days when he seceded from Mr. Gladstone. There was a slight expectation that Mr. Chamberlain's policy of general federation might be stretched to cover some kind of home-rule measure for Ireland, which would undoubtedly benefit more by the food tax on foreign commodities than even Canada, and could, therefore, be counted on to support the policy of Mr. Chamberlain, so long as it did not stand in the way of Irish ambitions. But now, in his desire to beat the Duke of Devonshire and to capture the Liberal-Unionist Association for his fiscal campaign, Mr. Chamberlain has done his best to revive the fear of home rule, and has, therefore, incurred the hostility and suspicion of home-rulers. While this palpably makes it harder for Mr. Balfour and Mr. Wyndham to strike such a bargain with the Irish members as will secure their solid support, so necessary to his weakened ranks, and on so many occasions during recent months the sole cause of his retention in power, it seems not impossible that his antagonism towards Mr. Chamberlain may incline the Duke of Devonshire towards home rule, and thus remove the one obstacle to his reentry into the Liberal party, where he might well expect to become reconciler and leader, and even to be asked by the King to form the next ministry. For the drift of the last seven by-elections makes it evident that Mr. Balfour cannot count on a victory at the polls even for his moderate policy of retaliatory tariffs, while the food-tax party has made practically no headway at all. It remains to be seen whether the Duke of Devonshire can overcome his dread of home rule, which, being based chiefly on his sympathy with the Irish landlords, has now, through the legislation of Mr. Wyndham, lost much of its reason for being.

For those who have at heart the best interests of American art in its larger aspects the news of Edward MacDowell's resignation of the Chair of Music at Columbia is peculiarly welcome. Mr. MacDowell's principal reason for giving up his professorship is, it appears, in order that he may find more leisure for what is, unquestionably, his proper work in the world—the writing of music. His engagements at the university have absorbed the best part of his time and energy for almost a decade, and his opportunities for creative work in the art of which he is an acknowledged master have been, during that time, lamentably curtailed. He will, we imagine, be sorely missed at Columbia; for he exerted there, admittedly, an educational force of extraordinary fineness and importance. His scholars and associates will be the poorer for his absence, whether they realize it or not. But American music will be the gainer. Those who are best qualified to judge recognize in Mr. MacDowell a creative artist of singular originality, power, and inspiration; his increased leisure will no doubt be productive of further and more continued evidence of his genius.

In the address that he delivered on February 7 before the Boston Labor Union, President Eliot took note of the very rapid increase in the last three years of the effective power of large combinations of men. The labor-union now faces the employers' association, one monopoly against another. Out of this kind of encounter, once rare, now common, has come the joint agreement combining the two monopolies. This is sure to result in raising the price of the necessaries of life, and against that, society must find a way to defend itself. Here are two monopolistic secret societies. Dr. Eliot suggests the expediency of establishing over them governmental inspection and control. That, he thinks, would be one remedy; but he pointed out that the action of legislative or judicial remedies must necessarily be slow and superficial, and the real cure must be found in the deep workings of the democratic spirit that made the strife possible. As modifications that are needed, and the attainment of which will tend towards permanent industrial peace, he mentioned steadiness of employment, conditions of labor that will permit the laborer to have a settled place of abode, and, in big concerns, a voice for the workman in the discipline of the works, and an interest for the workman in profits. He would also have for the workman pay increasing with the length of his service, and a retiring allowance. Both these last advantages are provided for officers of the army, and are much coveted by other salaried persons. Dr. Eliot objects to the monopolistic tendency of labor-unions and employers' associations which make for the division of society into two great classes. He agrees with other observers that that is contrary to the democratic spirit, as is also the tendency of labor-unions to keep men of unequal capacities down to a level, and to restrict the output and capacity of the individual workman.

It may be that if the late Mr. Whistler were not dead, the Copley Society of Boston would not be planning to have next week a show of his paintings. But if he were still alive and the show were afoot, how greatly would his soul be delighted and refreshed by the report of prejudice in Boston against his portrait of Mr. Canfield. This report concerns the reputed disturbance of some members of the Copley Society at the idea of hanging Mr. Canfield alongside of such citizens as Mrs. Sears, Mrs. J. L. Gardner, Mrs. Potter Palmer, and others. Not that these ladies are said to object. Mrs. Sears is herself a mighty good painter; Mrs. Gardner is a famous art-collector and an all-round sport; and Mrs. Potter Palmer, if we remember rightly, has herself been in the show business. Not one of them would be likely to flinch from smiling from a wall in Mr. Canfield's company. But evidently there has been some question whether the portrait of Mr. Canfield should go with theirs, and an embarrassing phase of the situation is that Mr. Canfield has sent more Whistlers to the exhibition than any one else. It is very amusing, and though Mr. Whistler is not here to enjoy it, Mr. Canfield is, and he is capable of being much cheered by it. He is a perfectly frank and unpretentious person, a gambler by trade and by choice, and without evasions. Whistler's portrait of him was the artist's last work, and would be an exceedingly interesting item in the Copley Society's exhibition. It would be a mistake not to include it if it can be had, but it may be that the report that the society is in danger of making such a mistake is only a malicious rumor.

One of the most learned of contemporary Congressmen, Mr. J. B. Perkins, of Rochester, has been heard from in debate in the House. Mr. Perkins is an able lawyer and a distinguished historian, but he discussed neither on history nor law. The question was whether Congress should prohibit the docking of horses' tails in the District of Columbia, and the introduction into the District of unlicensed horses whose tails have already been docked. General Grosvenor of Ohio, Mr. Cooper of Wisconsin, and Mr. Powers of Massachusetts were among the gentlemen who argued that docking was cruel, unnecessary, and contrary to the intentions of the Almighty, who made the horse after a pattern that was satisfactory to Him, and should be so to us. Mr. Perkins argued that docking, if properly done with the use of a little cocaine, didn't hurt the horse a mite; that it was no more unnecessary than hair-cutting; and that the horse looked better for it. If the House wanted to do something for horses, he advised it to abolish the check-rein, which causes horses "ten thousand times more torment" than docked tails. He said he owned dock-tailed horses, and evidently he knew all about them. But the House didn't. The House passed the bill, 85 to 8. When the bill gets to the Senate it will strike a community of horse-owners and may die. If it reaches the President, it will come to a horse-sharp, and he may kill it. It is perfectly true, as Mr. Perkins said, that the check-rein is immeasurably a greater nuisance to horses than docked tails.

What Will the Issue Be?

Now that war is actually begun in the Far East, it concerns us, as Americans, to consider with some care the outcome of such a contest, from the view-point, not only of the combatants, but also from that of our national interests. Let us begin by assuming that the war will be a duel between Russia and Japan. What is the relative strength of the antagonists? Their naval forces should first be compared, because sea power is destined to be a decisive factor in the struggle, inasmuch as, if the Japanese fleet should be disabled, it would not be practicable for the Tokio government to land a large army on the Asiatic continent and to maintain communications with it. If we leave out the battle-ship *Oslavia*, the armored cruiser *Dmitri Donskoi*, and the protected cruiser *Aurora*, which are on their way to Far-Eastern waters, but have not yet arrived, the total tonnage of the Russian navy on the Asiatic station is about 200,000. The war-vessels include seven battle-ships, ranging from 13,100 to 10,950 tons apiece; four armored cruisers of a displacement varying from 12,336 to 7800 tons; and seven protected cruisers, whose tonnage varies from 6750 to 3000. There are, besides, some twenty-four destroyers or torpedo-boats. The aggregate number of officers and men is computed at 20,000. If, now, we turn to the navy of Japan, the total displacement of which, if we omit the two war-ships last purchased, which lately left Singapore, is 170,000 tons, we find that it includes six first-class battle-ships, all modern, and ranging, in respect of tonnage, from 15,200 to 12,300; eight armored cruisers, also of the latest type, and only varying in tonnage from 9850 to 8500; twelve protected cruisers, whose displacement ranges from 4898 to 3100 tons. Japan also possesses a good many torpedo-boats and destroyers. The impression seems to be current among naval experts that the Japanese strategists, engineers, and seamen will show themselves more proficient than their Russian antagonists. This is an assumption, however, that may not be justified by the event. There is, on the other hand, no doubt that the Japanese start with the advantage of operating on interior lines, since, at the hour when we write, no junction has been effected between the main Russian fleet, stationed at or near Port Arthur, and the squadron at Vladivostok. Let us suppose that the naval superiority of Japan is so completely verified in one or more naval engagements that, thereafter, the remnant of the Russian war-vessels will be, practically, driven from the sea. In that event, the Japanese will be able to disembark any force at their disposal at any desirable point in the Korean peninsula or on the seacoast of Manchuria, and, thereafter, to keep it supplied with food and ammunition. How many soldiers would it be possible for the Tokio government to place on the Asiatic mainland? The permanent army of Japan, on a war footing, comprises 7500 officers and 193,790 men of the rank and file, a total which, on mobilization, could be increased from the depot reserves to about 8000 officers and 225,000 men. Behind this active army stands the territorial force, also organized, and more or less disciplined, which comprehends upwards of 3000 officers and 118,000 men. There seems, then, to be no doubt that Japan could send to the mainland upwards of 150,000 soldiers, and still leave more than an equal number for home defence.

Regarding the number of troops that Russia now has in Manchuria, much uncertainty prevails. It has been asserted, on what seems trustworthy authority, that her troops at or close to the theatre of war number about 300,000, but it must be borne in mind that something like 150,000 would be needed to garrison Vladivostok and Port Arthur, and to guard the Manchurian railways which run from Harbin to those naval fortresses. According to Senator Beveridge, from forty thousand to sixty thousand would be needed for the latter purpose alone, even in time of peace. It is, therefore, doubtful whether Viceroy Alexieff could muster for active operations an army larger than that which Japan, at the outset, might put into the field. As to Russia's ability to forward reinforcements and supplies, it must be remembered that the Trans-Siberian Railway, on which she would have to rely, has a very defective road-bed, poor bridges, and only a single track; which railway would probably break down under the strain of military exigencies, even if it were not cut, as it probably would be, by Japanese disguised as Chinese laborers.

It is obvious that the ultimate objective of a Japanese invading force would be Harbin, the Manchurian town which stands at the junction of the line to Vladivostok with the line to Port Arthur. If Harbin could be occupied by the Japanese, it is obvious that the Russian soldiers in Manchuria would be completely isolated from their base of supplies. That Harbin could be reached, however, without at least one battle is, of course, improbable. It remains to be seen what would be the result of such an encounter. In respect of cavalry there is no doubt that the Russians are much superior, as regards both numbers and efficiency. On the other hand, it seems to be believed by competent observers who took part in the fighting at Tientsin and in the joint expedition to Peking, that the Japanese infantry, though the soldiers are of smaller size, is at least equal to the Russian, and that the Japanese artillery is better served. The combatants are equally brave, but it seems probable—such, at least, was the impression received by Senator Beveridge—that the Russians are more enduring, and, as they can subsist on less food than the Japanese, we may, perhaps, assume that they would bear somewhat better the hardships and privations of a long campaign. Should the Japanese, however, be so successful in the earlier operations as to achieve the occupation of Harbin, there is no reason to suppose that the campaign would be a long one. The Japanese would have no desire to penetrate Siberia, but would content themselves with the expulsion of the Russians from Manchuria. Whether Vladivostok and Port Arthur, if invested both by land and sea, would require a protracted siege is doubtful.

Assuming then, for the sake of argument, that the Japanese will be successful in both their naval and their military operations, we proceed to inquire how our national interests might be affected. We answer that, if Japan should prove faithful to her plighted word, our interests would receive no detriment. Professedly, Japan has not entered upon the war with a view to conquest, but has pledged herself to uphold Korea's territorial integrity and China's sovereignty over Manchuria, and to respect the treaty rights which we and other maritime nations have acquired in those countries. We have, then, nothing to lose by the triumph of Japan, provided, of course, that country should not be rendered so arrogant by its victory over Russia as to become oblivious of its promises. In that event, it might be necessary for the United States, as well as for Great Britain, France, Germany, and other countries engaged in commerce with the Far East, to intervene, precisely as the nations represented at the Congress of Berlin interposed to regulate the Balkan peninsula after Russia's last war with Turkey.

The same thing may probably be said regarding the attitude which the treaty powers would take in the event of a conclusive defeat of Japan by Russia. Even if successful, Russia would be exhausted by the conflict, and could not venture to defy the joint wishes of the treaty powers. No matter, therefore, what may be the issue of the conflict, we have no reason to apprehend that our national interests will suffer. We can, therefore, survey the progress of the war as dispassionate spectators—with curiosity, but without anxiety.

What has made Cotton go Up?

RECENT revolutionary incidents on the cotton exchanges of the world have given peculiar timeliness and interest to a discussion of the supply and demand conditions of the great American staple which appears in the February number of the *North American Review*. The author of the article, Mr. Daniel J. Sully, ought to be exceptionally qualified to expound the causes of the relatively high price which cotton has lately attained, and, for that matter, is still held at, for he has been associated with the cotton industry for twenty years, and is a member of the Liverpool Cotton Association, as well as of the cotton exchanges of New York and New Orleans. The manufacturers, who have been reduced to the alternative of closing their mills or of buying the raw product at prices which they describe as ruinous, not unnaturally deny that there is any real economic cause for its huge appreciation in value, and attribute the rise in price exclusively to manipulation. Mr. Sully himself admits that the cotton-market has been the scene of manipulation during the last year, but he maintains that the advantage, so far as money is concerned, has rested with those who have tried to depress the price of the staple. On that side have been arrayed the mill interests, not only of New England, but also of Great Britain and the Continent. On the other side has been the principal purveyor of the raw product, to wit, the South, which is just emerging from four decades of poverty. As to commission-houses and brokers, these, according to Mr. Sully, have been about equally divided.

The author of the article in the *North American Review*, which appears to have been written about the middle of January, begins with the assertion that no plan of manipulation, unless financed on a scale sufficient to take over a large portion of the crop, could have brought prices up to the recent average level, and have kept them there for a considerable period. He concedes that there are times when "corners" are rendered possible by acute conditions, such as a phenomenally short crop, an inadequate supply toward the end of a season, and aggressive manipulation, backed by large capital. He pronounces it, on the other hand, impossible for corners to be devised and executed at the outset of a cotton year. No clique of speculators could be found with sufficient money and daring to attempt such a thing. How, then, would Mr. Sully explain the extraordinary spectacle which the cotton-market has for some time presented? He contends that the recent high prices of cotton are due to natural causes, which are likely to remain more or less operative for years to come. The germs of these causes should be referred, he thinks, to the period of enormous crops and low prices in 1897–8 and 1898–9. In each of these years the crop was more than 11,000,000 bales, and the price of cotton

fell to six, and even five, cents a pound. Two results followed: a restriction of production of the raw staple, and an expansion of the manufacture of the products into which cotton enters. On the one hand, every means was taken to induce Southern farmers to plant more extensively of other crops and to decrease the output of cotton. On the other hand, the low price of the staple and the enormous supply of it caused new mills to start up on the European Continent and in the Southern States themselves. It appears that even during the last twelvemonth, when we heard so much about the enforced curtailment of cotton manufactures, the South added to its mill facilities 817,826 spindles and 16,313 looms, representing an investment of about $16,000,000. Mr. Sully calculates that during the last ten years the mills of the world have increased their capacity by more than 17,000,000 spindles, and that the whole number of the world's spindles at the present time may be placed at 109,000,000. Attention is further directed to the fact that during the period 1897–9 not only was the capacity of cotton-mills proper increased, but people the world over were educated to new uses for cotton. We are told that cotton enters to-day into the fabrication of more articles than any other agricultural product, its low price having caused the staple to be employed for purposes never before contemplated.

What happened when a four years' period of comparatively short crops followed? According to Mr. Sully's estimate, the world's consumption, by the close of 1898, had come to be based on the assumption that the American crop would amount to 11,000,000 bales. The assumption has proved unfounded. The crop grown in 1899 was 9,436,416 bales; that of 1900 was 10,383,422 bales; that of 1901 was 10,680,680 bales, and that grown in 1902 was 10,727,559 bales. To what should be attributed the shrinkage in the production of the staple? Mr. Sully would ascribe it, first, to seed deterioration; secondly, to soil exhaustion, followed by poor tillage; thirdly, to the increased damage wrought by pests, such as the boll-weevil; and, lastly, the lack of acreage expansion. The three causes last named need no explanation, but, as regards seed deterioration, this, it seems, is due to the sale of the best seed to the cottonseed-oil mills. The agents of these mills go about the country at the beginning of the season, and usually get the early seed, which, as experience has shown, is the most vigorously reproductive. Under the circumstances, the farmer has to fall back on the later seed, which is of relatively low vitality and does not produce a full crop.

What, then, was the state of things that the cotton industry had to face on September 1, 1903? Mr. Sully answers that the supplies of raw material in the hands of mill-owners had declined to almost nothing. On the other hand, consumption had encroached upon the reserves of manufactured goods until the stocks of such commodities were at an extremely low ebb. From these facts, it is pronounced a reasonable deduction that a crop of twelve million bales of the American staple would have been absorbed at prices in advance of those of former years, by the mill interests of the world. We need not say that last year's crop fell far short of twelve million bales. The government estimate issued on December 3, 1903, placed the probable production for the year at 9,962,059 bales. That the government's estimate was not too low seems evident from the report of the cotton ginned up to December 13, 1903, a report issued by the Census Bureau on January 5, 1904. In spite of the temptation offered by high prices and exceptionally good facilities for marketing, the amount ginned was approximately 400,000 bales less than that ginned up to the corresponding date of 1902. Mr. Sully submits that if the cotton had been in the country it would have been rushed to the gins, and the figures for the year before would have been surpassed. Further proof that the cotton is not in the country was furnished by reports from all over the South up to the middle of January—when the article in the *North American Review* was penned—reports to the effect that from thirty to fifty per cent. less cotton was in the hands of the farmer than at the same time last year.

In view of the facts marshalled by him, Mr. Sully challenges the disinterested observer to resist the conclusion that natural causes are alone or mainly responsible for the recent high prices of cotton. Those prices have been due to the pressing demand for the staple, on the one hand, and to the inadequate supply of it, on the other. In a word, the staple has "bulled" itself.

The Fate of Korea

KOREA seems destined to be the sacrificial victim in the Far-Eastern struggle. Manchuria has long ceased to be an independent political entity. From being the conqueror of China, when the present dynasty invaded and subdued the Middle Kingdom in 1644, Manchuria steadily sank to the status of a somewhat neglected outlying dependency, the most backward part of a backward empire. Its hold on the Chinese imagination lay in the presence, at Mukden, of the tombs of China's foreign conquerors, and as the Manchus are even to-day an armed and hostile garrison in China, the relics of their ancestors are not very dear to the native Chinese. Korea has never ceased to be a separate and distinct kingdom, with a defined social, moral and political life of its own, in spite of the rival claims of suzerainty alternately put forth by China and Japan. Korea has a heroic history of intense interest and value, and stands as the bringer of light, religion and art to the Japanese.

Physically, the Koreans are a finer people than their neighbors of Japan, and visitors to the Hermit Kingdom speak of them as being much handsomer than the Chinese, who, in their turn, are, in physique superior to the Mikado's subjects. The Koreans have been devastated again and again by ruthless Japanese invasions, and to the last of these all historians unite in ascribing the present fallen fortunes and broken courage of the Hermit Kingdom. Korea gave Japan the art of letters, science and religion, as well as the best models and craftsmen in all those arts of painting and design which we think of as characteristically Japanese. In return for these great gifts, the Japanese again and again spread desolation through her fertile valleys. No Eastern people detests another so strongly as the Koreans detest the Japanese.

Korea is a land of extreme beauty and fertility, though it has for years suffered from certain political evils which we may the more easily understand as they have analogies nearer home. It has a land question almost identical with the Irish land question, except that, in Ireland, the landlords were additionally odious as representatives of foreign conquest and foreign domination, the rule of an alien race and an alien faith. But in both Korea and Ireland, the heart of the land question, economically speaking, was the same: a year-to-year tenancy, which gave the landlord the right to raise the rent every time the tenant improved his holding by clearing, draining, building or fertilizing. This system, in Korea, as in Ireland, kept the peasant class in perpetual poverty, and made all hope of progress for them impossible. The absenteeism of the Irish landlords was repeated in Korea, as the land-owning class invariably streamed to the capital, to take part in its pleasures and amusements, and to participate in the court life which, for splendor of pageantry and costumes, and for elaborate detail of etiquette, was a close second to the court of Vienna in the days before Sadowa and the legislative secession of Hungary.

A second evil, and a very serious one, in Korea, we can best realize by what we have recently read of Bulgarian-Macedonia under Turkish rule: it is the evil of tax-farming lined with extortion and dishonesty. A political writer of much acuteness has spoken of the Constantinople hierarchy in the Rumania of olden days as "a cascade of simony": we might, with some justice, speak of the governmental system of Korea as a "cascade of extortion." The peasant groans and pays the bill, just as he does in the practically feudal India of to-day. But the Korean peasant is further the victim of a cruel and barbarous criminal law, with punishments as capricious as they are severe, and here the Indian ryot has immeasurably the advantage, since, in the British-Indian Empire, the law can neither be bought nor delayed.

Add to this that the central government has never assimilated the modern doctrine that governments exist for the good of the people, and to develop and distribute the resources of the country; and that the Korean army was a costly luxury of the court, but wholly inefficacious against foreign foes, and we have a fairly true estimate of the internal condition of the Hermit Kingdom. Nor can it be doubted that Japan was inspired by genuine missionary zeal, accompanied, without doubt, by feelings less disinterested, in her attempt to modernize Korea, immediately before and during the war with China in 1894. Japan had then some sixteen years of civilized existence, in our modern democratic sense, to her credit, and had certainly done wonders within that time. Her intentions towards Korea involved an equally sweeping reformation for the land of "Morning Calm." But more than sixteen years of national life are needed before a kingdom can safely become the mentor of another, especially if that other strenuously objects, and has already, through fifteen centuries of calamitous invasions, grown to distrust and hate the would-be reformer.

The Japanese went at their task with a certain ruthless vigor, and the imprisonment of the Korean sovereignty, and the murder of the Korean Queen were symptomatic of their strenuous methods. They drew up schemes of reform which read admirably, but which took no root among the Koreans, and within three or four years the whole fabric of "New Korea" thus violently born under Japanese auspices, toppled and fell to pieces. The Japanese had secured settlements in various parts of Korea, such as Fusan and Chemulpo, and they had built the rudiments of a postal and telegraph system which are undoubtedly of benefit; but, at the same time, they managed to add to the keen animosity with which the Koreans viewed everything Japanese, and the work of civilization in Korea was thus set back and hindered.

Japan is now determined to try again, in spite of all treaties guaranteeing Korean independence and sovereignty; and Korea is likely to learn some rude lessons concerning the modern application of material forces. Good may result from this to Korea, provided that Japan's tutelage is only temporary. But nothing more hurtful to the genius and destiny of the gifted but unfortunate Korean race could be imagined, than a permanent merging of their

kingdom within the Mikado's Empire. Nor, it may be added, could anything be conceived, less likely to benefit the western powers, including the United States; since the Japanese will soon make it as impossible for a white merchant to succeed in Korea as it now is in Japan. The ideal of the Mikado's advisers includes the gradual ousting of the white race from all territory under Japanese influence; and this doctrine would undoubtedly be applied to Korea. With our Chinese exclusion laws, we are hardly in a position to complain.

The Child's Right to Proper Food

Dr. William Hall, a retired medical man of Hillside, Headingley, near Leeds in England, has promulgated the doctrine that every child has a natural right to be fed either by its parents or by the State, and that this right must be actively upheld. This doctrine seems humane and rational, and one would think that the efforts of a disinterested philanthropist to put it into practical effect would meet with nothing but praise and encouragement. On the contrary, however, Dr. Wall has encountered a great deal of opposition. He admitted this in a recent interview on the subject published in one of the big London dailies. "The clergy," he declares, "say that my scheme of feeding the children is against political economy, and that their souls must be attended to; while the schoolmasters say that it is the mind which must be developed. Some twelve months ago the Sanitary Committee of the Leeds City Corporation were induced to vote £500 for the establishment of a depôt for supplying humanized milk for poor children, and that scheme is in course of being carried out. But the authorities are frightened at my experiments with the feeding of poor children, which I have explained at York and other places."

Dr. Hall's idea is, in brief, to bring about the normal physical development of poor children by feeding them on suitable and sufficient food. He maintains that it is little, if any, use to teach children about their souls, or to attempt to train their minds, if they have deficient physical frames and lack proper nourishment. For some twelve months he has been investigating the home-feeding of Jewish and Gentile school-children, and tabulating results, according to his own weighing of the children. A summary of his examination of 2704 Gentile and Jewish board-school children from six to thirteen years of age, shows that while in a "good-district" Gentile school the average weight at ten years of age was 60.33 pounds, in the "poor-district" Jewish school the average weight at the same age is 64 pounds, as even the poorest Jewish children are better fed than average poor Gentile children.

One of Dr. Hall's experiments consisted in giving to sixty poor Gentile board-school boys and girls, seven years of age, half a pint of new milk and a nutritious bun five days a week during three months. At the beginning of the experiment, the sixty children weighed 187 pounds less than the average weight for their age. At the end of the three months, allowing for natural growth and increase of weight during that time, and allowing for the weight of the clogs and stockings which had also been provided, the children showed a net gain in total weight of 40 pounds, which the doctor claims must be credited to the extra food. They were also manifestly less anæmic and looked much more cheerful. They are now to be given, for a period, meat or fish and potatoes. "In the idea," says Dr. Hall, "that every child should be fed by its parents or by the State, and in its application, we have a principle and an action which will to a great extent prevent the misery and the vice which are otherwise sure to occur in the rising generation." It is in the crusade against the system of teaching children regardless of the food given to them and their lack of physical development that the doctor is exerting himself at present; and notwithstanding the opposition of clergy and schoolmasters, he is receiving very warm support from a large portion of his community.

The evil he is attempting to deal with is less acute in America than in most European countries; but even here, in this land of plenty, there are many communities where good work of this sort is needed.

Our National Optimism

Mr. Brett is congratulating us, in the *Outlook*, upon the optimistic trend of our national literature. There is a profound and well-grounded optimism such as is the flower of an essentially religious people or era, and there is an optimism which is the outgrowth of great national sacrifices for faith or principle or of far-sighted racial interests. There is also the optimism of well-fed, well-housed cattle. It is questionable whether a profound consciousness of life and its issues results in optimism, except in such cases. Before we become too self-laudatory we should examine into the true reasonableness of the faith that is in us.

Are we optimistic because we are comfortable? If literature be the true expression of the national consciousness few people would be willing to admit that we are the deepest, the strongest, the most alive and thoughtful people of the age. We are not grappling with the most essential problems of the soul, and that is the function of great literature, from Homer and Dante down to Browning and Swinburne.

We *are* producing enormous quantities of ephemeral stuff, material dealing with the more superficial and external aspects of life. The large mass of our output is fiction, and in the main it is the old-fashioned novel of manners and marriage. We have not yet moved on to the novel of motives, of the intellectual life, or to the novel which deals, as does that of France, with man's relation to the unseen forces of the universe, frequently, of course, to the diseases of the spiritual man. But these themes are, at any rate, more vital than manners, clothes, marriage, and money.

Mrs. Atherton, in her reply to Mr. Brett, points out that Americans who take a broad interest in life, and read foreign books—Nietzsche and d'Annunzio—may be morbid, but they are not childish nor shallow. For good or for evil, they are coping with a grown man's concerns. Roughly speaking, d'Annunzio's novels deal with the principles of æsthetic theory and man's relation to them, and Nietzsche is attempting a reform of ethical theory, and this, risking all the chances of mistaken conclusions, is better for the thinking man than to have his thoughts bounded by four narrow walls containing a bed and a table.

Subtract a few really great names from our literature—Poe, Emerson, Whitman, Hawthorne—and what have we left of permanent significance? It is useless to hide from the truth that we are a very Martha among nations, cumbered about many things and immersed in activities, *not in* thought. We have emerged from the concrete difficulties of colonization, liberating wars and political adjustments, and now is the time to begin building up a great national literature. But it will not be accomplished by allowing mercantile methods to prevail. Literary inspiration bears no relation to the laws of demand and supply. "The wind bloweth where it listeth, and thou hearest the sound thereof."

The only writer with a real voice in the making of literature is he who listens for the wind and embodies the voice of the silence, quite unconcerned about publishers and public. Fancy Blake writing to please the public!

> In my golden house on high
> There they shine eternally,

he wrote of his works.

Richard Feverel was published in 1858, the year which saw the publication of *Adam Bede* and *David Copperfield*; from that year on, until some ten or fifteen years ago, Meredith continued to send out novels to the unresponsive void. Thus is a great national literature builded.

Let us analyze our optimism. Is it the optim*ism* of a great faith in the far-off divine event, or the light-hearted optimism of child*hood* before the dawn of reflection?

Over-provision for Families

There is such a thing as making an excessive provision for a family. When a rich man dies and leaves his widow thoroughly well provided for, and all his children rich, it is liable to happen that the children all marry and set up for themselves or follow out their leanings in some other way that takes them from home, and that the widow is left to rattle around in a big house with servants for companions. It is an exceptional widow that can make a good thing of life on this basis. The average widow, who has been used to domestic life in the company of her peers, is very lonely.

The rich mother of children who need her help occupies a strong position. The rich mother of children who need nothing that she can give them may really be not so well situated for finding happiness in life as though she and her children were all poorer and more interdependent. No decent person, man or woman, grudges his mother support if he can possibly give it, but very decent children of mothers who need nothing but the kind of company that makes a house a home, may leave their mothers without that particular solace.

Gentlemen intending to leave five millions or more to a widow and four children, or less, should bear this possibility in mind. They will not do well, so far as the widow is concerned, to leave their children so much money, outright, that the children will need nothing their mother can supply.

Gentlemen who have large fortunes and no children will usually do better to live on, if possible, until their wives are about ready to accompany them to where they may be going. A lonely, childless widow is in a bad case, and if she is rich, no one should be surprised, or blame her overmuch, if the measures she takes for her relief are not altogether approved by observers.

ON BOARD THE JAPANESE ARMORED CRUISER "ASAMA," ONE OF THE SHIPS WHICH DISABLED SEVEN OF RUSSIA'S WAR-SHIPS AT PORT ARTHUR

The photograph was taken on the deck of Japan's armored cruiser, the "Asama," as preparations were being made to fire one of the big guns. The "Asama" is a 9750-ton ship, with an estimated speed of twenty-three knots. She was launched in 1898, has an armament of four 8-inch, fourteen 6-inch, and twelve 3-inch guns, and five torpedo tubes. The "Asama" is one of the Japanese vessels which took part in the engagement of February 9–10, during which seven Russian ships were disabled

A New American Idyll

By Henry Mills Alden

THE reader of *The Stone of Destiny*, a story just from the press of Harper & Brothers, does not need to be told that it is the work of an American woman of exquisite refinement and of the highest social rank. The book is pervaded by the atmosphere of a leisure commanded by a secure position and sedulously cherished by individual choice for the highest purposes of life and art.

American women of this class, when they write fiction, do not give us the "society novel"; the thing labelled "society" has no attractions for them, but only distractions, which they shun. They are not prompted to write by a literary ambition so much as by a deep and earnest purpose; therefore, their writings betray none of the cheap artifices so common in the literature which seeks with almost painful efforts to arrest attention and pique interest. They are distinguished by what they avoid rather than by what they attempt. Their art follows very simple lines; such elaboration and subtle delineation as we find in Edith Wharton's Italian studies are exceptional. Generally, though these writers may not have the positive graces of an Addison or a Thackeray, their diction is more simple and direct, and they write impeccable English.

It is true that the examples are very few of American women writers who have this threefold dower of culture, social eminence, and great wealth, and what we are saying of their work is based upon our actual knowledge of this work rather than upon a process of inductive reasoning leading to a principle applicable to all possible instances. If it should become the fashion for women thus abundantly dowered to strive for literary honors, the total result might not seem so worthy of admiration.

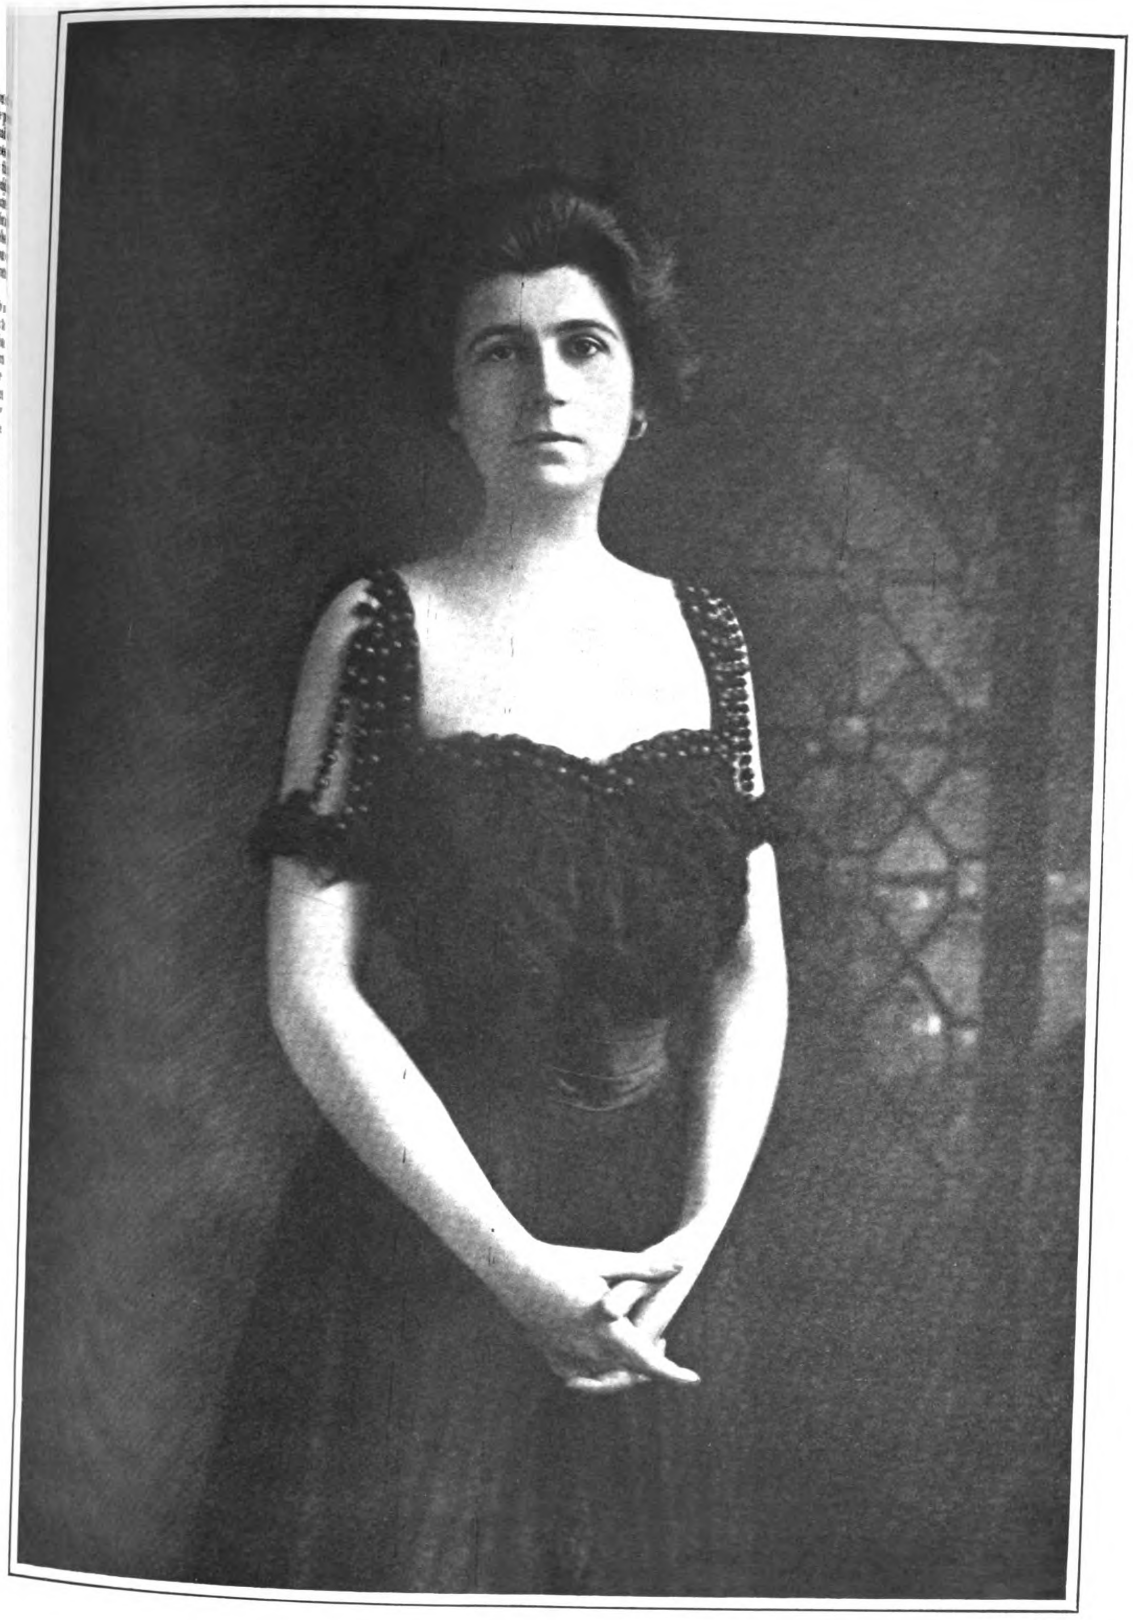
The few American women of this class who do write are essentially poets. Mrs. Fields and Mrs. Trask have won equal distinction in verse and prose. If Mrs. Mackay were not already known as a poet, the poetic quality of her prose is conspicuous in *The Stone of Destiny*. We have called it an American Idyll, though the scene is laid in Europe, but it makes no difference where the cycle of movement and emotion runs its course, so complete a detachment has the writer's art given it from any particular race or country. In calling it an idyll we do not mean that the story is idyllic in that special sense which attaches to Henry Harland's recent novels; the strain is too exalted for the entertainment of the lighter tropes and graces of the literary art. We are lifted into the stimulating atmosphere of knightly endeavor—that air we breathe in Tennyson's "Idylls of the King" and in Mrs. Trask's "Under King Constantine." The tension of a serious purpose is released in a drama which is not content to be a mere love-romance with idyllic charm: "the riddle of the troubled earth" penetrates every utterance. We hear this insistent note even in the pretty scene of Theodor's meeting with his little boy and girl in his studio, when they ask him what it is to die. It is with just such elemental questions that we are met at every point. What is honor? What is duty? In what consists the dignity of life? Notwithstanding its poetically ideal strain, the story deals with the vital concerns of all hearts to-day—the hearts of mothers, of husbands and wives, of children, and of the poor. Out of such concerns spring all the dramatic situations—dramatic in the simplest terms of our common life.

This tale, the reading of which may easily be accomplished in one sitting—and it is very sure to be, since it has a compelling interest—is something quite apart from all the fiction of our day. There is no portrayal of character, only its simple presentation. With the exception of the opening and closing scenes and of three or four in the course of the narrative, the movement goes on out-of-doors, in forest and field, and by the riverside. We think of the story as inevitably having been written in such surroundings, thus gaining that sanity and reserve which belong to nature. There is no comment, only the implicit impression; no halt for aphoristic reflections on the comedy of our life, which, nevertheless, is seen going on in mute procession, though there is no room ever for laughter. Throughout the story we are sensible of a structural harmony like that of a noble musical composition.

In the beginning the mother, Theodora, with her baby boy, and her dream of his future; she is the abiding presence in the story. Later on, after the boy, Theodor, has passed his three *Wanderjahre* in the study of his art and in the growth of a noble purpose for the devotion of that art to humanity, the course of love in connection with the career of the man and of the artist engages our interest. Here is disclosed the main value of the story, considered as a study of matrimonial conditions, though it is not presented as a study. The type of woman represented in Margaret, at once the object and the victim of Theodor's illusion, is the very opposite of that given us in Theodora, the mother. It is an implied rather than a premeditated satire upon a class of women who are not merely the product of leisure and excessive refinement, since they are even more frequently found in the idleness and squalor of the slums, selfish lovers of pleasure, voluptuaries, without sympathy, yet claiming all indulgence. Estrangement has followed, though it has not wholly displaced Theodor's illusion. In the course of his altruistic work an opportunity offers for a womanly ministration, and he is confident of enlisting her sympathy—just to tenderly break to two young children the tidings of the death of a woman who is the mother of one and sister of the other.

He entered her room. "The air was oppressive with the perfume of the cigarette Margaret held in her hand. She was lying on the sofa, indolent in the luxury about her." We need not read on to learn that his plea was futile. But how much of justice there is in her rejoinder! "First, you get wildly interested in painting, and think and speak and do nothing else. You treat it as a sort of cult, and expect me to play the part of priestess in your worship. Then, because *this* art, as you treat it, is an unknown quantity to me, you leave me entirely alone for weeks at a time. Then you take up an insane scheme of reforming the world, and you divide your time between your studio, which uses your days, and your school, which absorbs your money, and it never occurs to you to come and sit by me unless you have some hallucination by which you expect me to be carried away. . . . Be satisfied with what I have to give. . . . Stay here by me and rest. . . . Love me my way for a little while."

There is no meeting of irreconcilable natures. After what bitterness of desolation he sees the woman in Margaret awakened—after what supreme test of his nobility and sense of justice all discords are resolved, and the mother's faith in her son is justified, is told in the story, of which we have disclosed this much only to show with what vital elements it is concerned. Its beauty, its poetic quality, and its impressive simplicity give it a rare distinction as a living book.



War in the East

By Clinton Scollard

THE sable again for thine altars,
O Goddess of Peace!
Once more the red demon is loosened,
Death's hounds have release!
Ah, the sorrow untold, ah, the anguish,
Ere conflict shall cease!

Will the dove and the bough of the olive
Ne'er, ne'er be supreme?
Is good-will but a pitiful by-word,
A diplomat's theme?
And the time of the Nazarene's vision,
Is that but a dream?

KATHERINE MACKAY

Mrs. Clarence H. Mackay, who was Miss Katherine Duer, a daughter of Mr. William A. Duer, of New York, is the author of a new novel, "The Stone of Destiny," which is published this week. A German translation of a drama from her pen, "Gabrielle," which appeared last year in the "North American Review," is being prepared for stage production in Munich. "The Stone of Destiny" is a romance portraying the love of a man of altruistic views for a beautiful woman of shallow nature, whose love for him is only superficial. He marries her, and they drift apart; eventually the man saves his wife from erring, and lifts her up by his own moral strength.

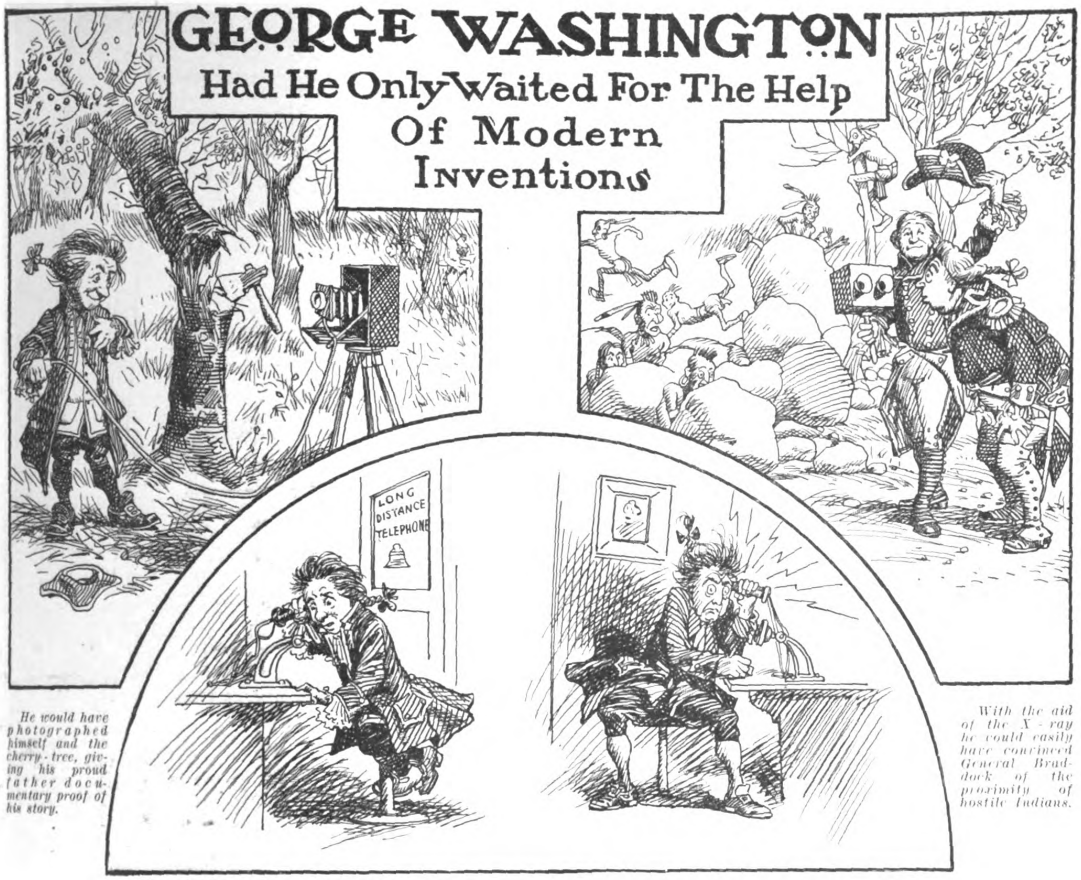
Books and Bookmen

By James MacArthur

MR. BRAM STOKER is a born story-teller. He has a knack of engaging your interest at the very outset and holding it through a series of exciting chapters until the dénouement. Perhaps he has never told a better story than *The Jewel of Seven Stars*, which has just been published, although his stories always have something about them that leave an impression, and won't be forgotten. Mr. Stoker already numbers a large audience of readers, both in this country and in England, but I feel certain that this latest story of his will greatly increase his popularity. It is a tale of wonder and mystery, and the reader who is already acquainted with Mr. Stoker's previous work, knows how well he can mystify his readers and keep them on tenter hooks of suspense until the end is reached. It is full of "thrills." There are pages in it which are capable of making the flesh of the most *blasé* reader creep. The story opens with the discovery of an attempted crime which at first glance might seem to have no further importance than that of some daily occurrence reported in the newspaper, but the circumstances that attend the trance into which the victim has fallen after being attacked by some unknown person become grave and complicated and mysterious. It transpires that he is a learned scholar and Egyptologist who has been engaged on some great experiment; the room in which he lies is full of strange Egyptian curios and mummies which he has collected during his travels in Egypt. The scholar eventually revives and proceeds immediately with his experiment, which involves the others who have been brought into association with him through the strange attack on his life, the nature of which he alone seems to understand. The experiment concerns the mummy of a queen, buried centuries ago in Egypt, whose sarcophagus the scholar had discovered under peculiar conditions, and in which he had also found the mysterious Jewel of Seven Stars. Now the occult begins to play a weird part in the story when it is learned that the queen had made secret plans for her own resurrection, and that the Egyptologist coming upon her plans during his investigations, had resolved to make the experiment himself and bring the queen to life from the mummied remains in the sarcophagus. For this purpose the scholar, accompanied by those who have been drawn into his scheme, among whom are his daughter, and the barrister who tells the tale and who is in love with Margaret, seek a lonely castle in Cornwall to make the great experiment. What takes place there must be held as a surprise for the reader. The result of the experiment is most astounding, and is worked out with great ingenuity and unexpectedness. All through the story the reader is bewildered and tantalized by the strange and bewildering turn of events which cannot even be hinted at in a brief notice of Mr. Stoker's extraordinary story. For example, to mention only one instance, there is the peculiar psychological relation of Margaret, the beautiful daughter of the Egyptologist, and her Persian cat, to the mummy of the queen and the mummy of a cat, which, like Margaret's feline companion, presents the strange phenomenon of a paw with seven claws. The effect of Margaret's personality, as her mood changes under the varying influences of her surroundings, is felt by the young barrister to whom she is attached. It should be noted also that Mr. Stoker has very successfully surrounded his story with an atmosphere that impresses the mind and warms the imagination of the reader to the unusual and extraordinary character of the tale he is telling. Mr. Stoker has undoubtedly written a very clever and masterly story of thrilling interest which is likely to command a popular audience.



Mr. Bram Stoker
Author of "The Jewel of Seven Stars"

The Stone of Destiny, by Katherine Mackay (Mrs. Clarence H. Mackay), whose portrait appears on another page, finds its explanation, it seems to me, in the pages of "Gabrielle: A Drama," which she published in the *North American Review* about a year ago. Gabrielle is debarred from marrying her lover, Théophile, because he is a priest, and his love for her ends in his attempt to make her take the vows and leave the world also. Gabrielle is repelled by his philosophy, and in these words of hers may be found the root-idea of *The Stone of Destiny*. "This moment is pregnant with Destiny. 'You fear the result of your capacity, and you thrust the responsibility upon my shoulders. . . . I thought we could walk together up the road leading to our star, with Love and Courage travelling with us, and Truth lighting us on ahead. You might have been the Voice; I, the Inspiration. . . . I have dreamed my dream and left it beneath me in the shadows of the dusk." There is just such a pregnant moment in the life of Theodora, when we meet her in the opening pages of *The Stone of Destiny*. She has sinned, and as she looks at the sleeping child in her arms, she muses on the future, and in imagination beholds the life of her son until he reaches his destiny. There, at the summit, as in a vision, she seems to look upon the face of a changeling sprite, who speaks in a strange familiar voice and says, "I am your retribution." The boy grows up to manhood strong and self-reliant and of a noble character, carefully nurtured and trained by the mother, who with every step is tremulous with fear and hope concerning his destiny. He marries a pretty butterfly of a woman, who, nevertheless, shows traits of latent goodness in her nature. She has no sympathy, however, with his high and lofty aims, and even the bond of their two children fails, when the hour of temptation comes, to hold her steadfast and true to her marriage vows. It is at this moment that the moral crisis of the story is reached. The husband, with his patient and noble endurance and the strength of his dominant character, shelters the erring wife, and helps to uplift her, with opened eyes and awakened womanhood, to a new life. Again, Theodora is on the summit of the mountain facing her son, and his voice, which sounds strange like a dear beloved voice silenced long ago, speaks tenderly, "There is no retribution, for I am the Compensation." So in the supreme moment of victory the son becomes a moral vindication of his mother, whose atoning life is crowned by her son's triumph. The responsibility had been thrust on his shoulders. He became the Voice, of which she was the Inspiration. The story as hinted at here is a simple and not uncommon one, but as told by Mrs. Mackay, it is clothed with a romantic idealism which removes it from the ordinary.

The author of *Wee Macgreegor* and *Ethel* has collected a number of short dialect sketches which appeared in a Scottish periodical, and has given them book form under the title of *Mrs. M'Lerie*. They are distinctly characteristic of the pawky humor of a Scottish neighborhood, and no doubt there is enough humanity in the sketches to reach the intelligence of many readers who are outside the circle of Mrs. M'Lerie's acquaintances. The characters are genuinely human, and the humor of Mrs. M'Lerie and Mrs. Munro and their neighbors is irresistibly funny—at least, to a Scot. They do not go much below the surface, and, after all, this is what makes the difference between *Wee Macgreegor* and *Mrs. M'Lerie*. The dialect, it may as well be admitted, is a stumbling-block to most readers; it is only when the feeling is deep enough, and the appeal to human nature—as in the creation of Wee Macgreegor, and the tender relations existing between his "paw" and "maw"—is strong enough to pierce the barriers of the language, that dialect stories become acceptable and overcome the scruples of the fastidious reader. We want more of Wee Macgreegor, and when he makes his reappearance in the spring in a second volume of later adventures he will be sure of a hearty welcome.

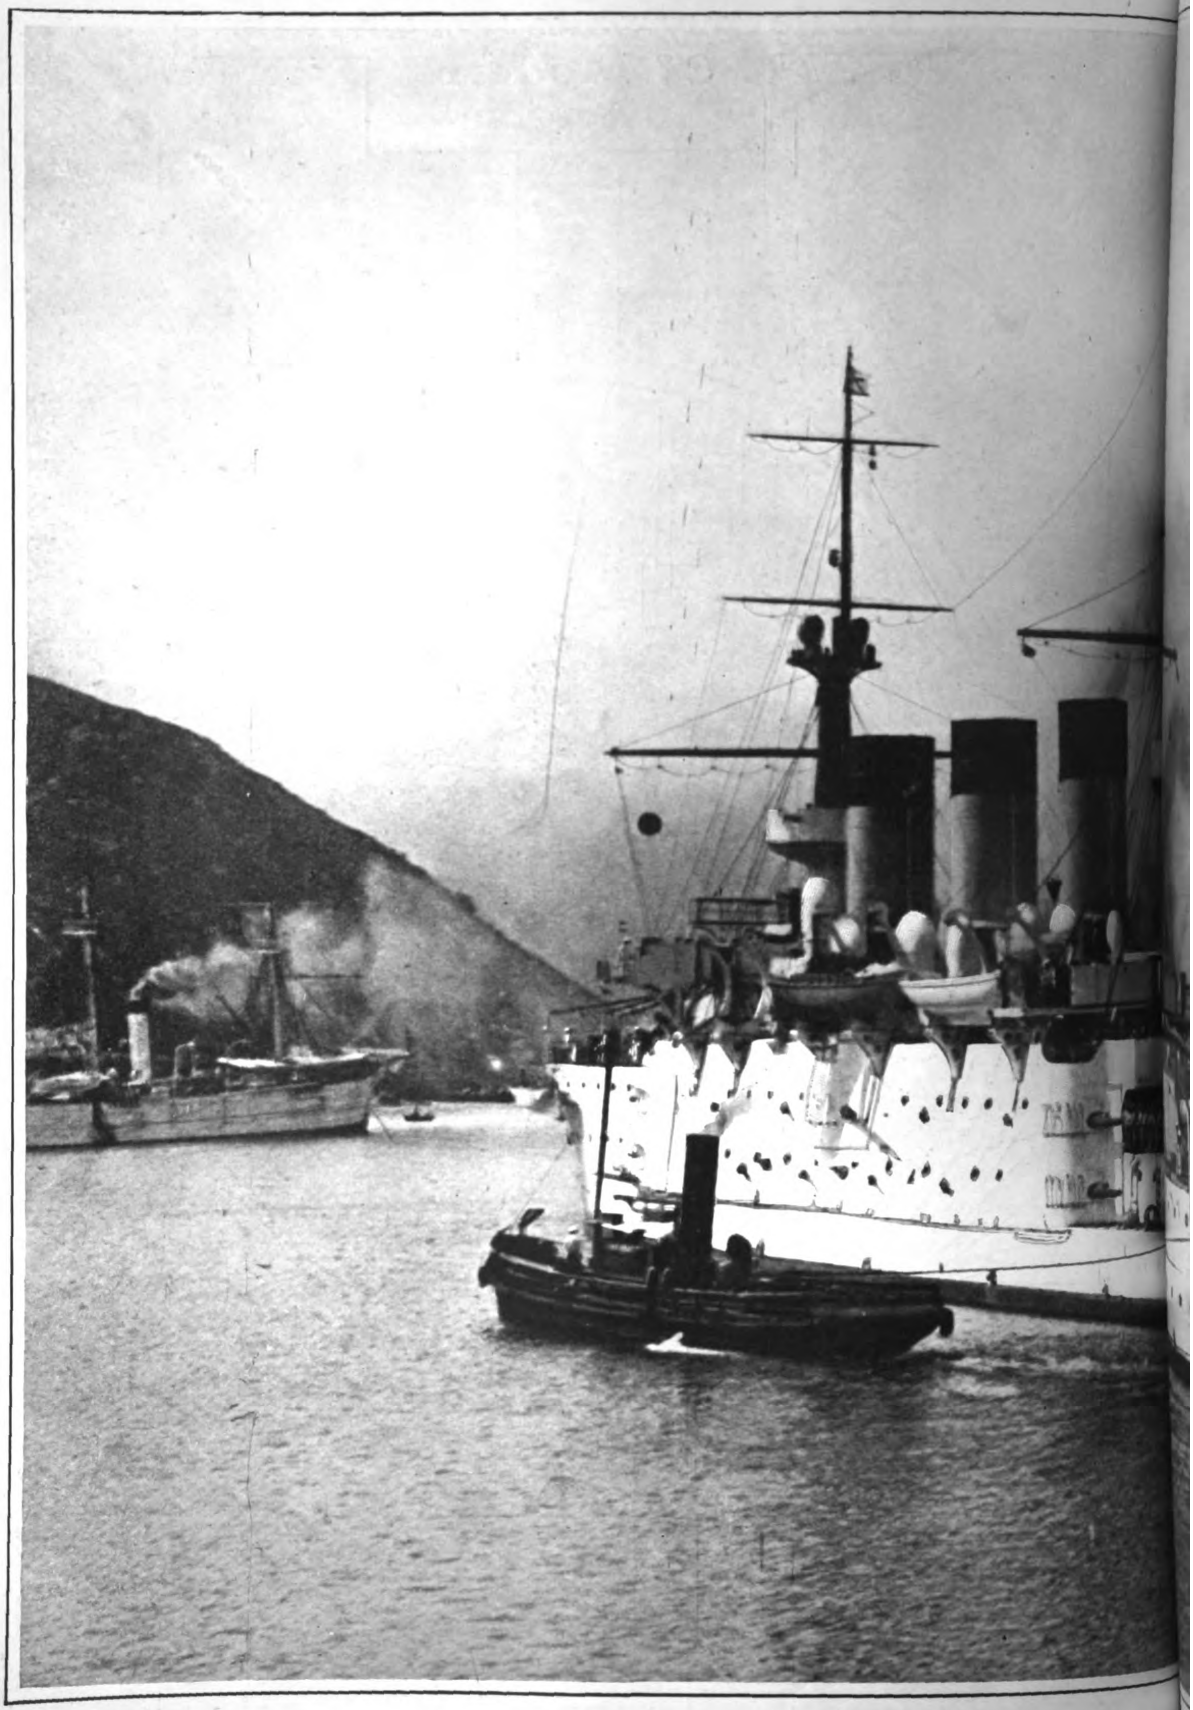
GEORGE WASHINGTON
Had He Only Waited For The Help Of Modern Inventions

He would have photographed himself and the cherry-tree, giving his proud father documentary proof of his story.

With the aid of the X-ray he could easily have convinced General Braddock of the proximity of hostile Indians.

He would have (wisely) notified his father of the hatchet episode, and received his observations on the value of truth by long-distance telephone.



He would have crossed the Delaware with speed and safety.

King George would have been delighted by early news of our independence.

This would have proved a great aid in reconnoitering!

Gambling in English Society

By Sydney Brooks

LONDON, *February 3, 1904.*

HISTORY will parallel most things. Especially if the things are not what they should be. It is one of the soundest rules of life to withhold one's confidence from the man who has discovered a new evil. When the evil which he believes to be unheard of touches on society or any of the innumerable branches of public taste and predilection, scepticism becomes almost a duty. All round one, for instance, temperance agitators are proclaiming that never was the drink habit such a curse to England as at this moment; artists are inveighing against the dominion of portrait-painting; musicians believe that the trivialities of light opera are more pervasive and demoralizing to-day than ever before; dramatic critics are perfectly certain that the stage was never so completely under the sway of glitter, vulgarity, and the "scenic artist"; social reformers speak as though the passion for getting rich in a hurry marked out this age from all others; and men of letters have an impassioned conviction that the Hall Caines and Marie Corellis of literature were kept in their proper place by the healthier taste of former times. Of course they are all hopelessly wrong. I dealt in a recent letter with the overwhelming proofs that England is becoming not less but more sober, and need not therefore repeat myself. Artists who believe that pure art is suffering more at this moment from the vanities of portrait-painting than at any previous period may turn with profit to Kneller's neat and comprehensive dictum: "Painters of history make the dead live, but do not begin to live themselves till they are dead. I paint the living, and they make me live." Or they may read of the second-rate French portrait-painter Vanloo, who, settling in London in 1737, became so much the rage that "the train of carriages at his door was like that at the door of a theatre," gave five sittings a day, and accumulated a fortune in four years. As for the musicians, and their certainty that real music was never of so little account as in the England of to-day, let them before recommencing their lamentations make a study of the forty years of calumny, failure, and bankruptcy that Handel passed in the England of the eighteenth century. With the "decay-of-the-drama" cry one has even less patience; it is too preposterously stale. "What do you now find? Farcical dialogue, compounded of the babble of the streets; the extravagances of demons; love intrigues repugnant to delicacy and manners." That is not the wail of Mr. William Winter or Mr. William Archer. It is the wail of a Chinese critic of the year 1500, and there are a hundred quotations that might be made from the Greeks and Romans, the Italians, French, Germans, and Spanish to keep him company. So one could go through the entire list. The world has exhausted every vice and committed all artistic sins, and the ghosts of our forefathers must smile a grim smile when they hear us pluming ourselves in the twentieth century on our unprecedented wickedness, our unique frivolities, our quite unheard-of degeneracy.

So that I am not going to pretend that the gambling mania which has swept and is continuing to sweep over English society is something peculiar to the year 1904, either in fervor, pervasiveness, or resultant harm. There may possibly be details in it that have not occurred before, and could not be paralleled from the history, let us say, of the eighteenth century—the great gambling age of English annals. If so, I am not aware of them. It is constantly said, for instance, that the extent to which girls and young married women gamble nowadays at "bridge" is entirely novel; but turning over the files of the *Times* for the year 1797 I happened upon this illuminating paragraph: "At some of our first boarding-schools the fair pupils are now taught whist and casino"—not, one suspects, for art's sake alone. And I rather fancy that all the other features of the "bridge" mania which are roundly denounced as unprecedented might, if examined, be found to be merely reproductions of bygone follies. An impartial judgment would probably go no farther than to say that gambling in English society has now scaled a height unreached since the most rollicking days of the latter eighteenth and early nineteenth centuries; that it is certainly more widespread to-day than it has been for the last seventy years; and that while individual losses are less sensational than they used to be, the proportion of gamblers to population was never at any time greater than to-day. In small non-essentials there has, of course, been a certain change. A hundred years ago more than one peeress kept gambling shops openly and advertised them as such. To-day it would be more correct to say that though many a titled woman's house is a gambling shop in substance and practice, the fact is not advertised. Shortly before Queen Victoria came to the throne, Crockford's, on St. James's Street, now the home of the Devonshire Club, was the gambling centre of the metropolis, and as much as $5,000,000 was known to change hands on a single evening. I do not think that anything like that would be possible now. Gibbon tells us how he watched Fox lose $2500 an hour for twenty-two hours on end. That, too, one may fairly class among the incidents of an age that has gone. In one of his letters to Horace Mann, Walpole makes the astounding statement that a loss of $500,000 at a single sitting was not rare enough to be surprising. It would certainly create some talk nowadays. One of Braddock's sisters gambled away her whole fortune of $60,000 in a month. Ladies are luckier to-day in getting some one to help them out of such predicaments. There is a well-known tale of four men who sat down to whist at Raggett's Club one Monday evening, *circa* 1820, and did not rise till eleven o'clock on the following Wednesday morning, one of them being the richer by $150,000. I have not heard of such herculean feats being performed to-day, and, indeed, one has only to look at the betting-book of Brooks's to realize that the age of heroic plungers has passed.

Nevertheless, in all its broad features, England is living over again the life of its great-grandfathers. Society lives to gamble, and a considerable section of it gambles to live. The reign of "bridge" is supreme and autocratic. Roulette, baccarat, poker, and whist are as though they had never been, and even in the days of their greatest might, their primacy was never anything like so wide or so enslaving as that of their fascinating successor. Society, not the "smart set" merely, but all society, is based on "bridge." It is the universal *pons asinorum*. A literature has grown up upon it comparable almost to the output of books on the Boer war. Professors of "bridge," men and women, titled as well as commoners, are reaping fortunes. It is part of the curriculum of the "finishing schools." It is one of the indispensable qualifications for an up-to-date governess. Without the passport of ability to play "bridge," an Englishman is a social outcast. House parties are arranged simply with a view to "bridge." Dinners are dethroned, and serve merely as an introduction to the cards. "Bridge" engrosses all interests and most conversation. I have known it utterly to spoil week-end shooting parties; I have seen it turn billiard-rooms into deserts; I have heard an M. F. H. denounce it as the ruin of his hunt. At balls and receptions the "sitting-out" room of former days is the "bridge" room of to-day and always crowded. At the clubs, if you are looking for a friend, you go first of all and instinctively to the card-room. And what is true of men's clubs is beginning to be true of women's. The few really fashionable women's clubs have already added card-rooms, and find them immediately becoming the feature of the establishment. The ladies of the Regency staved indoors all day with the blinds drawn playing faro. The ladies of King Edward's reign show a devotion not less determined to "bridge," especially on Sundays. I heard of a lunch party the other day that was typical of many. It began at the usual hour of two o'clock and broke up at 4 A.M. the next morning.

After all, one cannot wonder. "Bridge" is undeniably the best gambling game that has yet been invented, because there is an element of skill in it, because it is a game that may be fairly easily learned, that brings in quick returns, and is bound to pile up a considerable score for you one way or the other, and allows you the subtle luxury of standing out every fourth hand. It first struck London in 1892, but it was not till 1896 that it really got hold of "the town." Since then it has absolutely killed every other card game, with a completeness altogether without precedent in my experience. Some hostesses, the Duchess of Portland among them, have absolutely refused to countenance it. Others, appalled by the results of the gambling it has entailed, have sternly limited the stakes to a shilling the hundred. Others, again, have felt that the evil has gone so far that unless checked it must develop into a positive disease, and have accordingly banded themselves together into an anti-bridge league. Undoubtedly the extent to which women are gambling to-day produces an enormous amount of harm as well as some unpleasant "scenes." It is never a good thing when women owe men money, and if only one-hundredth part of the ordinary gossip that one hears be accepted as true, it has proved an exceedingly bad thing in more than one instance. There are a good many men, perhaps not the least wise in their generation, who make it a rule not to play with women at all; and one is rather disposed to applaud their resolution when one hears of the shifts to which a girl is driven who has lost more than she can afford to pay, has pawned all her jewelry, and has not the sense to tell her father or brother all about it. The people who have really benefited by the irruption of women into the card-room are the pawnbrokers and jewellers, and the tales they could tell would make an interesting chapter in the social history of King Edward's reign. At the Continental watering-places and 'Bads, the harvest they reap by the purchase of jewels, works of art, and even French frocks from fashionable women who are "down on their luck" is something prodigious. No one very much cares to what extent men gamble, but it is worth noting that most of the better clubs have already found it necessary to regulate the stakes. At these clubs, I need hardly say, no money changes hands. The card-room cashier books the winnings and losses, and sends to each member a weekly account, and I think that $2500 a week is the most that may be debited against a single player at any first-class London club. In one of them $1500 is the weekly limit, and in two others $1000, the points in these latter being fixed at a shilling, with $25 on the game. There is one card-room development to which "bridge" has given rise which I do not remember to have seen before. When a good player is not rich or rash enough to stake heavily, another member will agree to "carry" him—that is, will pay his points and draw a percentage on his winnings. There are quite a number of men who are making over $5000 a year by this simple method, and a "bridge" quartet is as often as not surrounded by an attendant quartet of equally eager backers.

The Anomalous Lot of the Divorced

It seems to be going harder than it once went with the husbands and wives who seek a legal release from their legal tie; the trouble which results from the double nature of marriage is apparently farther than ever from solution. The tie is not merely legal, so the friends of its mystical nature maintain: it is also spiritual; it is primarily of divine ordinance, and secondarily of human ordinance. Man may not put asunder whom God has joined together; and the friends of the mystical nature of marriage appear to think that this saying holds concerning those whom a magistrate has married as well as those whom a minister has married. This sort of marriage acquires the sacramental quality of the sort solemnized by the church, though how, is not expressed. So far as divorce is concerned, any sort of legal marriage seems to become spiritual, and eternally binding, by the same inscrutable process. The clergy who refuse their blessing to the union of a divorced couple make no distinctions as to the way by which they had formerly entered into the married state; if one or other has been divorced, that is enough; the divine law, just as effective in civil as in religious marriages, has been broken, and no human law can lift the ban from him or her who has legally broken it.

The situation has its anomalies which must often puzzle and sometimes baffle the minister's conscience. The other day a couple who had been divorced from each other were remarried by the rector of a church in Kentucky. Yet their case was, before the law, exactly that of any other divorced couple, and the fact that they had been husband and wife had nothing to do with it. They were as essentially unmarried as any people who had never been married, in the eye of the State, yet a minister of the church, though he might not marry divorced people, married them. The like case must present itself rather often, for every now and then one reads of divorced couples who, after trying it apart for a while, decide trying it together again. What is the minister's position? Does he hold that the marriage has never been broken, and that the pair have never been put asunder? If so, why should they be again joined together? Where is the reason, the need of the remarriage? Or is the minister who remarries a couple divorced from each other in error, and how? If he is setting himself above the State when he refuses to marry a divorced person, is not he setting himself above the church when he consents to remarry a couple divorced from each other?

This is the quibble which the divorced, whose lot is apparently growing harder, might put as a serious question in their behalf. But practically they have denied the mystical nature of marriage, and the clergy might reply that their quibble is not to be seriously answered. Then the divorced would have nothing to say for themselves, probably, as also they would not have much to say for themselves if they were Roman Catholics, and were told that there was an organized movement on the part of some ladies of their Church to effect their social outlawry for disobedience to one of its dictates. This, the newspapers tell us, though with how much authority is not evident, is the case; and it is to be supposed that there is much shivering among the divorced Catholics in anticipation of being left out in the cold. The ban is probably to be enforced against all kinds of divorced people, Protestant as well as Catholic, but it is to be enforced with peculiar rigor in the case of divorced Catholics, who, it seems, are rather increasing than otherwise, in defiance of their Church. They are not to be asked any more to dinners or dances, to lunches, or afternoon teas; they are not to be received or recognized by the daughters of the faith; they who were not appalled by the peril of their eternal health which they incurred in breaking an indissoluble bond, are now to be acquainted with the terrors of social outlawry.

What the effect will be no one can tell, but no one can well say that the daughters of the faith are not acting from their consciences in the performance of their part. It is possible, but here again there is nothing absolute, that their Church might not have required such an initiative from them. It has hitherto shown itself capable of dealing efficiently with offences against it within itself. If the divorced Catholics were to turn Protestant, it would be a different affair. Then it might not regard any social rigor in dealing with them as too zealous. But it is not known that they turn Protestant, or that they do not remain Catholics as much as they may in their disobedience. They have not probably asked their Church to bless their union in the second marriages often contemplated before the first was annulled; they have not offered it that offence in addition to their contumacy. They must know how it views their second marriages, and they cannot save their faces by noting to their fellow Catholics the social condition in those countries where the law of the Church has been or is still effective against divorce. They cannot ask, as they could if they were Protestants, whether the domestic arrangements so common, or reputedly so common, in France, Spain, and Italy, in default of the divorces which the faithful are denied, or which they deny themselves, are better than divorce. If they have read *The Ambassadors* of Mr. James, they are in no case, as they would be if they were Protestants, to allege that, conscience for conscience, their own as divorced people must be, is rather better than Madame de Vionnet's in her conventional solution of her domestic difficulties.

The situation is very anomalous in every way. Nothing is more notable in the highest society than its deference to formal religion. This, when it does not edify, must always interest the observer. Fashion is alike worldly and other-worldly in its strict conformities. Yet it curiously happens that those divorced people against whom social ostracism is proposed, are of the highest society. No provision concerning humbler offenders is contemplated; they are usually kept away from the dinners, lunches, teas, and the like, by their preoccupation with their service; and, besides, there are apparently no divorces among them. Of all countries in the world, the country from which most of our Catholics come enjoys perhaps the greatest social purity if not the greatest domestic happiness. Ireland fairly dresses the balance disturbed by France, Spain, and Italy.

In fact, all classes of her population at home seem to get on without divorces as well as all classes of the population in Canada, where Catholics and Protestants are united in dispensing with them. The Protestants get them by act of Parliament only for the scriptural cause, and the Catholics do not get them for any cause. So far as any statistics show, the Canadian household, under these conditions, is no less happy than the American household, which is preserved against violent temperamental dangers by divorce easier perhaps than anywhere out of Scandinavia or the Orient.

Neither climate nor race, however, seems to be exempt from the temptation to seek relief from domestic misery through the means which the law now provides nearly everywhere. Whether creed will prevail against the temptation remains to be seen. Will the terrors of this world prove deterrent where the terrors of the other world have failed? Will it seem more dreadful to be excluded from the élite than from the elect? We cannot doubt that the affair is serious for those who have incurred the penalty. They cannot hopefully protest that people in the non-divorce countries who have solved their difficulty in the conventional way are received in the best society, for this does not affect the fact of their own contumacy. Here it is certain that such people would not be received, and the question is whether the divorced and remarried can by any organized movement be identified morally with such people.

Entertainment in the Navy

By H. H. Byrne

Formerly of the United States Navy

MOST people imagine that the social functions in the navy are paid for by the government, and that naval officers generally have a sinecure in that respect, but, like the general belief on other matters pertaining to the service, the public is clearly in error, and particularly on the point just mentioned. Only recently the newspapers throughout the country were commenting upon the elaborate balls and parties that were given in honor of our officers by the naval officers and royalty of Europe, and upon the equally gorgeous receptions given in return, on board the battle-ships and cruisers; but how many people stopped to think who was footing the bill? Was Uncle Sam dining King Edward and the German Emperor in such style? No, he was not; every officer aboard those vessels paid out of his own pocket a proportionate share of the expenses. Now the *personnel* of our navy is differently situated from that of other countries, differing from that of Great Britain, which of all is the one most like our own, in that its officers are recruited from the country at large; but those two nations aside, the wardroom of the others is made up of favorite sons, and it would be almost impossible for any of the "common folk" to enter without going before the mast. The United States officers are, as every one knows, appointed from the Congressional districts, or, in other words, the people of the States are represented in the navy proportionately as they are in Congress, the result naturally being that the greater part of the officers are men of ordinary means who rely solely on their salary for an income. It is true, of course, that some few have other sources of revenue, but it is equally as true they are greatly in the minority. With their salary they are obliged to provide for subsistence, and clothe themselves, and entertain foreign officers on occasions as above-mentioned, which is very necessary to do when fleets meet. This is an injustice to our representatives. Other countries make adequate provision for this in their service, but thus far that responsibility is shifted by our country upon the officers themselves. A better idea can be had of what really is an imposition, when one considers an individual case; say, for instance, a lieutenant whose only revenue is his salary, which in this case we will credit with longevity pay and make it $2200 per annum. He has a family at home to whom an allotment of maybe $1200 is allowed, and he, stretching out the remaining $1000 to meet his other obligations, a few of which include tailors' bill for uniforms, mess bill, and laundry bill, not to mention incidentals and an occasional going ashore. In addition to all this he must meet his assessment for the banquet. One or the other of these is invariably the case. The single man cannot marry; if he is married he can only afford to see his wife probably once in three years, for her to follow his movements would require more than double his income. Sometimes he prefers going to an obscure station rather than the European one, for to "hold his end up" there would mean going into debt for, in all likelihood, five years to come.

A Word for the Filipino Scout

By A. Henry Savage-Landor

THERE seems to be a great deal of uncertainty and disagreement about the efficacy and faithfulness of Philippine native scouts, and, I dare say, a few words from one who is neither an army man nor an American citizen, and who speaks merely and absolutely from personal observation, may interest those whose attention has been roused by many conflicting statements and accounts. The institution in the Philippine Islands of an organization of properly drilled native regular soldiers, properly fed and clothed, as the scouts are, may be regarded as one of the best steps the Americans have yet taken to win the confidence of the natives in the Philippine Archipelago.

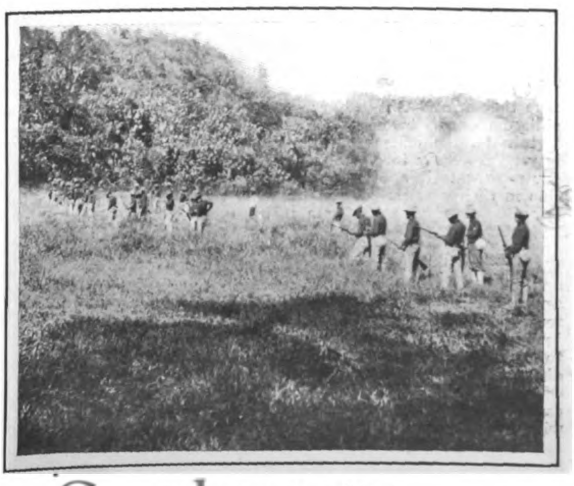
The native scouts are well paid, and, under the leadership of efficient officers, I have known them to develop into admirable and efficient fighting-men. But I have also seen others who, through no fault of their own, were very poorly drilled, clothed, and disciplined, and hardly deserved the name of soldiers. There is, however, no reason why this class of scouts—they are, fortunately, few and far apart—should exist at all in the Philippine Islands, for the raw material of the recruits is generally excellent. The men are either former soldiers of the ex Spanish guardia civil, a somewhat similar, although inferior, organization to the present scout regiments, or else venturesome spirits, such as former insurgents. There are, besides, a great many well-to-do young men who are attracted by the prospect of a military life and uniform—the ideal existence for the average young Filipino of manly physique and progressive ideas.

By Filipinos, I mean principally those living in the provinces, and I am inclined almost to exclude the average semi-demoralized and depraved young men of Manila, who have none of the real characteristics of their provincial countrymen.

Take the average healthy lad of, say, twenty years of age. He is lightly built, of an average height of from five feet three to five feet seven; he is extraordinarily subtle and wiry, easily trained, obedient and faithful if properly treated, but morose and vindictive even for small slights which have offended him. If well led he is brave enough, has a veritable mania for firearms and shooting, can shoot accurately if in practice, and is a born guerilla soldier, as the Americans have already learned; he can march fairly well if not overladen and overdressed—I say overdressed, because, in my observation, as we shall see later, what is good for the American soldier is not always suitable to a native—and, if necessary, the native can stand hardships, thirst, hunger, and travelling through jungle, dense vegetation, or (where there are no trails) in river courses, infinitely better than a white soldier. Where he has not come much in contact with Americans, the native scout is generally very abstemious, and I have no remembrance in my long stay in the islands of ever seeing a scout under the influence of liquor.

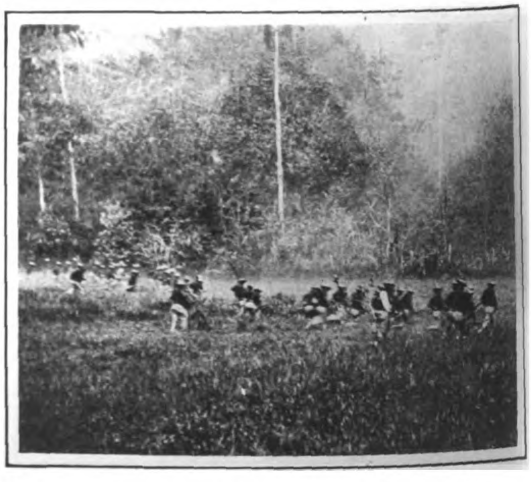
The Filipino becomes much attached to his superiors. I had the great pleasure of meeting many scout officers in the Philippines, and they, with the exception of one or two, who might well trace to their own incapacity the insubordinate conduct of the men they commanded, were absolutely unanimous in singing the praises of their men and the extraordinary faithfulness shown by them even under very distressing circumstances. Now the Spaniards have been much criticised because they did not pay their soldiers punctually, and none more than the Filipinos had reason to complain and reflect upon this point. But I think Americans should consider it quite a marvellous sign of faithfulness on the part of scouts, not to speak of constabularies and other such civil government organizations, who go for months without receiving their pay from Uncle Sam—the pay which is due them by contract every thirty days. Yet one never hears them grumble, and very rarely is a case of desertion to be registered, although the absent-mindedness of Uncle Sam leads to very serious trouble in other ways; the men have to borrow money at usury on the security of their pay, to provide for their wants and those of their families entirely dependent upon them until the arrears are eventually paid. This is a great pity, and if not remedied may eventually become a serious cause of distrust in the methods, already little understood, of the American government. But so far only the greatest patience and good-natured forbearing has been shown by native scouts.

Some Americans in the Philippines believe that the proven fidelity of the scouts is due, in a great measure, to the fact that they become ostracized, as it were, by their own people when joining the United States army, but such an accusation is most incorrect and undeserved. If Manila be excepted, the scouts and their families live in perfect peace with the rest of the inhabitants, and, indeed, the young scout is generally a great "catch" among the local *señoritas*. He is always looked up to by the inhabitants, and it is quite pleasant to watch them—at native dances, for instance—and to see with what *aplomb* they carry themselves and how fully they recognize the dignity of their uniform. If anything, I think, they could give points in the matter to a great many soldiers of other nationalities.



The scout officers now in command I found, as a rule, very capable; some were excellent, except, as I have already mentioned, one or two, who, I regret to say, were distressingly bad. That these officers are good is possibly more of a chance than otherwise, for, contrary to the British system—and also Russian and German—in which the pick of the best officers on hand are generally intrusted with the formation of colonial native regiments, the Americans have adopted the plan of raising non-commissioned officers to the rank of lieutenants and placing them in command either of a company or a smaller contingent at different stations or military posts.

So far as I could see, the majority of men who had been so far selected were men of a superior class, who are now doing very excellent work, but the process, if indulged in too freely, seems to me a precarious one. Indeed, so it has proved in some cases, especially with the older men, who see in the promotion the apex of their career. The middle-aged ex-sergeant who finds himself promoted to the rank of lieutenant, and is stranded in some out-of-the-way post—where no work is demanded—unable to speak the local language, can expect to have little or no respect from his men. An interpreter has to be employed to converse between men and officer, and frequently such a man is left to take charge of everything. Partly by harsh language and by more violent methods some sort of drilling is given to the recruits at first, but gradually even that gives way to late hours in bed, tropical laziness, the entrancing manner and sulky smiles of a black-faced Filipino young wife, and, worst of all, the most terrible of evils in the Philippines—the whiskey-labelled bottle containing deadly firewater of Chinese and Manila concoction.



Not all subordinates, especially the older ones, are, in my own observation, able to command. No doubt, however, the authorities well know these facts, and in time the defective officers will gradually be weeded out and their places filled by more efficient men.

And now that I have pointed out the few defects which can so easily be remedied by raising the standard of officers, let me say a few words in favor of some of the companies I had the pleasure and honor of inspecting.

Nearly all those that came under my observation were good, very good, and I only regret the impossibility of mentioning each officer by name. I was particularly impressed by the really marvellous results obtained by Company 46, Philippine Scouts, en-

Filipino Scouts in an Attack

A Skirmish in the Field

Scout

tirely composed of Visayan recruits, and which was, at the time of my visit, stationed in the town of Capiz, in North Panay. The evolution of this company was quite interesting.

It was early in July, 1900, that Lieutenant H. F. Weusthoff (the only battalion sergeant-major of the Sixth Infantry) was detailed by his commanding officer to organize a detachment of twenty-five native scouts, with a view to starting the nucleus of what at a future date might develop into a company of native scouts. The recruits came to be enlisted, and many of them had not the remotest idea of what soldiering meant in the strict sense of the word as understood by Western people. By hard work and perseverance, patience, consideration, and, above all, tact, Weusthoff from the moment the first detachment was formed threw his entire energy and intellect into the task of showing that the much-despised native might be made to prove that, after all, the leader is, to a great extent, responsible for the conduct of his men. If the men have faith in their commanding officer, astonishing results may be obtained.

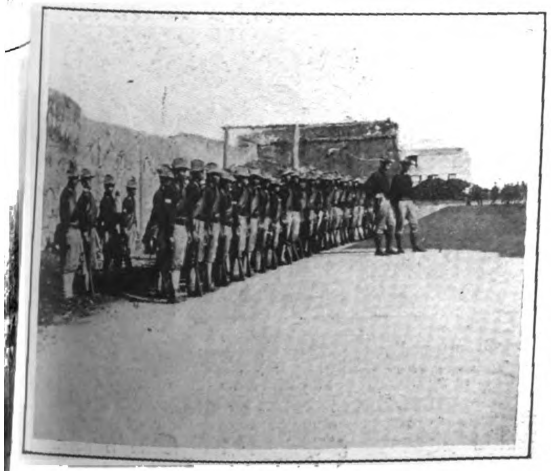
Beginning with twenty-five men and gradually swelling their number to one hundred men, Sergeant Weusthoff eventually obtained a commission as an officer of Philippine scouts, and, his excellent service being recognized by Uncle Sam, he was ultimately detailed to be one of the officers charged with the reorganization of the scouts in the island of Panay, the northern province of Capiz being assigned to him.

The men were duly enlisted and sworn for three years as the 46th Company of Philippine Scouts, but, owing to exigencies of circumstances, these men were always scattered in small detachments of ten or fifteen, and never saw garrison life until March, 1902, when the task of organizing them into a company and making them an efficient body of soldiers began again.

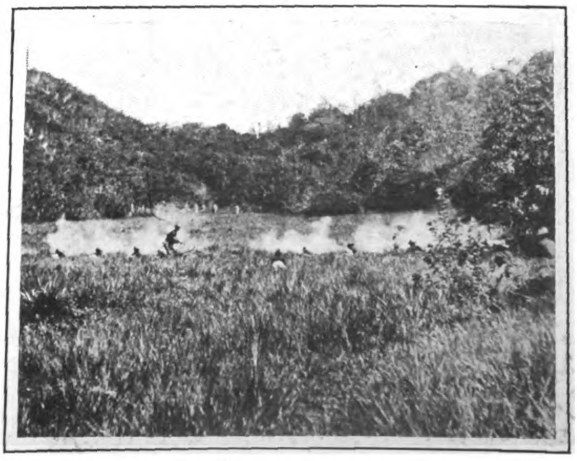
On arriving at Capiz I was very much struck by the unusually soldierly appearance and manner of both commanding officers and soldiers, and upon inquiry found that Weusthoff himself—a German by birth—had been in the German army, where he had obtained a good foundation and training for thorough military discipline, while his long residence in the United States had given him a certain simplicity of manner and general common sense and resourceful ways, typical of the American soldier, as far as military ways are concerned. Then, too, with the unselfishness and consideration for other people's feelings which a foreigner seems ever to possess in a higher degree than the average American, this particular officer seemed to be the very type of man wanted for such work.

His men appeared so remarkably well dressed, spotless and neat, and bore themselves in such perfect soldierly manner—indeed, as far as discipline went, I do not think I ever saw soldiers anywhere in the Philippines who surpassed them—that I expressed the wish to see the company at drill.

They were undergoing a trying time, working day and night, as orders had arrived to abandon the post. Much labor was expended in loading empty cases, useless boards, worthless office desks, and tools, the property of the United States government, which had to be accounted for or paid for by the officers in charge. Still, although this seemed hardly the moment to see the company to advantage, Lieutenant Weusthoff turned them out for me, and they went through their drill with amazing perfection. Skirmishing tactics were gone through with great precision, and I was much astounded by the intelligent manner in which each man obeyed orders—not mechanically, as is often to be noticed in the average soldier, but in a thorough manner, as if in an actual battle. I examined some of their weapons, and it was a real pleasure to see how their rifles were kept. Although those rifles had been in use for a year or more, they looked as if they had just come out of the arsenal—a marvellous fact to any one who knows the damp, muggy climate of Capiz, the most diabolical climate imaginable for the destruction of any metal, especially of steel or iron.



It is to be hoped that the American public may have a chance to judge for itself of the efficiency of Weusthoff's company at the St. Louis Exposition. I understand that Major F. deL. Carrington, First Infantry, has been designated as the commander of a battalion of scouts to go to the Exposition, and I think none deserves more than the 46th to be one of the four companies selected to be seen by the American people.



A Scout Camp in the Philippines

These scouts are dressed practically the same as the American soldiers, and I think the attire is suitable except for the boots. These, I am convinced, are not suitable for the natives.

As far as the quality of the shoes is concerned, they are as good as could be—but I have always noticed on taking scouts for long marches with me that few of them were able to wear their boots after the first few hours. Those who did, usually felt the need of cutting large slits in the leather to let in fresh air, and also to let out the water with which anybody marching across country in the Philippines always has his shoes filled. Most men, however, preferred to take off their boots and carry them on their shoulders. I trust that a small tribute on my part regarding the courage and faithfulness of Philippine scouts may not be inappropriate. I took three of these Philippine scouts as an escort during my long journey of several hundred miles across the island of Mindanao, a continuous journey which had never been accomplished by a single white man, and which, in the opinion of American military authorities, involved great risks. The country which I traversed is inhabited by fanatical Moros, and also by a number of savage tribes, which, if treated without tact, have peculiar and unattractive ideas of their own regarding the life of strangers. To say that the three scouts in question volunteered to accompany me, well knowing the risk before them, would in itself indicate a certain amount of confidence in white men, whether British or American; but, even more remarkable, the greater number of men in the company were either anxious or willing to go. The three men who accompanied me were from the excellent company of Lieutenant Benjamin Stark (then stationed at Reina Regente in Mindanao). These men were with me for several weeks, and were most obedient, respectful, and plucky. They were quiet and sober, even on reaching civilized points after long periods of privations and hardships.

The 39th Company of Philippine Scouts, Lieutenant Speth in Command

Native Scouts Attacking a Band of Insurgents

"The Younger Mrs. Parling"

Miss Annie Russell, in "The Younger Mrs. Parling," now playing at the Garrick, has the part of a young wife whose early surroundings were of the sort not recognized by society. She marries into a family of Puritan principles in order to escape from her uncongenial environment. She is repelled by their rigid and provincial ideals, and finally, when they offer a gross insult to her mother, she leaves her husband and reverts to a former lover

"The Other Girl"

"The Other Girl," by Augustus Thomas, is now playing at the New Empire Theatre. The central figure of the plot is a champion pugilist, "Kid Garvey," who is also a physical instructor in the employ of an athletic minister. The "Kid" almost succeeds in inducing a young woman of aristocratic family to elope with him. At the last moment, her cousin, in order to prevent the scandal, substitutes herself in the auto, furnishing the complications of the piece

"The Admirable Crichton"

Mr. Barrie's satire, "The Admirable Crichton," is being played at the Lyceum Theatre, with Mr. William Gillette in the principal part. "Crichton" is a butler in the family of an eccentric nobleman, who believes so firmly in social democracy that he entertains his servants at stated intervals in his drawing-room. "Crichton," who has at heart the traditional class distinctions, disapproves, although he believes that in unconventional circumstances the conditions might be reversed. The opportunity to prove his theory comes when the family is wrecked on a desert island, and "Crichton," by the force of his personal character and ability, becomes leader and dictator. He falls in love with "Mary," the nobleman's daughter, and is about to win her when the situation is suddenly reversed through their rescue by a passing ship. On their return home the old conditions prevail again, and "Crichton" submits to tradition

MISS VIRGINIA HARNED

Miss Harned has been appearing as "Lady Lorna Leinster" in E. H. Sothern's play, "The Light that Lies in Woman's Eyes." "Margaret Mayfield," a blind girl, is in danger of dying through grief for her lost lover, and in order to save her life, "Hector Cameron," a returned arctic explorer, is palmed off on her as the missing "Jack Clonmel." "Lorna (Miss Harned), knowing that the explorer is after the girl's money, tries to save her by making "Cameron" fall in love with her. She succeeds; but when "Cameron" discovers the deception, he swears that he will win her love in earnest. This he does, finally, after a vain attempt to impress her with his gallantry by planning to rescue her from a band of gypsies whom he has bribed to tie her to a tree. He marries her in the end, and the blind girl is made happy by the return of her lost lover

Correspondence

THE NORTH AND SOUTH AMERICAN RAILROAD

MEXICO, *January 14, 1904.*

To the Editor of Harper's Weekly:

SIR,—In your issue of January 9, and in an article entitled "The North and South American Railroad," there is mention made of two railroads connecting with the United States lines, "one making connection at El Paso, and the other at Ciudad Porfirio Diaz." Through some oversight you have overlooked the most direct and shortest line between the Rio Grande River and the City of Mexico, the National Railroad Company of Mexico, which runs in a comparatively straight line from Laredo, Texas, to the capital of this republic. It is over 300 miles shorter from this city to San Antonio than the line through Porfirio Diaz, and with its connections, the Gould system, 470 miles shorter from here to St. Louis, Missouri, than by any other route. It is a standard gauge, and should, I think, be considered in connection with such a project as that treated in your article.

I am, sir, F. E. YOUNG.

MR. WEBSTER OF NEBRASKA

OMAHA, NEBRASKA, *December 11, 1903.*

To the Editor of Harper's Weekly:

SIR,—Permit me to make a suggestion, from the prairie point of view, regarding the *personnel* of the next Republican national ticket. For the sake of argument, I shall assume the renomination of Mr. Roosevelt for the Presidency, because of the fact that upon that point there is little or no serious division of opinion or desire on the part of Western Republicans. It is a foregone conclusion that the delegates to the next national convention from the transmississippi country, and from most of the States in the Middle West, will be instructed in favor of Mr. Roosevelt as his own successor.

And, hereafter, the West must be taken seriously into account as a factor in national politics. It is no longer merely the tail of the dog, to be wagged when the dog is pleased. That is to say, it is no longer a miscellaneous aggregation of half grown, unformed, and unplaced commonwealths, uncertain of the future, dependent for very life upon the grudging grace of the East. Within the last dozen years the West has wrought a very miracle. Setting earnestly about working out its own salvation, it has achieved a sound, firmly founded independence. In agriculture, in manufactures, in the power to determine and control its commercial relations with the world, it has attained the solidity of *empire*. The prairies are now feeding not only the nation, but a large part of the earth; in a dozen vital industries, wherein the East has dominated in the past, the West is rising—yes, has already risen—to the dignity of a strong rivalry. Look at the list: Cotton, wool, leather, coal, iron, oil, copper, lumber, grain, beef, and the precious metals—in all these things the West has natural and inevitable control, and will exercise it. Best of all, it is financing its own industries with its own money, and is educating its own sons in its own institutions for the work that will be theirs. Rational railroad development and the construction of an isthmian canal, coincident with the development of natural resources, will give the West an impregnable supremacy in the world's affairs. This is no dream, but manifest destiny. It is upon this strong foundation that the West bases its claim for the right of political recognition. And it is upon his intimate knowledge of these conditions, and his profound faith in their evolution, that Mr. Roosevelt's leadership in the West rests securely.

The present condition of things points anew the need for wisdom in the choice of a Vice-Presidential nominee. The West feels that it is entitled to the Vice-Presidency; doubtless it will have its way. As a Westerner, I speak in behalf of one whom fate has qualified for preeminence. This is Mr. John L. Webster, whom the Republicans of Nebraska have already named in this connection. I shall not take it upon myself to urge Nebraska's claim; I do not speak of Mr. Webster as a Nebraskan, but of his greatness, which transcends all such minor considerations.

He is a rare figure, full of a rare quality—personality. He is not a man of opinions, but of convictions—convictions which have to do not only with politics, but with life—convictions which are rooted in an inviolable integrity of character. In a day when true statesmanship is a quality almost gone out of style, he is almost unique; for he is of the breed of statesmen, in the truest use of the word—the sort of man in whom cardinal principles are ingrained, and who will stand and die beside the guns of his faith. Add to this quality a gigantic intellect and a superb presence, and there is the man. The West has not his superior, hardly his equal, in these sterling qualities. I am, sir, W. R. LIGHTON.

A SOUTHERNER'S VIEW

CHUCKY CITY, TENN., *January 26, 1904.*

To the Editor of Harper's Weekly:

SIR,—In your issue of January 16, 1904, there occur letters from Mr. Coon, of Knoxville, Tennessee, and Mr. Huffaker, of Eagle, West Virginia, relating to the negro question. In the main they give the sentiment of a large part of the Southern people, but, unfortunately, sentiment is not always facts. There are places in the South, and not far from here, where negroes are not allowed. One colored presiding elder who comes here four times a year to hold his services was notified to leave a district in a near-by State after having gone for the purpose of discharging his ministerial duties. He expected to find his people, but instead he found the flock scattered and a notice to the shepherd to make himself scarce—a thing which he proceeded to do without any loss of time. Now, did we not know these things to be facts we would not say them, but as honest and impartial Southerners we feel the exact truth ought to be said, and nothing kept back. Sentiment is a good trail-blazer, but it takes facts to put the macadam there.

Of course we Southerners do like the darky, and largely for the reason Mr. Huffaker states—because he serves us. But do we always pay him for his work? We do, but it is more often a mere pittance compared to what he can earn elsewhere, or what we would pay the good class of white laborer. We do not think it untair to say that peonage, in a *modified form*, exists in many of the Southern States.

Then, again, the negro is liked, and of use to many of us so long as he remains a hewer of wood and a drawer of water. When he gets beyond that he is "out of his place," so you will hear many of us say. He is then able to do his own reading, writing, and counting—a thing, in the opinion of some Southerners, a negro is barred from doing because his ancestors were slaves. He does not always have the full benefit of his educational apportionment. Before me are the reports of the superintendents of public instruction for Virginia, Florida, Mississippi, South Carolina, and North Carolina. I find the per cent. of colored scholastic population in these States about as follows, respectively: 38 per cent., 42 per cent., 58 per cent., 53 per cent., and 33 per cent. I find that they receive from the public-school funds of these States the following, respectively, approximately speaking: 25 per cent., 22 per cent., 22 per cent., 27 per cent., and 27 per cent. Now, does this show that the negro always gets what he ought to have to help make him a good citizen? In this good State of Tennessee at the sitting of the last Legislature a bill was introduced providing for compulsory education. The bill was referred to a committee, and there met with the objections from members thereof who reside where there are many negroes, that it would mean equal education of whites and blacks! Of course the South, nor any section of it, can hope to be in the van of education so long as such men make our laws. Of course the bill never reached another reading, for the fellows who are afraid of the negroes' learning were in the majority.

Now, these are bare facts given by one who has always lived in the South, where he first beheld the light of day, and who always expects to live here, but who wants justice and equality to all, and merit and true worth to win out.

I am, sir, S. H. THOMPSON.

A NATIONAL COMMISSION

SALISBURY, N. C., *January 30, 1904.*

To the Editor of Harper's Weekly:

SIR,—The recent suggestion that a national commission be created to investigate the "negro question" should not be seriously considered until we have some idea of what this question is, and this inquiry should not be made until it is definitely known whether or not there is in fact any such thing as the negro question.

Is this proposed commission to decide whether or not negroes have the inherent right to rape white women? Whether or not it is right to lynch them if caught in the act? Whether they should be protected at the polls by Federal bayonets? Whether negroes are a privileged class, each of them entitled to a mule, forty acres of land, a Bible, and a cake of soap? Whether it is justifiable to prevent miscegenation, and whether the Southern people shall be compelled to run their hotels and public conveyances on the Ethiopian plan?

Such inquiries as these seem to constitute the basic elements of the discussion upon this subject. But the South has settled all these matters, forever and forever. The truth is that there is no such thing as the negro question. In the South the negro is an individual citizen, enjoying, in proportion as he deserves them, the rights of personal security, personal liberty, and private property. He is not by any means a martyr, a curiosity, or a political or social problem. Along the lines of individual progress, and subject to social laws which legislation cannot reach, and which only the laws of nature herself can alter, he has the right and the opportunity to develop, and in the fulness of time, the rise of the individual will be followed by the rise of the race, along the lines of intellectual and moral development.

I am, sir, J. H. HORAH.

OUT OF PLACE

COLUMBIA, S. C., *February 3, 1904.*

To the Editor of Harper's Weekly:

SIR,—I read with much interest the opinions of various Southerners on the "Negro in the South" that appear in the Correspondence department of your magazine.

I had not intended saying anything, but the broad assertion of the "Delta Resident" that he had "never seen him out of his place" calls for a reply; in my opinion he has been out of his place ever since he was set free.

Does our friend think that Mrs. Minnie Cox, whose case has recently created such a sensation in his State was in her place? Is that his idea of the negro's place? If it is I must confess that he is right in stating, "I have never seen him out of his place in Mississippi, and hardly think I ever will." In that case I do not suppose he considers negro officeholders out of their place. If so, he disagrees with greatest negro living—Booker Washington—who has time and again counselled his race against accepting political appointments, and where will you find one who will not? The cases of J. W. Lyons, Registrar of the Treasury, and William Crum, the nominee for collector of the port of Charleston, South Carolina, whose case has attracted national attention, are proof enough.

I am, sir, H. M. RANTIN.

A Test of Skyscrapers

EXPERIMENTS involving the permanency of structural steel covered with concrete or cement have recently been carried on at the Insurance Engineering Experiment Station at Boston; they prove that steel properly covered is absolutely safe against corrosion. In steel buildings and other structures, the framework is covered with cement or concrete of some kind, and it is impossible to observe what changes are taking place, and for this reason doubts have been expressed as to their permanency. It has been assumed, however, by engineers, that steel protected with such coatings would not be corroded, and this was found to be the case with the cables of the first Niagara Suspension bridge, which, after remaining embedded for a number of years, were found to be in excellent condition. To allay any scepticism as to the permanency of many modern steel-frame structures, and to prove that the protection of the steel by cement or concrete was satisfactory and efficacious, the experiments referred to were undertaken. The experiments served to show that care must be observed in mixing the concrete, and that when due precautions are taken the steel is perfectly protected. Accordingly, it is fair to assume from this work that the decomposition of steel under such conditions is not a matter to be seriously feared.

ADVICE TO MOTHERS.—MRS. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhœa.—[*Adv.*]

IF YOU ARE LOOKING

for a perfect condensed milk, preserved without sugar, buy BORDEN'S PEERLESS BRAND EVAPORATED CREAM. It is not only a perfect food for infants, but its delicious flavor and richness make it superior to raw cream for cereals, coffee, tea, chocolate, and general household cooking. Prepared by Borden's Condensed Milk Co.—[*Adv.*]

RESIDENCE Telephone Service pays for itself in car-fare saved. It saves time, too. Low rates. Efficient service. New York Telephone Company, 15 Dey St., 111 West 38th St. —[*Adv.*]

PUT new life into the run-down system. Abbott's Angostura Bitters does it. Nothing like it to kill that "tired feeling."—[*Adv.*]

A VALUABLE adjunct to a happy meal. COOK'S IMPERIAL EXTRA DRY CHAMPAGNE. It is unexcelled in America and abroad.—[*Adv.*]

USE BROWN'S Camphorated Saponaceous DENTIFRICE for the TEETH. 25 cents a jar.—[*Adv.*]

TAKE PISO'S CURE FOR CONSUMPTION for Coughs, Colds and Consumption. Sold everywhere.—[*Adv.*]

ADVERTISEMENTS.

Pears'

Why is Pears' Soap — the best in the world, the soap with no free alkali in it—sold for 15 cents a cake?

It was made for a hospital soap in the first place, made by request, the doctors wanted a soap that would wash as sharp as any and do no harm to the skin. That means a soap all soap, with no free alkali in it, nothing but soap; there is nothing mysterious in it. Cost depends on quantity; quantity comes of quality.

Sold all over the world.

OLDSMOBILE

The convenience of the reliable **Oldsmobile** to the **man of affairs** can only be appreciated by use. Once tried, and its capacity for saving minutes and dollars realized, no business man would consider it economy to be without one.

The light and simple **Oldsmobile Runabout** is very different from cumbersome and complicated touring cars, which need the constant attendance of a chauffeur, and frequently develop accidents and necessities for repairs when a delay can least be afforded.

For complete information about the Standard **Oldsmobile** (with curved dash) or any of our other cars, see our nearest selling agent, or write direct. A captivating automobile story "Golden Gate to Hell Gate," free on request to Dept. 48.

Olds Motor Works, Detroit, U. S. A.
Member of the Association of Licensed Automobile Mfrs.

Lux Crucis

A Tale of The Great Apostle

BY

SAMUEL M. GARDENHIRE

Through this story of the time of Nero moves the Apostle Paul, quietly wielding his titanic power. It is an intimate picture in which Nero's corrupt court and the final triumph of the Cross figure conspicuously. And through it all runs the tale of a Roman officer's love for a Christian maid—a story of strangely vital power and charm.

HARPER & BROTHERS

The Perfect Seasoning for SOUPS, SALADS, OYSTERS, CLAMS, FISH, SAUCES, ROASTS, GRAVIES, etc.

Indispensable for the table and in kitchen. Imparts delicious flavor. Insures good digestion. Purer and more healthful than ground pepper.

THE PRIVATE XENOPHON

by Rose·K·Weekes

"A SPY, sir, sent up by Captain Field."

"How was he taken?"

"Trying to get through the lines under cover of darkness, sir."

"I hope you've brought him in blindfold?"

"Yes, sir."

"Very good. Send him in at once."

Major Heriot, of the Intelligence Department, stretched out his long legs and sighed. He was a big, heavy, mournful-tempered, uncomplaining man, with a rigid sense of honor and a yet more rigid sense of duty, which qualities were often at war; for some duties that fall to an English officer are not specially pleasant to an honorable man. His position as chief intelligence officer outside the besieged town of Abbotsville brought him into contact with plenty of spies, whom he hated; to his temperament it was equally repulsive either to employ and reward spies of his own, or to try to seduce those of the enemy when captured, as they frequently were, in the attempt to get through to their compatriots besieged in the town. Many a time did he wish he had not entered the army. He did his duty, nevertheless, because in the service of his country a man cannot afford to keep his hands clean, but it never failed to put him out of temper.

This particular spy proved to be a tall, dark man, with strong features, and bold, reckless, discontented eyes; he had an air of scornful dignity which even the grotesquely fitting clothes that he wore could not destroy. His own suit had been taken away to be examined; for the same reason, his hair had been cut and his beard shaved off. It is easy to conceal a rolled-up note in the hair. Heriot looked at him, and he looked back at Heriot without flinching; till Heriot put an end to the silent duel by pointing out a chair and inviting him cordially to be seated.

"Thanks," said the stranger. "I congratulate you on your discreetly managed voice. It is advisable to conciliate spies, isn't it? One may get useful information if one treats them well."

Down he sat, calmly, and pulled his boots off; though the clothes were too small, the boots were too large, and, being heavy, they chafed his feet, which were rather badly cut.

"You've walked far," said Heriot, indicating them.

"Fifty miles or so; farther than a spy generally walks, isn't it?"

"I don't want to treat you as a spy if you aren't one," said Heriot, warily. "I can't tell what you are till you explain yourself; remember, you've made no report."

"I was asked no questions. Never question spies or deserters till they come to headquarters, or they'll tire of answering, and maybe refuse their information. That's in all the military manuals, isn't it?"

"I see you're an Englishman," said Heriot.

"I am."

"Then what the dickens were you doing outside our lines?"

"If I told you, you wouldn't believe me."

"You're wrong. I should trust your word."

"You'd be acting against regulations, then. However, I don't mind telling you. You're besieging Abbotsville, aren't you? Well, I wanted to get into the town."

"What for?"

"To see my wife."

"What's your wife doing in there?"

"Dying, probably."

"Is she a prisoner, then?"

"No, she's a patriot. I took no part in this delightful war, but she did; she's shut up in Abbotsville, and I wanted to join her. You don't always succeed in shooting all the carrier-pigeons they send out. One reached me at my farm out Goldburg way, with a note which tells me she's ill—enteric—and asking for me. Now I've only been married six months, so I just started out to walk here across country. I'd have liked to say good-by."

"If you're English, why did you let your wife fight against England?"

"Got a wife yourself, Major Heriot?"

"No, I've not," said Heriot, somewhat surprised.

The stranger bowed. "Wait till you have and ask her."

"You mean she acted against your will?"

"I mean she didn't consult me at all. She had wrongs to avenge, of course—did you ever know a woman who hadn't? If it isn't on the ladies who dress better than she does, it's on the enemies of her country. I woke one morning and found my wife gone and a note pinned on her pillow. She'd heard the trumpet-call and couldn't stay—a plague on all your wars and your patriots! We'd just been married a month. That's my story; believe it if you dare."

Heriot's hand went up to his mustache, which he thoughtfully pulled. The stranger's hand moved instinctively in the direction of his own chin, and in moving displayed a long stretch of sunburned arm projecting from a gray flannel shirt, which had the good quality of usefulness, but no other. Conscious of his own smooth and snowy linen, Heriot felt an impulse of sympathy towards the wearer of that scrubby hideous flannel.

"Do you know anything of the movements of the enemy?"

"Not a thing; and if I did, I shouldn't tell you."

"That's flat, anyway. I'm afraid we shall have to detain you, Mr.—"

"Jones," supplied the stranger, politely.

"Mr. Jones; but if there's anything I can do to make you comfortable, I shall be most happy; we are not quite barbarians, though war suspends the ordinary rules of politeness, I'm afraid."

"I saw you studying my shirt sleeve," said the stranger. "Yes, there's something you can do; and that is, give me back my own things in place of these beautiful clothes which I am not worthy to wear."

"I'm afraid that's against the rules; but my own wardrobe's at your disposal."

"Ah, you're afraid of hidden letters, of course! But, anyhow, can't I have back my personal property—my cigars, and so forth."

"I'll just look through them and see."

Heriot went back to his own room, where Mr. Jones's clothes were all spread out on the table, together with the contents of his pockets. After turning the key on his prisoner, an act which made him gloomily wish himself back as a gay, irresponsible subaltern, he sat down to make a thorough examination. A search of this kind must needs be minute. With the aid of his nail-scissors he cut the clothes to pieces; he ripped off the lining, dissected padding, explored hems, cut open the buttons, and split the heels of the boots, without any result. After doing his best, he gathered up the fragments and dropped them in the stove, thus satisfying conscience and making the room well-nigh uninhabitable.

Last he came to the contents of the pockets. A case of good cigars, a silver match-box, some loose cash, a fine linen handkerchief bearing the name of Mark Sörensen, and a pocket edition of Xenophon's famous *Anabasis*, tattered and dirty, with the name of "Thyra Dutoit" written across the fly-leaf. Heriot carefully dissected all the cigars, and refilled the case from his own; leaving the other things on the table, he took them and the match-box back to his prisoner.

"I'll bring you a decent suit directly," he said, delivering up his charge.

Mr. Jones glanced at the cigars, and then quickly at Heriot. "May I have my book?"

"The Xenophon? I'm afraid I can't see my way to that. I've got a copy of Cæsar's *Gallic Wars*, if that will do as well?"

"The book's my private Xenophon, and I value it very greatly."

"I'm sorry."

"It belonged to my wife."

"I'm very sorry," repeated Heriot.

"Can't you possibly let me have it?"

"'Fraid it's impossible."

"To tell the truth, it's the only souvenir I have, and she's like enough dead at the minute. Sure you can't manage it?"

Heriot took a turn up and down the room. The restless, anxious eyes of Mr. Jones made him restless too. "I'll tell you what I will do, if you like," he said, stopping. "I'll examine the book myself, and if I find nothing compromising I'll take the responsibility of giving it back to you."

"I'd rather you burned it offhand!"

"Why?" asked Heriot, in amazement.

"No. I'm wrong. Examine it, if you want to; I suppose you will, whether I like it or no. Spies have written messages on the leaves of a Bible before now, haven't they? A very convenient book for the spy is a Bible, because it arouses no suspicions. The art of war is so pious. But I believe you're a gentleman."

"I'm an officer and a gentleman."

"You're doubtful if they are compatible? So am I. However,

PHO

u've still got some of the feelings of
e: I'd rather you examined it than some
licers I've met. The truth is, my wife and
carried on a correspondence on the pages
that Xenophon before we were married.
e was a patriot, I a loyal Englishman,
d her friends naturally had a prejudice
ainst me. They were down on notes be-
reen us, but they never thought of inves-
gating the learned pages of Xenophon."

"Oh, *good* Lord!" said Heriot, aloud.

He looked so deeply disgusted that the
isoner laughed. "You'll like the letters,"
said: "we wrote most fully."

"I shall read them," said Heriot, dog-
dly.

"Go and do it, pray!" responded Mr.
nes.

Heriot went back to his room. As a
eliminary test he lighted his lamp and
ld the first page of the Xenophon close
the chimney, for most sympathetic inks
come visible under the action of heat,
ing again as the paper cools. After a
r seconds, certain yellow marks began to
pear on the margin. Heriot had before
w read secret messages written with
riate of copper, and he recognized the
ms at once; he put down the book, and
lled for a hot flat-iron, which is the most
avenient instrument for applying heat
ckly and adequately. While he waited he
ced the floor, trying to reconcile his duty
wards his neighbor (he was old enough
believe the catechism) with the maxim
at all's fair in war.

The first letter ran:

DEAREST,—There are three green cater-
lars hanging from my hat-brim, for I am
the arbor doing my lessons like a good
tle girl. I suppose I must just forget
bring in my poor Xenophon to-night; I
pe it won't rain and spoil his binding,
e I shall get a lecture for my careless-
ss, and it seems to me that one of your
uglish east winds is permanently blowing
our house now. Mother was most cross
th me yesterday because I pickled cabbage
the morning, and left the cabbage out.
e tells me I am a slattern; and my
her says I am a renegade; and Josef
ys I have lost all my looks; and there are
nes when I feel mournful. But then I
t your name in my prayers, that God may
ve away your English heart, so that we
y be together. . . .

Heriot laid the letter down, and poured
nself out a whiskey-and-soda; though he
de a rule of never drinking between meals.
ter that, he applied himself again to his
k and read on to the end.

The first letter was signed Thyra Dutoit;
next, in a man's writing, Mark Sören-
n. So they continued in alternation;
y were intimate letters, tender, candid,
idly recording the growth of love in a
l's heart. Heriot laboriously turned page
er page: some of Thyra's naïve remarks
ought the blood to his face for shame
at he, a stranger, should be reading them.
more unpleasant duty had never come
Major Heriot's way. Several times he
s obliged to break off and brace up his
ergies with a dose of whiskey. Several
nes, moreover, he uttered words forbidden
pass his lips.

There were at least thirty letters in
her writing, sixty in all. They ran across
ery margin, and over the fly-leaves, and
n in places intruded on the text. Heriot
not spare himself; he solemnly read
m down to the last word. When he had
ne, he heaved a sigh of relief; his next
was to detach the book, page by page,
m the binding and study each sepa-
e sheet. Such conscientious labor de-
ved a reward, and he got it, by finding
thing. He arranged the pages again in
ir order, pushed away the untidy heap
m under his eyes, and began to think.
Of one thing he was certain, which was,
at the letters were genuine. They spoke
themselves; besides, the ink had faded,
d in some places words were missing,
ving been rubbed off by their daily contact
th Mr. Jones's pocket; the letters had
en carried about for some months. Under
ese circumstances, Heriot felt that he
uld believe the whole of Mr. Jones's story,
th the exception of Mr. Jones's name.
ere was this man, then, ignorant by his
n confession of the enemy's movements,

AMONG the new automobiles of the year, our Columbia Electric Runabout, shown herewith, fills an important place. It is the lightest electric made with the same battery power, and no other approaches it for speed, endurance and reliability under all conditions of use. Another new Columbia that is selling rapidly is our 12 h. p. Light Gasolene Tonneau with two opposed cylinders in a forward bonnet and novel automatic features of control which make it easier to operate than any other gasolene car on the market.

Catalogue of these and other Columbia vehicles will be sent on request; also special catalogues of our Commercial Automobiles and Town Carriages for private service.

THE COLUMBUS CARRIAGE AND HARNESS COMPANY,
COLUMBUS, OHIO

TWO BOOKS BY GEORGE ADE
(Imprint of R. H. RUSSELL.)

THE GIRL PROPOSITION

A Bunch of He-and-She Fables

George Ade's fables are read the world over. The present volume is, as its title indicates, a series of extraordinarily clever sketches on a theme that is very dear to the author's heart, and which is vastly interesting to most people.

The Girl Proposition is packed with sense and wit and entertainment, all in the inimitable Ade vein. Profusely illustrated by Holme and McCutcheon. $1.00.

PEOPLE YOU KNOW

GEORGE ADE'S LATEST

No living writer could duplicate the work done here by this keen and humorous observer of American life. Among the twenty-six "people you know" are The Patient Toiler, The True Friend, the Self-Made Hezekiah, The Married Couple, The Samaritan, The Work Horse, and The Two Young People.

Over fifty quaint illustrations by McCutcheon and others. $1.00.

ignorant also of the English position, since he had been brought through the lines blindfold; there in the town was his wife, a mere girl, the writer of these charming letters, ill, perhaps dying, and asking for him. Between these two stood only the convention of routine, to overleap which was at Heriot's discretion.

He got up, gathered together the ragged pile of dissected Xenophon, and walked in upon his prisoner.

"I've brought this back," he said.

"My Xenophon? Ah, thanks! Well, and did you like reading them?"

"Not at all."

"Didn't you think them amusing?"

"I really don't know very much about them; I was thinking of other things. Will you give me your word of honor that you'll say nothing of what you've seen, either here in our camp, or on your way from Goldburg?"

"Why should I do that?" asked Mr. Jones, opening his eyes. "My sympathies at present are not with my country!"

"I dare say; mine aren't always. Still, I owe it a duty, and so do you. Will you give me your word?"

"By all means, if it gives you any pleasure. I'm not likely to have the chance of telling any one, am I? That being so, I'm quite ready to promise that I won't."

"Yes, it was a thousand pities we didn't get Abbotsville that time. It was such a near thing, too! What, didn't you know that? I was talking to Dutoit the other day, the fellow that kept the garrison going, don't you know, and he told me they were on the very point of capitulating when they got news of the advance of the force which made you evacuate. Hard lines, wasn't it? I'd give a good deal to know how that message got through!"

Heriot, looking very stolid, said that he should like to know, too, and within a month retired to his native county of Hants, where he grew pigs and mangel-wurzels to still the stings of conscience. He also built and endowed a little chapel and a pastor of Calvinistic tenets. One afternoon a visitor called to see him, upon whose name the parlor maid made an unusually wild variation, vaguely ending in—son. Heriot, without much interest, went to the drawing-room, and there he saw Mr. Jones. He stood stiff, not offering to shake hands.

"You found out?" said Mr. Jones.

Heriot bowed.

"I told you the exact truth."

"You told me a direct lie."

"On my honor, I did not!"

"You gave them information."

"I gave them the Xenophon. I spoke not one word."

Drawn by W. E. Meas

"Trying to get through the lines under cover of darkness"

"Very good. If I give you a pass through our lines, do you think you could manage to dodge their sentries and get into Abbotsville?"

"You'd do that—give me a permit on your own responsibility?"

Heriot nodded.

"I'd try."

"Good," said Heriot.

"Think you'll get into trouble yourself?"

"I? no; you see, you'll go in the character of one of my spies."

"I'm grateful," said Mr. Jones, after a pause.

"I dare say I should be cashiered if it came out," said Heriot, "but it won't come out. You're my accredited agent; and even if your real business got known, they'd put it down to my stupidity for not choosing a trustworthy man, that's all. I'm acting irregularly, but I'll be shot if I'm going to obey the rules and be a regulation cad!"

"Well, I'll keep my pledge," said Mr. Jones, "and I sha'n't forget what you've done." He added, in a somewhat sardonic tone, "'Tis God shall repay! you'll be safe so!"

In the days that followed Heriot had small leisure to think of the affairs of Mr. Jones; for shortly after the siege of Abbotsville was raised by a strong force of the enemy, and then disaster fell fast on England. Later on, when the war was over, Major Heriot resigned his commission. The cause of his resignation was a casual speech made to him by his commanding officer:

"The Xenophon!" exclaimed Heriot. "Those letters weren't ciphers, I'm positive of that! What do you mean?"

"You tested for muriate of copper; my wife's friends used acetate of lead. You should have tried the page with sulphuretted hydrogen."

"Do you mean that there were two sets of invisible letters in the book?"

"There were. As you may see."

He pulled out the Xenophon, more tattered and dirty than ever. The love-letters had long since faded out of sight, vanishing with the heat which called them out; but across the pages ran now another message, indelibly fixed there by chemical process. What Heriot read was addressed to Paul Dutoit, of Abbotsville.

"What did you tell me for? I used to hope sometimes it wasn't you!" said Heriot, bitterly.

"Do you blame me? I never said one word that wasn't true."

"You're an Englishman, aren't you? Well, you're a traitor."

"I guess Thyra's prayers got answered," said Sörensen, slowly. "I hate England."

"It's your country and mine."

"And you don't forgive me, I suppose."

"No, I don't. I've paid pretty heavily for your treachery; you tricked me into being a traitor as well. My life's spoiled—"

He broke off; but his unshaven chin and his fields of mangel-wurzels supplied Sörensen with the rest of his sentence. He turned the pages of the Xenophon irresolutely.

"Come to that, I've paid too," he said, slowly, "Thyra's dead."

Personal Impressions of W. B. Yeats

By Charles Johnston

I KNEW W. B. Yeats before he had dis-vered in himself the divine faculty of rse, though his life was already full of sion. In those early days his tendency was ward science, and we carried out together number of more or less ingenious and un-ccessful experiments in physics, chemistry, d electricity, with home-made contrivances en destined for quite other uses. Our re-arches soon took a different field, which, have always thought, was of high im-rtance for Yeats's poetry. He was a bid Darwinian, and, like all new pros-rtes, longed for a convert; and I, as his nool chum, was the natural prey. So ats spent the hours that should have gone Homer and Horace in pursuit of test ses and missing links, with which I was in e time to be belabored; and many a de-htful afternoon we spent roaming over e Dublin hills, or the cliffs of Howth, Yeats lding forth on evolutionary botany, while listened, commented, and at the end of ds, declared myself still unconvinced. Un-nvinced of the materialism that so often es with Darwinism, that is: though ac-pting the idea of growth and develop-nt.

Then came the first poems. And I remem-r some, never so far published, I believe, ich filled my imagination with a large d sombre magnificence, and had in many ys a broader sweep, a larger handling an any of his later works.

And soon after this came poems for the st time printed, in the newly founded and starred *Dublin University Review*, which s presently to be disowned by its *alma ter* for printing one of the burning idyls Theocritus. Among these first-printed rks, I remember "Mosada," a dramatic m of mediæval Spain, with Moors and chcraft; and "The Island of Statues," eek in coloring, but after the Greece of ats rather than the authentic Hellas.

Thus Yeats's early work was drawn, as to subject, from the universal material of nance, from many European lands; and was only after he had already written a od deal, that he found his proper subject-tter in Gaelic tradition, learning it first der the mentorship of Sir Samuel Fergu-, who has written so well, with such uine bardic fervor, of the heroes of elic eld. "The Wanderings of Oisin" s among the first-fruits of this new in-ration.

Then came an Oriental period, full of the dy of Eastern religion and Indian books. re are traces of it in poems like nashuya and Vijaya," and in the two rmons of Kanva the Indian. From ia and her philosophy, Yeats presently e to the Western mystics, from Jakob hme to William Blake; and all through later work, whether as theory or as sym-ism, his mystical studies have left their rk.

ere, then, we may say, are certain of elements of culture which make up poetical substance of Yeats's work: the ræval romance of all lands, the Gaelic dition, the teaching of India, the mystics the West. Whatever be his substance, atever his form, lyric, epic, drama, the gical music, the fineness and distinction, transmutation through passion and ught are there always; perhaps in their fection in "The Lake Isle of Innisfree":

ll arise and go now, and go to Innisfree, nd a small cabin build there, of clay and wattles made:
e bean rows will I have there, a hive for the honey bee,
nd live alone in the bee-loud glade.

I shall have some peace there, for peace comes dropping slow,
dropping from the veils of the morning to where the cricket sings.
e midnight's all a glimmer, and noon a purple glow,
nd evening full of the linnet's wings.

ll arise and go now, for always night and day
hear lake water lapping with low sounds by the shore;
e I stand on the roadway, or on the pave-ment gray,
hear it in the deep heart's core.

The Russian Advance

By Senator A. J. Beveridge

This book gives an accurate and interesting description of Russia's policy of expansion, which has become a cause for war.

Senator Beveridge investigated the conditions, the peoples, the industries, the markets, the religions of Russia, Japan, China, Manchuria, and Korea. The volume is of importance and value to the men and women of this country who are interested in the development of the new political, diplomatic, and commercial relations of the United States with the East.

With maps. $2.50 *net.*

BOOKS ABOUT THE FAR EAST

Other volumes that deal with the many and various phases of the Far East and its people are given below—entertaining travels, important epochs of history, scenes and customs, adventures and campaigns—a list from which every reader will find something of interest, of timely value, and to his liking.

Colquhoun's "China in Transformation"
Colquhoun's "Russia against India"
Ransome's "Japan in Transition"
Clark's "A New Way Around An Old World"
Child's "The Tsar and His People"
Harper's "Pictorial History of the War with Spain." 2 vols.
Harper's "Pictorial History of the War in the Philippines." 2 vols.

And for younger readers, **Knox's "Boy Travellers in the Russian Empire"**

HARPER & BROTHERS, NEW YORK

Progress of Science

A Novel Railroad

A RAILWAY where the trains make no stops, but are in motion throughout their journey, has been proposed by M. de Mare in a Belgian electrical journal, and is one of the latest contributions to the discussion of high-speed locomotion that is now taking place in Europe. M. de Mare's plan is revolutionary, and involves many practical difficulties, aiming, as it does, to save the time spent in stopping to let off and take on passengers. The scheme requires cars propelled by separate motors, which are capable of making higher speed than that ordinarily maintained by the train. When a station is approached, the passengers and baggage for that station are moved into the rear car, which is cut off just before the point is reached. The passengers desirous of boarding the train take their places in a car on a siding at the station, which proceeds to the main track at full speed, and catches the passing train, to which it is coupled, and the passengers and baggage transferred. Those for the next station are then received, and in turn the car is duly dropped. The scheme is most fantastic, and at present impracticable, yet it must be admitted that many of the elements necessary, such as the separate motors which can be controlled together or individually, are already developed.

The Source of Radioactive Substances

With radioactivity existing in the atmosphere and in stagnant air from cellars and caves, as well as in air drawn from a tube with one end buried in the ground in certain soils, is it fair to assume that such substances as radium, which have the power to produce a radioactive emanation, are contained in the soil? Messrs. Elster and Geitel, who have spent many years in investigating atmospheric electricity and unisation, have found in the cases specified that there is often marked induced radioactivity, which would indicate the presence of radium or other radioactive substances. Such an explanation as suggested has been advanced, and seems to indicate the more general distribution of radioactive material than has been considered probable. In the case of the air its activity depends in a large measure on meteorological conditions. An example of this is the fact that a fall in the barometer is likely to cause an increase in the radioactivity of the air, due, it is thought, to the escape of ground air into the atmosphere.

Science and Rats

The spread of the plague in the East has been shown to be due to rats which are carried from infected ports on vessels. Just the precise way in which this is accomplished is still a matter of debate among biologists, but the fact is appreciated, and in Manila and elsewhere the health authorities endeavor to kill all the rats in an infected locality and on board ships about to discharge their cargoes. This is accomplished in several ways, such as traps, catching the rats by hand or by animals, and on board ships sometimes by asphyxiation with carbonic acid, the latter a costly method, and often difficult of application. A method promising to be most efficacious has recently been devised by M. Danysz, of the Pasteur Institute, in Paris. He has found the bacillus of a disease which is peculiar to rats and extremely fatal to such as are inoculated with it, while at the same time it does not affect other animals or human beings. A culture can be made of this bacillus bouillon in which bread or grain is soaked. This is exposed for the rats to eat, and has been found a successful means of communicating the disease, which usually proves fatal in five to twelve days. The method has been tried on the rats in the Paris sewers and those of the Bourse de Commerce, which attack the grain-supplies. It is now recognized that if the rats can be destroyed, it is possible to keep plague and other diseases from Europe and the civilized portions of the East, and it is to be hoped that the new method of inoculation will be found successful when practised on a large scale.

DEAFNESS CURED

A Device That is Scientific, Simple, Direct, and Instantly Restores Hearing in Even The Oldest Person—Comfortable, Invisible, and Perfect Fitting.

190 Page Book Containing a History of the Discovery and Many Hundred Signed Testimonials from All Parts of the World—SENT FREE.

The True Story of The Invention of Wilson's Common Sense Ear Drums Told by Geo. H. Wilson, the Inventor.

I was deaf from infancy. Eminent doctors, surgeons and ear specialists treated me at great expense and yet did me no good. I tried all the artificial appliances claimed to restore hearing, but they failed to benefit me in the least. I even went to the best specialists in the world, but their efforts were unavailing.

My case was pronounced incurable!

I grew desperate; my deafness tormented me. Daily I was becoming more of a recluse, avoiding the companionship of people, because of the annoyance my deafness and sensitiveness caused me. Finally I began to experiment on myself, and after patient years of study, labor, and personal expense, I perfected something that I found took the place of the natural ear drums, and I called it Wilson's Common Sense Ear Drum, which I now wear day and night with perfect comfort, and do not even have to remove them when washing. No one can tell I am wearing them, as they do not show, and as they give no discomfort whatever, I scarcely know it myself.

With these drums I can now hear a whisper. I hear the general conversation and hear everything going on around me. I can hear a sermon or lecture from any part of a large church or hall. My general health is improved because of the great change my Ear Drums have made in my life. My spirits are bright and cheerful. I am a cured, changed man.

Since my fortunate discovery it is no longer necessary for any deaf person to carry a trumpet, a tube, or any other such old-fashioned makeshift. My Common Sense Ear Drum is built on the strictest scientific principles, contains no metal, wires, or strings of any kind, and is entirely new and up to date in all respects. It is so small that no one can see it when in position, yet it collects all the sound waves and focuses them against the drum head, causing you to hear naturally and perfectly. It will do this even when the natural ear drums are partially or entirely destroyed, perforated, scarred, relaxed, or thickened. It fits any ear from childhood to old age, male or female, and aside from the fact that it does not gather it never causes the least irritation, and can be used with comfort day and night without removal for any cause.

With my device I can cure deafness in any person, no matter how acquired, whether from catarrh, scarlet fever, typhoid or brain fever, measles, whooping cough, gatherings in the ear, shocks from artillery, or through accidents. My invention not only cures, but at once stops the progress of deafness and all roaring and buzzing noises. The greatest aural surgeons in the world recommend it as readily as physicians of all schools. It will do for you what no medicine or medical skill on earth can do.

I want to place my 190-page book on deafness in the hands of every deaf person in the world. I will gladly send it free to anyone whose name and address I can get. It describes and illustrates Wilson's Common Sense Ear Drums and contains bona fide letters from numerous cures in the United States, Canada, Mexico, England, Scotland, Ireland, Wales, Australia, New Zealand, Tasmania, India and the remotest islands. I have letters from people in every station of life—ministers, physicians, lawyers, merchants, society ladies, etc.—and tell the truth about the benefits to be derived from my wonderful little device. You will find the names of people in your own town and state, many whose names you know, and I am sure that all this will convince you that the cure of deafness has at last been solved by my invention.

Don't delay; write for the free book to-day and address my firm—The Wilson Ear Drum Co., 1547 Todd Building, Louisville, Ky., U. S. A.

Music

Mr. Elgar's "The Apostles"

MR. EDWARD ELGAR'S new oratorio, "The Apostles," considered by some the most important accomplishment in contemporary English music, was performed on February 9, for the first time in America, at a concert given at Carnegie Hall in aid of the City History Club. Mr. Frank Damrosch, a large orchestra, and choruses from the Oratorio and Musical Art Societies were the forces engaged in the representation.

Critical opinion in England has been divertingly various regarding Mr. Elgar's most recent contribution to the art of his country. The work had its initial performance in October, 1903, at the Birmingham festival, and raised almost as much critical dust as its famous predecessor, "The Dream of Gerontius." To some, "The Apostles" revealed itself as "a masterpiece, an invaluable contribution to the art of the world, a score of pure gold throughout"—thus the impulsive Mr. Vernon Blackburn. To Mr. Ernest Newman, on the other hand—and Mr. Newman, let it be noted, is a friend and sincere admirer of Elgar—the music seemed "not sufficiently inspired to satisfy the musical mind," and "impressive only to minds that are already disposed to consider anything beautiful that is associated with a sacred text."—There, we think, is the crux of the matter. Mr. Elgar planned, in his own words, "to compose an oratorio which should embody the calling of the Apostles, their teaching (schooling), and their mission in the establishment of the Church among the Gentiles." The first two parts of the work have for their theme the outward manifestation of God to those "who were called," completed in the Ascension; the third and final section, as yet unfinished, will deal with the inward manifestation of God "through His indwelling Spirit."

The basis of the work is thus, it will be seen, essentially theological, and Mr. Elgar, himself devoutly ecclesiastical in his point of approach, has furnished out his text with music of fervid sincerity and conviction. Let it be said at once that the score of "The Apostles," considered solely as a structural achievement, is superbly successful; its firmness of line, its subtlety of elaboration,—in brief, its sheer mastery of musical mechanics,—are nothing short of amazing. It is a far more complex, a far more intricately organized work than "The Dream of Gerontius": but there, in our view, praise must stop. As in the case of the earlier work, our deliberate criticism of this score is that it has nothing unique, nothing new, to say. Its best inspirations are, in essence, a dilution of Wagner; that which is not best is Mr. Elgar's own, and is, in the main, dull, flaccid, inexpressive. There are, indeed, memorable exceptions—as the introduction, the dawn music, the final chorus, the beauty and eloquence of which one concedes at once. One ends, though, by seconding with conviction the judgment of Mr. Newman — that "The Apostles," as it stands, "with its heavy atmosphere, its monotonous rhythms, its dragging, enervated, pulses . . . is not life." We only wish that we could further coincide with Mr. Newman in his confident belief in the preciousness of Elgar's gifts, which, he believes, must have come to a finer fulfilment had they not been "taken from humanity in order to be given to the Church."

Calve Again

Emma Calvé, the most magnetic and incalculable of singing actresses, returned to the boards of the Metropolitan Opera House on February 1, after an absence of one season, appearing, need it be said? as *Carmen*. It is still a great, a wonderful, impersonation: but it is, to-day, a product rather of uncontrolled genius than of considered and heedful art. At many points it is exaggerated, wilfully extravagant. Of course, Calvé is simply Calvé, and there is an end of the matter; but if she were in a mood for gaining wisdom in the exercise of her talents, there is one among her associates at the Metropolitan who could show her the beauty and power of controlled intensity, of temperament exquisitely adapted to the ends of a perfect art: and that is Milka Ternina.

DR. LAVENDAR'S PEOPLE

Mrs. Margaret Deland's new book of stories concerning Dr. Lavendar and the other dwellers of Old Chester seems to have awakened the interest in these characters created by the publication of "Old Chester Tales." Speaking of the leading character, the Chicago *Interior* says that "Dr. Lavendar takes precedence over all country parsons with the possible (only possible) exceptions of the Vicar of Wakefield and Balzac's Village Priest. Let no one who loves the fine things of the soul pass this book by." **$1.50**

Booth Tarkington's CHERRY

Says the *Interior*, speaking of Booth Tarkington's dainty new comedy: "Anything more utterly delicious than the comedy of this narrative can scarcely be conceived. It is simply beyond price or praise. The humor of it all is so exquisite it moves one far beyond laughter, to the point of tears." The book is attractively made and is illustrated in color. **$1.25**

WAR IN THE EAST

Up to the time this issue of the "Weekly" goes to press, Japan has disabled ten of Russia's war-ships; it is reported that three of the Czar's transports, with 2000 troops aboard, five commercial steamers, and the Russian mail-steamer "Mongolia," have been captured; Japanese troops have blown up a bridge on the Manchurian Railroad, blocking the road between Mukden and Port Arthur, preventing the passage of troops, and killing thirty Russians. The Japanese have also seized and occupied Mesampo, Korea, holding it as a base of operations, besides landing a force at Seoul. An attempted landing in the neighborhood of Port Arthur was repulsed by the Russians after a battle

RUSSIAN TROOPS UNLOADING SUPPLIES AT PORT ARTHUR

It is reported that a force of 50,000 of the Czar's troops are mobilized on the Manchurian border near Port Arthur. On February 10 Japan made the first attempt to land opposing troops here under the protection of her war-ships

A Winter View of Chemulpo Harbor, Korea, showing how Navigation is Hampered for Four Months at this Season of the Year

THE STORY OF THE EASTERN CRISIS

An account from our special representative, telling the exact causes of the war, the points at issue, the reasons, from the point of view of both Russia and Japan, why war was inevitable, and giving from personal knowledge of the Far East and of the resources of both nations the probable course of the war

By Thomas F. Millard

TO find the real origin of the present clash between Russia and Japan it is necessary to sketch briefly certain political tendencies of both countries for the last half-century.

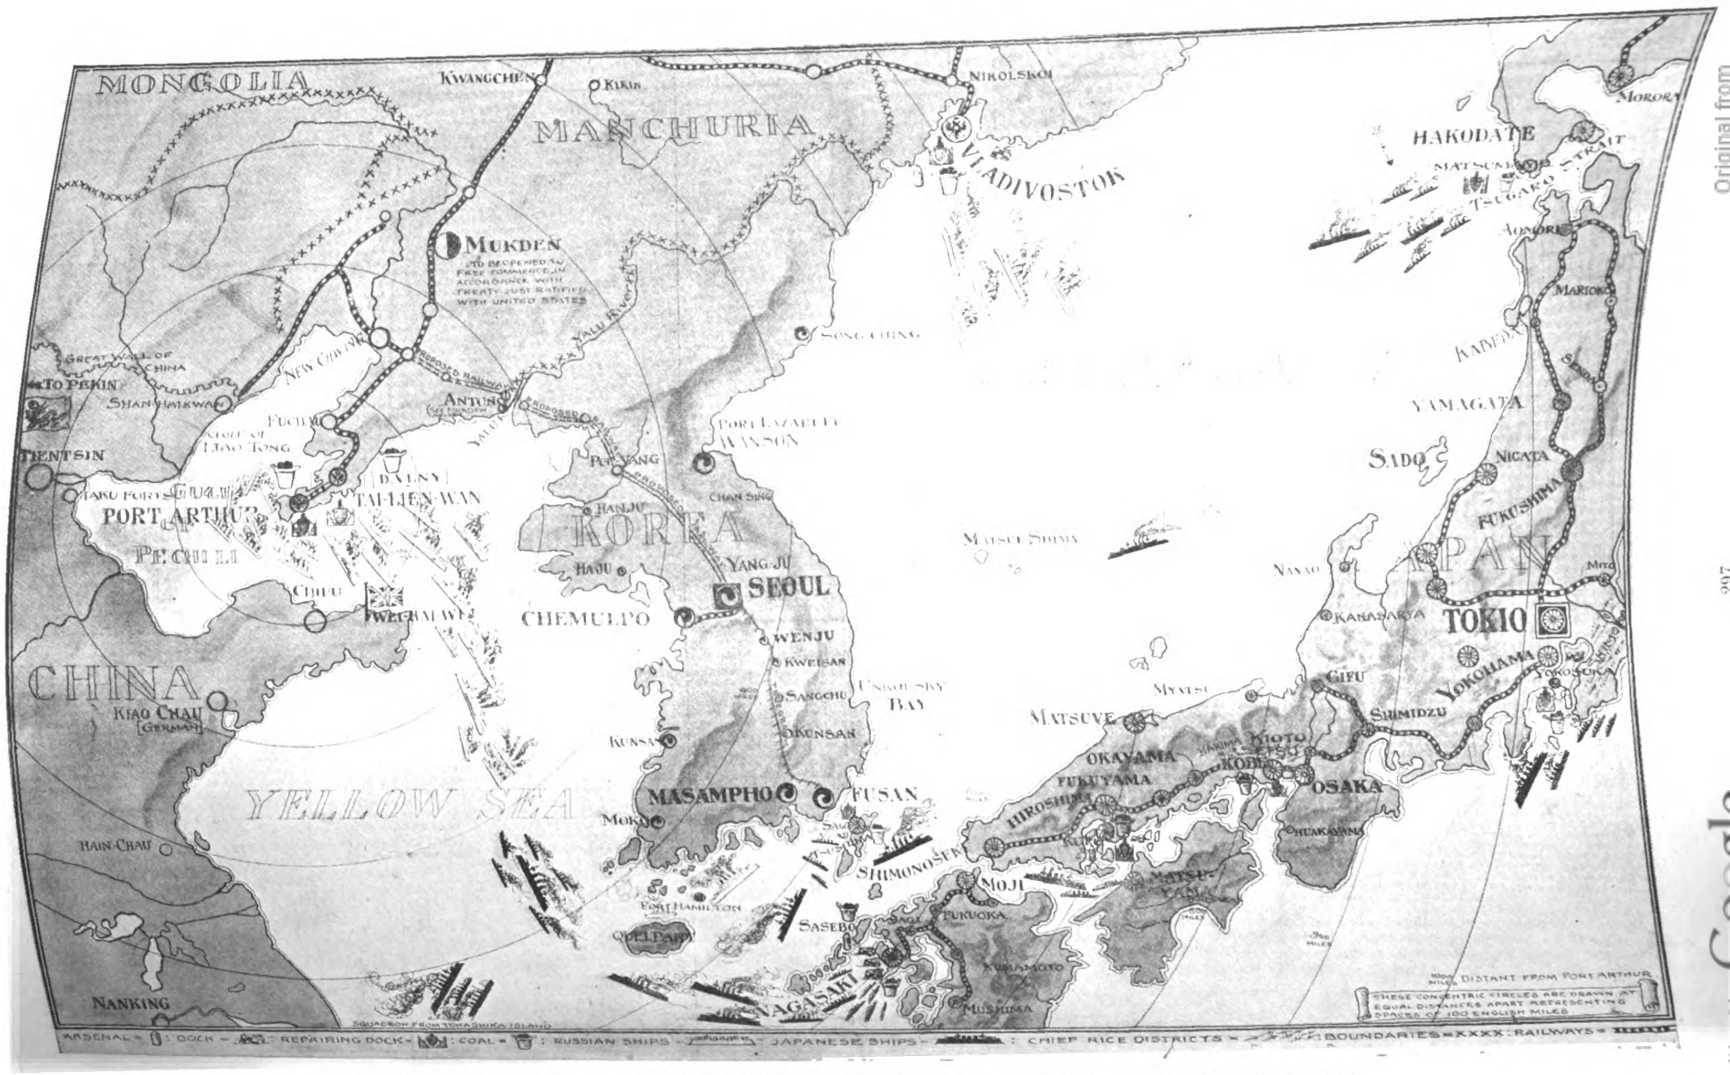
Russia has long realized that the problem of her internal development and material progress depended, in a great measure, upon the possession of seaports which would give her ready access to the outer world at all seasons. For a century she has had her eyes fixed longingly on the Mediterranean, only to have the jealousy of other European powers baffle her time and again. In late years she has cast longing eyes upon the Persian Gulf, without making more than tentative encroachments in that direction. There she finds herself confronted by England, as in the Mediterranean is arrayed against her the concert of Europe. As Russia has never been known finally to abandon any plan vital to her interests, it may be presumed that she will eventually secure a southern outlet; but at present she realizes the wisdom of proceeding cautiously in that direction.

Meanwhile, a later generation of Russian statesmen have turned their attention to opening up the great territory of Siberia, with its limitless possibilities for material development. In the Trans-Siberian Railway we see the first tangible result of this policy. However, even before the construction of the road was begun, the necessity of a favorable terminus was appreciated, and plans to secure it were set working. Here, again, Russia found herself confronted by the same old difficulty. She had no suitable port in Asiatic waters. Surveying her Pacific coast-line, she found that Usuri Bay, where Vladivostok is now located, was the most southerly port in her possessions. To reach even there it was necessary to make a great détour to the north, or cross a part of Manchuria. She determined that the best and most feasible route was across Manchuria, but to obtain the consent of the Chinese government was a difficult undertaking. To this end was Russian diplomacy directed for many years, with comparatively no success. Such was the situation in 1894, when the war between China and Japan occurred.

This war was the first direct and striking result, as indicated by a move of real significance in grand politics, of the adoption by Japan of Western methods and policy. Japan had been awakened, chiefly through the instrumentality of the United States, and with her awakening had come ambition. The New Japan soon found that it needed an outlet for its ambitions and activities, both political and commercial. The only possible outlet was the continent of Asia, and it became a policy of first importance with Japanese statesmen to secure a foothold on the mainland. It was most natural that their eyes should fall upon the little kingdom of Korea, whose anomalous position, as well as her internal weakness, left her the prey of superior powers. Where there is a will there is usually a way, and Japan's designs finally, after she had carefully reorganized her army and navy according to Western standards, brought on the war with China, in which, owing to the total unpreparedness of China, she was completely victorious.

Here was the beginning of the clash with Russia, although it was the work of forces operating for years along lines tending to that inevitable end. When Japan sought to grasp the fruits of her victory it was Russia's hand that interposed, although the interposition took the form of a unanimous act of several of the great European powers. Japan was deprived of the bone for which she had fought and compelled to be satisfied with Formosa and an indemnity. After having won a foothold on the mainland by force of arms, she was compelled to relinquish it under the menace of superior power, instigated by Russia, whose statesmen clearly saw that Japan's ambitions, if realized, would be fatal to Russia's designs. Japan retired, temporarily baffled, but the bitterness of her defeat and humiliation still lies deep in the hearts of her people, and has been a powerful force making for war.

It is characteristic of Russian diplomacy that it was able, in that matter of the settlement of the Japan-China war, not only to deprive the victor of all the substantial fruits of victory, but to take advantage of the circumstances to materially advance her own interests. As the chief mover in assisting helpless China to "save her face" in the settlement, Russia was able to pose at Peking in the attitude of a succoring friend, and the dazed and demoralized Chinese government could not resist the pressure brought to secure the ratification of a treaty permitting the construction across Manchuria of the Trans-Siberian Railway. Russia pointed out that the railway was necessary to China, since only by its assistance could Russia protect her ally from the aggressions of Japan. Just how far that astute old statesman, Li Hung-Chang, who conducted the negotiations for China, was really taken in may never be known. *I attempted to sound* him on this subject in an interview a short time before his death, without success. But the convention was signed. It gave Russia the right to employ her troops to facilitate the construction of and protect the railway—a privilege which she immediately used to establish herself in Manchuria. This was soon followed by the acquisition of Port Arthur by Russia, where she established and fortified an extensive naval and military base.



In Port Arthur, Russia had now secured an excellent harbor, fairly accessible at all seasons, and capable of easily being made impregnable, which she has not neglected to do. However, hundreds of miles of Chinese territory (southern Manchuria) intervened between Port Arthur and Siberia. Clearly Port Arthur, desirable as it is, could never become a thoroughly satisfactory army and naval base until connected with the Trans-Siberian Railway. So Russia set about getting a concession to build a branch from Harbin, in Manchuria, to Port Arthur, with a spur tapping the Peking-Shan-hai-quan road. The arguments advanced in favor of this project were many and legitimate. It has now been completed, and gives connection by rail between Europe and Peking. Under an enlightened administration this road would undoubtedly benefit the entire world, but whether it will under Russian control remains to be seen. Its construction permitted the introduction into Manchuria of more Russian troops.

This was the situation in 1900, when north China was thrown into confusion by the disturbances generally known as the "Boxer" insurrection. Russia seized this opportunity to greatly increase her forces in Manchuria, under cover of an apparent military necessity. But other powers interested in the Far-Eastern question, besides Japan, began now to see the drift of Russia's policy, and this brought a joint protest at permanent occupation by Russia of a large part of the domain of the Chinese Empire, where all the treaty nations have valuable commercial rights. Russia, protesting the rectitude of her intentions, pretended to yield, and agreed to evacuate Manchuria by a certain date.

There is not the slightest reason to suppose that she ever had any intention of keeping her promise. I ventured to predict three years ago that Russia would never abandon her position in Manchuria, and that the powers might prepare to accept the inevitable. As a matter of fact, from her standpoint, it would have been an exceedingly foolish thing to do, for it would have isolated Port Arthur at a time when every Russian diplomatist in the East fully believed that war with Japan was one of the certainties of the near future.

That Russia's course has not been satisfactory to the other powers goes without saying. But it is extremely unlikely that any of them, except Japan, will feel that its interests are sufficient to warrant a resort to arms. There has never been room to doubt that Japan was prepared to fight if she failed to secure satisfactory concessions. In fact, no careful observer of the game of grand politics as it is now being played in the Far East can doubt that ever since 1894 Japan has been carefully preparing to go to war with Russia, and Russia has been just as carefully preparing to

meet her attack. To this end, both nations have been as rapidly as possible bringing their armaments to a war footing. The completion of the Trans-Siberian Railway was a primary necessity to Russia. It is now officially said to be finished, although there are good reasons for thinking that its service in war may not be entirely satisfactory. However, the tone taken by Russia throughout the recent negotiations shows that she feels herself strong enough to bring the question to an issue.

Although it has until recently escaped the attention of the public, the active forces in the existing crisis have been formulating for more than a year. The first decisive step was, of course, the promulgation of the defensive treaty between England and Japan. This assured Japan that if she should throw herself into the breach to check Russian aggression, her territory will not be violated even if she suffers defeat, an assurance which materially strengthened her credit. That is the real meat of this treaty, which conveys the further assurance that Japan and Russia will be permitted to fight it out alone. Notwithstanding discussion of the probability of international complications, now so widespread, there is scarcely a possibility of outside intervention, except in the matter of preventing the imposition of extreme terms upon the vanquished, after the war has been fought to its military conclusion. The chances of the United States being dragged into the affray are too remote to cause any apprehension. This country has material interests involved, but they will undoubtedly be safeguarded at the proper time.

The immediate issues of the crisis that has at last brought the two nations face to face are important only so far as they throw light on the general situation. They are ample illustration of the frequently demonstrated fact that when two parties are seeking a quarrel a pretext is never lacking. Since Russia is in possession of the bone, she was naturally content to play a waiting game, which has placed Japan, superficially, in the attitude of an aggressor. The present crisis was brought about by diplomatic inquiries directed by Japan to Russia concerning the latter nation's policy in Manchuria and Korea. The immediate excuse for the representations was the alleged aggressive actions of Russians on the Korean side of the Yalu River, which forms the boundary between Korea and Manchuria; but if that had not presented itself, no doubt another excuse would have been found. The main design was to elicit a definite statement of Russia's intentions. Several notes were exchanged between the two governments, with quite definite results, which shine clearly through the mist of diplomatic communication. Russia would not budge an inch in Manchuria, nor would she concede that Japan has any right to question her conduct there. In this latter position she is undoubtedly correct, for, technically, China is the only nation directly concerned. Thus Russia evades the issue diplomatically, while the real effect of her replies have been to tell Japan that it is none of her business.

The Czar and his Officers Reviewing Russian Troops at Pavlovsk

It is also characteristic of Russian diplomacy that she complicated her reply and seemingly strengthened her position by throwing up an outwork in the nature of certain propositions regarding Korea, in which she seemed to make concessions, while really advancing claims she had never before made. In other words, while practically refusing to discuss the Manchurian situation with Japan, she unexpectedly advanced pretensions to a "sphere of influence" in Korea, thus paving the way for aggressions in that quarter. It is the old, old diplomatic trick of first claiming a right, then, by abandoning some immaterial part of it, seeming to make a concession. In this instance, the Russian game is too obvious to deceive even a novice in diplomacy, and, in fact, no one was deceived, Japan least of all. Russia has shown her hand; and it means that she intends to hold what she has got in Manchuria, at the same time putting her finger openly, for the first time, upon Korea.

Thus the issue is sharply drawn. The inevitable clash in the destinies of the two nations has as last occurred. One or the other must give way. Neither nation will willingly yield, for neither can, without abandoning something necessary and fundamental to its national development and prestige. Their differences are too deep to be reconciled by diplomacy, which can only temporize. As to the right and wrong of the issue, that is not easy to determine. Critically judged, both are absolutely wrong, since neither has any genuine right to what both are contending for. As to the dubious ethics of this march of destiny, much can be said on both sides. Argument boots nothing in a matter like this. This conflict was apparently inevitable. It seems beyond the direction of human wisdom in the present stage of civilization. It is the beginning of the destined struggle between East and West to decide finally which shall dominate in that part of the earth, and it will not be settled by a single war.

As to the result of war between Russia and Japan, there is room for wide difference of opinion. I have had opportunity to observe the troops of both nations in the field. I am strongly inclined to believe that Russia will be the victor; but my opinion is based almost entirely upon her ultimate superiority of resources. If Russia does win, what? That is a bridge the powers will not cross until they reach it. I have not been able to satisfy my mind fully as to where, in this conflict, the "greater interests of civilization" lie. Far behind the questions immediately presented looms the spectre of a forthcoming war of the civilizations.

In the present war, since a considerable body of water separates the hostile armies, it was inevitable that the first clash should occur on the sea. In this Japan has been victorious. The land fighting will probably occur in southern Manchuria and Korea. I have seen some military experts quoted to the effect that, strategically, Japan has the superior position. I do not agree with this theory. To me, quite the contrary appears true. Japan's real object involves the expulsion of the Russians from southern Manchuria and northern Korea, which means, essentially, that the Japanese must go to the Russians. To accomplish anything they must go in large force. Just how many troops Russia now has in the Far East is not known, and is variously estimated. I think that perhaps 150,000 men, exclusive of garrisons of important points, is not far from the truth. The actual fighting strength of an army is never more than two-thirds of its presumptive complement, estimated by units of organization. But this is a formidable force, and it is not to be presumed that it can be decisively defeated by one of inferior numbers. This means that Japan must land in the theatre of war at least 150,000 men, with the necessary supplies and transports. Those who recall, as I do, the difficulty we experienced in landing an army of one-sixth that size in Cuba, with undisputed possession of the seas, will at once realize the serious nature of such an undertaking. The difficulty will be greatly enhanced by the presence in adjacent waters of a numerous and formidable Russian naval force. It is not impossible, but if the Japanese accomplish it without suffering some severe setbacks they will earn the admiration of the world.

It is evident, then, that to be able to land a sufficient number of troops to cope with Russia, the greater part of the Russian naval force would have either to be decisively defeated or effectually blockaded. Let us assume that this difficult feat, with the disabling of the Russian war-ships at the outset of the war, is successfully accomplished. The war remains to be fought out on land. What, then, will be the situation?

Since Japan must assume the offensive, Russian action will necessarily be shaped to meet the moves of the enemy. To some it may seem that the strategic possibilities are infinite, but the probabilities are really quite narrow. The first main object of the Japanese will be to occupy Korea in advance of the Russians, if possible. It is reported that a considerable force has already been landed there. With the Korean Strait controlled by her navy, it will not be difficult to continue along this line. It is but a few hours' sail to Fusan, and there are other harbors on the east coast of Korea where troops can be easily landed. A partially completed railroad is in process of construction from Fusan to Seoul, the capital of Korea. Of course, the Japanese could not wait for its completion, but will probably push forward overland.

The first strategic move of importance by Japan's land troops was the attempt to throw a hostile force in the rear of the Russian army near Port Arthur. If this can yet be accomplished, it will be the best move Japan can make. It would at once threaten the entire Russian line of communications, and in the event of Japanese success would completly isolate Port Arthur.

So much for the theoretical possibilities of the first stage of the war. The practical probabilities are another matter. A vital factor is the climate. Almost the entire coast-line of the Gulf of Liao-tung and the Korean Bay is very shallow. A result is that in winter the greater part of the coast-line is frozen up, the ice often extending several miles from the land. Where the coast is comparatively free from ice, there are no harbors, and the water is so shallow that seldom can a ship of any size come within three miles. Where rivers enter the sea, as at Tientsin, Shan-hai-quan, Kin-chou, and Neu-chwang, a bar is invariably formed, which only vessels of light draught can cross. From December to April these bars are usually frozen tight. There may be one or two places on this coast-line where troops can be landed in winter, but it is a task any prudent general will shrink from. It is not to be thought of in the face of serious opposition. It will be difficult enough when there is no ice. An ice-free coast several hundred miles long gives some chance to elude observation from the land, and secure a foothold on shore without opposition. This done, an army may land and be prepared to defend itself by the time it can be attacked.

Thus the climate practically narrows the probabilities prior to the month of April down to naval operations, and at most a seizure by Japan of middle and southern Korea, always assuming that the Russian fleet can first be entirely disposed of. Both Russian and Japanese army and navy officers are perfectly familiar with all the conditions which affect the situation. Fusan, Chemulpo, and all the southern Korean coast is now free from ice, and operations need not be delayed there. The mouth of the Yalu is seldom entirely closed by ice, owing to its more rapid current, but a landing there at this time of year will be attended by great difficulties. So the Russians have two months yet to prepare to meet the Japanese armies that may be eventually landed in Manchuria. By that time she will have greatly reinforced her land forces. Meanwhile, unless the Japanese succeed in occupying the mouth of the Yalu, there will be nothing to prevent a movement of Russian troops southward to seize the mountain passes and northern Korea. The Cossacks are inured to cold, are hardy riders, and can move rapidly. It is not to be anticipated that the Japanese, except as a last resort, will attempt a demonstration of any magnitude towards Vladivostok.

So the middle of April, or perhaps, as is more probable, May, may find Russian and Japanese armies confronting each other at several points in the indicated theatre of war. Such a situation will precipitate a number of important battles, and on the results of those battles will depend the next stage of the war. Beyond that, at present, no man can pretend to see with any accuracy. As has already been shown, Japan will act with energy and intelligence. On the other hand, the Russian generals in the Far East are now fully alive to all the possibilities of the situation. I know positively, from the highest Russian military authority, although discretion forbids specific mention of the source, that the Russian army and navy plans for this war were fully prepared three years ago. I was even permitted an insight into their general character, and can say that they are very comprehensive, and provide, as well as human wisdom may, for all possible contingencies. There is no doubt that the Japanese plans are as complete. But it is in the working out that the weaknesses of plans are revealed, and in this Japan has had the first successes.

China's attitude in the event of war is being discussed. There is no room for uncertainty about this. If permitted, China will observe a strict neutrality, and the powers have already taken steps to see that she is not forcibly drawn into the struggle. They will insist that military operations be confined to the territory north of the Great Wall, which terminates at Shan-hai-quan. Japan has already given her assent to this delimination—in fact, Japan brought the subject forward. I have seen many comments on the probability of China assisting Japan by threatening the Russian line of communications from the west. This is sheer nonsense to any one familiar with the present military situation of China. She could not present a force that would not be easily routed by a single Russian division. Any threatening move on China's part would give Russia a legitimate excuse to seize Peking, an opportunity of which she would only too gladly avail herself. Any interference by China would result to Russia's advantage, not Japan's. A feeble voice, that of the Emperor, has been heard at Seoul, announcing that Korea will observe a strict neutrality. This would be comical if it were not pathetic. If China and Korea could maintain a strict neutrality there would be no war, for there would be no place to fight if the contending armies were debarred from neutral territory.

The Beginnings of American Diplomacy

By JOHN BASSETT MOORE, LL.D.

The first of a number of articles dealing with the most important periods of our diplomatic history. The author is Professor of International Law and Diplomacy at Columbia University.

The People of the Labrador Coast

NORMAN DUNCAN recently spent some months among the strange people of the Labrador coast. He writes of their life and its many tragic happenings—a paper of remarkable dramatic interest on a people hitherto little known.

Insect Commonwealths

How the bees, ants, hornets, etc., govern their little kingdoms, clean their streets, and care for the sanitation of their cities. Dr. MCCOOK, the author, is one of the foremost naturalists in this country.

New Hawthorne Letters

A hitherto unpublished group of letters written by Nathaniel Hawthorne to his publisher. They give a charming picture of his life abroad, of his attitude towards his books, his friends, etc.

The History of the Alphabet

Dr. HENRY SMITH WILLIAMS, LL.D., tells the story of the development of our alphabet from its earliest sources. His article is illustrated with many rare pictures of old inscriptions, stone writing, etc.

In a South American Desert

Mr. C. J. POST is now travelling for HARPER'S MAGAZINE through hitherto unexplored parts of South America. His article tells of a journey through an untravelled desert of Bolivia.

An Indian's Impressions of Civilization

The author of this article is a full-blooded Sioux Indian. He is now a physician and a worker among his people. He tells of his first impressions of civilization when, as a boy, he came East to obtain his education.

EIGHT SHORT STORIES

Robert W. Chambers, Roy Rolfe Gilson, Alice Macgowan, Margaret Sutton Briscoe, Mrs. Stepney Rawson, Grace Lothrop Collin, etc.

160 PAGES—PICTURES IN COLOR

The

RUSSIAN ADVANCE

By Senator ALBERT J. BEVERIDGE

THIS book gives an accurate and interesting description of Russia's policy of expansion, which has become a possible cause for war. Senator Beveridge investigated the conditions, the peoples, the industries, the markets, the religions of Russia, Japan, China, Manchuria, and Korea. The volume is of importance and value to the men and women of this country who are interested in the development of the new political, diplomatic, and commercial relations of the United States with the East.

COMMENT

THERE were two remarkable features of the public career of Marcus Alonzo Hanna, aside from the obvious truth that, at the time of his death, he was the most influential member of the Republican party, not only in the State of Ohio, but throughout the nation. Unquestionably, had he announced a year ago his candidacy for the Republican nomination for the Presidency, he would have secured enthusiastic support in many of the strongest Republican States. It can truly be said of him that repeatedly and sincerely he refused the crown of an honorable ambition. The facts, however, to which we would at this time refer, and which rendered his political life phenomenal, if not unique, are the brevity of the period during which he stood in the public eye, and, secondly, the completeness with which he outlived the storm of baseless slander and detraction to which for some four years he was exposed at the hands of unscrupulous political opponents.

It is true that long before he filled the public eye as the autocratic and irresistible commander of the McKinley forces in the campaign of 1896 he had taken an interest in the local politics of the Western Reserve, and he had been a member of his State's delegation to the Republican national conventions of 1884 and 1888. During the twelvemonth preceding the spring of 1896 he did a great deal of effective but quiet work on behalf of his friend McKinley, yet it may be said that, outside of his native State, he was personally unknown when he gained an easy victory over the Reed forces marshalled by those redoubtable tacticians, Senator Platt and Senator Quay. That was less than eight years ago, yet it is no exaggeration to say that before he died he had become the best-known and most powerful individuality in the Republican party. That was a surprising elevation to have been attained in so short a time, and has no parallel in our history, except that afforded by Henry Clay; and Hanna, it must be remembered, unlike the Kentuckian, was no orator.

We may be quite sure, however, that the exceptional weight which he had acquired so quickly in Republican councils was a source of less profound and fervent satisfaction to Senator Hanna than the knowledge that, in the minds of the great mass of fair-minded citizens, he had, by personal contact, wholly dispelled the misconceptions of his character engendered by the libels and aspersions sent broadcast by the "yellow" press during the campaign of 1900. It mattered not whether a man was a walking delegate, a Populist, or a socialist, the first-hand knowledge which he gained of the real Mark Hanna during the last few years caused him to brand with contempt and loathing the lies and caricatures which, throughout the campaign of 1900, were concocted by malignant hirelings, and exercised a baleful hypnotism on an ignorant and thoughtless section of the American people.

On the face of things, Japan has gone to war for the purpose of compelling Russia to evacuate Manchuria. What are the motives that impelled Japan to risk so much for the attainment of this object? There still seems to be current in American newspapers some misconception on this point. It is not true that the Tokio government is prompted mainly by a hankering for revenge, although it would be natural enough for the masses of the Japanese people to feel some vindictiveness. It will be remembered that, by the treaty of Shimonoseki, the Liao-tung Peninsula, including the naval fortress of Port Arthur, was ceded by China to Japan. Thereupon Russia, France, and Germany interposed, and compelled Japan to retrocede the peninsula to China, and to accept in lieu thereof an additional money indemnity. Before acceding to this demand, which, in the absence of support by England, she was not strong enough to reject, Japan pressed for a stipulation that in the future China should not cede any part of the Liao-tung Peninsula to any other foreign power. Russia, France, and Germany prevented the insertion of such a stipulation in the retroceding treaty, on the ground that it was obviously aimed at Russia alone, and that, inasmuch as Russia was not, and never would be, a disturber of peace in the Orient, it was superfluous and invidious. Not long after the retrocession, however, Russia extorted from China a lease of the Liao-tung Peninsula.

That the Japanese people should smart under what seems to them an act of flagrant perfidy and oppression is not surprising. It was not, however, for the satisfaction of a well-grounded grudge that the Tokio government resolved to try to expel the Russians from Manchuria. It was foreseen that, if the Russians were permitted to retain Manchuria, their absorption of Korea also would be only a question of time. Korea, however, is not merely the nearest, but is the only available outlet for the overflow of Japan's surplus population. An outlet is indispensable, because, in view of the limited area of cultivable land in the island empire, of the high birth-rate, and of the rising standard of living, the pressure of population on the means of subsistence is already formidable. Nor is this all. Should Russia acquire Manchuria, she would be irresistibly impelled to annex not only Korea, but also northern China. The economic aspirations of Japan would thus be stifled. For it is precisely in these countries that Japan finds the most promising market for her manufactures. The value of Japanese exports in 1902 to Korea and to China, directly or indirectly through Hongkong, was over 83,000,000 yen, out of a total export valuation of 258,000,000 yen. From the same customers in the same year Japan took commodities valued at about 50,000,000 yen. They constitute her natural market, because her people understand the wants, the business methods, and the languages of their inhabitants. Japan has no hope of competing with Europeans or Americans in Western markets. But she has looked forward to becoming the purveyor of manufactured products to the yellow races. It is a reasonable aspiration, and it was worth fighting for.

The report that the Empress Regent of China had fled from Peking to Kaifeng-fu, the capital of the province of Honan, is not confirmed; and no such movement is now likely to be made. It is probable enough, however, that a warning that a departure of the Chinese court from Peking was contemplated constituted one of the two principal motives for the despatch of Secretary Hay's note to the belligerent and neutral powers suggesting that China's neutrality should be respected. Few persons conversant with the excited condition of the Chinese population, wrought to fever-point by the successes of the Japanese at Port Arthur, doubt that the removal of the Empress Regent to the interior would have been followed by a general outbreak against foreigners, that would have required a second joint occupation of Peking, and a number of punitory expeditions. That was one motive; the other was the knowledge that if, in spite of a more or less sincere attempt of the Peking government to observe neutrality, anti-Russian demonstrations should be made by the Chinese residing in Manchuria, Russia, if victorious over Japan, would make of such incidents a pretext for the invasion of China proper and the occupation of Peking. Against both of such untoward events

precautions, which we hope will prove effective, have been taken by the agreement which Mr. Hay's note has brought about.

We discuss elsewhere the apparent departure in American diplomacy involved in Secretary Hay's proposal to all the neutral powers, as well as the two belligerents, that the neutrality of China proper in the present contest, and, incidentally, her territorial integrity, shall by agreement and joint effort be assured. We would here direct attention to an interesting report that Mr. Hay's wish if not his definite proposal originally went beyond the limits that we have indicated. He is said to have intimated to the neutral powers a desire for an agreement respecting the extent to which they would permit Japan to be penalized in the event of her defeat. Precisely what restrictions he hoped to impose on Russia if she should be victorious has not yet been divulged. We presume that he desired to shield the Island Empire from invasion, and from the exaction of an inordinate war indemnity that might cripple her for many years. The suggestion, which, of course, was merely tentative, is understood to have been withdrawn, owing to Germany's refusal to entertain it. The Berlin government, while disposed to cooperate in applying moral, or even material, pressure for the purpose of assuring the neutrality of China proper, if not also for the purpose of protecting her from invasion, was unwilling to offend Russia by undertaking to shield Japan from the consequences of defeat. Evidently the same motive would operate to give a somewhat narrow definition to the "China" which Germany would agree to cooperate in protecting. Apparently by the term China the Berlin government refers to China proper, and does not include the three Manchurian provinces, which, if victorious, Russia might be reluctant to evacuate. This is, of course, one of the points which raised questions of great moment, and which we have examined in another column.

How needful it was for the President to issue a proclamation is obvious in view of the numerous applications that have been made by American citizens for permission to enter the military or naval service of Japan, as soldiers, seamen, engineers, or surgeons. Evidently the applicants were unfamiliar with the act of Congress passed in 1818, by which the duties of citizens of a neutral power are defined. The act prohibits an American citizen not only from accepting a commission from a belligerent, or enlisting in the service thereof, but also from hiring another person for the purpose, or inducing another person to go beyond the jurisdiction of the United States with an intent to be employed by a belligerent. It is also against the law to fit out and arm, or to be in any way concerned in fitting out or arming, a vessel with intent that such vessel shall be employed in the service of a belligerent. The proposal, therefore, that Russian Jews and their American coreligionists who sympathize with the victims of anti-Semitic persecution in Russia should contribute a large sum of money for the purchase and equipment of a war-ship to be presented to Japan was, on the face of it, absurd. Every contributor to such a fund could have been arrested and punished for a violation of the act of 1818.

As for the apprehension expressed by some Russian newspapers that Japanese war-ships would be permitted by our government to use at will the ports of the Philippines, this will be allayed by the President's proclamation, which makes the customary announcement that no war-vessel of either belligerent will be permitted while in any port of the United States to take in any supplies, except provisions, and so much coal as may be sufficient to carry such vessel to the nearest port of its own country. As a precaution against an evasion of this regulation, it is provided that, without special permission, no coal shall be a second time supplied to any war-vessel until after the expiration of three months from the time when such coal was first supplied to it within the waters of the United States, unless such war-vessel, since last supplied, shall have entered a port of the government to which it belongs. Subject to these rigorous restrictions, the ports of the Philippines will be open to Japanese and Russian war-ships alike. The proclamation also set forth a warning which should be heeded by our manufacturers of arms and ammunition, and of other articles recognized in international law as "contraband of war." American manufacturers are at perfect liberty to sell such commodities to either belligerent, but they cannot send or carry them upon the high seas without incurring the risk of capture. We add that in the present contest coal will undoubtedly be treated as contraband of war.

There is no foundation for the charge made by Russian and French newspapers that in permitting their torpedo-boats to attack the Russian war-ships at Port Arthur before a declaration of war was made the Japanese permitted a breach of international law. That attack was made in the night of February 8-9, and more than two days previously—that is to say, in the forenoon of February 6—Mr. Kurino, the Japanese minister at St. Petersburg, had informed the Russian Foreign Office that his government renounced diplomatic intercourse with Russia, would resume entire liberty of action, and would thenceforth take such measures as, in his judgment, would be conducive to its interests. That was all the warning that Russia had a right to expect. It has long ceased to be obligatory to issue a formal declaration of war before beginning hostilities. We issued no declaration of war against Mexico in 1846, and at least two battles had taken place before an act of Congress recognized that a state of war existed. In the last war between Russia and Turkey an outbreak of hostilities preceded the formal announcement that a state of war existed. This, although the Declaration of Paris of 1856 made a formal declaration obligatory on the subscribing powers. Japan, not being one of those powers, was not bound by the Declaration of Paris, and, although Russia was one, we have just seen that she did not consider the obligation binding at the outset of her last war with Turkey. While, however, a belligerent is not entitled to expect a declaration of war, the rupture of diplomatic relations being considered ample notice of its enemy's intentions, it is otherwise with regard to neutrals, whose duties do not begin until they have received official notification that a state of war exists. Not only have the Russians no right to complain that they were "stabbed in the dark," because the attack on their war-ships at Port Arthur followed within about two days and a half the rupture of diplomatic relations, but it is the fault of their naval commander that they were not prepared to give the Japanese a warm reception. It had been known at St. Petersburg for many weeks that the demands set forth in the last Japanese note constituted practically an ultimatum, and, if rejected, would be followed by an immediate resort to war.

There has been some talk of late in influential quarters about the issues on which next summer's campaign is or is not likely to turn. Secretary Shaw, speaking on Lincoln's birthday in Chicago, did not undertake to frame the Democratic platform, but he was good enough to tell the Democratic party on what issues it would be debarred. It is true, of course, as Mr. Shaw said, that the free coinage of silver at the ratio of 16 to 1 cannot possibly become a paramount or even a conspicuous issue in 1904. Equally certain is it that the contest will not pivot upon any issue growing out of our late war with Spain. It is undeniable that the promise made four years ago by Mr. McKinley has been fulfilled—the promise, namely, that the insular government established in the Philippines shall keep steadily in view the rights, the interests, and the social and economical conditions of the Filipinos themselves. Whether a fight can be made on the trust issue is a question not so easily answered as Secretary Shaw imagines. He thinks that he has disposed of this issue by pointing out that from March 2, 1889, when a colorless report was made to a Democratic Congress by a Democratic committee appointed to investigate the trusts, up to the present hour, no original specific legislation on the subject has been enacted by a Democratic Congress, or recommended by a Democratic President, and few important prosecutions against alleged trusts have been instituted by Democratic Attorney-Generals.

Secretary Shaw omits to recognize that since March 4, 1897—that is to say, during the period when the trust question has become most urgent—all branches of the Federal government have been controlled by the Republicans, so that upon them, and not upon the Democratic minority in the Federal legislature, rests the responsibility for any shortcomings on the part of the government in relation to the trusts. Mr. Shaw concluded his remark by the assertion that if the issues

were to be narrowed to a question of preference between the Republican and Democratic candidates, there would be no campaign. In the opinion of the Secretary of the Treasury, the President has no second and no next- *haud proximus aut secundus.* Is Mr. Shaw taking for granted that the Democratic nominee will be Mr. Bryan or Mr. Hearst? He would scarcely venture to tell even a Republican audience that as between Mr. Roosevelt and Mr. Cleveland there could be no contest. Nobody knows better than Mr. Roosevelt himself that the one opponent whom he has cause to fear is the ex-President, and Mr. Shaw must also be aware that in Wisconsin and Illinois, as well as in Indiana and other pivotal States of the North, Mr. Cleveland would appeal with extraordinary power to a very large minority, if not a majority, of the voters.

Of even more interest and importance is the Republican platform attributed by a well-informed Washington correspondent to Mr. Roosevelt himself. There is no doubt that the President can exercise through his friends a decisive influence on the platform, and, in his letter of acceptance, he can emphasize the issues on which he wishes the fight to be made. We are told that the issues preferred by the President are four—to wit, the administration's policy in the Panama affair; secondly, its attitude toward corporations, as exemplified in the Northern Securities case; thirdly, its attitude toward organized labor, as evinced in the open shops in the Miller or "open-shop" case; and, fourthly, its attitude toward the controversies between capital and organized labor, as illustrated in the settlement of the anthracite-coal strike. As to the Panama affair, the President is doubtless right in thinking that his course has been stamped with popular approval, not only in the Northern but also in the Southern States. When the Panama treaty comes to a vote in the Senate, as it will before the end of the present month, there is reason to believe that not only almost every Republican Senator, but also about two-thirds of the Democratic Senators, yielding to unmistakable expressions of opinion in the Southern States, will declare themselves in its favor. Under the circumstances, it would be as futile for the Democrats to seek campaign material from the Panama affair as it would have been for the Whigs in 1848 to denounce the war with Mexico and the acquisition of California.

When we turn to the two labor issues, we cannot deny that, viewed collectively, they seem to justify the claim that the President has conformed to the maxim *in medio tutissimus ibis.* He may be represented by his friends as having pursued a safe middle course. On the one hand, by his declaration for the open shop in the Miller case, he proclaimed the right of every laborer, whether unionist or non-unionist, to accept employment; whereas, by his interposition in the anthracite-coal strike, he undoubtedly arrayed the vast influence of the Federal government on the side of organized labor, and thus enabled it to win a victory. As to the action against the Northern Securities Company, begun by the Attorney-General at Mr. Roosevelt's command, it has always been manifest that by it the President believed that he could steal the Democratic thunder. If, as most lawyers expect, the judgment rendered in this case by the Circuit Court of Appeals shall be affirmed by the United States Supreme Court, Mr. Roosevelt will point to the decision as a conclusive proof of the sincerity of his opposition to trust abuses, and will invite the people to contrast Democratic professions with his own performances.

Judge George Gray, of Delaware, seems to have been eliminated from the list of candidates for the Democratic nomination for the Presidency because he cannot get the delegation from his own State to the national convention. The Saulsburys and other leaders of the Delaware Democracy are inflexibly opposed to Judge Gray, not only because he publicly opposed the Democratic nominee for the Presidency in 1896, but because he subsequently accepted from Mr. McKinley the appointment of Peace Commissioner to Paris. Mr. Olney's candidacy may also be regarded as extinct, partly because he would have no chance of carrying his native State, and partly because in his speech at New York he pointed out that if any Cleveland man is to be chosen, it should be Cleveland himself. He frankly accepted the principle enunciated by Pope that "Jove's satellites are less than Jove." Of Senator Gorman's candidacy also we now hear but little, since the demonstration of his inability to persuade even half of his Democratic colleagues to vote against a ratification of the Panama treaty, and since his failure to induce the Maryland Legislature to accept his candidate for the United States Senatorship from that State. Unless we admit that Mr. Cleveland, notwithstanding the peremptory refusal to be a candidate embodied in the letter to Mr. St. Clair McKelway, would accept the Democratic nomination, there are, at the moment, but two avowed candidates for that nomination in the field, to wit, Chief-Judge Alton B. Parker and Mr. W. R. Hearst. Mr. Bryan, of course, is "willin'," but that he will receive a third consecutive nomination is not believed, even by those who count with absolute confidence on Democratic lunacy. As between Hearst and Bryan, the only question that could possibly be raised would be, Who shall drive the hearse? We add that if Mayor George B. McClellan is, as some people imagine, Mr. C. F. Murphy's dark horse, he has not yet been permitted to appear in the paddock.

The investigation of land frauds, which the Department of the Interior has been prosecuting for some eighteen months, is at last bearing fruit. It is expected that the evidence laid before the Federal Grand Jury of the District of Columbia will result in a dozen indictments. It seems that the plans of the land-grabbers were carried out successfully for several years. The instrumentalities by which the frauds were effected were corrupted notaries public in San Francisco and Portland, Oregon; bribed Forest Superintendents in the West, together with Land Office registers and receivers and State officials; and, lastly, bribed employees in the General Land Office in Washington. The ringleaders were John A. Benson, an engineer and real-estate speculator, and F. A. Hyde, an attorney, both of San Francisco. The method followed by these rogues is described by a well-informed Washington correspondent.

Through their spies in the General Land Office in Washington, the ringleaders would obtain information regarding large tracts of land suitable for forest reservation purposes. This land would then be entered upon ostensibly by dummies, and the affidavits of entry, proof of occupation, and other statutory requirements for the establishment of *prima facie* claims to lands would be perfected by bribed notaries. Then, on official Interior Department stationery, obtained from a corrupted Forest Superintendent, recommendations would be written in Hyde's office, setting forth the lands which should be withdrawn for forest reserves. These letters, having been signed by Forest Superintendent Allen, would be forwarded to Commissioner Hermann of the General Land Office at Washington. Hermann would approve them, and they would then go to the Secretary of the Interior, who would accept Hermann's recommendation without question, and send the executive recommendation to the President for his signature. Upon the creation of the Forest Reserve, assignments of the titles held by the dummy entrymen would be made to Benson and Hyde, the corrupted notaries being again called into service. Thus it came to pass that, by means of information furnished by collusive land officials, the San Francisco ring had its pick of the best land, and acquired forest lands worth fifty dollars per acre in exchange for forest-reserve lands that had cost them two dollars and a half per acre. These operations were carried on in California, Oregon, and Washington, the total area covered by the frauds amounting to many hundreds of thousands of acres. Three of the Washington officials bribed by Benson and Hyde are still at work in the Interior Department, but Binger Hermann, formerly Commissioner of the General Land Office, was compelled some time ago by Secretary Hitchcock to retire under a cloud, and has since become a member of Congress from Oregon. It may be expected that these worthies will figure among the persons indicted by the Federal Grand Jury.

A contest, which might without exaggeration be called a battle, has already taken place between Bulgarian frontier guards and the troops of the Sultan. Signs are not wanting that this contest is, as the saying goes in India, the first drop of the monsoon—the first breaking of the rains which will presently deluge the earth. Turkey, seeing Russia's hands tied by the Japanese war, will probably think the time ripe to try to recover eastern Rumelia, which slipped from her grasp in 1885, in defiance of the terms of the Berlin Treaty.

The powers, with Germany at their head, dissuaded Abdul Hamid from attempting to reconquer eastern Rumelia at the time, and that fertile province slipped under the shield of Bulgaria, and immediately entered on an era of great prosperity and well-being. The Sultan, however, is by no means reconciled to his loss, nor does he forget that Cyprus and Egypt have practically passed into the power of England, while Bosnia and Herzegovina are to all intents and purposes Austrian soil, Bulgaria being in reality an independent kingdom, though legally a vassal of Turkey. All these things Abdul Hamid has neither forgotten nor forgiven, and the recent war with Greece showed him that he can rely on his Osmanli troops to behave with splendid valor in the field. Bulgaria, on the other hand, would certainly have gone to war with Turkey last year, in the hope of adding Macedonia to the principality of Bulgaria, but for the restraining hand of Russia, which compelled as well as counselled peace. All things, therefore, make us apprehend the worst in the Balkans when the new insurrections break out with the melting of the snows. Austria will probably receive the mandate of the powers to enter and occupy Turkey; but the experiences of Russia in 1877 show that her task will be anything but a sinecure. Austria may have to fight half a dozen Plevnas before war, once alight in the Balkans, is finally quenched.

The Massachusetts Historical Society lately headed an appeal to Congress, to which the WEEKLY paid attention at the time, to have the famous old frigate *Constitution* restored and put to use again as a seagoing training-ship for the navy. The appeal was referred to Secretary Moody, at whose instance an examination of the old ship was made to ascertain her condition. The report received was that the hull was so far gone that it would have to be almost entirely rebuilt if the ship was to go again into commission. Secretary Moody imparted this finding to Mr. C. F. Adams, president of the Massachusetts Historical Society, and suggested that it would cost too much to rebuild the old ship, and that the best course might be to leave her where she was at the Charlestown navy-yard, use her spar-deck for a naval museum, and perpetuate her name by giving it to the next first-class battle-ship that is authorized to be built. But none of the Secretary's proposals find favor in the eyes of the Massachusetts petitioners. Mr. Adams, replying to the Secretary's letter, says the petitioners supposed that the *Constitution's* hull would have to be rebuilt, but that the job would be well worth the half-million dollars or less that it would cost. The ship, when restored, will be useful in teaching seamanship, and will be, Mr. Adams thinks, a much fitter vessel to keep for that purpose at Annapolis than the *Chesapeake*, now kept there. *Chesapeake* is a name that does not sound as well to a historical society that remembers, as *Constitution* does. Moreover, Mr. Adams and his friends want the *Constitution* to be put in order in time to lead a procession of ships at the opening of the Panama canal. With her to represent our first litter of fighting-ships, and the *Hartford* to represent the second, that procession, which Mr. Adams counts on with entire confidence, will be a highly significant as well as an imposing spectacle. Finally, Mr. Adams disapproves the proposal to give the *Constitution's* name to a modern battle-ship. "That name," he says, "belongs to that ship, and to that ship only. In the memory of the American people it was, and should remain, always associated with that ship and no other." Truly, to pass the old name down would make more for ambiguity than for perpetuation.

The New York Legislature is about to vote on a concurrent resolution proposing an amendment to the State Constitution which shall permit the Legislature to confer upon the female citizens of any city in the State the right to hold and vote for "the office of school commissioner and school trustee and every other office heretofore or hereafter created which shall confer upon the officer elected power to manage and control any public school or schools." Opponents of female suffrage object to the wording of this resolution, on the ground that if the State Constitution should be amended as it provides, city charters could easily be changed to make mayors, aldermen, and other city officers *ex officio* members of the school boards, thus entitling women to vote for and be eligible to almost any municipal office. Without discussing whether our cities would be better or worse off if that should happen, it seems clear enough that the resolution should be so drawn as to restrict its possible results to the particular point which it purports to cover. If the intention is to allow women to hold and vote for municipal offices, let that intention be expressed. But no such result should be reached by indirection by means of a bill that provides for something else.

It would be strange if at the innumerable commemorative meetings held on Lincoln's birthday nothing worth hearing or remembering had been said about the sixteenth President. At the dinner given, however, by the Republican Club of New York city, it appears—so far as the speeches and letters have been reported—that comparatively little was said about Lincoln himself, and a great deal about the Republican party and its living representatives. Mr. H. W. Mabie, indeed, put his finger upon the method by which Mr. Lincoln attained to extraordinary influence over an audience, when he pointed out that Lincoln, early in his adult life, had acquired the habit of clear and logical thinking, and that when he strove to commend his conclusions to his hearers, he almost always appealed to their reason, instead of to their emotions. This is true; but it is also true that the adoption of this method was instinctive rather than inculcated or imitative: it was due neither to systematic instruction nor to indirect influence or example on the part of others. It was self-evolved, and bears conclusive testimony to the fact that education, in the current sense of the word, is of inconsiderable importance to a man of great native force. We do not believe that Lincoln would have been a greater man had he been a graduate of one of our best secondary schools and also of one of our best universities. On the contrary, we deem it probable that, under such circumstances, he would have become a smaller, though more polished, man than he was, the native vigor and self-reliance of his intellect being, to some extent, impaired.

Mr. J. G. Schurman, president of Cornell University, also recognized the fundamental truth about the sixteenth President, when, speaking in Jersey City, he said that Lincoln arrived at his conclusions by his own unaided reasoning. Mr. Schurman added that it was well for the country that he did so, for nature had made him an almost infallible thinker. There have been great thinkers, however, who have disavowed conclusions which they knew to be impregnable. Galileo did so. Mr. Schurman reminded his auditors that Lincoln possessed not only an unerring power of ratiocination, but also the steadfast moral quality which would not permit him to retract or conceal his convictions. As Miss Ida M. Tarbell recalled at the dinner of the Chicago Society in New York, Lincoln in his contest with Douglas lost an election to the United States Senate because of his unflinching loyalty to the truth and of his determination to speak it out. He was warned at the time of the immediate political consequences of his inflexible candor. He foresaw them. But he also foresaw that the dilemma into which he thereby drove Douglas would deprive the latter of the Presidency of the United States.

A park commissioner should have taste. Mr. Pallas, the new Tammany Park Commissioner, seems to lack this highly important qualification for his important office. He has sold advertising space on the board enclosure which surrounds the unfinished public library on Fifth Avenue, turning over to unsightly uses what was a dignified enclosure. It will not pay. The concern that is most effectively advertised on this conspicuous surface is the new Tammany administration. Does Mayor McClellan care for this sort of exposition?

There are divers interesting signs of the earnestness of the Hearst movement. A particularly curious one has lately transpired. Mr. Pewee of New York, a conspicuous backer of Mr. Hearst's aspirations, who had found pictorial employment in one of the young editor's papers, appeared of a sudden in the service of another sheet. Was he lost to the movement? Not at all. Too valuable to be spared, he was immediately duplicated, and now appears daily in both journals. This is a new departure in politics, and gives pause to the reflections of the meditative observer. How far could it be carried? If Mr. Bryan slipped away from Mr. Hearst's embrace, could he also be duplicated and the duplicate advertised as the only real Bryan?

Secretary Hay's Circular Note to the Powers

BEFORE discussing the immediate and possibly ultimate consequences of the note addressed by Secretary Hay to all the powers, neutral or belligerent, that are concerned in China's future, it may be well to recall the precise terms of the document, up to the publication of which widely conflicting views concerning its significance and expediency were justified. The note expresses the earnest desire of our government that, in the course of the military operations which have begun between Russia and Japan, the neutrality of China, and, in all *practicable* ways, her *administrative entity*, shall be respected by both parties, and that the area of hostilities shall be localized and limited as much as possible, so that undue excitement and disturbance of the Chinese people may be prevented, and the least possible loss to the commerce and peaceful enterprise of the world may be occasioned. The italics are ours. Among the many reasons for keeping the eye fixed on the exact text of the note is the fact that in the last sentence is stated the specific purpose of the proposed agreement. The purpose is to avert a renewal of the Boxer uprising against foreigners, and the consequent necessity of a second joint expedition for the maintenance of order, which would involve not only a large expenditure, but the interruption of trade. That is the only purpose designated, and it is obviously one that no power interested in China could afford to disclaim. A favorable response to Mr. Hay's proposal was, therefore, in every case a foregone conclusion, provided the precise meaning of a novel phrase used by him—administrative entity—could be agreed upon. The acceptance of the suggestion was the more certain because it emanated from that one of the great powers which is universally known to have entertained at no time any project of territorial aggrandizement at the cost of China. Whether or no it be true that the despatch of the note was originally suggested by the German Emperor, it is manifest that neither Germany, France, nor Great Britain could have made the proposal without being suspected of ulterior designs, because every one of those three powers is the occupant of territory which formerly belonged to China.

On the face of the document, however, it was, evidently, needful to define what was meant by the phrase "administrative entity." Had Mr. Hay avoided the use of this new and ambiguous term, and avowed that all he wished for was an agreement on the part of the belligerents not to encroach upon the territory of China proper—that is to say, upon that great nucleus of the Celestial Empire that lies south of the Great Wall—the inference would have been warranted that he did not regard Manchuria as included within China's "administrative entity." By the equivocal wording of his note, he has committed our government to no such admission, but has left it for the other great powers to say how, on their part, they will interpret the proposed agreement. Japan, in her reply, made it clear that she was perfectly willing to respect the neutrality of China proper, provided, of course, the other belligerent would enter into a similar compact, but that she could not possibly consent to regard as neutral territory Manchuria, which, equally with Korea, is destined to become a seat of the war. In this exclusion of Manchuria from the neutral area, not only the other belligerent, Russia, but all the neutral powers, will undoubtedly acquiesce. The impossibility of regarding Korea as a neutral, in the sense of declaring her territory inviolable, is of course recognized, practically, by all parties, including the United States, notwithstanding the fact that a treaty exists by which we are bound to use our good offices on behalf of Korea whenever her sovereignty or territorial integrity is threatened with encroachment.

Assuming, as it seems safe to do, that Mr. Hay's suggestion will be accepted by all of the powers addressed, and that assent will be expressed with adequate definiteness in their replies, a formal treaty being deemed superfluous, we can see that the primary and only avowed aim of his proposal is likely to be fulfilled. Indeed, no sooner had the purport of his note and the friendly reception given to it been made known at Peking than the Chinese government issued a proclamation of neutrality, and rebuked one of the censors who had memorialized the throne against a removal of the court to Kaifeng-fu, which undoubtedly had been contemplated. We may probably assume, then, first, that the whole power of the Peking government will be used to prevent a recurrence of the Boxer outbreaks against "foreign devils"; that the pro-Japanese sympathies of the Viceroy of Chih-li and some other high Chinese officials will be sternly repressed; and that garrisons will be stationed at Shan-hai-kwan and other points along the Great Wall for the purpose of stopping such Chinese as are desirous of entering Manchuria to aid the Japanese. All this may already be said to have been accomplished by Secretary Hay's note, which, for the present, at all events, has apparently assured the internal tranquillity of China proper and the uninterrupted transaction of China's traffic with neutral countries. This is much to have attained, and if the note should have no further consequences, it would reflect great credit upon American diplomacy.

Let us suppose, however, that China's proclamation of neutrality is rigorously enforced, and that the promise of the belligerents not to encroach upon the territory of China proper is scrupulously fulfilled. Under such circumstances, it is plain that no pretext will be forthcoming for any further dismemberment of China proper, and also that China will have laid a basis for asserting, after the conclusion of the war, a claim to retain sovereignty over Manchuria, so far as this might be reconcilable with the leasehold and railway rights already conceded by treaty to Russia, or with the rights which Japan may have acquired by conquest at Russia's expense. This is a possible consequence of the move made by Mr. Hay, about which nothing is known to have been said in the replies made to his sagacious note, but which, we may be sure, has not escaped his own prevision or that of Japanese and Russian statesmen. That is why Mr. Hay's proposal, though it is one that the previous professions of Russia and Japan estopped them from rejecting, was probably received with mixed feelings at Tokio and St. Petersburg. For let us consider what, but for the pledges elicited by this note—China's promise, namely, to be neutral, and the promise of the belligerents to respect her neutrality—would have been the probable consequences of the war, provided, of course, the neutral powers did not jointly interpose to rob the victor of the fruit of victory, as was done by the Congress of Berlin after the last Russian-Turkish war, and as was done by Russia, France, and Germany after Japan had wrested from China the Liao-tung peninsula. There is but little doubt that the outcome of the contest, had the combatants been left to themselves, would have been this, namely, the victor would have annexed both Manchuria and Korea. As things are now, it looks as if—no matter whether Russia or Japan is beaten both on land and sea—the ultimate disposition of both Korea and Manchuria will have to be settled by a Congress in which all the powers interested in the Far East, including the United States, will be represented. Nor is it at all improbable that the proposal of such a conference would, by common consent, be relegated to the United States, as being the only great power unsuspected of any wish to gain a foothold on the Asiatic mainland.

Do, then, the purport and the reception of Secretary Hay's note call for nothing but unmixed congratulation? By the leading part which our government has taken in securing an agreement of the powers interested in the Far East, have we assumed no responsibilities that, under conceivable circumstances, might prove burdensome? Has not the thin end of a wedge been inserted, which, if driven home, might force us to depart from our traditional avoidance of Old World complications? Suppose that China proper should violate the promise to observe a strict neutrality. Would we not be morally bound to cooperate with other neutrals in compelling her to keep her word? Suppose that the Chinese in Manchuria, over whom the Peking government might, with a show of truth, profess that it could exercise no authority, render important service to Japan at a critical conjuncture, and suppose that Russia should make such service a pretext for taxing the Peking government with a breach of faith, and for proceeding to invade China proper? Would we be morally bound to cooperate with other neutrals in repelling the invasion? If not, what does our assumption of leadership amount to? Who hereafter would follow a leader that retires from the field the moment fighting is needed to carry out the plan of which he is the author? We, ourselves, hope and believe that a test of the extent to which President Roosevelt and Secretary Hay might be induced to go will not be applied in the present contest. We hope and believe that China proper will observe neutrality, and that Russia will not seek or seize a pretext for crossing the Great Wall. It is well, however, to bear in mind that, if diplomacy is to be effective, the armed hand must always loom behind it, and therefore some dazzling diplomatic triumphs may prove in the end too costly in the eyes of those who would have our country adhere to its traditional foreign policy.

Recent Views of the Negro Problem

SOME notable indications of the change which has taken place in public opinion at the North concerning the wisdom of attempting to enforce the Fourteenth and Fifteenth Amendments of the Federal Constitution were afforded on Lincoln day in New York city at a meeting which was held in the interest of the Hampton Institute, and over which Mr. Andrew Carnegie presided. Mr. Carnegie, who is well acquainted with the state of things in the Southern States, and especially in Georgia, where a near relative owns a large plantation, began by directing attention to the wide difference between the position of white men at the South and that of their brethren at the North as regards the expediency of admitting negroes indiscriminately to the suffrage. In the North the wholesale enfranchisement of negroes is relatively harmless, because there education is almost universal, and education can be trusted to produce intelligent and sober-minded citizens. In some Southern States, on the other hand, ignorant negroes constitute a large majority of the inhabitants. Mr. Carnegie pointed out that, in such cases, the effect of conceding the suffrage without restriction to the blacks would be that the intelligent whites

would be overwhelmed and powerless. The State and county governments would be in the hands of men steeped in ignorance of political responsibilities, to a degree which it is impossible for Northern whites unfamiliar with the conditions to conceive. Only actual residence in those Southern States can give a true impression of the facts. It must not be inferred that Mr. Carnegie regarded the deplorable ignorance of the colored people at the South as the outcome of any racial deficiency. On the contrary, he considered that, by their rapid and increasing acquisition of property, they were demonstrating more and more distinctly a capacity to rise in the social scale. At the same time, it is his conviction that to treat the Southern blacks as if they had already risen would be as grave a mistake as to try to prevent them from rising. Starting with these fundamental data, he arrived at the deduction that an educational test for the suffrage should be adopted and rigorously applied in the Southern States, though he would make the test applicable to whites and blacks alike, for it cannot be denied that ignorance in the whites, no less than in the blacks, is to be deplored and to be cured. He knows of but one remedy in either case, and that is education, not in the conventional, but in the widest sense of the term.

In Mr. Carnegie's opinion, no other suggested solution of the negro problem deserves serious consideration. He would dismiss at once proposals for the expatriation of the colored race, because such a transfer, if it were possible—which it is not—would be undesirable. He reminded his auditors that our country has less than thirty-three people to the square mile. On the other hand, England and Wales, Belgium and Holland, have, respectively, over 500. As things are now, we cannot produce cotton enough for the wants of the world, and, without the help of the colored man, we should produce much less. But for the colored man, in truth, the Southern States would be in the position which South Africa occupies to-day, a position which has rendered the importation of Chinese seemingly unavoidable. The right programme, therefore, for philanthropists, in Mr. Carnegie's judgment, is a concerted and steady effort for the elevation of the ignorant, of both the white and black races, at the South. He added that, in the endeavor to devise the best methods of furthering such elevation, white men at the North ought to seek the counsel of the wisest leaders of their own race in the South, and should accept their guidance as to the most effective mode of cooperation for the advancement of their section of our common country.

President Eliot of Harvard University, who followed Mr. Carnegie, took a position which would have been offensive to Thaddeus Stevens, by declaring that Northern opinion and Southern opinion were identical with regard to shielding the two races from admixture, one with the other. He frankly recognized that the feeling of the Northern whites against personal contact with the negro is even stronger than that of the Southern whites. He would not, however, shut his eyes, he said, to the real difference between Northern and Southern opinion, the difference, namely, that, at the North, nobody assumes that political equality involves social equality, or the right to free social intercourse on equal terms, whereas, at the South, the white population holds that there is a close connection between the question whether a negro shall vote or hold office, and the question whether a negro shall sit with a white man at dinner, or marry a white man's sister. It is probable that if at the North the blacks were as numerous as the whites, or even constituted, as in some Southern States they constitute, a large majority, Dr. Eliot would understand how one of these questions might come to involve the other. The Southern white, who knows that he would be outnumbered under an indiscriminate enfranchisement of the negro, knows also by his experience during the reconstruction period that judges, juries, grand juries, constables, and all administrative officials might come to be chosen from the race numerically dominant; that all laws aimed at the demarcation of the races might ultimately be abolished, and that, under such circumstances, it would prove extremely difficult, if not impossible, to secure the social separation of the races. It is because he has once already been threatened with racial admixture that the Southern white deems it indispensable to deprive the negro of political power, and recognizes a race danger in eating at the same table with a negro, or in any kind of social intercourse with him on equal terms. These are precautions which Northern whites have not been forced by unpleasant experience to take, but as to the necessity of which they ought, if Mr. Carnegie is right, to accept the guidance of their Southern brethren.

President Eliot made two other admissions, which disclose how far educated opinion at the North has moved from the point which it occupied, or seemed to occupy, in reconstruction days. Observation had taught him, he said, that the Northern whites are beginning to sympathize strongly with their Southern brethren in respect to the peculiar burden imposed upon the latter by the action of the national government in liberating the negroes. In almost so many words, Dr. Eliot avowed the belief that it was unfair to expect the Southern whites to bear the whole expense of educating the Southern blacks. This would be true, even if the Southern States were as able as are the Northern States to bear a huge outlay for educational purposes, which is not the case. President Eliot concluded with the assertion that Northern whites, in spite of their ingrained preferences for local control of education, are beginning to feel that the extraordinary burden placed upon the Southern States by the necessary separation between the black and the white races in educational institutions should be borne in part by the national government.

In a letter of considerable length from ex-President Cleveland, which was read at the meeting, there was not a word about negro suffrage, except that the writer described it as a problem which no patriotic citizen should neglect. The silence is significant. If Mr. Cleveland disapproved of the attempts made in the revised State Constitutions of certain Southern States to minimize the danger threatened by negro enfranchisement, he would scarcely have missed the opportunity of expressing disapproval afforded in this letter. He confined himself, however, to stating emphatically the fact that every section of our common country is deeply concerned in the better equipment of our negro population for self-support and usefulness, and to advocating some general agreement as to the mode of promoting the improvement of the colored race in this direction.

The proceedings at the meeting to which we have referred were fully reported, yet it does not appear that the views expressed by Mr. Carnegie, by Dr. Eliot, and by ex-President Cleveland provoked any dissent, or that a single voice was raised in favor of a rigorous enforcement by the Federal government of the Fourteenth and Fifteenth Amendments.

The Reserve Forces of the Russian Navy

We may without hesitation dismiss the often-repeated rumor that Russia is seeking the Sultan's consent to the passage of her Black Sea fleet through the Bosporus and Dardanelles, with a view to reenforcing her navy in the Far East. This rumor is to be discredited, not merely because the neutralization of the straits on both sides of the sea of Marmora is an article of international law, nor because England would probably raise objections to this move on Russia's part, in the interest of her ally, Japan, but far more because Russia is very likely shortly to require her Black Sea fleet precisely where she has it, in the Black Sea.

As to Russia's Baltic fleet, that is another matter entirely. When the Gulf of Finland is once more opened, we may expect to see strong reenforcements set forth for the Pacific from the great arsenal by the Neva. In the first outburst of excitement over the battle of Port Arthur it was said that the naval side of the war was practically at an end, and that Japan's command of the sea was assured. This is by no means the case. The first reminder to the contrary was the rumored bombardment of Hakodate by the Vladivostok squadron, bringing to our memories that Russia had, in that squadron, three of the strongest and heaviest armored cruisers afloat, ships so well defended by armor-belts as to be practically twenty-knot battle-ships of about twelve thousand tons displacement, and armed with primary batteries of four eight-inch quick-firing guns each. The fourth and newest ship in the Vladivostok squadron is a twenty-three-knot cruiser, whose services as a scout are likely to surpass her value as a fighting unit, though she also is very formidably armed.

While the Vladivostok squadron thus became prominent in the popular mind, it was further gradually realized that the damage to the Port Arthur squadron had been greatly exaggerated, and that, far from being totally lost to Russia, the ships torpedoed could probably be repaired within two or three weeks. Indeed, the mishap which befell them could have happened nowhere so opportunely for Russia, as within a few minutes of the Port Arthur dockyard, into which two of the injured vessels were able to steam, without assistance, while others of the ships reported totally lost were floated and towed into safety. It has become evident that even now the preponderance of Japan in the Yellow Sea is not so great as was thought, and the constant menace of the Vladivostok squadron will necessarily prevent a concentration of the whole of Japan's fleet, a portion of which will have to be detached, and is already, we may be certain, so detached, to protect the coasts of the Mikado's island empire.

Let us consider now the war-ships close to St. Petersburg, which the breaking of the ice will presently liberate, and some of which will in all probability soon be sent through the Mediterranean and the Suez Canal. There are, first, two battle-ships—*Emperor Alexander II.* and *Emperor Nicholas I.*, built in 1887 and 1889, and which are, therefore, somewhat out of date, though heavily armored and well armed. These two ships are more likely to remain at home, close to the forts of Cronstadt. Then there is the *Navarin*, launched in 1891, which displaces ten thousand tons, and has an armor-belt sixteen inches thick, with the usual primary battery of four twelve-inch guns. The *Sissoi Veliki* is about a thousand tons lighter, but equally heavily armored and armed, and was launched in 1894. Then we have two very heavy battle-ships launched only three years ago, and therefore of the most modern type, the *Borodino* and *Orel*, each displacing thirteen

thousand four hundred tons, and therefore two of the heaviest ships in the Russian navy, and nearly equal to the four great battle-ships which, with their fifteen thousand tons displacement, form the backbone of the Japanese fleet. These two ships might very well be among those chosen to go from the Baltic to the Yellow Sea, and they would probably be accompanied by the *Kniaz Potemkin Tavrichesky*, of nearly equal tonnage and power. If we add the *Kniaz Suvoroff* and *Slava*, each displacing thirteen thousand tons, and launched in 1902, it becomes evident that, in her northern fleet, Russia still has a most formidable reserve force. This would add a battle-ship tonnage of sixty-five thousand tons to the Czar's Far Eastern fleet. What this would mean we may realize if we remember that the battle-ship tonnage of the Mikado's fleet at the beginning of the war was eighty-four thousand tons, a total which may be diminished by losses, but cannot be increased, since the Mikado has no more battle-ships to fall back on.

It is worth remembering that a cordial understanding with Germany would practically liberate the whole of the Baltic fleet, which, it will be easily understood, could most effectively menace Japan's line of communications with Korea, thus compelling the Mikado's empire to guard the coasts of Korea as well as those of Japan. Whether Japan will, at a later stage of the war, still have war-ships enough to do this, is something not to be decided by abstract reasoning; nevertheless on this question will probably turn the fate of the war, and the future of Korea.

Japan and South America—A Contrast

A JAPANESE imperial proclamation, dated December 28, 1872, contained the words: "It becomes imperative to construct our army and navy upon the best possible system in accordance with the spirit of the age. We have therefore enacted a law for enrolling soldiers from the whole population, founded on the system which in the old days existed in this country." Those two sentences may serve as a *memorandum* of all the most important steps in the evolution of the Japanese war-power on sea and land. They recall the fact that long ago every able-bodied inhabitant of the islands was a soldier, prepared for service whenever summoned by the Mikado and led by him or his representatives; that the separation of the people into the distinct agricultural and military classes during a later period had proved to be a fertile cause of the abuses of the feudal system and of disturbances hostile to progress; that only a little more than thirty years ago the government fully realized the need of a new national military system to safeguard the prospective national development in the arts and industries of peace; and, finally, that the desired end was attained by grafting upon the old native institution of universal military service cuttings from the war establishments of western Europe and America—a process in which a shrewd and calculating eclecticism has been displayed. A trustworthy statement prepared in 1876 shows that at first the troops were instructed by French officers, and "drilled, clothed, and equipped after the new improved French system." The ship-yards at Yokosuka were also under French superintendence. The navy, however, was organized on the English model, and a commission of English officers and seamen engaged for several years as assistants and instructors. Promptly all the young men, of whatever class, became conscripts, and were placed where their studies in the art of warfare could be carried on under excellent foreign masters—that is, either in the army or in the navy. It may be added that Germany afterward became the chief instructor of Japan's army, but it is more important to remember that both military and naval tuition have been sought everywhere by Japanese students: at West Point and Annapolis, in nearly every one of the European schools, and by the far greater number who have figured rather as travellers and sojourners in Occidental lands. When, therefore, the Japanese officials have stated that the army and navy regulations of their country do not permit the enlisting of foreigners, the assertion does not signify that Japan dispenses, and will continue to dispense, with all sorts of foreign aids, but rather that in thirty years she has accumulated, as it were, about as much assistance from abroad as, *at the beginning*, she can profitably employ.

We shall appreciate the bearing of these facts upon the progress and probable duration of the war, if we bring to mind circumstances which offer the most striking contrast which can be found in modern history. When the South-American communities engaged in a struggle with Spain, during the early years of the last century, their inhabitants, utterly lacking tuition, fought by intuition: they were in the position of people who had always been denied free intercourse with the progressive nations, and who were therefore totally unprepared to resist well-trained forces. Appeals for assistance were made in Russia, England, and the United States, and some private assurances of cooperation were obtained even before the first shot was fired. The foreign officers—Europeans (not Spanish) and North-Americans—who served in the patriot armies of Chile and Peru alone between 1817 and 1830 numbered sixty-seven, of whom twenty-one were killed and eighteen wounded. At the very outset General Miranda sailed from the United States with a force of about two hundred men. The British government lent its encouragement to this filibustering expedition from the United States (directed against the Spanish authorities in Venezuela), and also sent much stronger British forces against the provinces of Rio de la Plata. The Argentine naval force, under command of an Irishman named Brown, on May 16, 1814, defeated and almost destroyed the Spanish squadron stationed at Montevideo. Through its agent in London the Chilean revolutionary government secured the services of a distinguished British officer, Lord Cochrane, who gave invaluable support to General San Martin in the campaign on the Pacific coast. Thus foreign volunteers were South America's teachers; through twenty years of heart-breaking warfare the Spanish-Americans made belated preparation to deal decisive blows; and when at last they had learned their lesson and were ready to begin, a single well-planned battle and legitimately earned victory—that of Ayacucho—brought the great series of little contests to a sudden end. Perhaps never before has it been so thoroughly demonstrated that wars with untrained contestants resemble the arguments of witless speakers—which are interminable, owing to the failure to see distinctly the vital points at issue and lack of ability to attack them, winning or losing promptly.

Incidents and Effects of Smoking

DR. SEAVER, the physical director of the Yale gymnasium, is quoted as saying that he has observed that high-stand men at Yale do not smoke, and that the smokers of the college are of mediocre attainments or low standing. He thinks that either the use of tobacco reduces mental activity in Yale students, or else that the inclination to use tobacco betokens the kind of mind that will be graded low in intellectual tests. He finds by inquiry that the attraction of tobacco for Yale students is mainly social. He computes that the gain in growth is twelve per cent. greater among students who don't smoke, and he thinks he has noticed among Yale students "that smoking inevitably lowers the standard of cleanliness, and begets a disregard for the rights of others that seems to have its roots in selfish indulgence."

This last phenomenon can be observed to quite as great advantage in the public vehicles of New York, as at Yale or any other college. The standard of manners among smokers seems to be low. The men who bring lighted cigars into street-cars and the cars of the Elevated railroad, the men who crowd the back platforms of surface-cars and smoke in the face of every passenger who crowds past them to get on or off, clearly and scandalously disregard the rights of others. They are usually men who, judging from their outward appearance, ought to know better. But they don't seem to know better. They don't seem to appreciate that their behavior is an imposition on public patience. These street-car smokers ought not to be tolerated, and we hope that an inclination recently disclosed by the health authorities and the railroad officers to get after them, will bear prompt and effectual fruit.

There are fit places for tobacco-smoke, cigarettes, and cigar-stumps. Out of place they are all offensive. To smoke in the street is inexpedient at best. To carry a lighted cigar into any house except one's own house, into any shop, elevator, waiting-room, or vehicle is bad manners, ranging in degree, according to circumstances, from inconsiderateness up to boorishness. Women, as a rule, don't smoke, and careful consideration for their wishes as to tobacco should always be shown by smokers while in their company. Whether pall-bearers may properly smoke in their carriage on the way back from the cemetery is matter for discussion into which we prefer not to enter.

There is no question that smokers' manners need to be ameliorated. If they are bad at Yale, it is no more than can be observed elsewhere. If they can be improved in the case of college lads, so much the better. But Dr. Seaver's reported observations on the demoralizing mental and physical effects of tobacco will stand a little more discussion. He says the high-stand men at Yale don't smoke. Against that we record that here in New York most of the high-stand men seem to be smokers. Ordinary observation indicates that a large majority of the leading men in New York—judges, politicians, merchants, bankers, lawyers, doctors—smoke tobacco. And some of the ablest ministers do the like, though perhaps not a majority of them. Smoking may be bad for all these persons, but it would not be possible here—nor, probably, in any other city—to observe reduced mental activity as a general consequence of using tobacco, or to find due basis for the opinion that the inclination to smoke betokens an inferior mind.

Yet Dr. Seaver may be right about the college lads. Smoking is bad for boys; schoolboys are almost invariably harmed by it. It is likely enough that a large proportion of the young men at Yale, or any other college, are not old enough to smoke. If there is a time of life when a moderate amount of tobacco-smoke ceases to do the user any perceptible harm, it comes, doubtless, at the earliest, after the body has got its full growth. We suppose smoking at best is a tax laid on the body for the ostensible benefit of the mental faculties. It is safe enough to say, at least, that the body should not be subjected to such a tax while it is still growing.

RUSSIAN TROOPS ON THEIR WAY TO THE FRONT

Russia is reported to have sent 60,000 troops to the scene of war, moving them through Manchuria and toward Harbin. The photograph shows a detachment marching along the line of the Trans-Siberian Railway on their way to the front

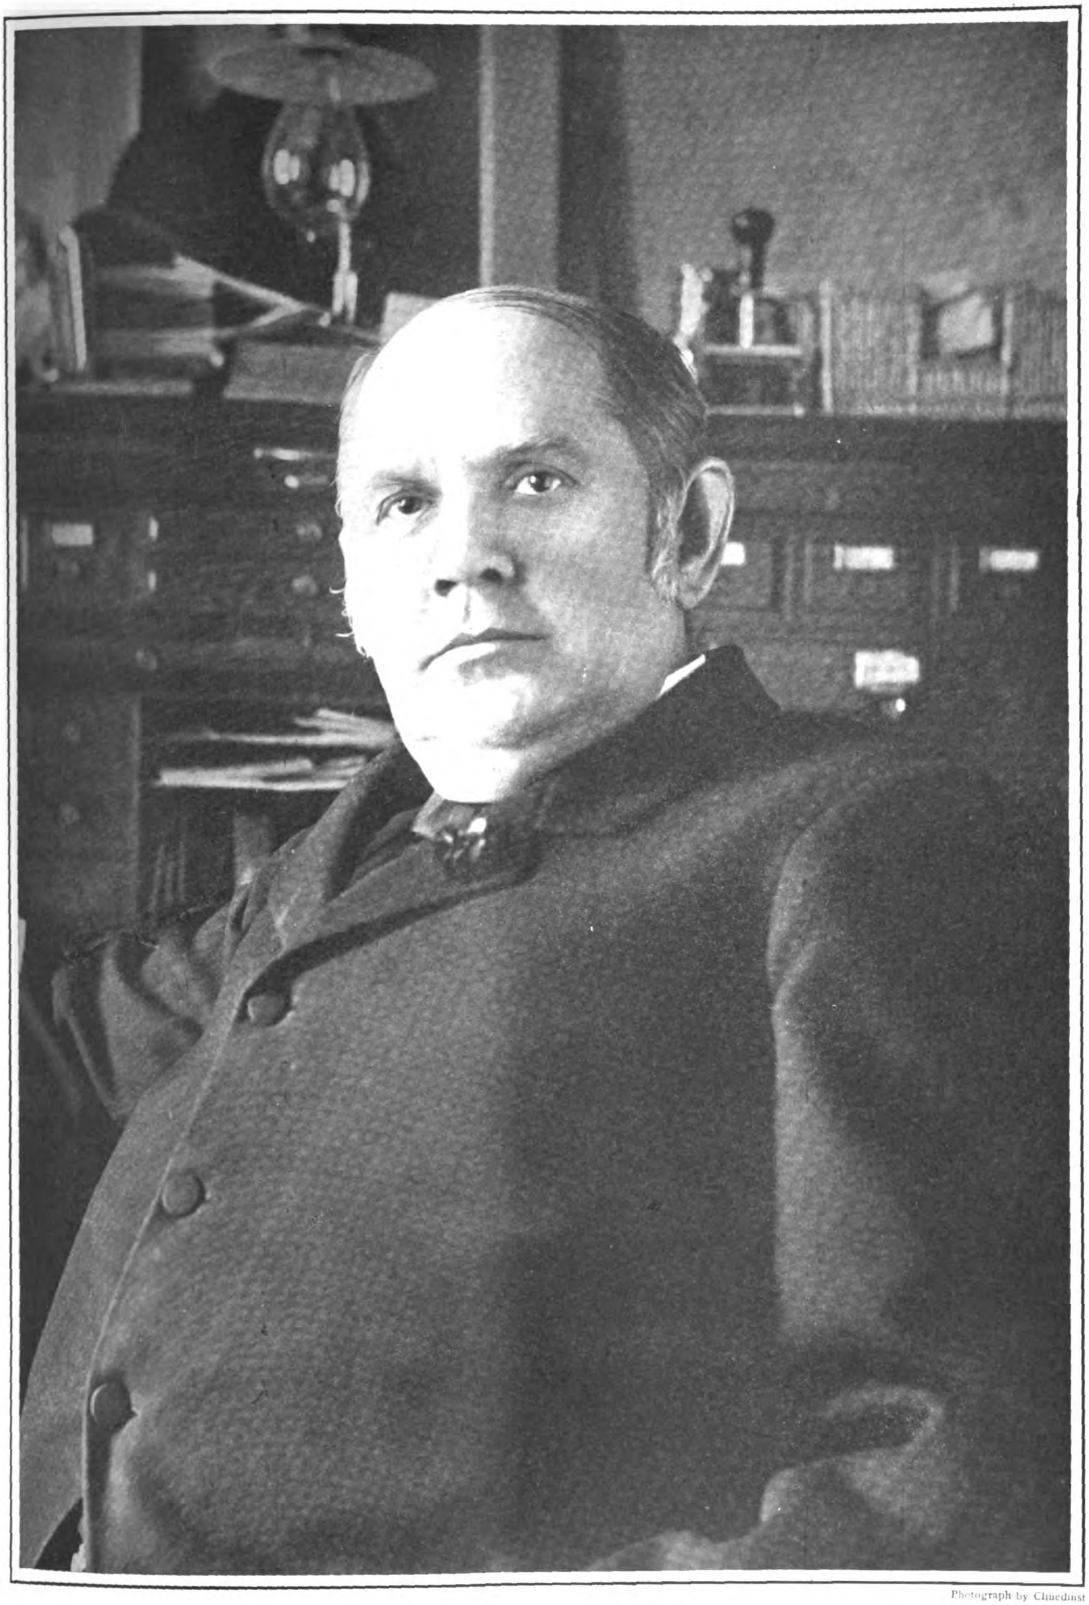
The "Smart Set" in England

By Sydney Brooks

LONDON, *February 19, 1904.*

IF words broke bones, the "Smart Set" at this moment would be the smarting set. Happily (or unhappily) they don't, and the "Comus rout of Circes, sybarites, cynics, and financiers" is as self-possessed and unruffled as ever. The "men with the manners of an organ-grinder and the morals of his monkey," the women who "affect the conduct of Lais without her graces," and all the other familiar ornaments of the "Smart Set," remain, to all appearances, unaffected by the tremendous indictment just launched against them. The author of that indictment is a lady who signs herself "Rita," and for the sum of one shilling you may purchase her *Sin and Scandal at the Smart Set* at any bookseller's. I do not know who "Rita" may be, but I seem to connect her with one or two novels that appeared in the "Pseudonym" series a few years ago—those awful years when one took it for granted that every woman old enough to hold a pen was secretly decanting her heart-throbs in some treasonable publication. I have read "Rita's" jeremiad with a consoling thankfulness that in this matter, at any rate, I belong to the right sex. It is a passionate work, so much so that the ordinary rules of punctuation have had to be expanded beyond the utmost Carlylean limits to encompass it. It is also most satisfactorily outspoken and comprehensive: there is a blush to every page, and sometimes two or three. But it is quite obvious that we men are treated throughout as aiders and abettors rather than as actual criminals. It is the "smart" woman on whose shoulders "Rita's" lash falls heaviest, and if the shoulders happen to support an American neck and head there is an added venom in its swish. And, undoubtedly, as "Rita" makes her out, the "smart" woman is a very terrible person. Her one desire, it seems, is to create a sensation, to be seen and heard on every occasion, to have her name figuring at every social function. Exclusion for her spells extinction. She entertains so that she may be entertained. Domesticity is a word expunged from her vocabulary. "An evening at home, or by a sick-bed, or perforce by reason of family bereavement, are things abhorrent to her." She "goes in" for everything, for sport, gambling, racing, motoring, dressing, dancing, scandalizing. She does whatever men do in order to keep "polly" with them. Even in the club no man is safe from her. "She rings him up to know 'a good thing' on the Stock Exchange, the best 'vet.' for her toy dog, the last extension of a settling day for her debts of honor or liability, or to ask him to 'do' a restaurant and a theatre at short notice, because she cannot stand an evening alone in her own house." She has her own engagements, her own latch-key, her own brand of liqueurs and cigarettes, her own "pals" and lovers, and her own special vice. "Whatever feminine grace or charm is left her she hides under the guise of 'slang' and coarseness and risky speeches." She never wears the same gown twice. Home is a word without meaning to her. "She has a flat or a house in town, a 'place' in the Shires, a villa or a 'suite' at some Riviera haunt, and what time she is not at one or the other of these places, she is staying with various other 'smart' folk at a country house, or on a yacht, or a houseboat." Of all things she loathes nature, "because nature inflicts penalties and obligations upon woman that even 'smartness' cannot evade." But she does what she can to evade them by drugs, pick-me-ups, and "nips." She has hosts of acquaintances and "pals," but no friend. "An utter absence of loyalty or *camaraderie* marks all her intimacies. To arouse envy, to outrival a rival, to steal the lover of the woman she calls 'dearest,' these are things she never scorns to do." She is absolutely indifferent to "art, culture, decency, or repose—to anything, in short, that is not moneyed and money-making." She has even invented a new language, and "Rita" supplies us with a portion of its vocabulary:



Twee-est (Dearest).	*Dweric* (Delightful).
My twee (My dear).	*Teagie* (Teagown).
Diskie (Disgusting).	*Undies* (?).
Fittums (Fits).	*Cossies* (?).
Scary (Frighten).	*Pals* (Friends).
Nightie (A robe de nuit).	*Expie* (Expensive).
Man-man (A royal person).	*Run dry* (Hard up).

Where "Rita" shrinks from translating *Undies* and *Cossies*, a mere man, anxious to get at the truth of things, is obviously very awkwardly placed. Perhaps they mean—but no, not that: impossible. On the whole, I give it up, and plunge once more into this breathless Philippic. . . . Letter-writing, I read, has become a lost art to the men and women of society. When an occasional *cause célèbre* brings forth anything in the shape of a real love-letter, "it reveals likewise the errors of a *boor* or the frank familiarity of a courtesan." The home has become merely a halting-place for perpetual birds of passage. The "Smart Set" will accept any invitation "which allows of perfect freedom to mind, morals, and manners." The "smart" woman, I gather, owes every one right and left, gambles as a matter of course, drinks almost certainly, and is probably a *morphinease*. She marries for money or position, or anything but love; she hobnobs with every wealthy vulgarian she can possibly get access to; and her amusements are those of the servants' hall. And who is responsible? "Rita" knows and she does not hesitate to tell us. It is mainly the fault of the Americans. "What of the 'smart' women," she asks, "from Transatlantic shores, who have brought their slang, their free and easy manners, their vulgar modes of eating and drinking and speaking, into halls made sacred by a long race of noble ancestors? Much of the loss of dignity and delicacy for which modern society is now famous may be traced to the influence of the 'smart' American woman. Charm she has and 'go' and unlimited audacity. But she has also an inherent boastfulness, a 'brainy' effervescence that is apt to get on one's nerves, and she certainly is the antithesis of courtesy and good breeding. But some of the effete, languid, semi-vicious scions of aristocracy found that this type of womanhood was infinitely more amusing than the type to which they were accustomed. She saved them so much trouble; not only could she do all her own talking, but theirs as well. Not only was she capable of amusing herself, she could, and *did*, amuse them also. Beyond and above all this, she was generally rich; very rich; and they were correspondingly weighted by debts and difficulties. So the question of exchange, a question hampered by no foolish romance, or pretence of affection, was asked and answered. It solved one difficulty. It has created another. Restrained by no feelings of delicacy, all her ambition centred only on 'getting there,' she has got there—and can never again be got anywhere else. She began by 'smartening up' society. She has ended by vulgarizing it. She has hosts of imitators instead of critics. She has floored all opposition in her own breezy determined manner, and she has grafted her own insolent airy graces upon the once-famed 'manners' of the great lady. Dignity, repose, and culture are not things that appeal to this alien 'smart' woman. She has bought her title. That is enough for her. 'Dip into the coffer and ask no questions,' is her motto. Above all things, be 'smart,' be pushing, and use every one, even the most vulgar of moneyed plutocrats, for your own advantage."

There's a picture for you. I hope it will please America, because there is more to come. "The amusements of the 'smart' world," says "Rita," "are on a par with its other eccentricities, and for the providing of many of these we have again to thank our 'smart' American sister. She it was who introduced 'notions' which were too idiotic for the nursery, but eagerly welcomed by the drawing-room. Who set society prancing and fooling over the ecstatic delights of a gymkana contest, in which women were blindfold and driven in ribbon-harness by men over a lawn outlined with—champagne bottles! Exquisite is the fun, ecstatic the excitement of contestor and spectator! Beautifully gowned women trotting in and out of a maze of bottles, in pairs, guided only by a ribbon rein held by some youthful dandy as a coaching expert! To the American 'smart' woman society owes other exciting cranks. Her "hen luncheons," her surprise parties, her *appendicitis* dinners, her bathing-dress picnics, her floral teas, her 'color' suppers, and her novelties in cotillion figures have been largely imitated. She has an inventive brain, and a mania for organization. She has shown us how charity can be made a playground for riotous display, and social functions turned into a wild orgie, or an undignified romp. To fancy dress a charity, to flaunt a bazar, to self-advertise a hospital, these are the things we have learnt from our transatlantic neighbors. With them advertisement is an absolute craze, the first law of *their* nature; and wisely and well have they engrafted it on their 'smart' sisterhood. They sent the 'Washington Post' capering through our ballrooms, and when we got tired of that, they introduced to us the supremely delectable cake-walk!"

How much truth is there in all this? Just as much, I imagine, as can be expected from any one who tries to look at a continent through a microscope. There has been a "Smart Set" in all capitals of all countries at all ages, and "Rita's" pretence that there is anything exceptionally new about the frivolities of the "Smart Set" in London is wholly without a base in history, reason, or even common experience. Things are pretty much as they always have been, and there is scarcely an inanity of to-day that one could not parallel from the past—and a past, too, antedating the American invasion of the eighties. Perhaps the "Smart Set" is more "paragraphed," and therefore slightly more public than it used to be; perhaps it pays its debts by a more indiscriminate hospitality than was common thirty years ago. But fundamentally it is just the same as ever, and just as really insignificant. A few American women have joined it and have led it, as they lead everything else—by virtue of cleverness, ingenuity, liveliness. Given a set where amusement is the thing most sought after, and you may be sure that an American will be more fertile in devising ways *and means* than her English sister; if "riskyness" is required, her audacities will take on a bolder and freer sweep; if the pace is naturally fast she will increase it by the mere intrusion of her thorough-going personality. She cannot help herself. Her natural capacities drive her inevitably to the front, and if she prefers to join the "Smart Set" nothing can stop her from being a little "smarter" than her English friends. But she did not invent the "Smart Set"; all that she has done, or, rather, all that the very few Americans who have chosen to join it have done, is to make it more inventive, more amusing, more daringly grotesque. Without her the "Smart Set" would have been just as foolish, but considerably more humdrum, and lacking that dash of piquancy which Americans cannot help throwing even into their wildest pleasurings. That seems to me to be about the truth of the matter. One need scarcely add that society is a very different thing from the "Smart Set," that there are ten American women in the former for every one who has flung herself into the latter, and that "Rita's" picture, ludicrously overdrawn and exaggerated in any case, fantastically misrepresents the life of social London as a whole.

MARCUS A. HANNA

Marcus A. Hanna, senior Senator from Ohio, died in Washington on February 15. Mr. Hanna was born at New Lisbon (now Lisbon), Ohio, in 1837. He was educated in the public schools of Cleveland, studying also for a year at Western Reserve College. His talent for organization led to his rapid rise in the business activities of Cleveland, and later made him successful in the many enterprises in which he was interested throughout the country. In the Presidential campaign of 1896 he was chairman of the Republican National Committee, dictating and securing the nomination, and later the election, of Mr. McKinley. When Senator John Sherman from Ohio entered President McKinley's cabinet in 1897, Mr. Hanna took his place. He was chosen to fill out Senator Sherman's unexpired term, and the following six-year term, ending in 1905. In January of this year Mr. Hanna was reelected as senior Senator from Ohio for the term ending March 3, 1911

Books and Bookmen

By James MacArthur

WE are indebted to Mr. Clement Shorter, the editor of the *Sphere* and *Tatler*, for the most effective reproduction that has been made of the first two pages of the famous Milton manuscript, which was recently put up at auction in London. The reserve price of the original manuscript of this first book of *Paradise Lost* was £5000, but as the highest bid only reached £4700 the manuscript failed to find a purchaser. The following note was given in the auctioneer's catalogue:

This manuscript is the property of Henry Clinton Baker, Esq., of Baytordbury, and it has been in his family since 1772, when it was inherited by his great great grandfather, William Baker, from Richard Tonson, brother of the younger Jacob Tonson. William Baker was the eldest son of Sir William Baker, M.P. for Herts, who married Mary Tonson, daughter of the younger Jacob Tonson, in 1742.

The accompanying illustration shows the first two pages of the manuscript. On the left hand page is the authorization, signed by Thomas Tompkins, domestic chaplain to the archbishop of that day, by Richard Royston, the warden of the Stationers' Company, and by George Tokefielde, the clerk who made the entry. On the right hand page are the first twenty lines of the first book of *Paradise Lost*—lines that are familiar to every lover of Milton, even if the handwriting of the scrivener, who copied out the poem at the blind poet's dictation, were not so easy to read. The general opinion at the time of the sale was that this treasure would be captured by some American millionaire. "It would be a pity," Mr. Shorter commented on the eve of the sale, "that it should leave England for the United States." Mr. Shorter's mind may now be set at rest, for although many literary treasures much more valuable than this one have come across the water, there does not seem to be any fear of this particular manuscript being taken out of England for some time to come. The auctioneer's remark, when he failed to find a purchaser in some rich American bibliophile was characteristic. "Now," said he, "if only it had been gorgeously illuminated!"

The first two Pages of the original MS. of Book I. of "Paradise Lost"

Mr. Zangwill, like Mr. Richard Harding Davis, seems to be resting from his literary labors and drawing on the capital of his past work for a more lucrative medium on the stage. His failure as a dramatist in "Children of the Ghetto," in spite of the fact that it was a beautiful and artistic piece of work which will not readily be forgotten by those who saw Miss Blanche Bates enact the young Jewish heroine, has been recouped by the play which Miss Eleanor Robson has been presenting for some time with unabated interest to theatregoers in New York. "Merely Mary Ann," with Miss Robson as *Mary Ann*, and "The Serio-Comic Governess," which, it has just been announced, Mr. Daniel Frohman has secured for Miss Cecilia Loftus next season, are both of them plays founded on two of the author's short stories. I notice that Gutzkow's "Uriel Acosta," which was written in 1846, and has always held the stage in Germany with more or less enthusiasm, has recently been revived at the Schiller Theatre in Berlin. It is a moving story and an excellently constructed drama, and might even yet be found a profitable venture if adapted by some English or American dramatist to the English-speaking stage. A few years ago it was reported that Mr. Beerbohm Tree intended to produce it in London, and no one else perhaps, except Mr. Belasco, could reproduce so effectively the striking pictures of seventeenth-century Amsterdam and its Jewish synagogue, or resurrect so successfully the martyred hero who forms the subject of one of Mr. Zangwill's noblest studies in the story called "Uriel Acosta," in the best of all his volumes of short stories—*Dreamers of the Ghetto*.

Mr. George R. Sims, the well-known London novelist, balladist, and playwright, tells a good dog story which is worthy the consideration of those persons interested in cases of lost identity. Mr. Sims has a terrier named Prinnie, which is in the habit of making a daily excursion of some three hours from Regent's Park to Portman Square and then home again. This has been his invariable practice, it appears, for eight years. One day lately he set out on his usual dog trot, but two days later he had only got as far as Portman Square. There a lady found him sitting on a doorstep looking wobegone. She had pity on the bewildered cur and gave him shelter. In response to an advertisement inserted by her in one of the London dailies the next morning, Mr. Sims sent one of Prinnie's old friends, the coachman, to bring him back home. But Prinnie did not recognize him—merely looked stupid and stolid, and when home was reached the errant favorite looked upon his master with eyes that saw not. In spite of every effort to jog his memory, the poor cur's countenance showed only dejection and blank amazement. A day or two passed, when it occurred to Mr. Sims that very possibly Prinnie might not have heard any French spoken during the course of his rambles, and that the chord of memory might be touched by one of the foreign phrases that had been addressed to his canine friend so often during his happier days in the kitchen. Whereupon Mr. Sims summoned his French cook, who, on seeing the dog, exclaimed, "Prinnie, venez pour votre dîner!" The effect was electrical. Prinnie barked with joy and comprehension of his surroundings, and frisked about as of old, devoting himself to affectionate demonstrations as if to make up for lost time. Mr. Sims says he will place the fact before one of the societies interested in the occult, but Mr. Sims is a humorist and must have his little joke. It may be recalled how in *The Black Poodle*, by Mr. Anstey, Bingo was warmly welcomed home after a mysterious absence, but turned out to be quite another dog, after all.

American visitors to London this year, who share our deep admiration for the drawings of Mr. E. A. Abbey, illustrating Shakespeare's comedies and tragedies as they have appeared in HARPER'S MAGAZINE, will be interested in the announcement that for the first time the series of one hundred and thirty drawings and paintings by Mr. Abbey are now on exhibition at the Leicester Galleries. This is an opportunity of which, I am sure, all lovers of art who visit London within the next few months will be glad to avail themselves.

Mr. Alfred Russel Wallace, who is best known as a popular scientist through his book, *The Wonderful Century* and his recently published work, *Man's Place in the Universe*, and also as the co-discoverer with Darwin of the law of natural selection, indulges in a literary diversion in the February *Fortnightly Review*. Mr. Wallace writes of a literary find which he made some eleven years ago in the shape of a manuscript copy of a poem called "Leonaine," signed with the initials "E. A. P." There is not the shadow of a doubt in Mr. Wallace's mind but that the poem, which I reprint below, was written by Poe, and he regards it as a poetic gem.

Leonaine angels named her, and they took the light
Of the laughing stars and framed her, in a smile of white.
And they made her hair of gloomy midnight, and her eyes of bloom
Moonshine, and they brought her to me in a solemn night.

In a solemn night of summer, when my heart of gloom,
Blossomed up to greet the comer, like a rose in bloom,
All foreboding that distressed me, I forgot as Joy caressed me,
Lying Joy that caught and pressed me, in the arms of doom.

Only spake the little lisper in the angel tongue,
Yet I listening heard the whisper, "Songs are only sung
Here below that they may grieve you, tales are told you to deceive you.
So must Leonaine leave you while her love is young."

Then God smiled and it was morning, matchless and supreme,
Heaven's glory seemed adorning earth with its esteem:
Every heart but mine seemed gifted with a voice of prayer, and lifted,
When my Leonaine drifted from me like a dream.

As a matter of fact, Mr. Wallace's "find," so gravely announced, is a delusion and a snare, for the poem, correctly named "Leonainie," was penned in imitation of Poe by the Hoosier poet in his callow obscurity for a wager which he won.

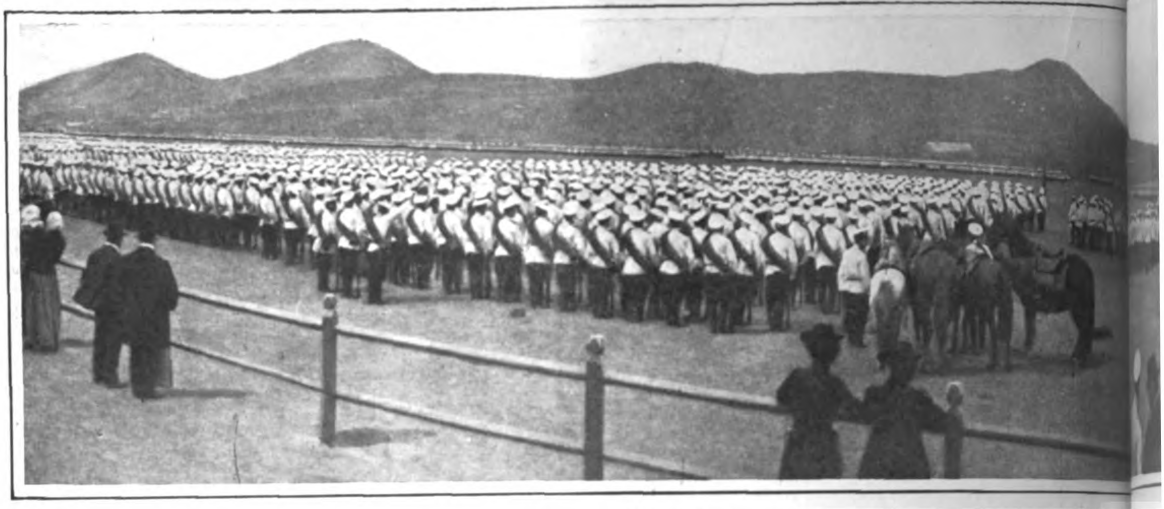
What Shall We Do With Our Sympathies?

By W. D. Howells

THERE is probably no valuable possession that a man is so lavish of as his sympathies, and yet there is nothing he so much hates to have wasted on an unworthy object. He likes to give them freely, but if he finds that he has fooled them away, he is more vexed and ashamed than he can well find words to say. In disposing of them, therefore, he cannot be too cautious; but here he is confronted by the difficulty of mingling a cold prudence with the rush of his emotions so as not to curdle them to the effect of a sort of tepid criticism. If he wishes to avoid such a regrettable issue, he must not merely look into his heart and write or speak, but when he has duly decided upon his real feelings, he must try to warm them up or warm them over to the temperature which his emotions had when he began to feel and before he began to think. It will require a great deal of skill and a great deal of patience to do this, but I think it will be worth while. I, for instance, ever since the brilliant attack of the Japanese torpedo-boats on the Russian battle-ships at Port Arthur, have been holding my Russian sympathies in one hand, and my Japanese sympathies in the other, and balancing them the right against the left, to make sure which are of the greater weight; for I am aware that as an American citizen I may incur a grave responsibility if I mistakenly decide the contest by throwing either into the scale. I fear that, for all the oceans of talk which swim between me and the scene of hostilities in the Far East, I may not be truly informed of the question between the warring empires; and it would be rash, it would be wrong, for me to take sides, if in one case I might spread the despotic rule of the Czar over Asia, or in the other case invite the Yellow Peril to our doors, by my error.

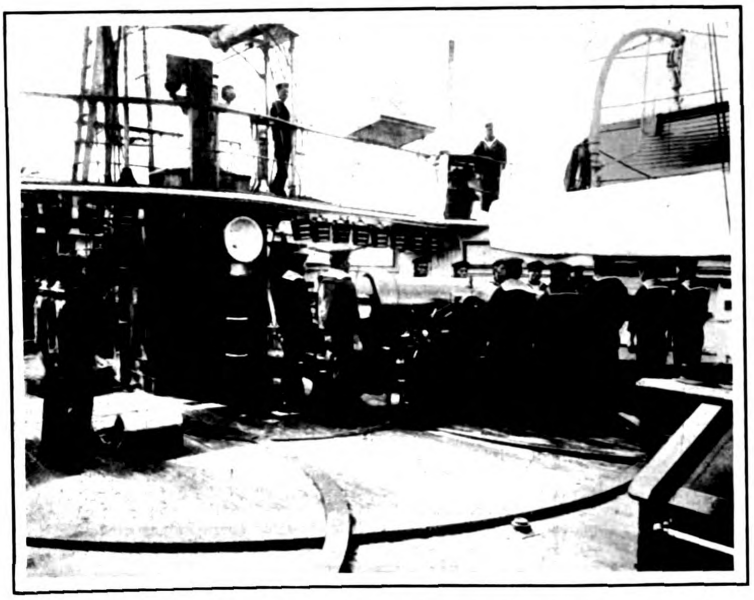
I fancy a like attitude of conscientious hesitancy in many of my fellow citizens, or at least those who are not obliged constantly to declare themselves in the daily press, and I would like to take counsel with the general reader as to what we ought really to do with our sympathies in an emergency like the present. We all know, or if we do not know, it is not for want of teaching in the newspapers, that our sympathies are all but all powerful in deciding the event of civic controversy among ourselves. Again and again we have read in the matter say of a great industrial rebellion, such as from time to time convulses the body politic, that if the masters, or if the men, do so and so, they will alienate public sympathy, and then they will be beaten, whichever have done so and so. The contestants themselves do not appear to pay the slightest attention to these warnings; they go on doing quite what they like, whether it is right or whether it is wrong; they fight to the point of exhaustion, and then one party gives in to the other. Sometimes it is the party which has not alienated public sympathy, and sometimes it is not; but after our instruction from the press we cannot doubt that in the event our sympathies have been all but all powerful. On a far vaster scale we have seen how all but all-powerful public sympathy has been in deciding international controversies when they have taken the form of war. Public sympathy was with the South all over Europe when we crushed secession; it was with Denmark when Prussia tore Sleswick-Holstein from her; it was with Poland when Russia quenched the last spark of her patriotism in blood; it was with Maximilian when Juarez toppled over his playing-card empire in Mexico; it was with France when Prussia occupied the capital of her new republic; it was with Spain when we struck her down in the Cuban affair; it was with the South-African commonwealths when England wiped them out; and we have but to recall the results in order to realize the extent of the mystical force exerted by the emotions of the world in determining the course of history. In its presence, we must think more than twice whether we side with Japan or with Russia in the actual contest; our sympathies may have a consequence which we shall always regret unless we apply them with the greatest possible caution.

The situation seems to be that Russia, which has already swallowed Manchuria, has been turning her surfeit-strained eyes toward Korea, which Japan has long been preparing for deglutition. The fact is that Korea no more belongs to Japan than Manchuria belongs to Russia; but it may be said that Japan needs Korea more than Russia needs Manchuria. This is the view urged by those who sympathize with a hungry robber rather than a glutted robber, and they have naturally a good deal to say for themselves. In spite of all they have to say for themselves, however, it does not appear that the Koreans have any greater wish to be eaten by the Japanese than the Manchurians had to be eaten by Russia; but we may safely leave those unreasonable populations out of the count. Our affair is solely with the two aggressors, how we shall choose between them, and how we shall apply our all but all-powerful sympathies. The fact that the Koreans are said to hate the Japanese with the hate of a helpless nation for a strong one may be admitted without affecting the fact that Japan suspects Russia of ultimate designs upon Korea; and still less can it sway us in view of the brilliant victory for the Japanese following the surprise of the Russian war-ships in Port Arthur. An event like that ought to rouse all our sympathies for a plucky little corsair flying at the throat of a huge pirate in defence of his prey. We cannot help remembering our great obligations to Japanese art, and we must not forget that we were ourselves the instrument of opening the Japanese Empire to the world, and so made ourselves sponsors for the infant political and military genius which has flourished into such a sudden and magnificent maturity. On the other hand, we must not forget how Russia is supposed to have stood our sole friend in Europe during the dark hours of our war for the Union, and how she once sent to our waters at that time some war-ships which have always been romantically imagined to have sailed with sealed instructions to aid us in case France and England, and especially England, molested us in our extremity. There never was any proof that the Russian admiral had such instructions; but the notion that a mighty despotism was moved to compassion for the dangers of a friendless democracy was so beautiful that the poetical legend has been accepted almost without misgiving by our grateful people.



On whom, then, shall we turn our backs? On the plucky little Japs, whom we ourselves liberated to international self-consciousness, and who have just struck a deadly blow at an enemy ignorant of the existence of war, or on our ancient and faithful allies the Russians, who are supposed to have stood our tacit friends in the midst of explicit foes, and who would, for all we know, have come to our defence if we had needed them? We have here a duty to fulfil as well as a pleasure to indulge. It would be delightful to give a loose to our emotions in either direction, but would it be right? Ours is a republic which has added to its responsibilities the despotic government of a people, bought at two dollars a head, who hate us; it is a union which has just hastened to profit by the dismemberment of a union in South America, and its citizens cannot be too careful in casting their sympathies for one side or the other in all pending difficulties. Upon the whole, would not it be best to wait for the end of the war, and then give our sympathies to the victor? That is what other world powers do, and it must be allowed that there is a logic in the accomplished fact which comes with almost the authority of inspiration.

But if we cannot wait, if we must do something with sympathies which, if we bottle them up in our bosoms may threaten us with explosive violence, why should not we give them where they are certain to do no harm if they do no good? Why should not we offer them in what seems to be a war of statesmen to the poor common men on both sides who must fight the statesmen's war for them, be torn with shot and shell, transfixed with bayonets, hewn down with sabres, drowned in sinking ships, blown into the air by bursting magazines, or scalded to death in the steam of the torpedoed cruisers? I do not find myself, after all, so greatly concerned in behalf of the knot of able aristocrats who hold the destinies of Japan in their grasp, as in behalf of the peasants snatched from their rice-fields, to feed the fires of a ruthless ambition not different in quality from any lust of empire that the sad earth has known. The spectacle of the Czar imploring the aid of heaven and invoking the patriotism of his slavish subjects for the defence of Russian honor has no majesty for me; though I think that of all living men his case is most pitiable in that he must look from the bloody gulf of war yawning before him, back to that heavenly height where lately he stood for universal peace. More impressive to me are the hordes of muzhiks torn from their villages in the snows, and sent, blind and dumb, to die in battles of which they cannot even imagine the cause. More even than to the poor common men on either side, I think our all but all powerful sympathies should be offered to the poor common wives and poor common children whom they leave behind them in the swamps or in the snows, to continue alone the hard struggle for life for which the husbands' and fathers' strength hardly sufficed. To them no victory can give back their dead in the battles, or undo their widowhood and orphanhood. What will it matter to the Japanese private whether the Mikado and his cabinet secure Korea or not? What can it profit the muzhik that the Czar keeps Manchuria? Yet to these only, it seems to me that in the very delicate balance of the Eastern question can we safely offer our sympathies.



We may be sure that the ordinary men whose destinies are being handled by the extraordinary men on both sides, will be, whichever side wins, the sufferers not only in the process but in the result. Great prosperity will follow the war, either to the winner or the loser; sometimes it will be the one which prospers, and sometimes it will be the other; and it is the easy and natural theory of the spectators that such of the poor common fellows as have outlived the fight they have fought, will profit by it, and share in the general prosperity. But the general prosperity is always for particular persons, and it almost never happens that the poor common fellows are among these. They will share in the harder work and the higher prices of living, and their wages will disproportionately rise; but mostly they will find their reward in having helped build up or firmly establish a great power in whose glory they will modestly find themselves forgotten. Even we who offer them our sympathies will hardly know who they are by name. But whether we know their names or not, we may be sure that they are our brothers, and may hope that somehow, somewhere, there will be an account kept of them, as well as of those who direct their destinies for them. That ought to do something to reconcile us to the sense of participating in their present unimportance when we plead for them.

Perhaps, indeed, there are yet a few others, a very small and, as things are now going, a very inconsiderable class whom we may join with the soldiers and their families in our sympathy. I mean those sages and saints who have understood that war always corrupts and depraves, and who must be rather sick when they turn their eyes from the promise of the Hague tribunal to the events of the Far East. The expulsion of Russia from Manchuria, or the expulsion of Japan from Korea, or the triumph of either could hardly console these sages and saints, and so far as our sympathies are sentimental, we ought to bestow them freely upon such sufferers by the war; we might give them a little to the Czar himself. But still, I insist, they should be mainly for the common soldiers on both sides, who have no more real interest in the war than we have, and so ought to be very near and dear to us; and again more than for these, for the wives and children of both nations who are being so rapidly widowed and orphaned.

THE TRUANTS

BY A·E·W·MASON

CHAPTER I

PAMELA MARDALE LEARNS A VERY LITTLE HISTORY

THERE were only two amongst all Pamela Mardale's friends who guessed that anything was wrong with her; and those two included neither her father nor her mother. Her mother, indeed, might have guessed had she been a different woman. But she was a woman of schemes and little plots, who watched with concentration their immediate developments, but had no eyes for any lasting consequence. And it was no doubt as well for her peace of mind that she never guessed. But of the others it was not likely that any one would suspect the truth. For Pamela made no outward sign. She hunted through the winter from her home under the Croft Hill in Leicestershire; she went everywhere, as the saying is, during the season in London; she held her own in her own world, lacking neither good spirits nor the look of health. There were perhaps two small peculiarities which marked her off from her companions. She was interested in things rather than in persons, and she preferred to talk to old men rather than to youths. But such points taken by themselves were not of an importance to attract attention. Yet there were two amongst her friends who suspected. Alan Warrisden, and the schoolmaster of Roquebrune, the little village carved out of the hillside to the west of Monte Carlo. The schoolmaster was the nearer to the truth, for he not only knew that something was amiss, he suspected what the something was. But then he had a certain advantage, since he had known Pamela Mardale when she was a child. Their acquaintance came about in the following way:

He was leaning, one evening in December, over the parapet of the tiny square beside the schoolhouse when a servant from the Villa Pontignard approached him.

"Could M. Giraud make it convenient to call at the villa at noon to-morrow?" the servant asked. "Madame Mardale was anxious to speak to him."

M. Giraud turned about with a glow of pleasure upon his face.

"Certainly," he replied. "But nothing could be more simple. I will be at the Villa Pontignard as the clock strikes."

The servant bowed, and without another word paced away across the square and up the narrow winding street of Roquebrune, leaving the schoolmaster a little abashed at his display of eagerness. M. Giraud recognized that in one man's mind, at all events, he was now set down for a snob, for a lackey disguised as a schoolmaster. But the moment of shame passed. He had no doubt as to the reason of the summons, and he tingled with pride from head to foot. It was his little brochure upon the history of the village—written with what timidity and printed at what cost to his meagre purse—which had brought him recognition from the lady of the villa upon the spur of the hill. He began to build up his life like a fairy palace from the foundation of this brief message.

Let it be said at once that there was nothing of the lackey under the schoolmaster's shabby coat. The visit which he was bidden to pay was to him not so much a step upwards as outwards. Living always in this remote high village, where the rock cropped out between the houses and the streets climbed through tunnels of rock, he was always tormented with visions of great cities and thoroughfares ablaze; he longed for the jostle of men; he craved for other companionship than he could get in the village wine-shop on the first floor, as a fainting man craves for air.

M. Giraud kept his engagement punctually. The clock chimed upon the mantelpiece a few seconds after he was standing in the drawing-room of the Villa Pontignard, and before the clock had stopped chiming Mrs. Mardale came in to him. She was a tall woman, who, in spite of her years, still retained the elegance of her youth, but her face was hard and a trifle querulous, and M. Giraud was utterly intimidated. On the other hand, she had good manners, and the friendly simplicity with which she greeted him began to set him at his ease.

"My daughter, monsieur, has an English governess," she explained; "but it seems a pity that she should spend her winters here, and lose the chance of becoming really proficient in French. The curé recommended me to apply to you, and I sent for you to see whether we could arrange that you should read history with her in French during your spare hours."

M. Giraud felt his head turning. Here was his opportunity so long dreamed of come at last. It might be the beginning of a career—it was, at all events, that first difficult step outwards. He was to be the teacher in appearance; at the bottom of his heart he knew that he was to be the pupil. He accepted the offer with enthusiasm, and the arrangements were made. Three afternoons a week he was to spend an hour at the Villa Pontignard.

"Well, I hope the plan will succeed," said Mrs. Mardale, but she spoke in a voice which showed that she had no great hopes of success. And as M. Giraud replied that he would, at all events, do his best, she rejoined plaintively: "It is not of you, monsieur, that I have any doubts. But you do not know my daughter. She will learn nothing which she does not want to learn; she will not endure any governess who is not entirely her slave, and she is fifteen and really must learn something."

Pamela Mardale, indeed, was at this time the despair of her mother. Mrs. Mardale had mapped out for her daughter an ideal career. She was to be a model of decorum in the early Victorian style, at once an ornament for a drawing-room and an excellent housekeeper, and she was subsequently to make a brilliant marriage. The weak point of the scheme was that it left Pamela out of the reckoning. There was her passion for horses for one thing, and her distinct refusal, besides, to sit quietly in any drawing-room. When she was a child horses had been persons to Pamela rather than animals, and, as her conduct showed, persons preferable by far to human beings. Visitors to the house under Croft Hill were at times promised a sight of Pamela, and, indeed, they sometimes did see a girl in a white frock, with long black legs and her hair tumbled all over her forehead, neighing and prancing at them from behind the gate of the stable-yard. But they did not see her at closer quarters than that, and it was certain that if by any chance her lessons were properly learned, they had been learned upon the corn-bin in the stables. Portraits of Pamela at the age of nine remain, and they show a girl who was very pretty, but who might quite well have been a boy, with a mass of unruly dark hair, a pair of active dark eyes, and a good-humored face alertly watching for any mischief which might come its way.

Something of the troubles which M. Giraud was likely to find ahead of him Mrs. Mardale disclosed that morning, and the schoolmaster returned to his house filled with apprehensions. The apprehensions, however, were not justified. The little schoolmaster was so shy, so timid, that Pamela was disarmed. She could be gentle when she chose, and she chose now. She saw, too, M. Giraud's anxiety to justify her mother's choice of him, and she chose with a sense of extreme virtue to be a credit to his teaching. They became friends, and thus one afternoon when they had taken their books out into the garden of the villa, M. Giraud confided to her the history of the brochure which had made them acquainted.

"It was not love for Roquebrune which led me to write it," he said. "It was, on the contrary, my discontent. I was tortured with longings; I was not content with the children's lessons for my working hours and the wine-shop for my leisure. I took long walks over Cap Martin to Mentone, along the Corniche road to La Turbie, and up Mont Agel. But still I had my longings as my constant companions, and since everywhere I saw traces of an-

tiquity, I wrote this little history as a relief. It kept my thoughts away from the great world."

"The great world," said Pamela, in a low voice of eagerness. "I wonder what it's like."

That afternoon marked a distinct step in their friendship, and thereafter in the intervals of their reading they talked continually upon this one point they had in common—their curiosity as to the life of the world beyond their village. But it happened that Pamela did the greater part of the talking, and one afternoon that fact occurred to her.

"You always listen now, monsieur," she said. "Why have you grown so silent?"

"You know more than I do, mademoiselle."

"I?" she exclaimed, in surprise. "I only know about horses." Then she laughed. "Really, we both know nothing. We can only guess and guess."

The whistle of a train, the train from Paris, mounted through the still air to their ears.

"Well," said Pamela, with a shrug of impatience, "we shall both know the truth some time."

"You will, mademoiselle," said the schoolmaster, suddenly falling out of his dream.

Pamela looked quickly at him. The idea that he would be left behind, that he would stay here all his life listening to the singsong drone of the children in the schoolroom, teaching over and over again with an infinite weariness the same elementary lessons, until he became shabby and worn as the lesson-books he handled, had never struck her till this moment. The trouble which clouded his face, sympathy reflected by sympathy upon hers.

"But you won't stay here," she said, gently. "Oh no! Let me think!" and she thought with a child's oblivion of obstacles and a child's confidence. She imparted the wise result of her reflections to M. Giraud the next afternoon.

"Listen," said she. "I have thought it all out."

The schoolmaster composed himself into the attentive attitude of a pupil.

"You are to become a Deputy."

That was the solution of the problem. Pamela saw no difficulties. He would need a dress-suit, of course, for official occasions, which she understood were numerous. A horse, too, would be of use, but that didn't matter so much. The horse was regretfully given up. It might come later. He must get elected first, never mind how. In a word, he was as good as a Deputy already. And from a Deputy to the President of the French Republic, the step, after all, was not so very long.

The schoolmaster listened, seeing the world through her eyes. Thus three winters passed, and Pamela learned a very little history.

Towards the end of the third winter, the history books were put away. Pamela was now eighteen, and looking eagerly forward to her first season in London. And no doubt frocks and hats occupied more of her thoughts than did the fortunes of the schoolmaster. Some remorse for her forgetfulness seized her the day before she went away. It was a morning of spring, and the schoolmaster saw her coming down the dark narrow streets towards him. She was tall beyond the average, but without ungainliness, long of limb and lightly built, and she walked with the very step of youth. Her dark hair swept in two heavy waves above her forehead, and was coiled down behind on the back of her neck. Her throat rose straight and slim from the firm shoulders, and her eyes glowed with anticipation. Though her hair was dark, she was not sallow. Her face was no less fresh and clear than were her eyes, and a soft color like the bloom of a fruit brightened her cheeks. In that old brown street she shone like a brilliant flower, and Giraud, as he watched her, felt all at once that he could have no place in her life, and in his humility he turned aside. But she ran after him and caught him up.

"I am going to-morrow," she said, and she tried to keep the look of happiness out of her eyes, the thrill out of her voice. And she failed.

Drawn by William Hurd Lawrence

Her eyes went straight to his

"It is good-by, then," said he.

"For a little while. I shall come back to Roquebrune in December."

The schoolmaster smiled.

"I shall look forward from to-day until that month comes. You will have much to tell me."

"Yes, sha'n't I?" she cried, and then, lest her eagerness should hurt her friend, she added, "But I shall not forget our quiet afternoons on the garden terrace."

The next morning she went away, and the schoolmaster lost his one glimpse of the outer world. He hungered for news and no news came, and when in the month of December he noticed that the shutters were opened in the Villa Pontignard and that there was a stir of servants about the house, he felt that the shutters were being opened after a long dark time from his one window on the outside world. He frequented the little station from that moment. Mrs. Mardale came first, and a fortnight afterwards Pamela descended from a carriage with her maid.

Giraud watched her with a thrill of longing. It was not merely his friend who had returned, but his instructor, with new and wonderful knowledge added to the old.

Then came his first chilling moment of disillusion. It was quite evident that she saw him as she was stepping on to the platform. Her eyes went straight to his—and yet she turned away without the slightest sign of recognition and busied herself about her luggage. The world had spoiled her. That was his first thought, but he came to a truer understanding afterwards. And, indeed, that thought had barely become definite in his mind when she turned again, and, holding out her hand, came to him with a smile.

"You are well?" she said.

"Yes," said he.

And they walked up the long flight of steps to Roquebrune, talking banalities. She gave him none of the news for which he longed, and they spoke not at all of the career which together they had mapped out for him. All their long talks upon the terrace, their plans and their speculations, seemed in an instant to Giraud to have become part of a pleasant, very foolish, and very distant past. He was aware of the vast gulf between them. With a girl's inimitable quickness to adapt herself to new surroundings

she had acquired in the few months of her absence the ease, the polish, and the armor of a woman of the world. He was still the village schoolmaster, the peasant tortured with vain aspirations, feeding upon vain dreams; and in this moment he saw himself very clearly. Her silence upon their plan helped him to see himself thus. Had she still believed in that imagined career, surely she would have spoken of it. In a word, he was still looking at the world through *her* eyes.

"You must come up to the villa," she said. "I shall look forward to your coming."

They were in the little square by the schoolhouse, and he took the words for his dismissal. She went up the hill alone and slowly, like one that is tired.

Giraud leaned that evening over the parapet in the little square of Roquebrune. He was thinking of the girl up there in the villa who had been struck by some blind blow of Destiny, who had grown a woman before her time. It was a pity, it was a loss in the general sum of things which make for joy.

He had, of course, only his suspicions to go upon. But they were soon strengthened. For Pamela fell into ill health, and the period of ill health lasted for two years. After those two years had passed she disappeared for a while altogether out of Giraud's sight. She came no more to the Villa Pontagnard, but spent her winter with her father and her horses at her home in Leicestershire. Her mother came alone to Roquebrune.

CHAPTER II

PAMELA LOOKS ON

IT was not until Pamela had reached the age of twenty that Alan Warrisden made her acquaintance at Lady Millingham's house in Berkeley Square. He took her down to dinner, and, to tell the truth, paid no particular attention either to her looks or to her conversation. His neighbor upon the other side happened to be a friend whom he had not seen for some while, and for a good part of the dinner he talked to her. A few days afterwards, however, he called upon Lady Millingham, and she asked at once, quite eagerly,

"Well, what did you think of Pamela Mardale?"

Warrisden was rather at a loss. He was evidently expected to answer with enthusiasm, and he had not any very definite recollections on which enthusiasm could be based. He did his best, however, but he was unconvincing. Lady Millingham shrugged her shoulders and frowned. She had been married precisely a year, and was engaged in plans for marrying off all her friends with the greatest possible despatch.

"I shall send you in with somebody quite old the next time you dine here," she said, severely, and she discoursed at some length upon Pamela's charms. "She loves horses, and yet she's not a bit horsy," she said in conclusion, "and there's really nothing better than that. And just heaps of men have wanted to marry her." She leaned back against her sofa and contemplated Warrisden with silent scorn. She had set her heart upon this marriage more than upon any other. Of all the possible marriages in London, there was not one, to her mind, so suitable as this. Pamela Mardale came of one of the oldest families of commoners in Leicestershire. The family was not well-off, the estate had shrunk year by year and what was left was mortgaged, owing in some degree to that villa at Roquebrune upon which Mrs. Mardale insisted. Warrisden, on the other hand, was more than well-off, his family was known, and at the age of twenty-eight he was still dividing his life between the season in London and shooting expeditions about the world. And he had the look of a man who might do something more.
